ENDNOTES [illegible]
NOTE ON SOURCES [illegible]
SELECTED BIBLIOGRAPHY [illegible]
INDEX OF IMAGES [illegible]
SUBJECT INDEX [illegible]

PREFACE xv

1 [illegible] 1

A Pictorial Puzzle [illegible]
A Virtuous Visual Competition [illegible]
The Cardinal and Theological Virtues in a *Psychomachia* [illegible]
The Cohort [illegible]
Justice's Ascent [illegible]
Justice's Violence [illegible]
Visualizing Justice's Pain and Challenges [illegible]
Adjudication's Transformation: Access for All before Independent Judges in Open Courts [illegible]
Celebrating and Understanding New Demands [illegible]
Building Idioms: Transparency, Access, Identity, and Security [illegible]
Democracy's Challenges [illegible]
Privatizing Process and Controlling Access [illegible]
The Decline of Adjudication [illegible]
Re-Presenting Justice [illegible]

2 [illegible] 18

A Long Political Pedigree: Shamash, Maat, Dikē, and Themis [illegible]
The Scales of Babylonia and of the Zodiac [illegible]
The Balance in Egyptian *Books of the Dead* [illegible]
Embodied Greek and Roman Goddesses [illegible]
Justicia, St. Michael, and the Cardinal Virtue Justice [illegible]
Civic Spaces, Allegories of Good and Bad Government, and Fourteenth-Century Siena [illegible]
Public Buildings Fashioning Civic Identities [illegible]
Lorenzetti and the Palazzo Pubblico [illegible]
"Love justice, you who judge the earth" [illegible]
Justice Bound by Tyranny [illegible]
Theories of Governance: Aristotle, Cicero, Aquinas, Latini, God, and Political Propaganda [illegible]
Good Government on the East and West Coasts of the United States: Reiterations by Caleb Ives Bach and Dorothea Rockburne [illegible]
Last Judgments in Town Halls [illegible]
Civic, Public, and Christian [illegible]
"For that judgment you judge, shall redound on you": The Magdeburg Mandate [illegible]
Conflating the Last Judgment with Trials [illegible]

3 [illegible] 38

Flayed Alive or Maimed: Judicial Obligations Inscribed on Town Hall Walls in Bruges and Geneva [illegible]
Controlling Judges: A Fifteenth-Century Cambyses in the Town Hall of Bruges [illegible]
Bribes, Gifts, and Budgets [illegible]
Skeptical about Law and Distrustful of Judges [illegible]
The Unjust Prince: Plutarch's Theban Judges and Alciatus's Emblems [illegible]
Dogs, Snakes, and Virgins: Even-handedness in Ripa's *Iconologia* [illegible]
Hands Cut: Disfigured Judges and Regal Justices for Sixteenth-Century Geneva [illegible]
Judicial Subservience and Dependence [illegible]
The Challenge and Pain of Rendering Judgment: Amsterdam's Seventeenth-Century Town Hall [illegible]
An "undertaking of megalomanic proportions" [illegible]
The Virtues of Prosperity: Justice, Peace, and Prudence Reigning over an Expanding Municipality [illegible]

"The free state flourishes, when the people honor the laws" [illegible]
Harming Your Children in the Name of the Law: Solomon, Zaleucus, Brutus, and Death [illegible]
The Judgment of Solomon [illegible]
The Blinding of Zaleucus and His Son and the Execution of Brutus's Children [illegible]
"So shall you be judged" [illegible]

4 [illegible] 62

Blind to the Light and Blindfolded by the Fool [illegible]
The Blindfolded *Justice* in the Amsterdam Tribunal [illegible]
"Open the eyes that are blind" [illegible]
Synagoga: Blind to the "Light" of Christianity [illegible]
Justice and Judges as Fools [illegible]
Alciatus's Theban Judges and Ripa's Injunctions: "A Steely Gaze," the Eye of God, and Bandaged Eyes [illegible]
Bruegel's Justice (or Injustice?) [illegible]
Damhoudere's Janus-Faced Justice [illegible]
Turning a Critical Eye [illegible]
Transcendent, Wide-Eyed, and Amidst the Animals [illegible]
Raphael's Glory of Justice [illegible]
Symbolism's Caprice: The Many Animals of Justice [illegible]
The Proud and the Dead Bird: Giulio Romano's *Justice* with an Ostrich in the Vatican and Luca Giordano's *Justice Disarmed* [illegible]
Sheep and Foxes, Dogs and Serpents: Rubens's Wide-Eyed Justice [illegible]
The Past as Prologue: Sighted or Blindfolded, and Tall [illegible]
Venice as Justice, Justice as Venice [illegible]
Across the English Channel [illegible]
Queen Anne as Justice [illegible]
The Lord Mayor's Show [illegible]
Dublin's Justice [illegible]
Old Bailey's Open-Eyed and Wide-Armed Justice [illegible]
Across the Atlantic Ocean: Kansas's Sharp-Eyed Prairie Falcon and Vancouver's Peaceable Justice [illegible]
A Resilient, Albeit Invented, Tradition [illegible]

5 [illegible] 91

Iconographical Conventions, Pictorial Puzzles, and Justice's Blindfold [illegible]
Commitments to Representation [illegible]
Impossible to Depict: An Exchange between Mantegna and Momus [illegible]
Creating the Canonical Elements [illegible]
Sight, Knowledge, and Impartiality [illegible]
"Suppose a Man born blind . . . be made to see": Locke, Diderot, and Molyneux's Problem [illegible]
Rawlsian Veiling [illegible]
Ambiguity and Self-Help: Joshua Reynolds's *Justice* in Oxford and Diana Moore's *Justice* in New Hampshire [illegible]
Constitutional Metaphors and Injustices [illegible]
Color-Blind [illegible]
Impartial or Unjust? The "Festering Sores" behind the Blindfold in Langston Hughes's *Justice* [illegible]
Confrontation, Eyewitnesses, Prison Garb, Spectators' Badges, and Ostrich Imagery [illegible]

6 [illegible] 106

Juridical Rights and Iconography [illegible]
Public Art and Popular Dismay [illegible]
Batcolumns and Mariannes [illegible]
Breaching the Conventions of Justice when Decorating the Public Sphere [illegible]
Unblindfolded: A "Communist" Justice Raises a "Newark Row" [illegible]
Hiding a "Mulatto Justice" in Aiken, South Carolina [illegible]
Life in Mississippi, Draped [illegible]
An "Indian" Hung in Boise [illegible]
Muhammad in Midtown and at the United States Supreme Court [illegible]
Lady of Justice but No Moco Jumbie in the Virgin Islands [illegible]
The Safety of Abstraction: Ellsworth Kelly in Boston [illegible]
Judging Judges: From Spectator to Critical Observer [illegible]
The Appearance of Impartiality [illegible]
Duck Blinds in [illegible] [illegible]

Restructuring Law's Possibilities [illegible]
Systemic Unfairness in Individualized Justice [illegible]
Structural Interventions: Judicial Task Forces on Bias in the Courts [illegible]
Glimpsing the Gaps [illegible]

[illegible] 7 [illegible] 134

Public and Social Traditions in Town and Country Courts [illegible]
Building a New Legal System in the United States [illegible]
A Grounding in Colonial and State Court Systems [illegible]
Purpose-Built Structures: From Houses and Taverns to Courts [illegible]
Segregating Interiors by Roles and Race [illegible]
Architecture and Adornment [illegible]
Juridical Privilege, Exclusion, and Protest [illegible]
Marking a "Federal Presence" [illegible]
Borrowing Space, Rules, and Administrative Support [illegible]
Custom Houses, Marine Hospitals, and Post Offices [illegible]
Professional Architects and Public Patronage [illegible]
Courts" From California to the New York Island [illegible]
Statehood for Texas and a New Federal Building in Galveston [illegible]
Building and Rebuilding in Des Moines and Biloxi [illegible]
Moving Further, Farther, and Higher [illegible]
Westward Expansion: Denver, Missoula, and San Diego [illegible]
Offshore and Across Land: Puerto Rico and Alaska [illegible]
Sky High in New York City [illegible]
Architectural Statements and Obsolescence [illegible]

The relationship between courts and democracy is at the center of this book, and the principal claims can be set forth simply. First, adjudication is proto-democratic in that courts were an early site of constraint on government. Even when judges were required to be loyal servants of the state, they were instructed to "hear the other side" and told not to favor either the rich or the poor. When resolving disputes and sanctioning violations of their laws, rulers acknowledged through public rituals of adjudication that something other than pure power legitimated their authority.

Second, democracy changed adjudication. "Rites" turned into "rights" imposing requirements that governments provide "open and public" hearings and respect the independence of judges. Courts developed alongside the press and the post as mechanisms for the dissemination of knowledge about government. Yet adjudication made a special contribution, offering a space in which ordinary persons gained, momentarily, the ability to call even the government to account. The circle of those eligible to come to court enlarged radically, and the kinds of harms recognized as wrongful multiplied.

Not only did all persons gain rights to equal treatment and dignity; they were also recognized as entitled to occupy all the roles" litigant, witness, lawyer, judge, juror" in courts. The nature of rights changed as well, as whole new bodies of law emerged, restructuring family life, reshaping employee and consumer protections, and recognizing indigenous, civil, and environmental rights. Courts rescaled in local and national contexts to cope with rising filings. Crossing borders, governments came together to create multi-national adjudicatory bodies, from the "Mixed Courts of Egypt" and the Slave Trade Commissions of the nineteenth century to the contemporary regional and international courts, such as the International Court of Justice and the International Criminal Court. The evolving norms reorganizing the role of the judge and imposing new obligations for courts moved from local to national to regional and trans-national institutions.

Third, both the longevity and the transformation of courts can be seen through tracing the shared political icons of the female Virtue Justice and of buildings called courthouses. Looking at the evolution and changing configurations of places designated courts enables one to map dramatic shifts in the scope and ambitions of governments. Over time Justice became a symbol of government and courts an obligation of governance. Further, as everyone became entitled to use courts, conflicts emerged about how to personify Justice, what "she" should look like, and what symbols deserved places of honor.

Fourth, democracy has not only changed courts but also challenges them profoundly. Most governments do not adequately fund their justice systems to make good on promises of equal justice before the law. Contemporary responses depend on various modes of privatization, including reconfiguration of court-based processes to manage and settle disputes outside the public purview, devolution of factfinding to agencies and tribunals where judges are less visible and independent and the processes less public, and diversion of decisionmaking to private arbitration and mediation. These incursions are masked by a spate of courthouse building projects creating architecturally important structures that are, in some respects, distant from the needs for adjudication and the daily activities of judges. Most of the new courthouses, often clad in glass to mark justice's transparency, celebrate courts without reflecting on the problems of access, injustice, opacity, and the complexity of rendering judgments.

Fifth, the movement away from public adjudication is a problem *for* democracies because adjudication has important contributions to make *to* democracy. Adjudication is itself a democratic process, which reconfigures power as it obliges disputants and judges to treat each other as equals, to provide information to each other, and to offer public justifications for decisions based on the interaction of fact and norm. Thus Jeremy Bentham's insistence on "publicity" Jürgen Habermas's interest in the "public sphere" and Michel Foucault's understanding of the power of surveillance inform our thesis of the distinct place for courts in producing, redistributing, and curbing power.

Sixth, courts as we know them today are recent inventions. The possibility offered of what Nancy Fraser has called participatory parity is an outgrowth of social movements pressing governments to treat all persons with dignity and accord them equal status under law. Yet, while monumental in ambition and often in physical girth, the durability of courts as active sites of public exchange before independent judges ought not be taken for granted. Like other venerable institutions of the eighteenth century the postal service and the press courts face serious challenges in the twenty-first.

Our task is to document these six claims. In this book, we trace the imagery that became the political iconography of town halls as well as the elaboration of purpose-built structures that came to be called courthouses. We move across oceans and ideas to map the emergence of rights that shifted the paradigm of legitimacy for governments. From the eighteenth through the twentieth-first centuries, interactions among lawyers, architects, judges, and government administrators captured political commitments and economic support for courthouses. We illustrate these phenomena through sketches of the development of courts in the United States, of major building projects in France, Israel, Finland, and a few other countries, and of the regional and international courts of the Americas, Europe, and the United Nations. After examining transnational efforts to develop alternatives to adjudication, we turn to the future of courts, which occupies the final segment of the book. Drawing on examples from South Africa, Mexico, Australia, and Minnesota, we provide images of what a democratic iconography of justice struggling to deal with failures and challenges as well as authority could entail.

This work emerged from our teaching, focused on courts and the function of judges and lawyers in criminal, civil, and administrative cases in both domestic and transnational justice systems. We have also worked as lawyers in courts, testified to legislative and judicial committees about court and sentencing reform, and been involved in projects for courts. Throughout, we have been the grateful recipients of knowledge from many people who have been generous with their time. While we cannot name them all, we would be remiss in not identifying several who have contributed to this project.

Aspects of these materials have been presented at seminars and workshops at our home base, Yale Law School, as well as at our prior home, the University of Southern California (USC). The deans at both institutions Dorthy Nelson and Scott Bice of USC, Anthony Kronman, Harold Koh, and Robert Post of Yale provided sustaining support, as did the librarians, specifically Camilla Tubbs, Mike Widener, Gene Coakley, and Blair Kauffman of Yale and Albert Brecht, Fannie Fishlyn, and Pauline Aranas of USC, all of whom enabled access to diverse, eclectic, and hard-to-find materials. Technology has also been required and, but for Susan Monsen who heads Yale Law School's Information Technology Services, and her colleagues Kevin Bailey and John Zito, we would not have been able to do the research and amass the materials for this volume. Their help, coupled with assistance from Marilyn Cassella, Lucinda Currell, Aaron Weiss, and Cassie Klatka, brought the pieces together.

In addition, we benefited from exchanges at colloquia and lectures at Yale's Global Constitutionalism Seminar; the American Philosophical Society; Benjamin N. Cardozo School of Law; Columbia Law School; Indiana University's Maurer School of Law; Villanova Law School; Princeton University's Program in Law and Public Affairs; Hebrew University's Faculty of Law; the Academic Center of Law and Business at Ramat Gan, Israel; Birkbeck College of the University of London; the London School of Economics and Political Science; and University College London (UCL); as well as from meetings of the Law and Society Association and at the Association of American Law Schools. At UCL, we had the good fortune to receive help from Philip Schofield, who is the head of its Bentham Project. Our forays into Renaissance iconography were launched under the tutelage of Jennifer Montagu and Elizabeth McGrath at the Warburg Institute of the University of London and prompted, in part, by conversations with Robert Cover.

Many scholars, judges, lawyers, court administrators, government officials, architects, artists, art experts, editors, photographers, librarians, archivists, colleagues, students, and friends have given advice, provided access to materials, taken pictures, or read chapters related to their expertise. The Note on Sources identifies various of the venues, libraries, and collections that contributed to this project, and we are grateful for their welcome and support. In addition, thanks are due to Rosalie Silberman Abella, Leslie Alden, Joseph Anderson, Michael Asimow, Caleb Bach, Emily Bakemeier, Aharon and Elika Barak, Emily Bazelon, Seyla Benhabib, Myriam Besnard, Michael Black, Laurence Blairon, Celeste Bremer, Stephen Breyer, Lea Brilmayer, Thomas Buergenthal, Guido Calabresi, Paul Carrington, Rafael Cauduro, Oscar Chase, William Clift, Morris Cohen, Moishe Cohen-Eliya, Judith Colton, Olga Marta del Carmen Sanchez Cordero de Garcia Villegas, Paola Pineda Cordova, John Darcy, Jose Ramon Cossio Diaz, Alexander Dyck, Steven Croley, Stephanie Curtis, Jonathan Curtis-Resnik, Geoffrey Davies, Joseph A. Saur, Kim Lane Scheppele, Garth Schofield, Richard Schottenfeld, Peter Schuck, Barbara Shailor, Fred Shapiro, Reva Siegel, Jessica Silbey, Susan Silbey, James Silk, Kathryn Slanski, Elinor and Robert Slater, Simon de Smet, Christina Spiesel, Alec Stone Sweet, David Tait, Ulysses Gene Thibodeaux, Cheryl Thomas, Herdis Thorgeirsdottir, Gerald Bard Tjoflat, Anne Tompkins, Frank Turner, William Vickery, Patricia Wald, James Waldron, Janet Walker, Angela Ward, Marilyn Warren, Patrick Weil, Ruth Weisberg, Laura Wexler, Luzius Wildhaber, Joan Winship, Douglas Woodlock, Harry Woolf, William Young, Theodore Ziolkowski, and Elizabeth Zoller.

We have been able to use materials in languages other than English and French because of translations from colleagues, friends, and students. Special thanks are owed to Chavi Keeney Nana (Dutch); Kirsti Langbein (Finnish); Stella Burch Elias (German, old and new, and French); Elinor, Rachel, and Robert Slater (Hebrew); Allison Tait, Julia Schiesel, and Tess Dearing (Italian and French); Nicholas Salazar (Latin); and Laurie Ball, Tina Esteves-Wolff, and Sophie Hood (Spanish).

A legion of students, past and present, have supported our efforts and educated us. Thanks do not capture all that we owe to one of them, Allison Tait, nor is the appellation ⊠student⊠ quite right for her. Allison Tait received her Ph.D. in French from Yale before becoming a member of the Yale Law School class of ⊠⊠⊠⊠. During the past three years, Allison collaborated on all aspects of this work, offering wisdom, research, and editorial suggestions based on her many literacies as she kindly guided others in bringing this production to fruition. In addition, Adam Grogg, Elliot Morrison, Kathleen Claussen, and Phu Nguyen, when law students at Yale, took on major roles in research and in editorial management, as did Yale undergraduates Naima Farrell, Dane Lund, Rose Malloy, Nicholas Makarov, and Lauren Ross. We were all joined in this work by many other students in years of research forays, both far-flung and conventional. Our thanks to Tanya Abrams, Kate Andrias, Laurie Ball, Grant Bermann, Joseph Blocher, Chesa Boudin, Elizabeth Brundige, Maria Burnett, Cassie Chambers, Josh Civin, Laura Coppola, Travis Crum, Victoria Degtyareva, Katherine Desormeau, Stella Burch Elias, Ruth Anne French-Hodson, Joseph Frueh, Jason Glick, Laura Greer, Hanna-Ruth Gustafsson, Katherine Haas, Laura Heiman, Paige Herwig, Brian Holbrook, Sophie Hood, Hannah Hubler, Johanna Kalb, Marin Levy, Kamila Lis, Alison Mackenzie, Carole Martens, Bonnie Meyersfeld, Elliot Morrison, Chavi Keeney Nana, Anna Horning Nygren, Joseph Pace, Matthew Pearl, Jennifer Peresie, Natalie Ram, Bertrall Ross, Julia Schiesel, Laura Smolowe, Brian Soucek, Vasudha Talla, Emily Teplin, Larisa Terkeltaub, Alana Tucker, Sarah Jordan Watson, and Steven Wu.

Aspects of various chapters have been published in different forms, including Dennis E. Curtis and Judith Resnik, Images of Justice, ⊠⊠ ⊠*ale Law Journal* ⊠⊠⊠⊠ (⊠⊠⊠⊠); Judith Resnik and Dennis E. Curtis, Representing Justice: From Renaissance Iconography to Twenty-First-Century Century Courthouses (the Jayne Lecture), ⊠⊠⊠ *Proceedin⊠s of the ⊠merican Philosophical Societ⊠* ⊠⊠⊠ (⊠⊠⊠⊠); Judith Resnik and Dennis E. Curtis, From ⊠Rites⊠ to ⊠Rights⊠ of Audience: The Utilities and Contingencies of the Public's Role in Court-Based Processes, in ⊠*epresentations of Justice* (Antoine Masson and Kevin O'Connor, eds., Brussels: P.I.E. Peter Lang, ⊠⊠⊠⊠); Judith Resnik, Courts: In and Out of Sight, Site, and Cite, ⊠⊠ ⊠*illanova Law* ⊠*eview* ⊠⊠⊠ (⊠⊠⊠⊠), and Managerial Judges, Jeremy Bentham and the Privatization of Adjudication, in Common Law, Civil Law and the Future of Categories (Janet Walker and Oscar G. Chase, eds., Markham, Can.: LexisNexis Canada, ⊠⊠⊠⊠), also published in ⊠⊠ S.C.L.R. (⊠d) ⊠⊠⊠ (⊠⊠⊠⊠). Editorial suggestions came from all those venues, with special thanks owed to Susan Babbitt of the American Philosophical Society.

We have had the generous support and thoughtful engagement of Michael O'Malley at Yale University Press; our thanks also to Jenya Weinreb and Jack Borrebach and to Peter Strupp and the staff of Princeton Editorial Associates. Finally, Yale University itself has provided us with remarkable resources, support, and colleagues.

Judith Resnik and Dennis E. Curtis

A Pictorial Puzzle

The image shown in figure [illegible] ran during the summer of [illegible] on the cover of the English magazine *The [illegible]conomist*[illegible] As the headline, [illegible]Unjust, Unwise, Un-American[illegible] makes plain, the cover story criticized the government of the United States for using an ad hoc [illegible]terrorist tribunal[illegible] instead of its regular courts to try individuals accused of being terrorists.[illegible] The editors assumed that readers would understand the visual accusation[illegible] the picture of a blindfolded woman, draped in Grecian robes and holding scales and a sword, seen through the crosshairs of a rifle's scope aimed at her heart.

One purpose of this book is to explain why the publishers of *The [illegible]conomist* had the confidence to rely on this image to sell their magazine internationally. They were not, after all, marketing only to people familiar with this remnant of Renaissance iconography. The editors knew that viewers would connect the picture to justice gone awry rather than to warrior princesses or Roman deities. The confidence that consumers would be neither bewildered nor confused came from the fact that this publication was not alone in appropriating the image of Justice. One can find her everywhere[illegible] in courts and in commerce, as a serious emblem or a foil.

A rapid world tour shows her ubiquity. Another example, the statue [illegible]*ustitia* (Justicia, or Justice) (fig. [illegible]), is from North America. Along with a figure called [illegible]*eritas* (Truth), she is one of two large stone statues chosen to bracket the entrance to the [illegible] building of the Canadian Supreme Court in Ottawa.[illegible] By traveling thousands of miles to Brisbane, Australia, one can see another such statue, labeled *Themis* after a Greek goddess of Justice (fig. [illegible]) and placed in front of a court complex in [illegible]. Her photo also graces the cover of the holiday card of the Supreme Court of Queensland, which explains that, in order to [illegible]emphasise that the statue is an emblem of Justice in this State, the seal of the Supreme Court is embossed on the buckle of the belt worn by the Goddess.[illegible]

Farther south in Melbourne, Australia, a huge aluminum *Lad[illegible] of Justice* (fig. [illegible]) can be seen from a busy street to mark the County Court of Victoria.[illegible] Indicating no specific [illegible]age, race or religion[illegible] she becomes, according to the sculptor, the image of [illegible]equality and fairness.[illegible] Moving to Zambia, Africa, one finds another *Lad[illegible] Justice* (fig. [illegible]), which was placed in front of one of its courts in [illegible].[illegible] The message, as described by one of the justices of Zambia's Supreme Court, is that [illegible]the judiciary will dispense justice and fearlessly defend the rule of law without favour.[illegible] The Zambia Association of Women Judges then used the figure for its logo, transferring it as a repeated pattern to brightly colored orange and black cloth used for dresses (fig. [illegible], color plate [illegible]).[illegible]

This travelogue continues with two European images from Azerbaijan, where a statue labeled *Themis* (fig. [illegible]) sits in the Constitutional Court; another rendition, with scales, sword, and blindfold, is the centerpiece of a [illegible] calendar (fig. [illegible]) provided by the Ministry of Justice.[illegible] Crossing land and oceans to South America, a *Justice* (fig. [illegible]) outside Brazil's Supreme Court identifies the courthouse building within the complex of government buildings in Brasilia.[illegible] Moving west across the Pacific Ocean, one can see the entrance (fig. [illegible]) to the [illegible] building for the Supreme Court of Japan. There, another *Justice* (fig. [illegible])[illegible] with distinctive elements [illegible] sits inside the foyer.[illegible]

Figure [illegible] returns us to the popular media. Taken in April of [illegible] during the first phase of the war in Iraq, the photograph of a defaced Saddam Hussein mural accompanied a story titled [illegible]U.S. Seeks Solid Core to Fix Iraq's Broken Legal System.[illegible] The *New [illegible]ork Times* captioned the photo [illegible]Saddam Hussein with the Scales of Justice in a mural in Baghdad[illegible] Like the large wall sculpture of *Lad[illegible] Justice* in Melbourne, this imposing mural was to be seen from city streets. Its disfigurement captures a regime just toppling.[illegible] The mural recorded Hussein's intent to personify a modernized version of legal, cultural, and religious authority by joining Western garb with a shaykh's robe while holding scales of justice. Hussein here repeated a gesture used over centuries by an array of political leaders, such as in a

painting by Rubens of the French Queen Marie de Medici and one by Verrio of Queen Anne of England, both also posed as the embodiment of Justice.⍰⍰

The cover of *The ⍰conomist* is a reminder that, in addition to adorning government buildings, Justice is readily deployed as a stock figure in the media and in advertisements. Iconography invoking Justice is a staple in a brisk trade aimed at selling books, briefcases, and jewelry to lawyers. One example is a catalogue cover (fig. ⍰⍰) for a law publishing house, Matthew Bender. The photograph is of *Justice,* a statue that has stood (first in wood and then in copper) since ⍰⍰⍰⍰ on top of New York's City Hall.⍰⍰ Her presence was initially noteworthy, as recorded in a nineteenth-century travel guide invoking verse from a once-famous poem of ⍰⍰⍰⍰:

> ⍰And on our City Hall a Justice stands⍰
> A neater form was never made of board⍰
> Holding majestically in her hands
> A pair of steelyards and a wooden sword,
> And looking down with complaisant civility
> Emblem of dignity and durability.⍰⍰⍰

Justice also plays a role in whimsy, which is evident from a dip into contemporary North American pop culture. In ⍰⍰⍰⍰, in celebration of cartoonist Charles Schulz, creator of the comic strip *Peanuts,* the city of St. Paul placed *Lad⍰ Justice Luc⍰* (fig. ⍰⍰, color plate ⍰) in front of the William Mitchell College of Law.⍰⍰ Alongside such friendly renditions, satirists regularly rely on Justice iconography to make less happy references, as can be seen from cartoons that were published over a fifty-year period in the United States.⍰⍰

In ⍰⍰⍰⍰, a brief-lived magazine called ⍰*acts ⍰orum News* used a cartoon (fig.⍰⍰) of a blindfolded likeness of Earl

Warren, then Chief Justice of the United States Supreme Court, to accuse that Court of a ⊠blind disregard for the Constitution.⊠⊠In ⊠⊠⊠⊠, the *Los ⊠n⊠eles Times* ran the Paul Conrad cartoon shown in figure ⊠⊠. Its Justice holds a coat hanger instead of scales to suggest the cruder methods used to induce abortions prior to the Supreme Court's recognition that abortion rights (here invoked through the case named ⊠*oe v⊠ Wade*) were constitutionally protected.⊠⊠ Moving forward almost three decades, in ⊠⊠⊠⊠ the *Wall Street Journal* relied on scales and a blindfolded man (fig. ⊠⊠) to echo the text of a story about the ⊠flawed⊠ aspects of the justice system in China.⊠⊠

These dozen-plus images, the tip of a visual iceberg, anchor a first point. Throughout the twentieth century and into the twenty-first, Justice imagery has been used on government buildings and in representations of political personages in magazine articles, newspapers, advertisements, and cartoons. These various deployments all rely on the fact that we (people living in Europe, North and South America, Africa, Australia, and Asia) can ⊠read⊠ them. We recognize an oddly dressed woman with her various attributes (scales, sword, and sometimes a blindfold) as representing or referring to law and justice. Designers of contemporary courts, purveyors of goods and services, and cartoon artists know that placing this figure in front of their building or on a placard prompts viewers to make an immediate association with law. This linkage of state power with Justice images spans continents and differently constituted polities.

A Virtuous Visual Competition

The Cardinal and Theological Virtues in a *Ps⊠chomachia*

As those steeped in European history know, the Justice recognized today dates from the Medieval and Renaissance periods. The sixteenth-century print of ⊠*usticia* (fig. ⊠⊠) by Cornelis Matsys, showing her with scales, sword, and billowing garments,⊠⊠ is one of hundreds of classical images available in archives and on museum and building walls.⊠⊠

Consider that image alongside another engraving by Matsys (fig. ⊠⊠) showing two figures.⊠⊠ One is an easily recognized Justice. The other woman is looking in a mirror, which is not a clue useful to many contemporary viewers. For art historians, however, the mirror with its reflecting gaze pegs her as Prudence.

In many centuries, Justice and Prudence, joined by Fortitude and Temperance,⊠⊠ formed a quartet called the Cardinal Virtues, grouped together so often that commentators sometimes referred to one as ⊠missing⊠ when only three were presented. Derived from discussions by Plato, Cicero, and St. Thomas Aquinas,⊠⊠ the foursome was shown in paintings and engravings and on decorative objects. Sometimes, they appeared alongside the theological trio of Faith, Hope, and Charity.⊠⊠

Those Virtues, in turn, overlapped with other sets now less well known. One group, the ⊠Gift Virtues⊠ was usually listed in an order beginning with Fear of God and followed by Piety, Knowledge, Fortitude, Prudence, Understanding, and Wisdom.⊠⊠ Another, the ⊠Four Daughters of God⊠⊠ Mercy, Truth, Justice, and Peace⊠ taken from an Old Testament psalm, was featured in many Medieval texts.⊠⊠ Various of these Virtues were regularly depicted in an epic battle called the *Ps⊠chomachia* (after a famous fifth-century allegorical poem by Prudentius describing Christianity's triumph over paganism), enacting the moral struggle for a person's soul, which pitted seven Virtues against a symmetric group of seven Vices.⊠⊠

In practice, which Virtues and Vices were in combat varied in numbers, names, and pairs. In any given battle scene, Abstinence, Discipline, Humility, Loyalty, Largesse, Mag-

Figure ⊠⊠ *Justice and Prudence,* Cornelis Matsys, circa ⊠⊠⊠⊠.

Copyright: Warburg Institute, University of London.

nanimity, Modesty, Obedience, Patience, Peace, Simplicity, or Sobriety might be substituted or added to some of the Cardinal, Theological, or other Virtues.⊠⊠ Their opposites, in turn, included an array of Vices⊠ Anger, Avarice, Deceit, Despair, Discord, Envy, Extravagance, Gluttony, Greed, Inconstancy, Infidelity, Lechery, Lust, Pagan Idolatry, Pride, and Sloth.⊠⊠

These figures are sometimes identified through labels and sometimes by attributes⊠ such as scales for Justice, armor or a broken column for Fortitude, an olive branch for Hope, or a bridle and a pitcher for Temperance.⊠⊠ But the imagery varied by period, place, and artistic impulse, such that any particular Virtue can be found with an odd lot of attributes. Images of Justice are shown, for example, holding cornucopias, lictor rods, orbs, books, and tablets; nearby are a mix of animals and birds including dogs, snakes, ostriches, and cranes.

As for their gender, Virtues typically took the female form⊠ thereby reflecting their roots in Egyptian, Greek, and Roman goddesses,⊠⊠ the feminine gender of the Latin nouns that they represented, and the gender ascribed to them by various early literary personifications such as the *Ps⊠chomachia*⊠ By the late Middle Ages, artists had come to use the male form for certain Vices.⊠⊠ How and why words, activities, or abstractions came to be gendered is a topic of feminist theory, for the iconography reflected, produced, and codified sex-role distinctions.⊠⊠

The Cohort

Justice is central to this book but did not become a regular participant in the conflict between the Virtues and Vices until the twelfth century.⊠⊠ In time, scenes of battles were replaced by more static displays of opposing forces, or the Virtues and Vices were shown on branches of a tree.⊠⊠ Images of the triumph of goodness came to prominence, with the Virtues depicted as standing above their corresponding Vices, laid low, destroyed or humiliated through

conquest. As the Virtues became parts of Christian scenes of the Last Judgment and then adorned the portraits of various earthly rulers, the Vices receded from view (politically more than theologically).

The long list of the many Virtues, accompanied by elaborated philosophies addressing their interdependencies, hierarchies, and distinctions, provides evidence of a competition that once existed for our visual education and our political imagination. By the late Medieval period, Church leaders were providing these images as part of their instructional programs to wide and diverse audiences that were schooling on moral and religious obligations embodied in various Virtues such as Hope, Faith, Charity, Prudence, Temperance, and Fortitude, as well as in Justice.

As town leaders began to erect new civic structures to augment the meeting places provided by churches and markets, they put pictures of the Last Judgment, sometimes accompanied by depictions of Virtues, on those walls. Over time, Justice became the emblem prominently displayed on many an exterior of a European town hall. By the sixteenth century, allegorical engravings were distributed in print, and various Virtues graced the designs for the coats of arms of many burgher states and some of the ruling families in middle Europe.

That a host of Virtues were once part of the "common currency" can be seen by turning to a well-known series painted by Raphael for a room in the Vatican called the Stanza della Segnatura and reproduced through hundreds of engravings. The print by Veneziano after Raphael's *Prudence* (fig.) shows her again as an imposing woman looking at herself in a mirror. In this rendition, Prudence has been given a second face (that of a bearded old man) at the back of her head. Looking back, she is said to be able to comprehend the past. Through the mirror, she is supposed to be able both to contemplate the present and to look to the future. These self-reflective and multiply focused gazes were to indicate Prudence's practical wisdom, grounded in knowledge both introspective and wide-ranging.

Veneziano's *Temperance* (fig.) has a bridle, one of her stock attributes used to symbolize self-restraint. *Fortitude* (fig.), from around the same period and by the school of the artist Marcantonio Raimondi, wears a helmet with a small lion perched on top and holds a broken column all intended as references to power, endurance, and strength. The imagery from the Vatican is illustrative of the governing ideology of the era, in which the Cardinal Virtues adorned spaces that were simultaneously religious and political.

But one did not need to travel to Rome in order to see such displays. Joining an array of other Renaissance images, the Virtues were catalogued and popularized in the com-

pendia of graphic allegories and emblems produced during the sixteenth century by Andreas Alciatus, Cesare Ripa, and others. Their works were illustrated, embellished, and widely reproduced as the printing press permitted many editions and extrapolations in various languages. Through didactic and repetitive invocations in art and literature, on tarot cards, and in political and theological theory, these Virtues provided a common set of references across a broad geographical span.

Yet the many Virtues, save Justice, are largely lost to general knowledge. Most of the people walking into courthouses, reading cartoons, or buying magazines would not look at a woman holding a mirror and know either that she represented Prudence or that this Virtue was once posited as a requirement of good government.

Justice's Ascent

What accounts for Justice's visual accessibility? Why is she a part of today's popular knowledge while other Virtues (and Vices) all also with their own distinctive attributes, myriad depictions by governing powers, and substantial interpretative literatures about their philosophical implications are lost to contemporary view? Why has Justice eclipsed her sibling Virtues not only as a kind of shingle to hang outside a government building but also as a central theme of modern governments? Why are law and political theory not awash with ideas about the necessity of engaging in practices of Temperance, Fortitude, Prudence, Wisdom, or Charity as well as of Justice?

In addition to the first purpose of this book, which is to map how the pre-democratic emblem of Justice became an icon for twentieth-century governments, a second objective is to respond to questions about why her siblings dropped from sight in the law. Some argue for the naturalness of Justice's ascendancy to the apex of a hierarchy of Virtues. Further, as Aristotle's *thics* became integrated into Christian theology and political theory, this Virtue (sometimes translated as Righteousness) related to various state activities, from enforcement of criminal laws (penal justice) to regulation of commerce.

Moreover, for centuries, discourses about justice have sought to explain what it means to be just through delineating relationships among ideas of equity, charity, mercy, retribution, and justice. Writing in the thirteenth century, St. Thomas Aquinas famously distinguished between two forms of justice. Distributive justice was the provision of honour, money, benefit, or other thing semblable to render what is due to each person, as determined by a criterion of proportionality between individual worthiness and the goods being distributed. In contrast, commutative justice dealt with inequalities by an arithmetical mean . . . such that the suffering or loss of one is balanced by the suffering or loss of another. Seeking to apply these notoriously unclear distinctions, some classified distributive justice as the allocation of common goods to individuals in proportion to their contribution to the common good, while commutative justice concerned transactions between two persons with the losses suffered by one compensated by the other in proportion to the injury incurred. The sixteenth-century French political theorist Jean Bodin added harmonic justice to mediate between distributive and commutative justice. Questions of the purposes and effects of these many facets of justice were replayed in literary works, such as Spenser's *The aerie ueene,* and in debates over centuries among religious and political philosophers.

But Justice was not the sole Virtue promoted as superior. Plato can be read to have put Sapientia (Wisdom) in first place followed by Temperance; from the union of these two with Courage issues justice. Or one might understand Platonic Virtues to function as a set, always interdependent and all equally essential for a polity to thrive. Some Christian theologians identified Caritas (Charity) as the mother of all the virtues. Others placed Prudentia (Prudence or practical wisdom) first among the Cardinal Virtues, serving as the Lantern that preceded the others. Temperance also had a claim to top billing as the one necessary before any of them *are* virtues. Alternatively, it was Concordia (Peace) that was said to be the central value of civic life. Rankings also varied with categories, such that Justice was the highest moral virtue, Wisdom the highest intellectual virtue, and Charity led the list of theological virtues.

Justice's Violence

The shifting hierarchies among various Virtues make it simplistic to assume that her contemporary ubiquity was inevitable. Instead we argue that Justice's remarkable longevity stems from her political utility, deployed because of a never-ending need to legitimate state violence. The imposition of law in both civil and criminal contexts disrupts ordinary persons' lives. Not all political theories of leadership require wise, restrained, and generous governance, but all rely on authority to maintain order by sanctioning those deviating from communal norms. During ages in which faith in various conceptions of a god were pervasive, the premise that the king (and his judges) were earthly representatives of a divinity cushioned the violence of law. In Medieval town halls, scenes of the Last Judgment adorned walls, often with parallel depictions of decisions made on the ground.

But debates emerged about what powers were properly held by monarchs and how authority was delegated to lower officials. Problems of legitimacy came alongside the growth of republican governance. The judgments of all-too-mortal judges were in need of anchors beyond sheer power. As beliefs shifted and conflicted when localities and states separated from religious empires, and as popular consent gained some relevance to legitimate government,

a different imagery developed. Localities created dedicated spaces for judgment—courthouses—and used them not only functionally for trials and meetings but symbolically to underscore their economic girth and political aspirations. New public spaces, typically accessible to spectators, sought to assuage concerns about the imposition of authority through a promise of even-handed treatment for those who came within their ambit, either as criminal defendants charged with violating the state's peace or as civil litigants seeking state assistance in resolving disputes.

Behind the increasingly imposing facades of town halls and courthouses adorned with the decorative figure of Justice lay an economic story of competition for commerce, a political effort to generate civic identities, and less cheerful facets of law's import. Every act of judgment results in state imposition of force, reallocating property from one civil claimant to another or depriving criminal defendants of their liberty and (in some eras and places) of their lives. Every government seeks to demonstrate its ability to provide peace and security by employing such violence, and every government needs to legitimate its own use of force against the disobedient by demonstrating that those who have breached the ruler's law are identified and sanctioned after being found responsible.

In the chapters that follow, we map the ascendancy of Justice as a marker of governments and the ascendancy of adjudication, enshrined in courthouses around the world, as a *sine qua non* of democratic governance. We turn to pictures on the walls of European town halls to understand how rulers claimed that Justice was essential to good governance and how they used public demonstrations of the power to impose punishment in the name of "peace and security." Over time, those performances helped produce norms that law's violence be justified rather than arbitrarily inflicted.

Visualizing Justice's Pain and Challenges

A third objective of this book is to show contemporary viewers that more has been lost than recognition of the many Virtues that once dotted public places. Today's austere and celebratory courthouses offer few clues to the consequences, challenges, or failures of justice systems. Rulers once paraded before local audiences a much harsher understanding of what doing justice entailed. Various allegorical paintings linked Renaissance governments to classical and biblical ancestors, and a few—such as depictions of the Last Judgment and the Judgment of Solomon—remain familiar. But other pictures, once easily comprehended, focused on the pain that rendering judgment imposed not only on those judged but also on those who served as judges.

Several European Renaissance town halls (including the monumental seventeenth-century building still extant in Amsterdam) featured the narratives of the Judgment of Brutus, a Roman envoy who sent his sons to their deaths because they violated the laws of the state.[illegible] Also on display was Zaleucus, a Greek lawgiver who, when obliged to punish his son for breaching edicts, gouged out one of his own eyes rather than inflict total blindness on his son. People who walked into the Town Hall at Bruges saw a large painting of a corrupt judge, Sisamnes, vividly being flayed alive at the order of the Persian King Cambyses. Those who entered the Town Hall of Geneva were greeted with a long mural aptly named *Les Juges aux mains coupées* (*Judges with Their Hands Cut* [illegible]), for it showed several judges whose limbs had been severed.

What did such scenes try to teach, and why are they now gone from sight? During the Renaissance, the good judge was the obedient judge, loyal to a king or emperor and holding office only at the pleasure of rulers.[illegible] Rulers used classical stories not only to remind the populace of religious and historical traditions grounding their authority but also to remind judges of their servitude to the state. Rulers offered analogies of their guardianship of subjects to parental responsibility for children, both in authoritarian hierarchies obliged to enforce rules.[illegible] The resulting punishments were also meted out in public, with stockades, racks, and guillotines providing gruesome spectacles that counseled against disobedience.[illegible]

In subsequent centuries, a very different conception of the judge came to prominence, as that jurist was repositioned to be independent of the executive and empowered to serve as a check against government. Political theories celebrated not only the desirability but the necessity of separation of powers and of judicial constraints on executive action. By [illegible], for example, England protected judges by statute.[illegible] That idea traveled across the Atlantic, where it was adapted in the Massachusetts Constitution of [illegible], then enshrined in the United States Constitution's guarantee of life tenure for its federal judiciary,[illegible] and thereafter migrated around the world. Punishment, in turn, moved indoors, as the construction of large penitentiaries accompanied a wave of courthouse building. Personifications of Justice continued to be used to mark a building as a court of law. Stony figures, occasionally blindfolded, were explained to denote the appropriate distance between judge and government.

What have been lost from sight are expressions of the pain entailed in doing justice. As the opening travelogue of contemporary courthouses suggests, governments that are so welcoming of adjudication as essential to their work do not put on display the many challenges entailed within the democratic promise of "equal justice for all." With a few exceptions, such as the murals in Mexico's Supreme Court building and the decision to site South Africa's Constitutional Court where a prison from the Apartheid era had stood, governments mostly proffer impressive courthouses as affirmations of the justice of their authority.

Justice iconography thus serves as a testament both to the longevity of political symbolism and to its plasticity, as

some attributes are reread and others attrit.□□ During the Renaissance, Justice came with a motley array of flora, fauna, and objects. Once she was displayed with an ostrich, explained by reference to the bird's reputed ability to digest everything and to its feathers of equal length. Today suggesting that a courthouse show an ostrich would prompt quizzical amusement.

In contrast, many contemporary commentators presume that a blindfold is not only an appropriate but a necessary appendage, always worn by Justice to signify law's impartiality. But, as we detail, clear-sightedness was valorized in Medieval Europe, while covered eyes denoted an inability to see the light of truth. A fool was shown putting a bandage over Justice's eyes to capture how easily law could be led astray. Thereafter telescopes, microscopes, and photography demonstrated the complex relationship between sight and knowledge, and psychologists and philosophers puzzled about how fair judgments were shaped. The blindfold then gained a new valence as an emblem of a desirable □veil of ignorance□ to borrow the metaphor of political theorist John Rawls.□□ But others□ such as the poet Langston Hughes□ protested that Justice's blindfold hid □festering sores / That once perhaps were eyes□ because legal systems failed to confront the injustices of social and political inequalities.□□ Contemporary constitutional conflicts over whether legal rules ought to be □color blind□ or to take differential circumstances into account are captured in artistic renditions in which the eyes of Justice are sometimes shaded, sometimes obscured, and sometimes clearly sighted. What Justice ought to □see□ and inferentially to know, continues to be contested.

Adjudication's Transformation: Access for All before Independent Judges in Open Courts

As this book makes plain, adjudication is an ancient practice. Our fourth aim is to show that the practice of adjudication helped to shape democratic norms about government's relationship to the public. We trace how some features of old-style judging (even-handed treatment of those affected, some constraints on arbitrary power, and a degree of public accounting for actions) contributed to democratic ideas. The many visual displays that adorned town halls repeated themes of power grounded in knowledge, wisdom, and uncorrupted judgment. Injunctions to □Hear the Other Side□ inscribed in Latin (□*udi et* □*lteram partem*) on town halls of the seventeenth century, became embedded in constitutional obligations termed □due process.□

But democracy has radically transformed adjudication. A fifth purpose of this volume is to document the profoundly challenging impact that democratic precepts have on courts. We have already noted the shift in the role of the judge, who gained a kind of independence unique for government employees. Two other aspects of modern adjudication□ public access and political equality□ are also novel. During the Renaissance, the public was invited to watch spectacles of judgment and of punishment. Yet, while witnessing power, the public was not presumed to possess the authority to contradict it. Unruly crowds were a possibility, prompting (as Michel Foucault analyzed) the privatization of punishment.□□ In contrast, court judgments became obligatorily public, as illustrated in the □□□□ Charter of the English Colony of West New Jersey, which provided that □in all publick courts of justice for trials of causes, civil or criminal, any person or persons . . . may freely come and attend.□□□

A century later, the new states in North America took this precept to heart, as the words □All courts shall be open□ were reiterated in many of their constitutions. Interacting with a new sense of entitlement was the practice of □publicity□ to borrow Jeremy Bentham's term. Accessible courts, along with the press and the post, enabled what Bentham called the □Tribunal of Public Opinion□□□ to assess government actors. As Bentham explained, while presiding at trial a judge is □under trial.□□□ From the baseline of the Renaissance, the public's new authority to sit in judgment of judges and, inferentially, of the government that empowered them, worked a radical transformation. As □rites□ turned into □rights□ spectators became active participants. Courts were one of many venues contributing to what twentieth-century theorists termed the □public sphere□□ disseminating information that shaped popular opinion of governments' output.□□

It was not until the twentieth century, however, that all persons gained rights in many countries to be *in* courts□ as litigants, witnesses, jurors, lawyers, and (even more recently) as judges. Formal principles of equal treatment entitled a host of claimants, regardless of race, class, ethnicity, and gender, to fair hearings. As the transnational codification of the □□□□ United Nations Covenant on Civil and Political Rights proclaimed, □everyone shall be entitled to a fair and public hearing by a competent independent and impartial tribunal established by law.□□□

One measure of the success of these new commitments has been a rising number of filings in courts. A few numbers from the United States are exemplary. As of □□□□, state courts dealt with some □□ million filings annually. While the federal courts handled a much smaller number□ about □□□,□□□ civil and criminal filings, and more than a million bankruptcy petitions□ tracing the development of the federal system permits one to watch the role played by courts in shaping a national polity. Fewer than □□,□□□ cases were brought before the federal courts in □□□□; ten times that number were filed by □□□□.

Growing dockets beget judges. In the middle of the nineteenth century, fewer than forty federal (as contrasted with state) trial judges sat in courtrooms around the entire United States. By □□□□, more than □□□ judgeships existed at the trial level. Judges and cases□ and money and politicians □ beget courthouses. In □□□□, virtually no buildings owned

by the United States government (again, not the states) bore the name courthouse on their doors. The occasional federal courtroom was tucked inside custom houses or in spaces borrowed from states or private entities. By , more than federal courthouses so named existed.

Celebrating and Understanding New Demands

Civic leaders of recent centuries (like their Renaissance counterparts) sought to create symbols of presence, power, and prosperity. During the nineteenth century, facilities housing judges, postal services, town records, and jails were grafted onto the landscapes in cities and counties around the world. In both common law and civil law jurisdictions, these buildings served as social gathering places and theaters of justice. Over time, multi-purpose town halls and municipal centers no longer sufficed to contain expanding functions. In response, governments erected segregated, purpose-built facilities today called courthouses, jails, prisons, government office buildings, post offices, tribunals, and agencies. Again using the federal system in the United States as illustrative, the federal judiciary once decamped in what were modestly termed court quarters for judges. By the end of the twentieth century, the federal government had funded the largest building program since the New Deal for the renovation and construction of new courthouses. Excellence in design became the byword, as courthouse commissions went to high-profile architects rewarded for crafting signature buildings.

A parallel expansion of court resources can be found in many countries. During the latter part of the twentieth century, France launched a program resulting in several palais du justice modernes Israel commissioned a new building for its Supreme Court, and Australia funded a new federal courthouse. Courthouse building (as well as prison construction) became a major industry, with specialized associations focused on designs for the justice system. Local variations were complemented by a transnational idiom propelled by a marketplace of lawyers, judges, architects, and court administrators crossing national boundaries and shaping construction plans at the regional, national, and international levels.

Projects for a world court began with hopes for dispute resolution to take the place of war. In , Andrew Carnegie funded the Peace Palace in the Netherlands at The Hague to house the Permanent Court of Arbitration. Later, that impressive space was shared by the international courts of the League of Nations and the United Nations. A hundred years later, planning for another new court reflected less hope and more of the century's horrors, as countries joined the treaty establishing the International Criminal Court, with jurisdiction over genocide and other crimes against humanity. Advocates for a fixed site for that court argued the need for a building that could last forever.

Building Idioms: Transparency, Access, Identity, and Security

In short, while an ancient practice, adjudication has been reconstituted and acquired four attributes independent decisionmakers, requirements of public processes, a new ideal of fairness, and equal access for and equal treatment of all. A tour of the many new courthouses, serving as the new icons of justice, captures adjudication's centrality. Governments explain their decisions to case their courts in glass and to bathe them in light as representing the values transparency, accessibility, and accountability that undergird the exercise of force. These facilities often marry old Renaissance forms with newer technologies and aesthetics as they embrace the iconography of the Virtue Justice, augmented by an eclectic array of objects created through materials ranging from cloth and clay to bronze and steel.

Two ideals entailed in the democratic commitment of access to justice playing out in the buildings and their use need to be disentangled. One is that all persons have access to using the law. This new equality puts pressure on the visual displays within courthouses. Social movements about equality and identity reshaped both the images of justice and the dockets of courts. As women of all colors gained recognition as rightsholders, entitled to sue and be sued, to testify, and to judge, the stone female figure of Justice became less an abstraction and more a representation of a person, embodied. But who should decide how she Justice was to look

Once, elite groups of rulers and patrons controlled commissions filling courthouses with portraits of elder statesmen along with the draped (or naked) female figure of Justice. But twentieth-century ideologies produced conflicts over Justice's color and shape. Protests erupted in the s about a mulatto Justice in a federal courthouse in Aiken, South Carolina, as well as about a statue in Newark, New Jersey, that was said to smack blatantly of Communism. By the s, civil rights advocates found offensive a s mural in the federal courthouse in Jackson, Mississippi, where a scene portrayed the segregated South. In the s, Muslims objected to the display of Muhammad outside a courthouse in Manhattan, and in , debate ensued about a display in an Idaho courthouse of a mural showing an Indian about to be lynched.

A second aspect of access to courts shifts the focus from those authorized to bring claims to court to those who watch the audience. Edification of viewers (courts as theaters or schools) remains an objective of open courts, as do democratic objectives that power be constrained, transparent, and accountable. In the late twentieth century, courthouse construction became enmeshed in security concerns that shaped three separate circulation patterns to segregate judges from the public and criminal defendants from everyone. Yet, designers of major buildings continue to feature large open courtrooms, providing material references

to the political and legal commitment that courts are venues in which government and the populace interact.

Democracy's Challenges

The narrative of adjudication's triumph and its celebration is, however, complemented and complicated by an alternative understanding that emerged in the late twentieth century. Egalitarianism poses deep problems for polities that have thus far been unwilling to commit the resources that would support all the adjudicatory opportunities promised. As the ranks of rightsholders expanded, nations responded not only by creating more judgeships and by building yet more specialized structures but also by moving some forms of adjudication offsite, to administrative tribunals and to procedures that have come to be known by the acronym ADR alternative dispute resolution. Our sixth task is to map the resulting fragmentation and privatization of adjudication and its implications for courts.

Privatizing Process and Controlling Access

With soaring demands for adjudication, governments have responded by diversifying the venues for adjudication. Magnificent courts welcome some rights seekers to their halls but send others to much less visible and impressive settings administrative agencies or tribunals where lower-tier hearing officers work. In the federal system in the United States, for example, in four times more judges (often termed hearing officers) sat in federal agencies than in federal courts, and these administrative judges rendered tens of thousands of decisions in disputes brought by recipients of government benefits, such as veterans, employees, and immigrants seeking adjustment of their status.

In some respects, this evolution has served to increase the domain of adjudication, because agencies have modeled their own decisionmaking processes after those of courts. Yet this work occurs with judges less insulated from oversight by the executive and at sites generally inaccessible to outside onlookers. Many other claimants are dealt with by private providers, such as associations of arbitrators, where no rights of access for third parties exist and where no obligations of transparent accounting are imposed.

For those cases that remain within the courts, judges press litigants to avoid the public processes of adjudication whenever possible. In the s, England and Wales reformatted procedural rules to facilitate settlements, and in , the European Community issued a directive that all national courts promote mediation of cross-border disputes. Parallel movements across borders have shifted the ideology of judging away from the public acts of adjudication toward more private managerial roles, overseeing lawyers and promoting conciliation. With the devolution of adjudication to agencies, the outsourcing to private providers, and the reconfiguration of court-based processes toward settlement for both civil and criminal cases, the occasions for public observation of and involvement in adjudication are diminishing. By , in the federal courts of the United States, trials began in only two of a hundred civil cases, and the decline in the rate of trials (despite decades in which filings had risen) gained the moniker of the vanishing trial.

The Decline of Adjudication

The narration of adjudication's triumph, marked by hundreds of impressive courthouses around the world and the many guarantees of open and public courts in national and international conventions, gives an impression of invulnerability. But the contemporary fragility of two other institutions the press and the post also developed during the Enlightenment, ought to give one pause. The criticisms leveled against them inefficiency and a preference for private ordering are regularly applied to courts as well. Even as new courthouses provide aspirational monuments to a system of government-based public justice, they are becoming venues for the resourced elites and the outliers. On many a day, the austere hallways of various grand courthouses on both national and international levels are empty. Demand and use, however, remain high in lower level courts, as trial level and administrative judges in many systems report overload and inadequate resources.

Dramatic evidence of the retreat from courts came from policymaking by the Executive Branch of the United States government after the terrorist destruction of the World Trade Center's Twin Towers in September of . Eschewing both federal criminal trials and the military court system, the Department of Defense created a detention camp at Guantánamo Bay, a United States naval base in Cuba. The United States government first argued that persons there detained could not bring challenges to their detention or to the conditions of their confinement, including claims of torture.

Our opening image a Justice shown in the crosshairs of a rifle scope (fig.) was accompanied by commentary objecting to that shadow court system outside the reach of either Congress or America's judiciary. Rebuffed by the Supreme Court, the Executive Branch set up a process for classifying individuals alleged to be unlawful enemy combatants. Government officials asserted that they could control the access of detainees to courts, to their lawyers, and to the press. Further, the tribunals, deemed administrative were initially closed to the public.

Although one might be tempted to bracket the rules for alleged terrorists as unique responses to horrific events, analysis of other government regulations shows the continuum on which the decisionmaking regime at Guantánamo Bay sits. Ordinary prisoners confined in the United States, ordinary claimants under various federal laws, and ordi-

nary individuals in administrative agencies also have few opportunities for independent judges to decide claims of right in public. Despite the many affirmative iterations in state, national, and international documents of "open courts" and independent judges for "everyone" these aspects of adjudicatory processes are in jeopardy.

Explanations of the shift toward privatization of adjudication are multiple, from a lack of resources to the view that alternative forms of conflict resolution are more accurate, less expensive, and more user-friendly. Others see a political backlash, in that some "repeat players" found the glare of adjudication disruptive to business practices or governance policies, and successfully "played for the rules" by limiting the reach of courts and by constricting access.

Nineteenth-century theorist Jeremy Bentham shared with twentieth-century theorist Michel Foucault an appreciation of the role architecture played in the exercise of power. Bentham celebrated the placement of the judge before the public eye, as he argued the remarkable potential of "publicity" to discipline "Judge " Co" Foucault in turn watched governing powers seeking to maintain control through privatizing the technologies of punishment.

Today, adjudication is being removed from public purview, making the exercise and consequences of public and private power harder to ascertain. Although built with cutting-edge technologies, new courthouses are at risk of being anachronistic. Illustrative is the docket of one new transnational court" the International Tribunal for the Law of the Sea (ITLOS). From its creation in the "s through , a total of fourteen cases had come before it.

Re-Presenting Justice

The final focus of this book is on the implications of our analysis for the future of courts and their material embodiments. Courts are artifacts *of* democracy that are overwhelmed democratic promises. Yet courts are also important contributors *to* democracy. Adjudication is one site of democratic practices, redistributing power from government to individual, from one side of a case to another, and from participants to the audience. Through such participatory parity, public processes both teach about democratic practices of norm development and offer the opportunity for popular input to produce changes in legal rights. The redundancy of various claims of rights enables debate about the underlying legal rules.

But to create public spaces as active sites requires normative commitments predicated on a political theory about the role played by judges, disputants, and the audience in juridical proceedings. What the Renaissance images teach is that adjudication's purposes and norms have long transcended geography and political jurisdictional authority. Yet the visual traditions of Justice have their political roots in governments that were hierarchical, non-democratic, and tolerant of profound inequalities. It is therefore not surprising that the icons of Justice that have come down to us signal little about access to justice or about rights-seeking, and that figurative portrayals during the twentieth century began to spark debate about the images of which people, with what features, should be placed on display inside courthouses.

The precepts of good democratic governance encoded and iterated in the symbolism of Justice are far too narrow. In the closing chapter of this volume, we offer alternatives. To the extent that Renaissance iconography is of use, we would be better served were our leadership to see itself needing to invoke the range of values personified in Prudence, Fortitude, Temperance, Wisdom, and Charity, as well as the power of Justice. Would that governments thought they had to show commitments to "mildness and compassion" by relying on eloquence and persuasion before imposing their will by force. Entailed would be an understanding that Justice, if the only attribute of government, becomes reduced to power rather than working as one of a set of principles and obligations that constitute good governance.

Admissions of justice's failings, in turn, could serve to discipline power with a self-consciousness about its own potential for fault. Imagery drawn from Mexico and South Africa, where both erected courts in the wake of popular revulsion against prior regimes, offers examples insistent on acknowledging the injustice that has gone forth in the name of the state. But such constructions have come in extraordinary moments reflecting national upheavals rather than forming a part of the regular idiom of justice buildings. In contrast, the celebratory glass of many contemporary courthouses seeks to signal access without acknowledging the conflicts, the risks of error, and the lack of resources that freight justice systems.

In closing, we offer but a few of the ways to invoke the challenges of democratic justice in the twenty-first century and the diverse means to make accessible processes, ranging from settlements negotiated under the aegis of courts to rulings by judges. By traveling from the Great Victorian Desert in Australia to the northern corner of Minnesota, we identify examples of efforts to visualize the work of opening doors to courts. Presented in this amalgam are not only acts of memory" reclaiming the stories of justice and injustice" but also efforts to advance a vision that democratic justice is not simply continuous with the practices of adjudication predating democracy. To practice justice today is an ambitious project, and to represent it requires devising ways to acknowledge what democracy brings to adjudication: a new and genuinely radical aspiration to find ways to make earthly justice available to more people, if not to all.

Chapter 1 demonstrated Justice's ubiquity. Our focus here is on her history. Whether emperors, kings, queens, dictators, burghers, presidents, or prime ministers, and whether leading charismatic governments, rationalizing bureaucracies, or constitutional democracies, sovereigns of all kinds have wrapped themselves in Justice symbols. The implements that Justice came to hold reflect a changing mix of theological and political ideas about the sources and nature of legal obligations and about the function of judges. In this chapter, we track the development of Justice iconography, as varied deployments proved sufficiently capacious to sustain continuity across very different conceptions of deities, government, women, and adjudication. As a form of political propaganda, Justice has had a remarkable and distinctive run.

A Long Political Pedigree: Shamash, Maat, Dike, and Themis

The Scales of Babylonia and of the Zodiac

Egypt is often cited as the source of the particular attributes that have come to be associated with Justice. Drawings of Maat, a word used for both a female goddess and a concept important to Egyptian cosmology, often depict a female with scales. But one can also find traces of Justice imagery even earlier, in Babylonia. The line drawing in figure 1.1 (color plate 1) is one such example, taken from a small cylinder seal from the Akkadian period and dated between 2300 and 2200 BCE. Seals were rolled over the surface of clay tablets to certify recorded transactions. The seated figure shown near the scales has been identified as the god Shamash (also called, in English, Utu), the judge of heaven and earth, identified with sun, light, and an ability to divine the truth.

The extant images of Shamash do not regularly show him holding scales. Rather, as in figure 1.1, he often had a special saw, called a shasharu. This tool has been explained poetically, as employed to open up mountains in the East at daybreak, and, perhaps, more generally to delineate truth from falsity. Depictions of Shamash also show him holding a ring of coiled rope and a rod, objects ascribed to surveyors and therefore, when linked to rulership, denoting the act of setting things right. The Akkadian words *kittu* and *misharu,* translated into English as "truth," "equity," or "justice," described the "straightening out" of a situation whose equilibrium, put out of balance, had became "crooked."

The connections between Shamash and state activities are plentiful. Shamash is prominently depicted on the famous Babylonian stele inscribed with the Code of Hammurabi, which stood around 1700 BCE in a public courtyard in the main temple of Babylon, Hammurabi's capital city. Apparently a few copies of the stele were set up throughout the realm. One, brought around 1200 BCE to Susa (a city in modern-day Iran) by a neighboring king as a trophy, was taken to France in 1900 and stands in the Louvre in Paris. The black, seven-foot-high stone has some 300 statements, akin to legal decisions imposing social order and bracketed by a prologue and an epilogue. The large bas-relief that covers the upper third of the obverse of the stele shows Hammurabi standing before Shamash, who is seated on a throne and extends a rod and ring toward the king. The text proclaims that Hammurabi will, like "the sun-god Shamash," rise and "illuminate the land," for Hammurabi is the "king of justice, to whom the god Shamash has granted (insight into) the truth."

In addition to the royal monument, thousands of tablets with cuneiform writings incised into clay provide details of the Mesopotamian legal and religious systems. Some descriptions analogize the king, serving as a judge, to Shamash, and others require that oath-takers in conflicts invoke Shamash as they swear to speak the truth. Mesopotamian imagery of scales, rods, and saws are sources of objects today used to denote Justice. Moreover, when Justice is shown with a book, said to denote written law, the reference could be read back to the law stele of Hammurabi's code as well as to later iterations, such as the tablets

Figure [illegible] Mesopotamian Scales, Akkadian period, circa [illegible]–[illegible] BCE, from *[illegible]ods, Demons, and S[illegible]m[illegible]ols of [illegible]ncient Mesopotamia[illegible]n [illegible]llustrated Dictionar[illegible]* by Jeremy Black and Anthony Green, illustrations by Tessa Rickards, [illegible].

Copyright: University of Texas Press and the Trustees of the British Museum, [illegible]. Image reproduced with the permission of both copyright holders. See color plate [illegible].

of the Ten Commandments, the Old and New Testaments, or the Justinian Code of the Roman Empire.[illegible]

Another set of images[illegible] the zodiac, also traced to Mesopotamia[illegible] regularly included scales. Many ancient cultures had pictures and texts referencing mythic figures to stars in the night sky.[illegible] At some point, perhaps as early as [illegible] BCE, people linked the autumnal equinox (when day and night are [illegible]equal[illegible] in time) and the pattern of stars visible in the fall season (particularly the constellation now called Libra) to the time at which god(s) made judgments about the fates of people (either living or newly dead).[illegible]

Which cultures were the first to forge these associations and how these ideas moved from place to place are not clear.[illegible] Mesopotamians shaped a calendar relating to the movement of stars and developed the idea that stars affect human life.[illegible] Those beliefs influenced the ancient Jewish lunar calendar, which put its New Year and [illegible]day of judgment[illegible] in the months called (by the Christian calendar) September and October.[illegible] That season is when the constellation Libra[illegible] which came to be signified by scales[illegible] is in the sky. The zodiac is the visual translation of some of these connections, mapping [illegible]the annual course of the Sun.[illegible] The word zodiac comes from the Greek [illegible]*odiakos* that can be translated as [illegible]a circle of animals or little pictures of animals[illegible] Several zodiac mosaics from the Roman and Byzantine periods survive, including those in synagogues built in an area now in Israel.[illegible] In the center of such depictions was a male sun god figure, seen in a frontal position, crowned by a halo with emanating rays and sometimes accompanied by a chariot and horses.[illegible] The outer circle typically had twelve radial units, with one animal for each zodiacal sign. At the four corners, heads of women represented the four seasons, often indicated by different vegetation[illegible] such as grapes, pomegranates, and an olive branch for autumn.

In the mosaics identified to date, [illegible]the sign of Libra is shown as a human figure holding a pair of scales.[illegible] This motif can be found in a host of settings, from ancient temples, synagogues, and churches to Renaissance halls of justice.[illegible] The import of the twelve signs is debated; they may have been objects of worship, ancient calendars marking time, or had both functions.[illegible] What these images show us is that the picture of a particular kind of scales and the act of judgment became entwined in an area between the Euphrates and the Tigris more than four thousand years ago. Via the Roman Empire, this imagery moved across both land and many political configurations to form symbols that remain recognizable today.

Another link between scales and judgment comes from analysis of various ancient legal codes that imposed punishments supposed to be the equivalent of a particular injury. Whether [illegible]an eye for an eye[illegible] or a more complex system of monetized penalties, ancient and Medieval societies specified sanctions in terms of measurements.[illegible] Restorative justice under these conditions focused on identifying a quantum of vengeance or compensation necessary to restore a just balance. Of course, scales were talismatic of another kind of judgment[illegible] a commercial one.

Today scales are commonplace, but the actual objects used as weights and scales were once scarce and precious, carefully guarded to protect their precision.[illegible] Given their centrality to economic life, these tools of trade were often deposited with official keepers such as local rulers. One might thus understand the practice of justice not only as commercially useful but as a kind of commercial exchange itself. Judgments fixed the price of a wrong, and scales aptly captured this form of weighing while also measuring how to set a fee for items of trade.

But not all of the actual scales took the form of a balance with two pans, which has become commonly recognized as what scales [illegible]look like[illegible] and is also the source of the word balance, derived from the Latin [illegible]*ilanc* (also [illegible]*ilan*[illegible], or [illegible]*ilancia*)[illegible] two plates or pans. In ancient times, the steel-

yard, with its long bar and a pan on one side and a weight on the other, was a popular shape of the measure. A few artists chose that form of the balance (as Joshua Reynolds did in his *Justice* of [illegible], shown in Chapter [illegible]). But the steelyard, with its two sides of [illegible]impressive inequality,[illegible] is not Justice's logo. Rather, the even-armed scales, whose trail we follow from Shamash and the Egyptian Maat to the Christian St. Michael and then the Renaissance Virtue Justice, has been the form repeatedly chosen for an image now seen as denoting both fair and equal treatment.

The Balance in Egyptian *Books of the Dead*

The area around another river[illegible] the Nile[illegible] is the more commonly acknowledged source for the figure of Justice and her scales. There the Egyptian ideal Maat was also linked to judgment and shown through images of balances. Because the [illegible]universal sense[illegible] of the term Maat has no precise equivalent in other languages,[illegible] Egyptologists offer several words to capture what Maat encompassed: [illegible]truth, justice, righteousness, order, balance, and cosmic law,[illegible] a [illegible]divine order,[illegible] a [illegible]stability,[illegible] and an [illegible]evenness[illegible] that stood in contrast to and overcame chaos. The concept was depicted by a feather alone,[illegible] with a pedestal or base denoting foundational importance,[illegible] and by a woman with an ostrich feather tucked under a band on her head. At times that female (who was also called Maat) can be seen holding a balance or, as in figure [illegible] (color plate [illegible]),[illegible] she herself forms the centerpiece of the scales.[illegible]

The detail in figure [illegible] comes from one of hundreds of papyri sheets within what is now called the Egyptian *Book of the Dead*[illegible] Dated from about the fifteenth century BCE, this is one of the [illegible]best-known scenes from funerary papyri.[illegible] An oft-repeated explanation for such depictions

FIGURE [illegible] Maat, detail from the Papyrus Nodjnet, *Book of the Dead,* circa [illegible] BCE.

is that a person's heart (said to direct a person's will, feelings, thoughts, and character) was, at death, weighed against a feather (representing Maat) to determine where that person would go in the afterlife.[illegible] Various Egyptian deities, including Maat, Osiris, Thoth, and Ra, have been connected to that decisional process, shown or described as holding the balance, figuratively being the balance, or being placed in the pans of the balance.[illegible] Moreover (and akin to the associations around the Mesopotamian god Shamash), [illegible]measuring, weighing, and counting[illegible] were [illegible]intimately linked with *maat*[illegible] The reading of the scene in figure [illegible] as a judgment made upon a person's death fits within subsequent religious and literary traditions that posit an assessment and a [illegible]last judgment[illegible] at a person's death and that rely on images of weighing.[illegible] A line in the *Book of Proverbs*[illegible] [illegible]But Yahveh weigheth the hearts[illegible] may echo the Egyptian image of the heart and the feather on a balance.[illegible]

Dozens of other quotes from the Old and New Testaments and from the Koran use the imagery of weighing, balances, and scales to capture judgments about religious or moral worth.[illegible] In the *Book of Job*[illegible], we read the plea, [illegible]Let God weigh me in the scales of justice, and he will know that I am innocent[illegible] From *Psalms,* we learn that the [illegible]Lord weighs just and unjust and hates with all his soul the lover of violence.[illegible] In the Koran, from *The Prophets,* comes this description: [illegible]And We will set up a just balance on the day of resurrection, so no soul shall be dealt with unjustly in the least.[illegible] Greek and Roman literary texts reiterate this imagery. In the [illegible]*Iliad* Homer recounted: [illegible]Then Jove his golden scales weighed up, and took the last accounts [illegible]of Fate for Hector.[illegible]

These traditions share a belief that a divine judgment takes place at death, thereby supporting an interpretation that Maat shown with scales represents a [illegible]test[illegible] in which a person had to [illegible]affirm his innocence.[illegible] But debate remains about whether such a judgment was individualized and broadly available or limited by caste, whether the verdict depended on personal conduct or magic and ritual,[illegible] whether a decision about the person was rendered at death,[illegible] and whether such scenes depicted an act of judgment entailing weighing or, rather, that the values of cosmic equipoise embodied in Maat had been achieved.[illegible]

The nexus of Maat and law comes as well from other Egyptian sources. The vizier, the [illegible]highest legal official[illegible] during certain dynastic periods, was called a [illegible]priest of Maat[illegible] and Maat was sometimes [illegible]synonymous with the law itself.[illegible] Further, when Egyptian kings exercised punitive powers, [illegible]the image of Pharaoh as the personal messenger of justice[illegible] was often accompanied by Maat. Through many dynasties, pharaohs held a crook and a flail, objects associated with the god Osiris, who was also sometimes part of the *Book of the Dead*'s scenes involving Maat and the balance. Whether Egyptian iconography provided a basis for Justice's sword remains a question; pharaohs were also depicted [illegible]wielding a club, scimitar or sword to kill[illegible] foes, shown cringing at their feet.[illegible]

Embodied Greek and Roman Goddesses

Mesopotamia may have begun the tradition of scales, as well as of a saw that later became a sword, and kings in both Babylonian and Egyptian cultures were shown with rods or staffs. But it was Maat's female form that served as a predecessor to a series of Greek and Roman goddesses (Themis, Dik[illegible], and Iustitia),[illegible] all justice-engaged and all linked to ruling powers.

Themis, daughter of Uranus and Gaea (representing Heaven and Earth, respectively), sided with Zeus as her parents lost their battle with the Olympians. Thereafter, Themis served as Zeus's counselor and consort.[illegible] Depicted as clear-eyed, she held the authority to call an assembly of gods and to maintain order within that court.[illegible] Her female form enabled analogies to the moral influence attributed to mothers.[illegible] Themis has been credited with providing a kind of collective conscience informing religion and morality.[illegible] Themis and Zeus had a group of [illegible]golden daughters,[illegible] identified as the Horae (Horai) or Seasons, who were also associated with justice.[illegible] One daughter, Dik[illegible], was associated with [illegible]just retribution[illegible] or [illegible]right and justice,[illegible] while another daughter, Eunomia, was said to embody [illegible]well ordering.[illegible] Dik[illegible] and her sister Astraea shared the title of [illegible]Princess of Justice.[illegible] (Astraea was also linked to the constellations in the zodiac. Centuries later, given her embodiment of both the heavens and justice, Astraea formed a part of the hagiography of Elizabeth I of England.[illegible])

The wealth of Greek personifications enabled distinctions among justice-identified goddesses. Some commentators, for example, associate Themis with divine justice, societal order, and written rules[illegible] and place Dik[illegible] in the context of individualized applications of justice.[illegible] Echoes of the grand cosmological themes of orderliness associated with Shamash and Maat can be found in descriptions of Themis and Dik[illegible], to whom were also ascribed the maintenance of a stable world and a state of being that entailed righteous order.[illegible] Moreover, just as Maat was sometimes symbolized as a pedestal or base, the idea of themis (as contrasted with the goddess Themis) was likewise understood to provide a [illegible]base[illegible] or a [illegible]foundation[illegible] and (along with a concept called dik[illegible]) a [illegible]just, upright way[illegible] essential to sustaining relationships in a polis.[illegible] As Max Weber later argued, positing these deities to represent appropriate [illegible]ethical[illegible] obligations was requisite to maintaining [illegible]large and pacified polities[illegible] as economic and social development came to depend on being able to rely on oral promises and written words.[illegible]

A pause is in order to attend to the risk of reading back from contemporary theory and practices and making attributions about ancient images and writings. First, the recoveries to date of both images and words are partial,

dependent upon the happenstance of preservation and discovery.[illegible] Moreover, much of what constitutes today's knowledge of antiquity is of remarkably recent vintage. The Hammurabi stele, for example, was found in [illegible]. Thus, even as we construct this rounded narrative, the current pieces must be understood as the fragments that they are, brought together to form a genealogy made plausible from a particular standpoint.

Second, the extant bits once had a different import. Iconic and symbolic imagery in a pre-print, pre-internet environment could not have been experienced as they are in a world awash with pictures accessible from thousands of miles away through internet connections that bring home (literally) sites from around the world. One of our reasons for detailing debates about how to translate terms and images of Akkadian cuneiform, Egyptian hieroglyphs, Hebrew, ancient Greek, and Roman script is to provide a cushion against a too-ready equation of such images and words with contemporary meanings.

Third, much of what we recount in this chapter is about the relationship between the power of a ruler or god and the imposition of judgment itself. Throughout this book, we trace the movement from gods, fate, and nature to authority frankly based on human agency that entails choice, coercion, community, obligation, democracy, and justice. Over time, the idea of judgment became increasingly linked not only to the act of imposing an outcome but also to concepts about what practices constitute just and legitimate governance. The term justice emerged as a preoccupation, vivid centuries ago in Greek literary personifications of the Virtues and the philosophical traditions they have come to embody.

Whether Greek justice and [illegible]our[illegible] justice have parallel entailments is contested[illegible] readily apparent through a brief review of scholarly disagreement about the meaning of dik[illegible]. For some, dik[illegible] is a reference to a process of orderliness, perhaps providing an analogue to a [illegible]rule of law[illegible] ideology that imposes authority to maintain social organization. Others believe dik[illegible] embodied a broader understanding of values that required underlying justifications for decisions and hence embodied ideas closer to contemporary views of justice.[illegible] In short, as we move from ancient justice-connected language and personifications (bequeathed to us through the happenstance of preservation) through the centuries of the first millennium and beyond, we also move toward arguments that the continuing displays of Justice imagery were efforts to sustain claims not only to power but also to virtue and legitimacy.

Justicia, St. Michael, and the Cardinal Virtue Justice

Rome's power brought to the fore the Latin word *ius,* often translated as [illegible]law[illegible] and the shift from Dik[illegible] to Iustitia, Justitia, and eventually the familiar Justice. Etymologists report that *ius* referred to [illegible]human as opposed to divine law[illegible] and denoted a [illegible]formula of normality[illegible] to which conformity was required; this [illegible]state of regularity[illegible] was foundational to law in Rome.[illegible] When the Romans renamed various Greek gods, two[illegible] Themis and Dik[illegible] folded into Justitia. Some evidence exists of a cult of Justitia, although sculptural remnants are hard to find,[illegible] and she appears to have played a lesser role in Roman culture than Dik[illegible] did in Greece.[illegible] But we know that some Roman emperors broadcast their special relationship with Justitia through their coins.[illegible]

Images of Justicia (or Justitia), categorized in several genres, have been found on coins made under fifteen of the Roman emperors who ruled between the first and fourth centuries CE.[illegible] On one side of many coins is a representation of a particular ruler identified by his name; on the other side is a figure of Justicia, sometimes standing, other times seated on a throne, and holding various objects including a cornucopia,[illegible] a sceptre, scales, and a bundle of rods called fasces that was emblematic of the authority of Roman government officials.[illegible] One scholar of this coinage argued that it was a perfect form of political propaganda, available in daily life but controlled by what an emperor wanted to put into circulation.[illegible] As for what Justice looked like, the classicist Helen North concluded that Dikaiosyn[illegible]/Justicia was the sole personification among the Virtues that had a recognizable [illegible]type[illegible] in ancient art.[illegible] (More generally, to the extent that personifications existed, very few of the attributes that subsequently came to be associated with various Virtues in the wake of Renaissance iconographical codification were acquired before the Hellenistic period.[illegible])

North cited Aulus Gellius as emphasizing Justicia's [illegible]stern appearance and keen gaze.[illegible] Literary critic Theodore Ziolkowski translated the Gellius description ([illegible]luminibus oculorum acribus[illegible]) as giving Justicia a [illegible]piercing gaze[illegible] congruent with a line from an Athenian author, Menander, who ascribed to Dik[illegible] an [illegible]eye that sees everything.[illegible] And, according to art historian Michael Evans, Aulus Gellius provided the Middle Ages with the only information about how Justice had been portrayed in antiquity.[illegible] (Chapters [illegible] and [illegible] detail the evolution of Justice iconography through various editions of the compendia by Cesare Ripa, who denominated one of his seven descriptions of that Virtue [illegible]Justice according to Aulus Gellius.[illegible])

Moving forward in time, Justice imagery came to be entwined with the Catholic Church, reliant, unlike Jewish traditions, upon human personification. Female figures identified as Justice can be found in Christian art from as early as the fifth century.[illegible] These stern-gazed women did not, however, always come with scales. Rather, Medieval European art frequently affixed scales to another figure, the oft-winged male St. Michael, who also stood as an exemplar of a moment of judgment (figure [illegible], color plate [illegible]).[illegible] The use of a balance to represent judgment is shared by Babylonian, Egyptian, Greek, Roman, Jewish, and Christian texts and imagery. But it was St. Michael, [illegible]assuming the r[illegible]le of [illegible]Master of the Balance' which Thoth[illegible] (and Maat) had

held before,[illegible] who formed the bridge from Egyptian eschatology across Christian imagery to the Renaissance Virtue of Justice.

In the Old Testament, Michael was one of a group of seven archangels (joining Gabriel, Raphael, Uriel, Chamuel, Jophiel, and Zadkiel) who assisted God.[illegible] Michael gained prominence as the captain of the heavenly hosts and as an especially wise counselor.[illegible] The New Testament names St. Michael the angel in the [illegible]great battle in heaven[illegible] with the dragon (the anti-Christ) who sought to [illegible]seduce the whole world.[illegible] Further, St. Michael was a [illegible]psychopomp,[illegible] serving as a protector and conveyor of souls to God for judgment.[illegible] Some traditions placed St. Michael along with other angels as messengers who [illegible]delivered the Law[illegible] from God to the people.[illegible] In other legends, St. Michael had a special relationship with the Virgin Mary, whose [illegible]spirit was consigned[illegible] to his care [illegible]until it was permitted to reanimate the spotless form, and with it ascend to heaven.[illegible]

The cult of St. Michael spanned several centuries and many parts of Europe.[illegible] Some of the earliest images of St. Michael date from the seventh or eighth century,[illegible] but it is the imposing Romanesque abbey at Mont-St.-Michel, erected after [illegible] on an island at the edge of Normandy, that attests to the degree to which St. Michael had by then become adored in France. His centrality can also be seen from his role as a major literary figure in John Milton's *Paradise Lost,* where, inter alia, Michael takes charge of an army of angels battling Satan in a war reminiscent of the *Psychomachia* of Prudentius.[illegible] Paeans to St. Michael can be found in Medieval Irish homilies as well as in Egypt's Coptic churches, and he became the patron saint of the City of Brussels.[illegible] These transborder commonalities have prompted some to trace the roots of Europe's cult of St. Michael to Celtic monks who returned from Egypt to Ireland with Michael as their focus.[illegible] Others mark a path for his adoration from the East through Southern Italy to central Europe.[illegible]

The portrayal of St. Michael weighing souls and the broadening of his following after the sixth century coincided with a shift in Christian theology about what occurred at death. One understanding, predicated on the Letter of Paul to the Romans and on the Nicene Creed of [illegible] CE, is that because Jesus died for the [illegible]sins of man[illegible] acceptance of Jesus was itself the source of salvation that put a person on the trajectory to heaven.[illegible] But if [illegible]eternal salvation[illegible] was guaranteed to devotees through the [illegible]sacrificial death of the saviour,[illegible] images of angels holding scales are not obviously relevant, nor does this perspective easily support the common deployment of pictures of the Last Judgment in the [illegible]earthly[illegible] courts of many town halls. Indeed, scholars report relatively little Christian art dated from the fourth and fifth centuries that portrayed the judgment of the dead.[illegible]

In contrast, if judgments after life are based on individualized assessments of the worthy acts of particular people, the motif of St. Michael holding scales becomes usefully didactic, as do pictures of the Last Judgment set in places where judicial rulings are made. Starting around the sixth century, images of the weighing of souls can be found. Possible sources include Job's claim of being [illegible]weighed in a just balance[illegible] and a fourth-century liturgy of St. Augustine describing [illegible]good and evil deeds weighed against each other.[illegible] In the tenth century, examples became more frequent,[illegible] and in [illegible] the idea of God's specific evaluation of individual action at a person's death became a doctrine of the [illegible]immediate, individual judgment after death,[illegible] endorsed by the Pope in the bull *Benedictus Deus*.[illegible]

This theological position corresponds to many depictions of the Last Judgment with St. Michael; these images date from the late Middle Ages and the Renaissance, when the psychostasy[illegible] the Weighing of the Souls[illegible] became a standard feature of Last Judgment iconography. The images have been characterized as of two types, one showing the process of judgment by [illegible]depicting the weighing of the soul[illegible] and the other showing the consequences of that judgment, with some souls en route to heaven and others to hell.[illegible] Figure [illegible], *Saint Michael Weighing the Souls at the Last Judgment,* from early sixteenth-century Switzerland, falls within the first genre focused on the process of judgment.[illegible] Jesus holds the orb of sovereignty above St. Michael, who has in his right hand a sword raised high. In his left hand, St. Michael holds slightly tilted scales with the [illegible]heraldic right side, as the good, against the diabolical left.[illegible] In this image and many others, tiny humans sit on either side, one shown with hands raised in prayer, the other either [illegible]miserable . . . or devilish.[illegible] On occasion, St. Michael is not directly holding scales[illegible] they hang instead from other supports, both material and divine.[illegible] Moreover, sometimes the Virgin Mary is nearby, helping to tip the balance of the scales toward heaven.[illegible] At times, as in figure [illegible], St. Michael (like Justice, who came to replace him in a secular pantheon) can be found with both sword and scales.[illegible]

In thousands of such carvings and paintings, St. Michael is personified as a young and beautiful male, often winged, sometimes clad in white robes, and holding scales. In other versions he is dressed as a warrior with sword, mail, spear, and helmet.[illegible] As the conduit for bringing the [illegible]elect to Paradise,[illegible] St. Michael may owe his wings not only to his angelic role in the Bible but also to Greek and Roman traditions. Greek vases show Hermes weighing fates, and in some legends Hermes and then his winged Roman successor, Mercury, the messenger, can also be seen conducting souls to another world.[illegible] In other depictions reflecting St. Michael's role as a warrior and his conflation with the English St. George, Michael subdues or conquers a dragon (symbolizing Lucifer), who lies at his foot.[illegible] On occasion, St. Michael himself became the embodiment of authority, holding an orb or a staff.[illegible] Images of St. Michael were also inscribed on merchants' weights, which, after the time of William the Conqueror, became standardized through seals and marks.

For example, a tiny (nineteen-millimeter) winged Michael figure holding scales has been found stamped on lead weights from the Plumbers Guild of London.

The account thus far has focused on images of judgment as artifacts of religious or cosmological beliefs. These traditions developed in an interaction with political power, manifest in Europe through imperial, papal, and local authorities. Judgments on earth from those made by magistrates to those of the Inquisition provided models for the imagined theological judgments of various gods. Because Catholicism was a dominant force in Western Europe for the Medieval period, its theology about the processes of judgment played a special role. Posited were three phases: the Second Coming of Jesus, the separating of the blessed from the damned, and the Resurrection. Depictions of these moments drew on earthly counterparts including tribunals in Rome and elsewhere. Moreover, the tools shown for punishment in pictures of hell resembled real implements used on earth to inflict pain. With a heightened consciousness of legalism throughout the medieval world judgment scenes became a dominant feature of late Medieval imagery.

Reflecting rulers' needs both to judge and to punish, earthbound Justice appropriated not only Michael's scales but also his sword. The sword, in turn, was linked to other justice-connected figures. Some associate a sword or axe with the Greek Dik, while others cite the biblical heroine Judith, who cut off the head of Holofernes; the Roman heroine Lucretia, who killed herself after she was raped; and images of God brandishing a sword, as well as pictures of real Medieval justices shown with swords. Through late Renaissance codifications, scales and swords came to be Justice's particular markers that distinguished her from other Virtues. She then ascended to a position in which she has survived the past five centuries, while her counterpart Virtues have not. Her image read from then to now as Justice can be found in thousands of manuscripts, wood pieces, paintings, frescoes, and stone facades, and in contemporary courts and cartoons around the world.

Civic Spaces, Allegories of Good and Bad Government, and Fourteenth-Century Siena

A passage from Book of Homer's *Iliad* reads:

> And the people were gathered in an assembly, and there a quarrel had arisen; two men were quarreling about blood-money for a slain man: one claimed he had paid it all, declaring it to the people, but the other denied he had received anything. And they both desired to get a settlement through an arbitrator. And the people approved and encouraged both sides, and the heralds restrained the people. And the elders sat on smooth stones in a sacred circle and held in their hands the staffs of the loud-voiced heralds; and then with these (staffs) they stood up and in turn proposed a settlement. And in the middle lay two talents of gold to be given to the one (elder) who proposed the straightest settlement.

This passage leads us from a focus on the history of Justice iconography to consideration of the spaces in which she came to be found and the places in which judgments were made. A variety of sources from a range of societies give evidence that, centuries ago, resolutions of some disputes occurred in what we would today call public settings. We know from Greek poems (such as this excerpt from Homer) and analyses of Greek governance; understandings of Mesopotamian practices; research into Roman civil procedure; histories of the roles played by English lay judges and of prosecutions; extensive descriptions of the pageantry surrounding biblical, Medieval, and Renaissance rituals; and the rich literature on city-states in Europe that through either voluntary or mandatory procedures, some decisions, some pronouncements of judgments, and many punishments occurred in places (fields, open markets, town squares, portals of churches, and courthouses) to which those who were not parties to the disputes had ready access.

Our aim here is not to provide a comprehensive history of the development of legal processes, of various methods of proof and punishment in public and private settings, or of the many governments that engendered them. We cannot capture the heterogeneity and nuances of the diverse jurisdictions with their differing relationships to imperial and Church rule, to various economies, charters, populations, and senses of their own corporate identities. Rather, we track how and why, across time, place, and political organization, ruling powers sought to present and to represent their authority to impose law to a viewing audience that at times included not only earthly spectators but heavenly overseers shown proffering approval. We dwell not on the details of the procedures but on the fact of open processes housed in governmentally supported venues that dealt with conflict and enforced law. Over time, states gained monopolies over legal jurisdiction and, through the display of judicial authority, rulers sought to bond individuals to them and to legitimate their powers.

Public Buildings Fashioning Civic Identities

During the late Middle Ages, European town leaders began to construct civic spaces to add to the churches, market squares, and private residences that were sometimes used for communal business. Evidence of public buildings devoted to forms of daily governance dates from the end of the twelfth century in Italy and a bit later in North-

ern Europe. Arguably, the first municipal governments were courts brought into being by the need to decide disputes, and then acquiring additional administrative functions. Construction projects stemmed from the growth of urban centers, the development of interest in and the need for law, and conflicts over power in which ruling empires sprawled and receded.

Law boomed in Europe as nascent city-states sought to order developing economies and regulate social interactions; the results were a mixture of local customs and codifications promoted by jurists trained in universities in Italy, France, and Germany. Courts proliferated, making municipal control visible through enactment and enforcement of regulations. These public performances of law included a range of activities, including formal agreements to dismiss prosecutions, oath takings, and the dramas of executions. The pictorial remains and the reenactments via modern cinema have made scenes of scaffolds and hangings familiar, but other events rarely reproduced were also once part of such spectacles. In the mid-sixteenth century in Germany, for example, rulers staged public readings of basic rights as a *quid pro quo* for obtaining the loyalty oath from their subjects.

The setting for these displays was initially the outdoors, at times deliberately proximate to a particular part of a church. As civic leaders became intent on expressing (sometimes competitively) their locale's prosperity, they invested in building projects and planned towns to mark and to make their identities. This interest in civil self-fashioning resulted in structures clearly designed to dominate their environs. Inscribed within were didactic scenes aiming to legitimate the power exercised. In a world without a printing press and with many illiterate people, the visual arts were a key medium of instruction. Designs served as mnemonic aids aimed at instilling beliefs. In their buildings (styled a town hall or town house, a rathaus, or a civic palace), rulers relied on depictions of the Virtues and allegorical scenes of religious stories and classical myths to link their regimes to prosperity, peace, and history.

Many town halls were built, but given the deterioration of wood and stone as well as recycling, renovation, and alterations over time, only a few remain to instruct us about their original shapes and interiors. (For example, one estimate is that less than percent of German painting from the Medieval period survives.) What we know from a range of sources and a few buildings is that town halls were multi-function buildings in which city officials created spaces for communal, commercial activities as well as for running a city's affairs. Each surviving example is a testament to the prosperity of a locality that was able to finance the construction of a robust public space. Our central example in this chapter is Siena's (aptly named) Palazzo Pubblico, constructed during the fourteenth century. Thereafter we will move forward to the fifteenth century in Bruges and then to seventeenth-century Geneva and Amsterdam to detail other civic spaces.

Lorenzetti and the Palazzo Pubblico

Siena's Palazzo Pubblico served as a fortress, meeting place, office building, symbol of the commune, and centerpiece of a long campaign of public redevelopment that transformed the urban core. Its impressive frescoes are well documented and debated in the annals of art and history. The views in figures and (color plates and) are from of a series of murals in what is called the Hall of the Nine (Nove), named after a revolving group comprised of nine citizens who used this room as their meeting chamber.

Figures [illegible] and [illegible] *[illegible]llegorio of [illegible]ood [illegible]overnment* (left), see color plate [illegible]. *[illegible]llegorio of Bad [illegible]overnment* (right), see color plate [illegible].

The two frescoes of particular interest here were painted by Ambrogio Lorenzetti and date from about [illegible]. [illegible] Their modern titles are the *[illegible]llegorio of [illegible]ood [illegible]overnment,* seen in figure [illegible], and the *[illegible]llegorio of Bad [illegible]overnment,* shown in figure [illegible]. [illegible] The frescoes, drenched in Justice iconography (Justice herself appears twice and is named seven times), were statements about a relatively new form of leadership[illegible] a republic claiming some distance from both the Emperor and the Pope. The amalgam of picture and script served as a shrine to the power of the Nine, who relied on the [illegible]prerogatives of a literate elite of clerics, academics, and officials[illegible] to rule. [illegible]

The rich imagery, embellished with many texts, has given rise to dozens of interpretative quests to decode this [illegible]acknowledged masterpiece of medieval secular painting and one of the consummate political statements in the history of Western art. [illegible] As political propaganda, the room extols the virtues of republican government over despotism in the [illegible]first realistic landscape of modern times. [illegible] The frescoes are a window into which forms of philosophy and ideology influenced the [illegible]great political project of the medieval Italian city-states, [illegible] or, in the words of Quentin Skinner, whether the Renaissance [illegible]owes a far deeper debt to Rome than to Greece. [illegible] However one resolves the debate on Siena's rulers' affiliations with Aristotle, Cicero, and Christian theology, we know that these rulers wanted to be understood as entwined with Justice.

By the end of the thirteenth century, Siena was a republic governed by an oligarchy of merchants in a council that was first formed around [illegible] and, before being reduced to [illegible]the Nine[illegible] numbered twenty-four. [illegible] Siena's ruling families produced a legal system through a written constitution and detailed legislation, implemented by a General Council, issue-specific sub-councils, various officials, and judges. [illegible] The [illegible]civic investment[illegible] extended from the Palazzo Pubblico to the city's walls, churches, fountains, and drainage systems. [illegible] Siena also asserted jurisdiction over the area within a thirty-mile radius of the city. [illegible] The [illegible]s were years of prosperity during which Siena started several communal building projects, some of which did not come to fruition because of agricultural crises, famine, and then the [illegible]Black Death of [illegible]. [illegible]

Construction of the Palazzo Pubblico began in [illegible]. Sometime around [illegible], the Nine took up their residence in the hall where the frescoes appear. The Nine commissioned their painting and approved both the imagery and the many textual inscriptions. Most of the personages depicted are named in Latin (the language used along with the Italian vernacular for Sienese official documents), while long verses adorning the frescoes were written in Italian. [illegible] These pictures, perhaps somewhat altered through repairs, [illegible] provide one of the earliest surviving examples of European didactic art displayed at the direction of rulers attenuated from the Church.

The *[illegible]llegorio of [illegible]ood [illegible]overnment* (shown in part in figure [illegible] and spread across two walls) is populated with fifty-six people and fifty-nine animals in a countryside dotted with inscriptions. The style of this well-preserved fresco is categorized as late Medieval realism, even as it is replete with utopian visions of prosperity and security. [illegible] Efforts to

interpret the imagery's meaning are legion. One piece of the puzzle is about the central bearded male figure seated on a throne. He wears an impressive robe, holds a scepter and a shield, and resembles a mixture of Jesus and an emperor. To some, he is not a royal or religious personage but the Common Good (Buon Commune or Ben Comun), a metaphoric illustration of Aristotelian ideals (translated through St. Thomas of Aquinas) showing that Siena would, given its good communal leadership, be a place of prosperity and peace.

For others, the male figure's political roots hark back to Cicero's Rome, invoked in an effort to legitimate the exercise of power by the Nine. Because the enthroned male figure wears the black and white colors of the Commune of Siena and has its lettering on his shoulders, he can also be read as Siena itself and, inferentially, as representing the Nine who commissioned his depiction. Further, because his placement echoes the famous Giotto *Last Judgment* fresco in the Arena Chapel in Padua, the scene could be a secularised image of the Last Judgement uniting divine and human judgment. The stature of the male figure (and arguably thus of the ruling Nine) is indicated by the verses at the bottom of the fresco, which state, everyone grants him taxes, tributes, and lordships of lands. Under this reading, the didactic goals of the Nine were not Aristotelian but predicated on Cicero, insistent that peace, security, and civic unity are the results of virtuous and powerful leadership.

Love justice, you who judge the earth

Whether reading the male figure as a reference to the Common Good of Aristotle or as the embodiment of the Nine's leadership in the mode of Cicero, one must appreciate the degree to which the vision of political success was tied (literally and metaphorically) to Justice. In this fresco, awash with Virtues and textual inscriptions, Justice plays an unusual role. The male figure is surrounded by the Cardinal Virtues of Fortitude, Prudence, Temperance, and Justice (all with Latin labels) and two other figures, Peace and Magnanimity. But only Justice is portrayed twice, and written into the text seven times.

One views a Justice sitting at the end of a line-up of Virtues and then again on her own throne surrounded by figures and script. In the first of her incarnations, Justice is seated alongside other Virtues, shown both at their level and of their size. Looking straight forward and crowned, she is labeled Justice She holds another crown in her lap and displays a sword, pointing upward. On her knee lies a severed head, prompting one commentator to describe her as the personification of . . . Vindictive Justice and to note that beheading was a punishment reserved for kings, queens, and nobles accused of treason while hanging by the neck was the punishment reserved for vulgar disturbers of the public peace. Below Lorenzetti's sword-holding Justice are soldiers on horses and a group of scruffy-looking people, presumably prisoners, held together by a rope. Some read this grouping as emblematic of the power of secular justice to enforce its edicts. The Lorenzetti rendition also demonstrates that by the s St. Michael's sword had become one of the emblems used to denote a figure as Justice.

The second Justice in the *lle or of ood overnment* sits at the other end of the scene from the first. She has a throne of her own and a ring of flowers on her head. This Justice is higher and larger than the other Virtues; she is almost on the same level and of the same size as the male figure, and, like him, she is attended by other Virtues. Above the male figure's head are the theological Virtues of Faith, Hope, and Charity. Paralleling them above Justice's head and inhabiting her heavenly zone is Wisdom (Sapientia), holding a balance and a book, attributes now associated with Justice. Below this Justice is another Virtue, labeled Concord, along with a group of twenty-four well-dressed people over whom Justice may be ruling. Justice turns her eyes upward toward Wisdom. The quote above her head, from the *Book of Wisdom,* reads: Love justice, you who judge the earth.

Scanning the fresco vertically, one sees that from Divine Wisdom comes Justice, producing Concord. Further, the painted balance that surrounds Justice in a semicircular embrace supports a thesis that Justice is herself divine rather than secular. Concord takes two cords from each of the pans on that balance and weaves them together before handing them to the twenty-four people assembled below. That group may serve as a reference to the former Sienese council of that number, to citizens more generally, or to the Elders (also numbering twenty-four) that the New Testament described as sitting beside the Lord on Judgment Day. This group carries the cords to the Common Good / Nine. He holds them in his right hand thereby making material the link running from Wisdom through Justice, Concord, and the people, to the rulers and to the City itself.

The enthroned Justice is also accompanied by a good deal of written explanation that, given the levels of literacy at the time, empowered those able to read. In addition to the text above her head, labels are affixed near each of the pans of the balance that encircles Justice. On one side is what can be made out to be the word Distributive (DISTRIBUTIVA), close to a winged female using one hand to put a sword to the neck of a man and the other hand to crown the head of a kneeling figure. Near the other pan, the term Commutative (COMUTATIVA) appears next to another winged female who seems to be giving a round object (arguably a box holding money) to one kneeling figure and some kind of weapon (possibly two spears) to another. Beneath this Justice and along the base of the fresco run several verses, translated as:

> Wherever this holy virtue Justitia rules,
> she induces to unity many souls; and these,
> gathered together for such a purpose; a
> common good for their master undertake; who,
> in order to govern his state, chooses never to
> keep his eyes turned from the splendor of the
> faces of the virtues which around him stand.
> For this, with triumph are given to him taxes,
> tributes, and lordships of lands; for this,
> without wars, is followed then by every civil
> result, useful, necessary and pleasurable.

On the wall next to all the figures and forming a part of the *lle or of ood overnment* is a scene of a light-infused and thriving locality filled with builders, dancers, and cobblers in a rolling landscape presumably resulting from the joint rule of the enthroned male and female figures. A large woman labeled Security (Securitas) hovers over the countryside along with a scroll that reads, Without fear, let each man freely walk, and working let everyone sow, while such a commune this lady will keep under her rule, because she has removed all power from the guilty. Another script near the bottom of the landscape and read to refer to the enthroned Justice notes:

> Turn your eyes, you who are governing, to gaze
> attentively at her who is here represented, and
> for her excellence is crowned; who always
> renders justice to everyone. Behold how many
> good things come from her, and how sweet life
> is, and how full of repose is that of the city
> where is observed this virtue, which more than
> any other shines. She guards and defends those
> who honor her, and nourishes and feeds them.
> From her light is born the rewarding of those
> who do good, and giving to the iniquitous due
> punishment.

Justice Bound by Tyranny

If the detailed imagery and many texts on Justice's special relevance to a thriving polity failed to bring home the link, the scene that stands in contrast makes it again. When Sienese viewers turned away from the *lle or of ood ov ernment,* they could contemplate the harms that flowed in the *lle or of Bad overnment* (see fig.). At the center of a desolate and dark scene sits another male figure on a throne, but this one is horned, fanged, and labeled Tyranny (TYRAMMIDES). Holding a dagger, he is surrounded by Vices labeled Avarice, Pride, Vainglory, Cruelty, Treason, Fraud, Fury, Discord, and War. Further, in contrast to the figure of Security floating in the air in *ood overnment,* one finds a haunting figure of Fear (Timor) above the bleak countryside. Next to Timor is the text: For wanting his own good on this earth, he subjected justice to tyranny; wherefore along this road passes no one without dread of death; because robbery is without and within the gates.

Justice also appears in this fresco, but here she is bowed and bound. Moreover, below Tyranny's feet is a goat, serving either as a reference to the damned or to the Vice Lust (Luxuria), further degrading the bound Justice figure. Her hair is disheveled, and she wears a white, unadorned dress; she looks at the two pans severed from their balance. Rather than holding cords linking her to Wisdom, Concord, and Good Government, she is the one bound by a rope. Other harms flowing from Bad Government in which Justice is cowed are portrayed nearby, where armed men injure both persons and property. Once again, script hammers home the point. Near Tyranny is a text explaining, There, where bound is Justice, no one for the common good ever joins together, nor goes straight ahead for the right, but is agreeable that Tyranny should rise. Another text completes the contrast between Siena's promotion of peace and security and the disarray occasioned by bad government. At the bottom of the fresco, below the bundled Justice, are the words . . . where is tyranny and great suspicion, wars, rapines, treacheries, and deceptions gain the upper hand.

Theories of Governance: Aristotle, Cicero, Aquinas, Latini, God, and Political Propaganda

Efforts to decode the frescoes focus on the broader political claims as well as the enigmatic central male in the *lle or of ood overnment* These frescoes were among the first authored by a fourteenth-century European secular government seeking to instantiate political propaganda. But what were the Nine aiming to teach In addition to disagreement about how to interpret the central male figure, another major puzzle is what to make of the enthroned Justice, the two labels Distributive (DISTRIBUTIVA) and Commutative (COMUTATIVA) near the scales' pans, and the two winged females, one close to the label Distributive and holding sword and crown, and the other near the word Commutative and giving or taking some objects.

Again, one view is that we are looking at St. Thomas Aquinas's description of Aristotelian concepts of justice embodied in the prime example of a new civic imagery in which political (as contrasted with religious) leadership has secured stability. The vision is that through natural sociability citizens join together under a rule of law that will be imposed upon them equally. The small winged women would thus represent the commune, rewarding or punishing citizens who excel or fail in their public duties and deciding on fair exchanges among equals. Further, the cords (moving from Wisdom through Justice to Concord and then through the assembled councilors or citizens

to the Common Good) may symbolize how divine law inspires human law.□□□ In short, the Sienese government produced peace and prosperity by □placing common welfare above private interest.□□□□

Yet the actions taking place near the labels □Commutative□ and □Distributive□ do not fit easily within the philosophy associated with Aristotle and Aquinas. While one might decipher the winged figure under the word □Comutativa□ to be distributing or allocating goods, one could also see her as receiving offerings. Moreover, punitively severing a head in an act of punishment was not associated with □iustum distributivum,□ understood to be a rule of fairness for allocating common goods among community members.□□□ One view is that the confusion spawned by the words □Distributiva□ and □Comutativa□ affixed near the pans is a distraction caused either because these terms were later additions replacing earlier inscriptions or were flipped during repairs.□□□ Alternatively, the words were originally placed there by Lorenzetti, who had misunderstood the Aristotelian message he had been commissioned to depict.□□□ Other historians argue that neither Aristotle nor St. Thomas Aquinas but another political theorist□ Brunetto Latini□ was the author of relevance for the Nine. This interpretation posits that Latini's discussions of law and politics better explain the pictures of Justice rectifying inequality and punishing misbehavior.□□□

One could also read the pictures as insisting on the importance of communal rule through a powerful group, such as the Italian body of signori rather than a single podesta. The governing documents of Siena gave its rulers unconstrained authority to □promote the good and pacific state of the people and commune of Siena,□□□□ even as those documents charged them with being men □who are lovers of peace and of justice.□□□□ Based on the political literature and practices then current, this analysis puts Cicero at the center of the iconographic message, read to be less sanguine about innate sociability and more insistent on the need for wise (and imperial) leaders to achieve peace by relying on justice as the □ultimate bond of human society.□□□□

A different interpretation posits the political ideology expressed to be less secular than the Aristotle/Cicero debate suggests. These frescoes could be read as the effort of the Nine to convince viewers that their authority was religiously sanctioned because their commission was for a vision of the Day of Judgment. Given the echoes of Dante's □*Inferno* and biblical symbolism,□□□ Siena could be the Heavenly City of Jerusalem, serving as the center of its own world.□□□ Under this approach, the contrasting vision of Tyranny is Hell and the central horned figure a representation of Lucifer.□□□ The sequence could also reflect the link between divine judgment and secular authority, which imposed its justice as would God and which was empowered to do so through words from the Book of Wisdom, □curving over Ambrogio's Justice□ and providing evidence of God's presence:□□□□ □love justice, you who judge the earth.□□□□

Yet another theory sees Peace (Pax), holding an olive branch, as the focus of the frescoes. This thesis relies in part on the titles, *Peace* and *War,* that were used to describe the two frescoes in centuries closer to their creation. Unlike the other labeled females, the figure of Peace neither sits straight nor faces viewers. Rather, she glances about as she reclines, gazing □dreamily□ at the scene.□□□ Perceiving her to have a □pride of place at the center of the fresco□ as well as serving as the spectator from whose vantage point the scene is viewed, one could be looking at a □vision of Peace□ meditating on the contrast of her realm with that of War.□□□

Other commentary turns our gaze toward the landscape and its distinctive features (including a group of dancers, sometimes described as female and other times as male) to see in the frescoes an inventive and lyrical celebration of Justice's sustenance and the rebirth of culture.□□□ Alternatively, approaching the imagery from the perspective of contemporary political economy, one could argue that the frescoes encouraged citizens to affiliate with and give tribute to Siena, fiercely competitive with its neighbors and especially its larger rival, Florence.□□□

We recount these debates not to decide them but to demonstrate that, whether based in Greek or Roman political thought, in Christian theology, or not reducible to a single ideological program, the frescoes pronounced that Justice was central to good governance, communality, powerful leadership, peace, and/or access to heaven. Yet, despite the aspirations and the artistry, Siena's effort to sustain the frescoes' promises did not succeed. The Republic of Siena lasted about seventy years, ending in □□□□, when a revolt occurred as Emperor Charles IV visited the city.□□□ That popular unrest had many sources, including the inability of the Nine to □deal effectively with the increased violence and disorder that followed the plague.□□□ Yet some aspects of the republic's system continued, with forms of authority shared by oligarchs until Siena was absorbed into the Florentine state of the Medicis in the mid-□□□□s.□□□

Good Government on the East and West Coasts of the United States: Reiterations by Caleb Ives Bach and Dorothea Rockburne

The duration of the government promised by Siena's leaders was brief, but their display of civic virtue has endured, as can be seen from its influence on the art commissions for two contemporary United States courthouses, one on the West Coast in Seattle, Washington, and the other on the East Coast in Portland, Maine.□□□ For the northwest courthouse, the muralist Caleb Ives Bach drew inspiration from Lorenzetti as well as from Byzantine mosaics and Mexican muralists (fig. □□, color plate □). His large-scale paintings were installed in □□□□ on the first floor to mark the entry to a courtroom when that courthouse was newly dedicated.□□□

Figure [illegible] *The [illegible]ects of [illegible]ood and Bad [illegible]overnment,* Caleb Ives Bach, [illegible], in the interior of the William Kenzo Nakamura Federal Courthouse, Seattle, Washington.

Photographs reproduced courtesy of the United States General Services Administration and with the permission of the artist. See color plate [illegible].

The brightly colored, densely patterned, flat-surfaced pair of allegories is populated by more than001 figures. In *The ffects of ood overnment,* Virtues labeled in Latin (Justitia, Fortitudo, Prudentia, Magnamitas, Temperantia, and Pax, translated as Justice, Fortitude, Prudence, Magnanimity, Temperance, and Peace) surround a female named Bonum plebis (for the Good of the People) and join the Theological Virtues identified as Fides, Spes, and Caritas (Fidelity, Hope, and Charity) and two angels in the top third of the painting. The landscape below teems with people, food, music, and other signs of prosperity, all in celebration of what good government can produce described at the bottom as Caelum in terra (Heaven on Earth).

In *The ffects of Bad overnment,* the Vices Avaritia, Vanitas, and Superbia (Avarice, Vanity, and Pride) float about the head of the central male, Tyrannia (Tyranny). Other Vices (Guerra, Proditio, Discordia, Furor, Fraus, and Crudelitas, translated as War, Treason, Discord, Rage, Fraud, and Cruelty) surround him. The bottom two-thirds of the painting show the harms done to the population, cen-

tered around a barren tree. The script at the bottom (Inferni in terra) speaks of Hell on Earth.

For the renovation of a federal district courthouse in Maine, artist Dorothea Rockburne also drew on the Siena scenes but turned instead to abstraction. Rockburne's proposal to bring the great history of law and civic order, which Siena had established by the thirteenth century, into a present day courtroom won approval from the government selection panel. The resulting wall painting, measuring feet long and . feet high, bears the name *The irtues of ood overnment,* which are also the words headlined in the brochure (fig. , color plate) produced by the United States government to describe that courthouse's renovation and artwork. One commentator at the dedication ceremony described the painting as a modern contemplation of the virtues of prudence, faith, common good, hope and magnanimity, using pure geometry and vibrant color as meditative devices.

Rockburne had proposed affixing labels (as in Siena) to identify some of the Virtues represented in the abstraction. But in light of a judge's concern that lawyers might opportunistically use posted words to persuade jurors of the rightness of their clients' causes, she did not add inscriptions. Rockburne's decision to use abstract imagery may not have been the only reason to provide labels. Even if she had used figurative images of the specific Virtues, most people would have needed labels to identify various female forms as Prudence, Faith, and Magnanimity. But when artists place women with scales and swords in today's courthouses, no such signs are needed. The Lorenzetti frescoes are one of several markers of Justice's ascendancy as the key Virtue of the secular state. Although Charity was the highest of the theological virtues in Corinthian ideology and Wisdom the highest of the intellectual virtues, Justice initially ranked highest only when grouped among the moral virtues Over time Justice has displaced the others to become an international hallmark of the state. Before mapping her codification and rise through a process of secularization aimed at teaching civil virtues, more needs to be understood about the religious manifestations that she displaced.

Last Judgments in Town Halls

The fourteenth-century scene in Siena was unusually majestic in its artistic achievement (and luckily well preserved), but the effort it represented conveying political messages through expressive imagery was not exceptional. From the fourteenth century onward, comparable depictions of Allegories of Good Government greeted those who walked into civic buildings throughout Europe. Before sketching other themes that emerged over time, we need to clarify what it means to call these buildings civic and public so as to avoid anachronistic implications.

Civic, Public, and Christian

As illustrated in the context of Siena, civic buildings were town-built, multi-function structures that were dedicated neither as churches nor as marketplaces. Yet to *describe* them as not churches or markets is not to *ascribe* to them the absence of either religious or commercial purposes. These late Medieval and Renaissance buildings were not secular in the contemporary sense of denoting a separation between church and state, nor were they public in the sense of providing space only for activities today associated with government. Rather, communal governance and theological authority were conflated, with power scattered through familial and associational ties nested in religious, economic, and social connections and transacted in buildings sometimes denoted churches and other times town halls.

This constant intermingling of civic and religious life is captured by one historian's phrase, civic Christianity which threaded throughout Europe. In that Christian society i.e., one more than perfunctorily attached to the gospel as its source of inspiration law and justice could never be categories wholly temporal or purely religious. Not only did the courts of governing bodies work in theological-juridical terms, but religious texts and sermons were peppered with references to legal processes. A catechetical treatise by Dirk van Delf stressed the relationship between the apostles of the Last Judgment and local leaders: So shall come the twelve apostles, quite as senators, councilors, or aldermen, who on beautiful thrones and at the bidding of the judge shall sit, and before whose judgment all the world shall stand. A sermon was even more direct: Christ steps into the courtroom, invites the sinner to approach him, lifts him on his shoulders and carries him to his father who sits in the judge's seat.

The conflation can be seen in the buildings that governing powers used, the pictures commissioned, and the texts and oral incantations issued. For example, Siena's Nine met in a church before the construction of the Palazzo Pubblico in the early s, as did the councils of northern cities such as Geneva. Designated areas at the sides of cathedrals in France were used for outdoor court proceedings, and some churches held court inside. Moreover, once town halls were built, many included chapels where councilors attended mass before turning to the town business of deciding disputes, overseeing warehouse facilities, and maintaining scales and weights. Some of the rooms within looked churchlike, and the main halls of such buildings opened onto squares serving as stages for public ceremonies reflective of the business within.

Our interest is the inscriptions and paintings on the walls of places that welcomed the public as witnesses. As Siena's Palazzo Pubblico has already illustrated, the use of space for political instruction was not casual. Thirteenth-century statutes of Padua, for example, decreed that the four main

doors of its civic building. . . which were directly accessible from the two public squares by four exterior staircases, had to be continuously open. On market days, a specified number of judges had to be available to the public. The visual coherence of the spatial proximity of Padua's law courts to its public square was designed to materialize the political unity of the commune itself.

"For that judgment you judge, shall redound on you": The Magdeburg Mandate

Two differences from contemporary deployments of the iconography of Justice need to be underscored. First, late Medieval and Renaissance town halls spoke in a preliterate and pre-print world. Many people could not read, and hence pictures were imbued with iconic properties that are hard to imagine given the contemporary flood of visual images from around the world. Today's viewers may reason about how allegorical pictures translate intellectual messages into visual form, but for those who looked at only a few paintings over the course of their lifetimes, these images may well have had a visceral correspondence with abstract ideas.

Second, the pictorial educative mission was aimed not only at the general populace but also at the decisionmakers. As we elaborate in later chapters, today's courthouses rarely employ imagery seeking to instruct judges and lawyers about how to behave. The assumption is that law schools, statutes, ethical codes, and professionalization do that work. But in earlier eras, judges and other local council members were as much the target audience for the displays as was the public. Judges were repeatedly warned that they were put at risk as they rendered judgment. Judges, as well as those whom they judged, were subject to superior powers (God and the state) that required obedience and loyalty.

That point was made through a pictorial mix that in Italy included classical historical narrative scenes from Greece and Rome, some biblical narratives of which the most prominent was the Judgment of Solomon, and depictions of the Last Judgment. Not only did pictures of the Last Judgment gain a particular place of honor in northern Europe, but in some city-states written laws *required* that they be posted in courtrooms. One example comes from a system of municipal laws originally written between and in Magdeburg Province, which were then adopted in various localities. As a version stated, "the last judgment shall be painted in all court places. The judges should judge fairly."

In a further reference to that obligation, the Magdeburg Law elaborated:

> When and where the judge sits in judgment, in the same place and in the same hour, God sits in his heavenly court, above the judges and above the magistrates. And so a judge in the town hall should have painted the strict court of our Lord Jesus Christ. This is so that he should think of the Court of our Lord; and that he should also think that he is a judge of the people, that God has saved with his precious blood. And so David speaks: "Juste judicate filii hominum." Judge fairly, you children of men, when you judge according to worldly measures (that is, you judge men on the earthly level, God will judge whether your judgment was just or unjust) the same judgment will be passed in the same hour over you, it is fair, and so it was of you that the Prophet David speaks.

This statutory requirement was explained by Ulrich Tengler in his German treatise *Laienspiegel* (or *Layman's Mirror*), first published in Augsburg in and reprinted many times. A subpart of a section "On Criminal Proceedings" bears the title "On the Last Judgment." From a edition, we know that pages were devoted to the theological and moral reasons for the "truth" of that event, its relevance for judges in towns following the Magdeburg Law, and discussion of the regulation requiring display of an image of the Last Judgment. The author concluded the section with the admonishment that "each judge should think about the cruelest court of God, and have it before his eyes, so that he judges fairly."

As a consequence of this provision, Tengler explained, it was "common in the council chambers and in courtrooms where capital cases and other matters are judged, where oaths are sworn, and where other legal, corporal, and civil matters are decided, that a figure of the Last Judgment be depicted." That "praiseworthy custom" joined the display of other classical and biblical narratives, shown so as to "move the councillors and judges to do justice." Throughout "the fifteenth and especially the sixteenth century in northern Europe it became standard practice to have a Last Judgment painted on the wall behind the judges' bench." Exploring the stories told in painted Last Judgments is thus in order before tracking the other narratives once prominent in government buildings as well as their eventual eclipse through the domination of Justice.

Conflating the Last Judgment with Trials

The iconography of the Last Judgment, like that of Justice, developed over the centuries and varied in form and content. The *Gospel of Matthew* is an oft-cited textual source that described the "Son of Man . . . will sit in state on his throne" surrounded by angels, with the nations gathered about him. "He will separate men into two groups, as a shepherd separates the sheep from the goats" and "he will say to those on his left hand, 'The curse is upon you; go from my sight to the eternal fire that is ready for the devil and his angels.'" Other biblical references, such as verses

from *Psalms,* identified the Lord "seated on "his" throne" as a "righteous judge."

How were these phrases translated pictorially? During many centuries after the lifetime of Jesus, the answer was not much. Art historians have found relatively few images from before the thirteenth century that referenced the Last Judgment. Thereafter, the theme of the Last Judgment became common in many churches,"" featured both on cathedral doors and church interiors. Such scenes often show either Jesus separating sheep from goats or apocalyptic endings of the world."" Dante's *Divine Comedy,* completed in "", provided additional inspiration, prompting some fine details on the horrors of hell."" Many famous renditions, such as Michelangelo's *Last Judgment* in the Vatican's Sistine Chapel, focused on resurrection rather than on the act of judgment."

But when depictions of the Last Judgment moved into courts and onto the printed books of a locality's laws and regulations, the scenes came to resemble the places and the work that the pictures were to influence."" Settings much like courtrooms became common. In some Last Judgment paintings, Mary was specially positioned as an intercessor akin to a defense lawyer, pleading for mercy."" Court settings, in turn, were arranged to mirror how Jesus and the apostles appeared in scenes of the Last Judgment. In Pistoria, for example, trials were held outdoors, "under the open heavens, once again likening them to the appearance of Christ in Glory at the Last Judgment."" In Spain, the rituals of the Inquisition were shaped to mirror the dramas associated with the "eschatological moment of judgment," with ceremonial enactments drawing thousands to "witness the indictment of souls."

The literality of the convergence of worldly and heavenly justice can be seen in pictures such as the fifteenth-century painting, the *Courtroom Scene with Last Judgment and Portrait of Niclas Strobel* (fig. "", color plate ""), that hung on a wall of the Town Hall of Graz in Austria."" The format of this painting is not unique but represents a formula in which the bottom half depicts human judgment paralleled by a divine court above."" An inscription dates the painting to "", more than a decade after the central worldly figure identified as Niclas Strobel had held the town offices of judge and mayor."

The ambiguity of the Graz version makes it particularly intriguing. It could be read as a horizontal diptych with two discrete scenes. On the bottom, the jurist (Strobel) presides over what has been identified as an oath-taking, with counselors and spectators (the two figures standing behind the benches on which the others are seated) watching. Above is Christ, arms outstretched, who sits on a heavenly throne. He is surrounded by seated counselors, as well as by Mary kneeling on his left and a male kneeling on his right. The symmetry created through the layout and coloration (red drapery for both the jurist and Christ, with beige, black, and red clothes for figures in both earth and heaven) could suggest that one kind of judgment parallels the other. As Erwin Panofsky explained, the figures on either side of Jesus serve as his "associate justices," and they provide a parallel to the jurists and councilors below."

But the two male spectators, leaning over the sides of the benches and plausibly representing the public, have their gazes focused heavenward, as do three of the seated councilors. By following their eyes and looking at the middle section of the painting, in which the spectators share space with small, naked embodied souls (either being raised to heaven or condemned to hell), one can understand the picture as showing a single integrated scene in which Jesus is present in the earthly court."" In this interpretation, Christ is not offering a parallel to the human judge but is waiting on the court's earthly decision in order to render his own judgment on the living characters in the courtroom."" Moreover, the midground depiction of human souls in transit, to heaven or hell, underscores the consequences of being subjected to heavenly judgment.

The links between the divine judgment to be imposed at the end of days and the daily business of dispute resolution were thus made explicit, and those to be reminded of the gravity of decisionmaking were not only alleged wrongdoers and the public but the judges as well. Text and image worked in tandem to make the point. In Regensburg, Germany, during the fifteenth and sixteenth centuries, local burghers took an oath swearing "to keep only God and the Law before my eyes, as I must answer for that before God at the Last Judgment."" Lest they forget, pictures of the Last Judgment were in view as they worked."" Thus, when "the judge pronounces justice, God sits above him, judging judges and jurors."

Moreover (and as in the displays in Siena), images were often accompanied by texts so that viewers who could read received the point in words as well as pictorially. The mural of the *Last Judgment* in the Lüneberg Town Hall was inscribed with a biblical passage reading: "For judgment is without mercy to you who has shown no mercy."" Below a "" *Last Judgment* that hung above the magistrates' bench in a court in Hamburg were the words: "You, who are about to judge others, consider what you do; for you judge not for humankind, but for the Lord," followed by the verses "for that judgment you judge, shall redound on you," and "with what measure you mete, it shall be measured back to you."

A similar admonition appeared on Last Judgment paintings in the Town Halls of Bruges and Nuremberg."" In Regensburg's Town Hall, a Latin inscription charged: "Senator, when you enter this council chamber in your capacity as public official put aside your private sentiments before the door, put aside anger, violence, hatred, alliance, and flattery and take up the persona and cares of the Republic, for as you have been impartial or inequitable, so shall you be judged by God."" The *Last Judgment* displayed in "" in the Breslau Town Hall made reference to the legal obliga-

tion to post the image, [illegible]as is demanded by Magdeburg Law.[illegible] In woodcuts and words, books on legal procedure reiterated these analogies [illegible]between the last Judgment and actual court trials.[illegible]

Through oaths, admonitions, and Last Judgment paintings, judges were positioned to identify with the judged, for both were at risk of damnation. At the end of time, judges' own worth would be decided in light of the decisions that they had rendered.[illegible] Art historians debate whether the deployment of the Last Judgment in town halls was an effort to use religion to bolster the legitimacy of secular rule[illegible] or evidence of the intermingling of the secular and the religious.[illegible] Our interest is in how the selection of text and image reflected an understanding of the position of a judge. Then, judges did not sit as do their contemporary counterparts[illegible] independent personages chartered to judge but insulated from superintendence by government. Rather, the walls that surrounded judges provided insistent public admonish-

ments of the vulnerability of judges and of the judged, both positioned as subjects before a higher authority.

The imagery of the Last Judgment lost its centrality in town halls before its religiosity became problematic for secularizing societies. In Germany and elsewhere, Last Judgment scenes were replaced with other historical narratives harkening back to classical and biblical traditions and then the abstraction of Justice. Explanations for the eclipse vary depending on the emphasis placed on the effects of changing economic conditions, political theories, and religious ideology in the Reformation's wake. One could read the retreat from Last Judgment depictions to represent a secularization of the act of judging, a decline in religious authority, and an embrace of a humanism enamored with classical narratives of heroic personages and communities. As we will explore in Chapters and , rulers in both Amsterdam and Venice analogized themselves to the Israelites and the Romans rather than to souls awaiting God's grace.

Alternatively and at least for certain parts of Protestant Europe, one could claim the continuing relevance of faith to courthouse iconography but a change in the premises. In Lutheran ideology, earthly piety required obedience and punishment but did not necessarily predict entitlement to eternal life. While real judges gained their authority from God, predestination drove their own ultimate fate. Because judges' work on earth no longer provided the basis for salvation or damnation, Last Judgment trial scenes were less instructive. The Last Judgment as a statement of the causal relationship between temporal and eternal events was now only one of several possible analogies and exempla for the temporal judge. Moreover, not only was salvation derived more from virtue than from any particular act, but judgment itself came to be seen as more disinterested. That ideology made appealing the didacticism provided by exemplary figures from history and by personifications of various Virtues. In eras when women could not themselves be judges, Justice's female embodiment facilitated a focus on abstractions rather than on worldly realities.

From the perspective of the history of Justice iconography, the Last Judgment stands at the front of a line of images speaking to judges about their work. The decline in reliance on that scene did not mark the end of imagery warning judges about how to discharge their tasks, nor did it immediately result in the dominance of displays of the Virtue Justice. Rather, as we explore in Chapter , other biblical and classical narratives continued to teach about the challenges and obligations of judgment as well as the risks to judges that, if they breached their duties of loyalty to higher authorities, they too would meet a gruesome fate. As Last Judgment images moved backstage, the ideology of judicial subservience materialized through other narratives.

Today's courthouses generally celebrate the practice of adjudication and rarely advert to the pain entailed in rendering judgment. But the visual themes that once adorned places of judgment were not always so upbeat. Darker elements acknowledged both the possibility of justice gone awry and the burdens of being a judge. Last Judgment scenes reminded judges that their fate, like that of the litigants, rested in God's hands. Justice images included frank acknowledgment of judicial corruption.

In addition, many town halls made plain that judges were subservient to, rather than independent of, their employing state. The royal overtones of the word *court* (like the French term for courtrooms, *salles d'audience*) were then appropriate. Today such words are deployed unselfconsciously, though a few—such as Jeremy Bentham—commended an escape from their history through a new vocabulary with the alternative term "judicatories."—Like the formerly royal words, the inspirational image of Justice as a virtuous goddess is commonplace in contemporary buildings. But few of the weighty allegorical depictions that were ubiquitous from the fourteenth through the seventeenth centuries have come down to us.

These complex images were part of a tradition called *exempla virtutis* (examples of virtue) that identified acts "worthy of imitation" and therefore appropriate to display on town hall walls.—By unearthing the classical myths, biblical stories, and Renaissance emblems that make decipherable pictures that might otherwise be ignored, one can find many references to the violence entailed—both for the judged and for judges—in adjudication.

Flayed Alive or Maimed: Judicial Obligations Inscribed on Town Hall Walls in Bruges and Geneva

Controlling Judges: A Fifteenth-Century Cambyses in the Town Hall of Bruges

The Judgment of Cambyses, depicted in figures [illegible] and [illegible] (color plates [illegible] and [illegible]) provides a first example. The story comes from the *Historiae* (*The Histories*), written by Herodotus around [illegible] BCE. Herodotus described the rule of King Cambyses, said to have lived some [illegible] years before the Common Era.—According to Herodotus, upon learning that the judge Sisamnes was corrupt, Cambyses ordered him flayed alive. Thereafter, Cambyses appointed Otanes, the son of Sisamnes, to serve as a jurist and forced the son to preside on a seat made from his father's skin.—

From the thirteenth century onward, versions of this story appeared in European compilations of classical stories. As these anthologies came to be organized alphabetically, thereby facilitating access, this exemplum came to be featured in paintings, drawings, and prints. By the sixteenth and seventeenth centuries, the story of Cambyses was a theme regularly portrayed in European town halls.—Dozens of images exist, but the vividness of the *Judgment of Cambyses* by the Flemish artist Gerard David is noteworthy.—This work, commissioned in the late fifteenth century for the Town Hall of Bruges, was hung in [illegible] and can now be seen in the city's museum, the Groeningemuseum.—The painting, a diptych with each panel almost six feet high and five feet wide, includes four scenes.—

The story begins in the left-hand panel of figure [illegible]. Toward the back of the frame, behind the arches and under a canopy, a red-robed judge, Sisamnes, stands near another figure from whom he accepts a bag of money. In the central scene, Cambyses (dressed not as a Persian emperor but as a king, "wearing a royal coronet in German fashion[illegible]) both accuses Sisamnes, now seated on a high-backed chair, and orders his arrest—shown by a man strong-arming the judge from his authoritative seat. In the right-hand panel (fig. [illegible]), the corrupt judge is being flayed alive. (Reproductions cannot duplicate the experience of looking at the larger-than-life, brilliantly colored original, offering gory details startling in their specificity.[illegible]) Toward the back of the panel, on the right side, is a smaller scene situated, as in the first panel, under painted arches and providing the denouement. The new judge—Otanes, the son of Sisamnes—is seated on his father's skin, draped over the judge's bench.

Competing interpretations explain both the Cambyses story and the reasons for its placement in ☒☒☒☒ in Bruges. Classical historians identified Cambyses as a king gone mad☒ a monarch condemned to a perpetual state of rage and drunkenness because, wrongly drawn into war with Egypt, he had killed its sacred bull. Herodotus described how Cambyses desecrated tombs and committed various atrocities, including the murder of his siblings.☒☒After leading his soldiers astray, Cambyses died at the very place where he had killed Egypt's sacred animal.☒☒Seneca invoked Cambyses when discussing ☒Anger☒☒ describing Cambyses's drunkenness, labeling him a ☒bloodthirsty king☒and counseling against emulating him.☒☒

If the flaying of the judge is put in the context of these many noxious acts, the diptych shows the crazed king using his power in gruesome ways.☒☒An alternative reading, and one that dominated the story's deployment during the Medieval and Renaissance periods, was that Cambyses wisely sanctioned an unjust judge. The scene☒ set forth in town halls, on commemorative medals, and in tapestries☒ regularly served as an *e☒emplum iustitiae* (justice exemplars), warning all judges about how to behave appropriately.☒☒ Indeed, in a major Danish tapestry of ☒☒☒☒, Cambyses was deployed as the embodiment of Prudence.☒☒

Scholars do not all agree about which sources influenced the many depictions of Cambyses. Whether or not copies of Herodotus's ☒*istoriae* were easily obtained, at least some materials in circulation during the late fifteenth century offered variations on the story that interpreted the punishment appropriately applied to the ☒unjust judge☒For example, in ☒*esta* ☒*omanorum* (subtitled ☒Remarkable Stories Deriving from the Acts and Chronicles of the Romans☒),☒☒ a tale about a ☒corrupt judgment☒ described how an ☒emperor established a law that every judge convicted of a partial administration of justice should undergo the severest penalties☒ Thereafter followed a story about a ☒certain judge☒ (unnamed) who, ☒bribed by a large sum, gave a notoriously corrupt decision☒ The emperor then ordered him flayed and his skin ☒nailed upon the seat of judgment☒ where the corrupt judge's son was required to sit.☒☒ Similarly, inscriptions on Renaissance medals of the scene explained, ☒Cambyses maintained the law and administered it justly, as one can perceive here from the punishment.☒☒☒Further, some editions of the iconographic anthology by Cesare Ripa (detailing how to depict Virtues and Vices) referred, when illustrating Injustice, to the ☒venal☒ and ☒unjust judge☒ Sisamnes, flayed by Cambyses, who was described as the ☒great practitioner of justice.☒☒☒

The Bruges version has distinctive features. Many other renditions show the denouement☒ Otanes sitting on the throne of judgment with the skin of his father draped below or above him☒ but do not detail either the arrest of the corrupt judge Sisamnes or the ghoulish specificity of his flaying,☒☒arguably laid out to be evocative of a crucifixion.☒☒Further, the decision to put this particular iteration into place in ☒☒☒☒ in the Town Hall of Bruges provides a puzzle for art historians. One theory, reliant in part on identifying various of the men portrayed to resemble locally prominent personages,☒☒takes the picture as a reference to specific events. Given the unsuccessful effort ten years earlier (☒☒☒☒) by citizens of Bruges to revolt against then-Archduke Maximilian (who later became Emperor), the ☒☒☒☒ painting could be read as a warning by pro-Maximilian forces not to cross kingly authority again.☒☒ Alternatively, if one focuses on Cambyses's madness, the scene, commissioned by the town's aldermen, might be taken as an oblique protest against the unjust exercise of kingly power.

But linking the commission of the Cambyses painting with specific events in Bruges may be misguided. This diptych was not the only image in that Town Hall. Gerard David was also commissioned to paint a *Last Jud☒ment* (now lost), and we know that the plan was in accordance with the commendation that judges surround themselves with pictures to ☒display good, old, wise adages conveying wisdom and knowledge; for . . . seeing provokes reflection.☒☒☒Moreover, portrayals of the Cambyses story can be found in many other town halls, including those of Mons, Gda☒sk (Danzig), and Brussels☒☒ appearing near other exempla such as the *Jud☒ment of Solomon* and the *Punishment of* ☒*aleucus* (discussed later in conjunction with their display in the Amsterdam Town Hall). Prints and etchings disseminated these allegories more widely.☒☒The purpose of the Bruges *Cam☒☒ses* may thus have been to make the more general points that judges ought not take bribes and that were judges to get out of line, rulers had the power ☒to guarantee the utter impartiality of the judgments handed down.☒☒☒

Bribes, Gifts, and Budgets

One other explanation (not mined by art historians, who generally assume that impartiality and anti-corruption norms were extant) is that the *Jud☒ment of Cam☒☒ses* was put on display in an effort to generate *new* understandings of what constituted illicit action by judges. Rather than presuming that the picture documented the prohibition of paying money to judges and the power of rulers to control local magistrates, the image could have been an effort to instill these ideas.

Giving money to judges was not necessarily considered wrong at the time. As Natalie Zemon Davis explained in her book *The* ☒*ift in Si☒teenth☒Centur*☒ ☒*rance*☒☒Gifts were everywhere in the movement of French politics, justice, and appointment in the sixteenth century.☒☒☒Under French law, gifts ☒to do honor to new officers were perfectly acceptable☒☒ ☒ making difficult a distinction between a ☒good gift☒ and a ☒bad one.☒☒☒Indeed, local judges supported themselves by receiving provisions from disputants, a practice recognized by law. Prior to ☒☒☒☒, France ☒forbade judges to accept any present from litigants in a current case under penalty of loss

of their office . . . *e[illegible]cept* for gifts of food, wine, and other perishables.[illegible] Further, as Davis explained, to obtain a judgeship required making a payment to the king for the [illegible]gift[illegible] of that office.[illegible] Indeed, as John Noonan put it in his book titled *Bri[illegible]es*[illegible] Reciprocity is in any society a rule of life, and in some societies at least it is *the* rule of life.[illegible]

The problem is not only one for history. Determining an appropriate relationship between judicial output, judges' incomes, and institutional budgets remains problematic today, centuries after debates in France about licit and illicit gifts. For example, during the [illegible]s in the United States, some localities provided that judges could receive bonuses by imposing fines on criminal defendants. In the course of trying to enforce Prohibition, the unpopular federal campaign against the consumption of alcohol (subsequently repealed through a constitutional amendment), Ohio passed a law permitting local law enforcement officials, including judges, to receive extra remuneration from fines imposed on and collected from violators. One such defendant challenged his conviction by the Village of North College Hill, where the mayor, who was also the village court judge, received about twelve dollars per fine imposed and had, over seven months, thereby augmented his salary by about [illegible].[illegible]

Was that illegal[illegible] The Supreme Court of Ohio dismissed the claim as presenting no [illegible]debatable constitutional question.[illegible] The United States Supreme Court reversed in a well-known decision, *Tume[illegible] v[illegible] hio,* which concluded that a [illegible]direct pecuniary interest . . . and . . . official motive to convict and to graduate the fine to help the financial needs of the village[illegible] violated the promise of due process of law.[illegible] Yet to do so, the Court spent pages canvassing English and American practices. Only after that survey did the Court decide that the custom of gaining fees and costs from convictions was not so embedded in the law as to be permissible.[illegible]

Moreover, while the idea of making payments to individuals has since become antithetical to conceptions of judicial integrity, institutional benefits are still gained

through payments, no longer called "gifts" but "user fees" that are tied to court-based activity. In some countries (such as England and Wales), "full-cost pricing" is in vogue. That system aims to have civil justice costs, including judicial salaries and administration, supported through fees paid into court rather than by national budgetary allocations.[illegible] If judges are reliant on such schedules with their payments by the hour for court time, incentives exist (as illustrated by the Ohio statute at issue in *Tume*) to conduct more proceedings.

Paying judges directly is also not foreign. As is detailed in Chapter [illegible], disputants in many countries are encouraged to turn to privately paid arbitrators; a program in California is called "rent-a-judge." Some consumer and employment contracts require the use of conflict resolution systems funded by private companies against which the claims are brought. And for those judges who stand for election, campaign contributions may come from interest groups hoping to shape the law.[illegible] In some countries, appointment processes are also not immune from economic influences. Judicial appointees can be supported" or opposed" by particular sectors running campaigns on their behalf. And when judiciaries render unpopular decisions, legislators sometimes threaten budgetary cuts. In short, some of the puzzles about the relationship between the financing of adjudication and the conditions for independent and impartial judging remain.

Yet one proposition has long been ruled out" bribery" defined from ancient Egypt through today as making a gift that wrongly influences and thus perverts judgment.[illegible] As the *Cambyses* narrative illustrates, such injunctions are directed specifically at judges, admonishing them not to take bribes. A related but distinct concept with a comparably long pedigree is that judges ought to be even-handed when rendering judgments. Throughout history, judges have been enjoined not to favor the rich (who have the capacity to give bribes, bestow rewards, or otherwise make appeals) or to be especially sympathetic to the poor (who because of their needi-

ness may engender special concern). Yet relatively little historical evidence of enforcement mechanisms can be found, and the issue of line-drawing was (and is) ever-present.

Skeptical about Law and Distrustful of Judges

The Judgment of Cambyses was not the only image of judicial misbehavior. Within the earlier tradition of placing *Last Judgment* paintings in town halls (see fig. 3/[illegible]) to remind judges that they too would be judged, a few images also warned against taking bribes. For example, in Maastricht, a [illegible] *Last Judgment* showed local aldermen presiding at trial, with a demon and an angel nearby. The inscriptions have the demon tempting them to accept bribes, while the angel warns:

> You who are counsellors, . . .
> Do not allow, for favor or hate,
> with bribes to hire,
> Else you go, who justice are,
> to hellish fire.

That motif can be found elsewhere, standing as a free-form sculpture called *Judge with a Rich Man and a Poor Man* (likely from a design by Albrecht Dürer) that was commissioned in [illegible] for the renovations of the Nuremberg Town Hall. *Judge with a Rich Man and a Poor Man* stood in a room in which business was conducted and verdicts rendered; a painted *Last Judgment* hung on the wall. The sculpture has several figures. At its center is a bearded man in robes who holds a baton in one hand and scales in the other. On one side, a poorly dressed man with upturned hands appeals for help, while on the other, his well-dressed counterpart appears to be reaching into a bulging purse. Paired nearby are a devil and an angel, joined by a griffin.

One could read the sculpture's message to admonish town leaders to be even-handed. Alternatively, one could view the angel as weighing in on the side of the poorer applicant, reminding those in power to take care of those in need. Further, just as some read the placement of the *Judgment of Cambyses* in Bruges to be a local reference, the Nuremberg scene may also refer to a particular incident. In [illegible] a Nuremberg Council member had been found to have taken bribes. Or one could enlarge the focus by looking more generally to the literature of the time, which presumed that corruption was rife in contemporary courts. Whichever of these readings is embraced, the devil's image served as a reminder of the risk of evil that lurks near power while the rich man's purse showed the threat of corruption. Thus, unlike contemporary decoration in courthouses, this portrayal suggests that authorities are fallible.

In sixteenth-century France, even if gifts were everywhere, Davis detailed a few prosecutions of judges alleged to have taken bribes, as well as admonitions in emblem books warning against accepting bribes or ignoring poorer litigants. For example, one of the images in Hans Holbein's *Pictures of Death* (in circulation in mid-sixteenth-century France) was of a corrupt judge accepting coins from a rich litigant and ignoring a poor one. In a [illegible] facsimile of Holbein's *Unjust Judge,* the skeletal figure of Death pulls a judge off the bench in a gesture reminiscent of the arrest of Sisamnes in Gerard David's *Judgment of Cambyses*. The accompanying verse explains:

> From out thy seat thou shalt be taken,
> So oft bribed to iniquity,
> Thy ill-got gains must be forsaken;
> No bribe can buy thy life of me.

Prohibitions against bribery are, as we have noted, ancient. But pictures of flayed judges were not regularly displayed until after the Middle Ages. Why did anti-corruption messages become prevalent in the decoration of town halls during the late fifteenth and sixteenth centuries? The fourteenth-century walls of Siena's Palazzo Pubblico praised Justice and detailed the injustice flowing from Tyranny but did not rail against the misuse of power. We cannot know whether other buildings of that era, no longer standing or now with illegible script, bore such admonitions. But what we do know is that judicial fallibility through corruption and bias became a major visual motif in the century thereafter.

These paintings, sculptures, and prints of corrupt judges display anxiety about the fairness of the application of laws, as well as suspicion of lay judges, lawyers, and municipal officials. The currents of unease in imagery and text ran through France, Germany, and England. In sixteenth-century France, the open sale of judicial office exhaled the breath of corruption. . . . Not only was it felt that a magistrate who bought his office was not far removed from one who would sell his justice, but the multiplication of judicial office was thought to encourage unnecessary litigation. A fifteenth-century German text, replete with proverbs creating a spiritual encyclopedia, made the point in poetic form: Water harms flames, sun snow, the south wind flowers, smoke light and money justice. Even more pointedly: Money, love and fear are often the cause of the judge's error.

Similar concerns led to efforts at reform in England. Abolition of the sale and purchase of office by judges, while not accomplished, was one goal of the popular movements of the [illegible]s. An ordinance encompassing a broader idea of judicial integrity was embraced in [illegible] and soon repealed, but half a century later, the [illegible] Act of Settlement sought to insulate judges from currying the king's favor. Rather than serving at the pleasure of a monarch, judges were to keep their offices contingent on good behavior. A vote of both Houses of Parliament was required to terminate their position.

The politics of the time, struggling over the legitimate exercise of power, with rulers trying to control judges and some popular efforts to constrain rulers, had a literary tra-

dition and a visual idiom to express these concerns. Classical literature gave literate Europeans stories of the misuse of authority, as illustrated by the account of Herodotus that launched the many depictions of the *Judgment of Cambyses*. Those exempla worked in tandem with encyclopedias of emblems and icons to furnish standard tropes by which to translate the distress about power into a vocabulary shared across many jurisdictions.

The Unjust Prince: Plutarch's Theban Judges and Alciatus's Emblems

Holbein's depiction of the *Unjust Judge* may well have been influenced by warnings against bribery in the works of Plutarch, writing in the first century CE and greatly admired during the Renaissance. Plutarch reported that in Egypt "statues of judges erected at Thebes "had" no hands; and the chief of them had also his eyes closed up, hereby signifying that among them justice was not to be solicited with either bribery or address." A parallel reference comes from the first-century BCE Sicilian historian Diodorus Siculus, who also spoke of closed-eyed judges in Thebes in his world history, *Bibliotheca historica*. Diodorus described a room in which "there were many statues of wood, representing the pleaders and spectators, looking upon the judges that gave judgment. . . . In the middle sat the chief justice, with the image of truth hanging about his neck, with his eyes closed, having many books lying before him. This signified that a judge ought not to take any bribes, but ought only to regard the truth and merits of the cause." In the [illegible]s, these descriptions gained a visual counterpart through editions of Andreas Alciatus's emblem book. As discussed in Chapter [illegible], those volumes were joined by the [illegible] *Iconologia* by Cesare Ripa" and a few other volumes" in providing a shared vocabulary of imagery and anecdote.

Andreas Alciatus, a professor of law in Bourges, France, and then in Pavia, Italy, and a friend of Erasmus (who called him a "shining light of Learning, not only the Law"), "was a figure central to both the history of art and legal humanism. Alciatus was a systematizer of law ("the man who introduced the historical method into university education") who shaped a humanistic jurisprudence through an extensive body of publications. His [illegible] treatise, an anthology of a diverse collection of moralizing short poems or epigrams to which his publisher added illustrations, was reproduced in some [illegible] editions." Each "emblem" (a term that Alciatus appears to have coined") consists of pictures accompanied by texts. The pictures were more than illustrative; the images were to be "read" (albeit with different levels of comprehension) by both the illiterate and the philosophically trained."

Among the emblems, which in some editions are numbered, is one called *The Good Prince in his Council*. There shown is a royal figure seated on a throne and surrounded by a few other men who are handless. Depending on which edition one sees, the central figure has no eyeballs in his open eye sockets or has one eye, or arguably (given the state of a particular edition's engravings) a patch or some kind of bandage covering part of one or both eyes. Figure [illegible] reproduces an example from a [illegible] Latin edition; the central figure is wearing a bandage obscuring part or all of his eyes, and his colleagues lack hands." In contrast, in the [illegible] edition from Paris and the [illegible] edition from Padua, the prince has no bandages over his open eyes. Whatever the visual depictions, these editions describe the figure as sightless."

The accompanying epigram varies with the edition. In the leading English compilation of five editions, published between [illegible] and [illegible], one finds this elaboration:

> These men without hands who are seated are those by whom justice is administered. They should have well-balanced sense; nothing is received from them in response to a bribe. Their prince, deprived of his sight, cannot see anybody, and he judges by due sentence according to what is said in his ear."

This parable (which echoes Plutarch's story of the Theban Judges) places the act of judgment in the hands of the sightless "prince" or "judge" in a world in which no doctrine of separation of powers existed and executive and judicial authority were combined.

Dogs, Snakes, and Virgins: Even-handedness in Ripa's *Iconologia*

Moving from judges to Justice, themes of the perversion of judgment through special connections to one party in a dispute or from bribes appear in the iconographical compendium of Ripa. A volume was first published in [illegible] without illustrations and republished in [illegible] and thereafter with accompanying pictures. Ripa set forth several kinds of Justice, each with her own description." In discussing one, "Strict Justice" ("Giustitia Retta"), Ripa advised that Justice be shown as a "woman with a raised sword, regal crown, and scales; on one side of her, there is a dog signifying friendship and a serpent on the other signifying hate. The raised sword denotes that Justice should not bend to either side, neither for friendship nor for hatred of any person and is therefore praiseworthy and able to maintain authority."

Another of Ripa's Justices was "Justice According to Aulus Gellius," a second-century CE Latin grammarian who, as we noted in Chapter [illegible], described Justice's "piercing gaze." Ripa said she ought to be portrayed as a "woman who is a beautiful virgin . . . "because" in the manner of virgins, "she" must be exempt from passion, not . . . corrupted by flattery, gifts, or anything else . . . . To indicate Justice and intellectual integrity the ancients used a jug, a basin, a column" as is

verified on old sepulchers of marble and by diverse antiquities, such that Alciatus said: A good judge must be pure of soul and clean of hands, if he wishes to punish crime and avenge injury.[illegible] One can hear through these admonitions an interconnected critique of judges. Anxiety about judgment laced the depictions of Gerard David's *Cam[illegible]ses* in Bruges, of the *Last Jud[illegible]ment* in Maastricht, the Dürer-modeled sculpture in Nuremberg, Holbein's woodcuts circulating in France, and the texts and pictures of Alciatus and Ripa, reprinted in many languages and disseminated around Europe. Geneva's version, *Les Ju[illegible]es au[illegible] mains coupe[illegible]s* (*Jud[illegible]es with Their [illegible] ands Cut [illegible]ff*) (fig. [illegible]), gives such concerns a particularly spectacular expression.

Hands Cut: Disfigured Judges and Regal Justices for Sixteenth-Century Geneva

Les Ju[illegible]es au[illegible] mains coup[illegible]es, sometimes called the *Tri[illegible]u[illegible]nal of The[illegible]es,*[illegible] is a startling scene. Dated [illegible], the fresco is attributed to Cesar Giglio, a painter from Vicenza.[illegible] The imagery starts right above a door-height balustrade, reaches the ceiling, and fills the top third of the room's walls. The presiding judge is centered on one of the walls and seated on a high-backed bench. He is shown in the detail provided in figure [illegible] with open eyes, an upright scepter in one hand, and the other hand cut off. On each side of that judge sit three others, also depicted handless, so that thirteen stumps of arms are visible. At least two of the six judges have their eyes cast down if not closed.

Two scrolls unfold, on the left behind a figure identified as David and on the right near a figure of Moses.[illegible] The scroll near David has text in French, with lines citing to [illegible]*saiah* [illegible]:[illegible] and *Psalm* [illegible]. The legible words from [illegible]*saiah* can be read as [illegible]Who among us will dwell in the eternal flames[illegible] A few letters are legible in the second passage, as is the attribution to *Psalm* [illegible]. One scholar presumed that the text read, [illegible]God stands in the assembly and judges among judges.[illegible] (A standard English translation of *Psalm* [illegible] reads instead: [illegible]God stands in the assembly and judges among the gods.[illegible])

As can be seen in the larger view (fig. [illegible]), the text near Moses is in French and readily legible. The passage, from the Old Testament's [illegible]*odus* [illegible]:[illegible], can be translated as [illegible]Thou shalt not accept gifts, for a present blinds the prudent and distorts the words of the just.[illegible] In terms of the specific explanations for this display, local stories of treason or perfidy are a possibility.[illegible] But, as the alternative title [illegible] *Tri[illegible]unal of The[illegible]es*[illegible] suggests, a textual basis could have been the Greek Plutarch as recycled through Alciatus and others.[illegible] That the Geneva fresco has its central judge open-eyed is

FIGURE [illegible] *Les Ju[illegible]es au[illegible] mains coup[illegible]es* (*Jud[illegible]es with Their [illegible] ands Cut [illegible] ff*), Cesar Giglio, circa [illegible], Geneva Town Hall, Geneva, Switzerland. Painting in the chamber of the Conseil d'Etat (Council Chamber) in the Baudet Tower.

FIGURE [illegible] *Les Ju[illegible]es au[illegible] mains coup[illegible]es* (detail).

explained either as poetic license taken by the original artist or as an error of repainting during a restoration.[illegible] Moreover, because some of the editions of Alciatus's emblems do not clearly provide a sightless judge (although the accompanying texts generally do describe him as such), Giglio could have worked from an image that showed eyes.

Les Ju[illegible]es is a particularly vivid and now well-preserved rendition, but images of handless judges were not unique to the Geneva Town Hall. Other examples of [illegible]Theban judges[illegible] could be found in town halls in Germany and Poland, including at Ulm, Augsburg, Regensburg, and Gda[illegible]sk.[illegible] In addition to the Alciatus reference, historians have found another source[illegible] a dictum by John of Salisbury that [illegible]officials and judges [illegible]were[illegible]the hands of the state[illegible] invoked in a fifteenth-century [illegible]council poem[illegible] by Johannes Rothe, the town clerk of the City of Erfurt.[illegible] Rothe used the metaphor to explain that officials and judges were to take money and gifts given in honor of the community, while clerks (such as himself) were to serve as the city's [illegible]eyes[illegible] to supervise the

receipt.⊠⊠Moreover, in some southern German cities, ⊠severing hands or fingers served as punishment for corrupt officials⊠⊠ providing a reminder that one should not read the depictions of handless judges only as allegories, for the ⊠gory threat . . . could be taken quite literally.⊠⊠⊠

The effort to constrain judgment was not limited to depictions of judges but could occasionally be found in drawings of the abstract Virtue Justice herself. Two German manuscripts of the fifteenth century portrayed a female Justice with her arms severed around the elbow.⊠⊠In both she is surrounded by men who are shorter than she, and in both, the men hold scrolls with the same Latin text, that the ⊠woman is tall . . . because the judge must remember the judge in heaven; she is blind so that she shall not be influenced by wealth or poverty, friendship or hatred; and she has no hands so that she shall not be too gentle or too harsh.⊠⊠⊠Another armless female is shown in an image by Marten de Vos, who worked in Antwerp and drew a personification of the Virtue Integrity in that fashion.⊠⊠

Les Ju⊠es au⊠ mains coup⊠es hung in the Chamber of the Conseil d'Etat in the Baudet Tower of the Geneva Town Hall, which was the ⊠seat of the government of the old Republic and Canton of Geneva.⊠⊠⊠The General Council of Geneva emerged from an assembly of citizens that began meeting in ⊠⊠⊠⊠ in the cloisters of the Cath⊠dral de St.-Pierre.⊠⊠In ⊠⊠⊠⊠, Bishop Adh⊠mar Fabri issued a charter recognizing Geneva as a citizen republic with jurisdiction over certain matters. Geneva gained its discrete political identity after ⊠⊠⊠⊠, when its leading families allied and obtained protection from the free cities of Bern and Fribourg. The result, in ⊠⊠⊠⊠, was independence from both the Holy Roman Empire and the House of Savoy,⊠⊠whose prince-bishop of Geneva fled the city in ⊠⊠⊠⊠. John Calvin arrived in ⊠⊠⊠⊠, and within the decade this Protestant republic had adopted his ⊠*cclesiastical* ⊠ *rdinances*⊠⊠⊠

Central to Geneva's identity were Calvin's edict ⊠Let every soul be subject to the higher powers⊠his insistence on political obedience as a bulwark against anarchy,⊠⊠and his hostility to the Catholic Church. As its motto, *Post tene⊠ras lu⊠* (⊠*fter darkness li⊠ht*) might suggest, this ⊠Reformed community in Geneva considered itself to be a better expression of the pure church than the corrupted Catholic Church it replaced.⊠⊠⊠Seen by Catholics as defiant, Geneva aspired to a disciplined church and state conforming to God's will, a ⊠Christian commonwealth⊠ functioning as a thriving republican city-state.⊠⊠ Whether this ideology provided a source for the fresco or not,⊠⊠the Republic of Geneva's Town Hall was replete with admonitions that judges ought not take bribes.

The building itself dates from sometime during the early fifteenth century and provided a discrete structure in which the town's governing bodies (including a Small Council of Twenty-Five, a Council of Two Hundred, and a General Council) worked. Inscribed on one of its walls is a passage from ⊠⊠*Chronicles* ⊠⊠:⊠–⊠, translated as:

> Jehoshaphat . . . said to ⊠the judges⊠ ⊠Be careful what you do; you are there as judges, to please not man but the Lord, who is with you when you pass sentence. Let the dread of the Lord be upon you, then; take care what you do, for the Lord our God will not tolerate injustice, partiality, or bribery.⊠⊠⊠

The room where *Les Ju⊠es au⊠ mains coup⊠es* was displayed (and then obscured via redecoration until its rediscovery in ⊠⊠⊠⊠) was used to pronounce judgments and to impose sentences.⊠⊠ The room's other frescoes were executed in ⊠⊠⊠⊠ at the direction of local authorities. More than a century later, *Les Ju⊠es* covered over a part of the original d⊠cor.⊠⊠What remained visible included philosophers, historians, religious figures, Justice, and other Virtues, all accompanied by instructional texts.⊠⊠The figures arrayed on the three walls could be read to refer, in turn, to the magistrates of Geneva, to Justice and other Virtues, and to the Last Judgment.⊠⊠⊠

As in Siena, Justice dominates Geneva's communal effort to express its own good governance.⊠⊠⊠On a wall adjoining the handless judges, the ⊠⊠⊠⊠ frescoes feature Justice, placed on that wall's center (fig. ⊠⊠) and discussed in various texts explicating the other images. Reminscient of Giotto's figure, she is shown clear-eyed, wearing robes of crimson and gold as well as a large gold crown; she holds a balance in her left hand and a raised sword in her right.⊠⊠Seated on a high-sided throne, Justice is flanked by two figures, identified as Aristotle and Cicero.⊠⊠⊠By deploying both men, the frescoes avoided the debate (detailed in Chapter ⊠) surrounding the iconography of the Palazzo Pubblico in Siena. Rather than be read as preferring either Aristotle or Cicero, Geneva embraced them both.

As in Siena, many maxims accompany the pictures, offering a mixture of Latin and the vernacular, as did the lettering of the scrolls complementing *Les Ju⊠es au⊠ mains coup⊠es*⊠But, unlike in Siena, a good many of the Geneva messages are about buffering judges from bias. For example, at Justice's feet is a partially destroyed scroll with Latin text that can be reconstructed to read, ⊠If a controversy arises before a judge, maintain the balance of judgment; do not let yourself be bent by affection or by the influence of gifts. A judge of firm mind does not give preference to anyone.⊠⊠⊠Above Justice's head runs, in Latin, ⊠I am Justice, who gives to each that which he deserves.⊠⊠⊠Near Cicero is a Latin text translated as ⊠No occasion arises that can excuse a man for being guilty of injustice.⊠⊠⊠

More instructions (not all focused on biased judgment) swirl about. Close to Aristotle is a passage from his *Nico⊠ machean ⊠thics*⊠ that ⊠Justice is the greatest of the virtues.⊠⊠⊠ (The same words are etched on the facade of a ⊠⊠⊠⊠ federal courthouse in Denver, Colorado, shown in Chapter ⊠.) Facing Justice is Virgil, who appears near the Latin words ⊠Be warned: learn justice and help the a⊠ icted.⊠⊠⊠And along-

Figure [illegible] *Peinture murales avec la Justice entourée de [illegible]auche à droite d[illegible]ristote, [illegible]ile, Cic[illegible]ron et [illegible]lanus* (*Mural with Justice Surrounded [illegible], from Left to [illegible]ht, [illegible]ristotle, [illegible]il, Cicero and [illegible]lanus*), circa [illegible], Salle du Conseil d'Etat (Council Chamber), Geneva Town Hall, Geneva, Switzerland.

side an image of Lactantius, a Christian who authored *Divinarum institutionum* (*Divine [illegible]nstitutions*) in the early fourth century CE, is a Latin passage from that work that reads, [illegible]Justice has two veins: piety and equity.[illegible] Another Virtue featured prominently in the frescoes is [illegible]L'Amiti[illegible] (friendship), explained as a likely reference to Aristotle's premise that friendship, like Justice, is a necessary precondition for a healthy polity.[illegible] Thus Geneva did not portray an uncomplicated picture of government but adverted repeatedly to the struggle to be just and to the temptations judges faced. The walls bear witness to the possibility of judicial betrayals of the Virtue Justice and to the greater powers evaluating the justice rendered.

Judicial Subservience and Dependence

Return to the puzzling relationship among gifts, bribes, and support of judges. Focused on France, Natalie Zemon Davis was intrigued by the fact that, unlike England, where the word [illegible]*ri[illegible]e* had negative connotations dating from Chaucer's time, old French lacked a term for bribery.[illegible] Davis argued that the emergence of the mid-sixteenth-century effort to prohibit gift-giving ought not be understood simply as a triumph for judicial integrity but rather as a means of rendering judges more dependent on central royal authority. Cutting off support from litigants by recasting gifts as bribes was [illegible]as much related to the king's efforts to control his judicial officers and win their loyalty as it was to popular complaint.[illegible] Prohibiting gifts tightened [illegible]the judges' ties to the monarch [illegible]who paid their salaries[illegible] as against their competing ties to local aristocracies.[illegible]

The images in Bruges of Sisamnes flayed and in Geneva of handless judges should be put into this context of a struggle for loyalty. These paintings and frescoes for town halls express the power of rulers to judge their judges, to arrest and evict them from their offices, to maim and to flay them. Add Last Judgment scenes, the ambiguity surrounding donations and gifts to judges, the complexity of sorting permissible from impermissible gifts, and the pervasive evidence of unease about [illegible]fear or favor[illegible] corrupting judgment, and one can see that several of the narratives in town halls aimed to instill an ideal of judicial subservience to higher powers. Just as Last Judgment scenes instructed judges to fear God, so did deployment of the Cambyses story and pictures of maimed men remind judges and councilmen to obey earthly ruling powers.[illegible]

Furthermore, as Davis pointed out, forbidding gifts shifted magistrates' dependence from local populations to royal authority. But where should judges get their support? Take a proposition that seems to leap from the picture of Cambyses: judges cannot be paid by the litigants before them, for that payment is an illicit bribe. But a modern assumption is that judges can be appointed by the state, draw their salaries from the state, work in buildings provided by the state, have jurisdictional competencies defined by the state, and yet be called independent and impartial. We have come to conceive of judges as holding a peculiarly distinctive form of employment and of the judge as simultaneously a subject and employee of the state yet able to sit in judgment of the very entity that authorizes that task. Elaborating the growth of this idea of independence, translated through the separation of powers and interrelated to ideas of impartiality, is one of the aims of this book, as is explaining how observers today also look at images such as the *Judgment of Cambyses* and *Les juges au main coupée* and find not only anti-corruption premises but also obligations of what we call fairness and equal treatment. Medieval and Renaissance adjudication provided opportunities for the development of proto-democratic practices, to which we return after examining more narratives of Justice that once were commonplace.

The Challenge and Pain of Rendering Judgment: Amsterdam's Seventeenth-Century Town Hall

Judicial corruption was one leitmotif within European town halls, and a second was that judging entailed pain, both professional and personal. This theme can be seen by moving forward from the sixteenth century to the middle of the seventeenth and by traveling from Bruges and Geneva to Amsterdam, where city leaders made that point through an extraordinarily self-conscious project that produced their town halls.

We know from local records (cited in Katharine Fremantle's classic volume on the Amsterdam Town Hall) that the city's leaders (burgomasters) as well as the building's principal architect (Jacob van Campen) took seriously the Roman architect Vitruvius's instruction that "public and private buildings "should" correspond to the grandeur of our history, and will be a memorial to future ages." The burgomasters wanted their building to "proclaim the city's accomplishments and reflect its wealth and prestige." They hoped that, as "the ultimate embodiment of the dominion and civilisation of their era" their Town Hall "would eclipse even the finest architecture of the past."

Their aspirations were, for a time, fulfilled in that the Amsterdam Town Hall became a "secular temple as well as a trophy"; its chambers were of unprecedented "refinement and grandeur," displaying the impressive resources of the Dutch during the seventeenth century." The Amsterdam Town Hall was promptly dubbed the "eighth wonder of the world." The burgomasters had a story to tell" of their prosperity and power linked to commerce, peace, and justice."

An "undertaking of megalomanic proportions"

The view of the Amsterdam Town Hall in figure 1 shows its imposing facade facing Dam Square. Now also called the Royal Palace, because it later served as the residence for Louis Napoleon," it remains (like the Palazzo Pubblico in Siena) open to the public. And, like Lorenzetti's frescoes in Siena, the iconography of the Royal Palace has been unusually well documented and explicated." Moreover, because Amsterdam became a center of European graphic arts and "townscapes" became a popular genre," paintings and illustrated city guides published in the 1600s and thereafter brought images of the Amsterdam Town Hall to many parts of the world."

The building shown in figure 1 was not Amsterdam's first Town Hall. Another had existed since at least 1400 on what is now Dam Square. In 1480 a "separate court of justice" called the "Vierschaar" (Tribunal) was added, and by the 1500s the complex included prisons." There continued the tradition, once enacted in open fields, of public displays of rulers' power." During the fourteenth and fifteenth centuries, "public punishments were carried out in the Vierschaar, where a post for scourging "or flogging", surmounted by a figure of Justice, was set up." Executions, with the sheriff and others watching, took place in front of the Town Hall."

In 1400 Amsterdam's population was about 10,000; by 1500 it had more than doubled, to 21,000, and in 1600 it had grown to about 100,000." Yet "it was not because it was overcrowded that the city council decided to replace the old Town Hall, but because it was derelict." Fremantle tells us that burgomasters wanted their city's building to be "worthy of her status and of the virtues of her government, which might declare her greatness within the city and to the admiring world." Their commission of a building of unprecedented size for the city" prompted another historian of the building, Eymert-Jan Goossens, to call the effort "an undertaking of megalomanic proportions" that united "the arts in an architectural context on a scale hitherto unknown in the Netherlands."

Whatever one's critical stance toward the ruling class of Amsterdam and their ambitions, their building and its interiors constitute a remarkable didactic exercise, aimed at marking and making power by instructing its viewers and its users. In terms of the authorship of the plans (and in contrast to contemporary courthouse buildings, whose design and art are often specified by internationally recognized architectural firms), we know that the thirty-six members of the city council studied proposed plans for the building, and further that the city's rulers, the burgomasters, directed

FIGURE [illegible] Exterior of the Town Hall (Royal Palace) of Amsterdam. Architect: Jacob van Campen, [illegible]–[illegible], Amsterdam, the Netherlands.

Photograph reproduced with the permission of the Amsterdam City Archives.

many of the decisions.[illegible] And, whether laudatory or skeptical of the result, commentators concur on one point: the city governors succeeded in making their building Amsterdam's major visual symbol.[illegible] The Town Hall was the [illegible]largest public building project undertaken in the Republic in the seventeenth century[illegible] it was not only built to [illegible]serve as the seat of the government but also served as a meeting place for the citizens.[illegible] Further, the Town Hall was Holland's first structure in [illegible]a classical style of architecture in which buildings were considered in the round and as a whole, in relation to their setting, and with their decoration as an integral part of the design.[illegible]

The interior allegorical didacticism offered a mixture of classical and religious themes. Ripa's [illegible]*conolo*[illegible]*ia,* translated and published in Dutch in [illegible], [illegible] was a major influence, as was the Bible. Much has been written about the Republic of the Netherlands as an embodiment of the Old Testament's Israel.[illegible] (As discussed in Chapter [illegible], Venetian leaders also claimed that their city was the [illegible]New Rome[illegible] in a special relationship to the Pope.) Amsterdam's leaders saw their city as the [illegible]latter-day holy city of Jerusalem[illegible] with its Town Hall as the [illegible]seat of [illegible]ighteous' authority[illegible] embodying [illegible]divinity on earth[illegible] and serving as the [illegible]the heart of a harmonious community.[illegible] Yet the burgomasters also saw themselves as [illegible]successors to the consuls of the Roman Republic.[illegible] Thus the Town Hall's designers laid claim to Greek and Roman traditions, recycled through Christian iconography,[illegible] as they retold their own history through a series of paintings and displays of various gods.[illegible]

The Virtues of Prosperity: Justice, Peace, and Prudence Reigning over an Expanding Municipality

The Amsterdam Town Hall was not the city's only civic structure. By the seventeenth century, the increase in municipal functions required that some activities previously housed under one roof be relocated. Thus, the new Town Hall was one of a series of buildings that included a weigh house, market halls, warehouses, an orphanage, an old-age home, a theater, and a house of correction.[illegible] Yet even with that proliferation, multiple functions remained in the one dominant building. In [illegible]modern terminology, the Town

Hall was court of justice, house of detention, police headquarters, ministry of justice, public prosecutor's office and place of execution [illegible]and housed yet other functions[illegible] all rolled into one.[illegible]Indeed, what occurred inside the building affected townspeople from their youth to their old age.[illegible] Rooms were designated to match the services provided, with spaces dedicated to the Commissioners for Matrimonial Affairs, the City's Trustees of the Orphans, Marine Affairs, the Burgomasters, the City Council, a Commissioner of Petty Affairs, a Bankruptcy Office and, on the top floor, the display of art.[illegible] Space was marked not only by function but also by import; Van Campen is credited with allocating offices to express the [illegible]power relations[illegible] among them.[illegible]

The new building's construction began in [illegible], before the fire of [illegible] that so damaged the prior Town Hall.[illegible]The first stone was laid around the time of the Peace of Münster, which concluded a war with Spain[illegible]and thereby freed up funds to finance the project.[illegible] Although the building's design was not finalized until sometime thereafter, [illegible],[illegible] trunks of Scandinavian conifers, each some [illegible] metres long, were driven by hand into a marshy ground at an average rate of sixty per day.[illegible] The floor plan shaped a building measuring [illegible] by [illegible] feet, with two inner courtyards.[illegible] The building was not complete when inaugural ceremonies that entailed a great deal of pagentry took place in [illegible]. A commemorative medal was coined and poems composed, including a [illegible]-line poem by Joost van den Vondel and other odes by Jan Vos.[illegible]

The Town Hall's symmetrical facade announces that the government it celebrated was entwined with Justice. She sits as one of three large figures, all attributed to Artus Quellinus and all crowning the tympanum of the building, below the cupola facing Dam Square.[illegible] Peace, put into place around [illegible], is at the center,[illegible]with Prudence on one side and Justice on the other, both of which can be seen in figure [illegible] and both of which were by then [illegible]traditional elements in the decoration of a town hall.[illegible]On the back side of the building's roof, facing away from Dam Square, sit Temperance and Vigilance (in lieu of the fourth Cardinal Virtue, Fortitude),[illegible] flanking a figure of Atlas holding up the world. On the front facade, beneath Peace on the twenty-meter marble pediment is one of many personifications of the [illegible]Maid of Amsterdam.[illegible]

Inside, the themes made plain on the facade[illegible] authority and prosperity derived from Peace and Prudence linked to Justice[illegible] are echoed many times. The grand [illegible]Citizens' Hall[illegible] (Burgerzaal) at the center of the first floor above street level has ceilings [illegible] feet high and runs [illegible] feet long and [illegible] feet wide.[illegible] That the building was [illegible]a representation of the world[illegible]and mirrored the universe can be seen from the central statue[illegible] another Atlas, again holding the world on his

shoulders, surrounded by Peace and the Four Cardinal Virtues.[illegible] Below Atlas stands a major sculptural relief[illegible] the [illegible]*lor*[illegible] *of* [illegible]*msterdam*[illegible] with a second rendition of the Maid of Amsterdam, shown holding branches from olive trees and palms, denoting [illegible]peace and prosperity.[illegible] Placed in a large sculptural setting, she is guarded by lions and attended to by many figures, including the Virtues of Justice, Freedom, Discipline, Religion, Peace, Trade, Plenty, Wealth, Unity, and Faithfulness.[illegible] On the floor of this room is a huge mosaic made from wooden inlay showing the hemispheres, and a zodiac can be found on its ceiling.[illegible]

Throughout the many rooms flowing off corridors and stairways, the program of self-conscious symbolism relying on the traditions with which Amsterdam allied itself ([illegible]from God's sacred pages, and the antiquity of the Romans[illegible]) continued, with deities such as Diana, Mercury, Venus, and Apollo; historical allegories; and various Virtues strategically deployed. As Gerard de Lairesse put it in [illegible], [illegible]for each piece (chiefly sculpture) is so ordered, as to allude to the rooms; whence we know, what uses the rooms are put to, and by the rooms, what the paintings, stone-figures and bas-reliefs signify.[illegible] For example, Venus guards the passageways to two rooms [illegible]that lead up to the Chamber of Matrimonial Affairs and that of Marine Affairs, both of which fall under her jurisdiction.[illegible] Two Last Judgment scenes were commissioned, one painted by Adriaan Backer for the lunette in the Citizens' Hall[illegible] and a second, by the building's architect-artist Jacob van Campen, for the Tribunal on the floor below.[illegible] The Cardinal Virtues of Fortitude, Temperance, Prudence, and Justice can be found in various places. One ceiling in the Citizens' Hall is a painting by Nicolaes van Helt Stockade [illegible]showing Amsterdam, personified as Justice, expelling vices . . . from heaven[illegible]; assistance comes from several other Virtues.[illegible] Roman histories also were plentiful.[illegible]

The theme of anti-corruption was (as in the Town Halls of Geneva and Bruges) reiterated throughout, aimed at enjoining all who governed to be above accepting bribes. In the Burgomaster's Council Room, a painting by Ferdinand Bol featured the Consul Luscinus, who provided a model of civic virtue because he had rejected a bribe from Pyrrhus and rebuffed the threat posed, as the picture showed, by a fearsome elephant.[illegible] Another image, about the [illegible]incorruptibility of the Roman consul Marcus Curius Dentatus[illegible] who was known to have preferred the [illegible]humble[illegible] turnip to expensive gifts, repeats the message.[illegible]

[illegible]The free state flourishes, when the people honor the laws[illegible]

Justice dominates several spaces,[illegible] as can be seen by turning to the two rooms dedicated to the administration of justice[illegible] the large Magistrates' Chamber on the first floor (at the same level as the grand Citizens' Hall) and the Tribunal on the ground floor.[illegible] The Magistrates' Chamber was the place in which disputes were heard, statutes set forth, and marriages performed.[illegible] Its entrance is shown in figure [illegible]. The room is marked by a large sculptural relief dated about [illegible] called *Justice, Wealth,* [illegible]*etri*[illegible]*ution,* [illegible]*reed, and* [illegible]*nv*[illegible] and attributed to Artus Quellinus. The Justice at its center has an unusual place of honor in that the large sculpture sits in view of and parallel to another large relief depicting the City of Amsterdam. Therefore, the statue of Justice above the western entrance to the Citizens' Hall serves as a [illegible]counterpart to the figure of Amsterdam which ornaments its eastern entrance.[illegible]

This stone Justice is a large, draped, clear-eyed woman who holds both scales and an upturned sword. On one side is a cherubic angel, and on the other is a figure described as a harpy, paired to denote good and evil. Below Justice's feet, bent and curled, are two figures said to be [illegible]tormented souls symbolising greed and envy[illegible] over whom Justice plainly triumphs. To her right is a skeleton, [illegible]Death[illegible] with an empty hourglass. On Justice's left is a figure called [illegible]Punishment[illegible] who [illegible]turns her face away from Justice[illegible] and holds various implements, including lictor rods, that could be used for [illegible]shattering the kneecaps.[illegible] Under the group are detailed symbolic carvings that are hard to see in most reproductions. Included at the center above the door is an eye[illegible] a reference to the [illegible]all-seeing eye of God,[illegible] flanked by [illegible]two wooden measures of length.[illegible] On the arch to the Magistrates' Chamber is a clock, which could be understood as suggesting that [illegible]time to repent[illegible] remained.[illegible] Carved on the entrance passageway to the room are the sword of Justice, a bridle to link Temperance's moderating influences to judgment, and a lion's pelt to reflect Fortitude's strength.[illegible]

Inside the large (eighty by thirty-two feet) and lavishly appointed Magistrates' Chambers,[illegible] Justice can again be found. One or two painted Justices, clear-eyed, once existed on panels in the ceiling.[illegible] In addition, as can be seen today and is shown here in figure [illegible] (color plate [illegible]), a large canvas has Justice at the center of a scene. This [illegible] painting, *Justice* (or *Prudence, Justice, and Peace*), is by Jürgen Ovens.[illegible] As figures [illegible] and [illegible] show, huge statues of this same threesome sit atop the building's facade, crowning the building's tympanum. While outside Peace presides in the middle, indoors, in Ovens's rendition, Justice is the enthroned central figure, once again clear-eyed and holding scales and sword.

Ovens's Justice, wearing a yellow (or gold) dress that is set off by a red drapery across her lap, is attended by the other two Virtues, both shown seated and lower in the picture's frame. Wrapped in a white robe with pearls on her arm, a wreath of olive branches on her head and another in hand, Peace leans on Justice's knee. Prudence, dressed in brown and blue and carrying a [illegible]snake staff,[illegible] places a hand on, and perhaps thereby restrains, Justice's sword.[illegible] One of Ovens's contemporaries explained in [illegible] that the painting made clear [illegible]that Justice's work, without Prudence to guide it, is in all ways very dangerous; and experience overwhelmingly shows, that often when judges do not act with suffi-

FIGURE [illegible] *Justice, Wealth, [illegible]etri[illegible]ution, [illegible]reed, and [illegible]nv[illegible]* attributed to Artus Quellinus, circa [illegible], entrance to the Magistrates' Chamber, Town Hall (Royal Palace), Amsterdam, the Netherlands.

Photograph reproduced with the permission of the Amsterdam City Archives.

cient prudence, they make disgraceful mistakes, and following their imprudently declared judgments, which are even more imprudently carried out with great insensitivity, until finally, far too late, they are complained about.[illegible]

Other paintings in the room elaborated Amsterdam leaders' embrace of law and reiterated the Dutch's special connection to the Israelites of the Old Testament. On the wall above what is now a fireplace[illegible] is a frieze crafted in [illegible] by Artus Quellinus depicting the Old Testament story of the Israelites worshipping a false idol, a golden calf.[illegible] Above it is a painting, *Moses Descends from Mount Sinai* (fig. [illegible]), by Ferdinand Bol, who had trained in Rembrandt's studio.[illegible] On the huge canvas, about fourteen by nine feet, Moses is positioned against rocks that could be taken for a throne. He is draped and appears godlike, surrounded by several winged cherubic angels emerging from the clouds in a darkened sky. Moses holds the tablets of the Ten Commandments, which became a symbol of law through their repeated use in Christian art.[illegible] Below his feet and seen through a shaft of light are supplicants[illegible] women and men of various ages appealing to, pleading with, and welcoming him.

Historian Simon Schama bemoaned this imagery, describing it as [illegible]stilted and ungainly[illegible] with [illegible]its pretension at baroque monumentalism . . . [illegible]that[illegible] far outstripped Bol's native ability to deliver.[illegible] But, while terming the artistry [illegible]second-rate[illegible] Schama thought the painting provided [illegible]first-rate historical evidence[illegible] of the relative power-holders in Amsterdam. The selection of this narrative marked the ascendency of the moderating forces of the Burgomasters, opposing the conservative Calvinists' efforts to prohibit various forms of art.[illegible] Their choice to ignore Aaron and to lionize Moses ([illegible]the lawgiver and political leader[illegible] who transferred his own authority to the Israelites' judges rather than to priests) can be read as an implicit rebuke against the Calvinist clergy.[illegible] Through appropriating a biblical Ten Commandments scene and thereby borrowing [illegible]the ideological

vocabulary⌧ of their opponents,⌧⌧ the Burgomasters pronounced themselves the true guardians of lawfulness.

That this painting encapsulated the Burgomasters' insistence on the rule of (their) law is plain from the poetry that described it. Amsterdam's leading poet, Vondel, published verse to explain the scene:

> Hebrew Moses has received the law from God,
> With which he returns from above
> to the people,
> Who greet him reverently, and welcome
> him eagerly.
> The free state flourishes, when the people
> honor the laws.⌧⌧

Another poem, by Jan Vos, also composed to honor the painting, read:

> He who governs the people requires
> a strong hand
> The Laws are to intimidate all whose ways
> are wicked
> Where wise Laws obtain, virtue shall
> be upheld.⌧⌧

Above the place where the magistrates sat when examining parties was a representation of the Last Judgment.⌧⌧ Also painted in gold lettering on the wall above the entrance were the words ⌧Audi ⌧ Alteram partem⌧ (Hear the Other Side),⌧⌧ found in other town halls such as those at The Hague and in Gouda, in books providing exempla of justice, and (as displayed in Chapter ⌧⌧) in twentieth-century courthouses.⌧⌧

Any prisoner who did not admit guilt was examined in another room, with carvings of the ⌧instruments of torture⌧

on the wall. There the accused was tortured in the presence of the [illegible]sheriff, burgomaster and magistrates[illegible] to extract a confession.[illegible] Torture rooms exemplified the point made by legal historian John Langbein, that [illegible]judicial torture[illegible] was [illegible]part of the ordinary criminal procedure, regularly employed to investigate and prosecute routine crime before the ordinary courts.[illegible] When admissions of guilt were not forthcoming or eyewitnesses unavailable, torture was used as a predicate to, rather than a punishment after, conviction.[illegible]

Minor punishments were imposed in the Magistrates' Chambers, but death sentences (followed by executions on scaffolds erected outside the Town Hall) were pronounced in an orchestrated ceremony on the floor below in a second room, called the Tribunal (the Vierschaar in Dutch), also specially appointed to suit its function in the administration of justice.[illegible] The room was situated so that the Burgomasters could look down through windows on the second floor into it and thereby [illegible]give their sanction to the sentencing of the prisoner.[illegible] Once sentences of death were pronounced in that room, they were irrevocable.[illegible] The verdicts were [illegible]called out . . . so that the crowds outdoors could hear.[illegible] Not only could passers-by look in and watch the proceedings in the Tribunal from windows that faced the street. Public visibility was the point of the room, providing

the ceremonial setting for the local population to observe the imposition of state power.

Harming Your Children in the Name of the Law: Solomon, Zaleucus, Brutus, and Death

The Tribunal's iconography tells stories not much heard today of the pain that those who render judgments must endure. As can be seen from figure , a photograph taken from its entrance, the Tribunal is a relatively small marble room. The walls describe what awaited the accused and how making such decisions burdened the judges. On the door used to enter the room are crossed bones and skulls and an inscription from Virgil's *eneid* that reads, Be warned; learn to be just, and do not slight the gods. A serpent coiled around bars at the entrance gate represents humankind's fall into sin; executioners' swords and skulls inscribe the themes of guilt, remorse, and pain that run through the room.

The western wall of the room (see figs. and) faced the accused, and was what those outside on the street could see. Four large female figures (two upright . . . and two hiding their faces in shame) represent caryatids women enslaved by the Greeks as an eternal warning against those conspiring against the state. They not only serve to echo a sense of injury but also appear to hold up the heavy projecting cornice above. Joined by two narrower pillars carved in a floral pattern, the caryatids frame three narrations on the panels behind the magistrates' bench. Told there are stories of Solomon, Zaleucus, and Brutus in reliefs attributed to Artus Quellinus and presumed to have been designed by Jacob Van Campen.

Missing from the room is a commissioned triptych of the Last Judgment that was to have been placed above the three

marble carvings so that the [illegible]representations of divine justice would together have completed the significance of the scenes of human justice.[illegible] The [illegible]Chosen[illegible] were to have been on the right and the Damned [illegible]on the left.[illegible] That plan changed when the room was redesigned and the center panel, painted by Jacob van Campen, was [illegible]never actually installed[illegible] but was instead transferred in [illegible] to the Amersfoort Town Hall.[illegible]

As many of the rooms in the Amsterdam Town Hall illustrate, it had become [illegible]the fashion[illegible] in the Netherlands to follow Ripa's advice that [illegible]things written[illegible] under iconic images enhanced the viewer's engagement,[illegible] and therefore that artists should [illegible]add verses to a painting's frame to explain its significance and/or symbolic meaning.[illegible] Yet such written texts are notably absent from the Tribunal, where the images framing the ceremonies of death were thought to suffice.[illegible] Portrayed by Quellinus are three then-famous stories[illegible] the Judgment of Solomon, the Blinding of Zaleucus, and the Judgment of Brutus[illegible] designed to appear to onlookers from outside [illegible]as a background to the events that took place within the court.[illegible] The three panels, spanning Judeo-Christian, Greek, and Roman literature, produce an [illegible]international pictorial tradition.[illegible] While unusual given the marble artistry and the grandeur of the Amsterdam Town Hall, they are of interest because they are in other respects ordinary. The *e[illegible]empla iustitiae* in this Tribunal were used repeatedly in other buildings and in print.[illegible] Similarly, scenes of the Last Judgment were, by law and custom, to be posted on town hall walls so that judges could literally see their own fate were they to err. As a Renaissance medal explained, [illegible]When kept in view, the punishments of the unjust teach justice.[illegible]

The Jud[illegible]ment of Solomon

Alongside scenes of the Last Judgment, depictions of Solomon were commonly featured in town halls.[illegible] Both of these stock images often graced the portals of churches, placed near the outdoor spaces where courts of law were

Figure [illegible] *in Solomon's Justice,* Artus Quellinus, circa [illegible], the west wall of the Tribunal.

convened.[illegible] By the Renaissance, Solomon had come to provide a prototype for the embodiment of wisdom,[illegible] and he appeared twice in the Amsterdam Town Hall, once in the Council Chamber, where the painting *Solomon Pra[illegible]in[illegible] for Wisdom* by Govaert Flinck hung.[illegible] The second, [illegible]*in[illegible] Solomon's Justice,* was the centerpiece of the west wall of the Vierschaar. This middle panel (fig. [illegible]) depicts the familiar biblical story of two women, each of whom had given birth to a child. One baby had died, and both women claimed to be the mother of the surviving infant. Solomon's proffered solution[illegible] [illegible]fetch me a sword[illegible] to cut the baby in two[illegible] is rejected by one woman, revealing herself to be the true mother through her willingness to give up her child to protect its life.[illegible] As a Renaissance medal from the [illegible]s explained: [illegible]God's wisdom can be seen in Solomon the pious man, for truly wise is his judgment which adjudicates to the mother her child.[illegible]

[illegible]*in[illegible] Solomon's Justice* served as a reminder that divining truth requires skilled, practical wisdom grounded in knowledge of human emotions.[illegible] By proposing to kill the child, Solomon elicited new information, as one of the women was said to have responded: [illegible]It shall be neither mine nor thine; divide it[illegible] while the other offered to forsake her child ([illegible]Give her the living child[illegible]). Solomon's intervention, in turn, proved his wisdom and confirmed the legitimacy of his service as ruler and judge.

The Blindin[illegible] of [illegible]aleucus and [illegible] is Son and the [illegible]ecution of Brutus's Children

More challenging than the story of Solomon[illegible] for those with the burden of judgment[illegible] are the lessons to be learned from the stories of Zaleucus and Brutus, which bracket [illegible]*in[illegible] Solomon's Justice* and also depict parent-child stories, but of

a different sort. Zaleucus, shown in figure [illegible], was known as a [illegible]law-giver[illegible] in the Greek colony of Locri (in what is now Southern Italy) in the seventh century BCE.[illegible] He issued an edict that anyone found to have committed adultery was to be blinded.[illegible]

After his son was found guilty of that crime, Zaleucus, unyielding, insisted on the prescribed punishment. Over protests from his colleagues, who respected and pitied him, Zaleucus ordered his son to lose only one eye and gouged out one of his own as well.[illegible] Thus, according to the Roman author Valerius Maximus in his *Memora[illegible]le Doin[illegible]s and Sa[illegible]in[illegible]s,* Zaleucus [illegible]rendered to the law a due measure of retribution, by admirable balance of equity dividing himself between compassionate father and just lawgiver.[illegible]

But mercy did not protect the next set of sons, executed at the order of their father. The *Jud[illegible]ment of Brutus* (fig. [illegible]), another of the [illegible]traditional subjects for decorating[illegible] tribunals,[illegible] comes from the Romans by way of the historians Livy and Valerius Maximus. Lucius Junius Brutus was the first consul of the Roman Republic following the overthrow of the monarchy in Rome in [illegible] BCE.[illegible] Brutus's two sons[illegible] Titus and Tiberius[illegible] joined a conspiracy to return the monarchists (the Tarquins) to Rome. According to Livy, Titus and Tiberius preferred the benefits of affiliation with the royal family to the strictures of the Roman Republic's law, which [illegible]was impersonal, inexorable. Law has no ears.[illegible]

Upon learning of his sons' treachery (according to Maximus), Brutus [illegible]put off the father to play the Consul, and preferred to live childless rather than fail to support public retribution.[illegible] To comply with his duties, he sentenced his sons[illegible] along with their co-conspirators[illegible] to death. In the Amsterdam panel, Brutus is shown ordering the punishment to proceed and watching its infliction.[illegible] Looking into the Tribunal from the street, observers could see one dead son and the second bound and about to be decapitated by a man wielding a large axe. Behind them in the center is the symbol of Rome, the she-wolf with Romulus and Remus at her feet.[illegible]

Whether the *Jud[illegible]ment of Brutus* was a lesson to be embraced has been debated. One interpretation is that justice and punishment ought to supersede family ties, making fathers who order and watch their children's excutions admirable. Yet, not long after Livy wrote, both Dionysius of Halicarnassus and Plutarch focused not only on Brutus's commitment to the Roman Republic's law but also on the beastliness of the execution scene.[illegible] By early [illegible]Christian times, doubts gather[illegible]ed[illegible] as [illegible]divergent variants[illegible] of the story emerged.[illegible] Centuries later, however, Machiavelli insisted on its merits: [illegible]*When Li[illegible]ert[illegible] has [illegible]een new[illegible] ac[illegible]uired it is Necessar[illegible] in [illegible]rder to maintain it to [illegible]ill the Sons of Brutus*[illegible]. . . and he who establishes a free state and does not kill [illegible]the sons of Brutus', will not last long.[illegible]

The story of Brutus continued to have currency in France and England during the era of the French Revolution, when its [illegible]democratic[illegible] implications as well as its insistence on the righteousness of executing those who wronged the state had special appeal.[illegible] Jacques-Louis David, likely inspired by Voltaire's play *Brutus,* painted the scene in [illegible] (*The Lictors [illegible]eturnin[illegible] to Brutus the Bodies of his Son*),[illegible] and the composition of that painting, in turn, was the basis for a staging of the play.[illegible] In debates in the [illegible]s about the framing of the Constitution in the United States, a pamphleteer opposed to ratification used the pseudonym Brutus when publishing eighteen essays.[illegible] In the following century, Wordsworth (who had been in Paris in [illegible]) approvingly invoked Brutus's judgment in his *Sonnets upon the Punish[illegible]ment of Death*[illegible] In England in the [illegible]s, the popular public preacher Charles Spurgeon relied on Brutus for his admonition: [illegible]See you not here how he loves his country better than his son, and he loves justice better than either.[illegible]

The proposition that sacrifice out of loyalty to a republic entailed placing the state's law before one's familial attachments (choosing [illegible]patriotism[illegible] over [illegible]paternity[illegible]) was reiterated through other images in the Amsterdam Town Hall. In the Burgomasters' own chambers they viewed a painting [illegible] *uintus [illegible]a[illegible]ius Ma[illegible]imus [illegible] rders [illegible] is [illegible]ather to Dismount,* by Jan Lievens. There told was another Roman story, coming from Livy as well as Plutarch,[illegible] and explained in lines inscribed beneath that were written by the poet Vondel:

> The Son of Fabuius bids his own Father
> Dismount from his horse, before the city's
> honor and dignity
> Which knows no blood, and demands that he
> approach respectfully.
> Thus a man honors the State in the office laid
> up for him.[illegible]

The narratives of the painful burdens entailed in administering justice were found in much plainer town halls, sometimes joining other such stories to insist that leaders and judges prove their fidelity to the law by harming their families or themselves. Proof of the even-handedness of judgment came from ordering the execution of one's relatives, friends, subordinates, or soldiers. In addition to many renditions of Zaleucus and Brutus, local governments surrounded themselves with pictures of other leaders who were then well known, such as the Judgment of Trajan and the Judgment of Count Herkinbald.

Renditions were painted by Rogier van der Weyden sometime between [illegible] and [illegible] for the Brussels Town Hall[illegible] and placed to face the judges, while the accused saw a scene of the Last Judgment behind the jurists. Trajan gained his heroic stature through ordering that his own soldier, accused of murdering a widow's son, be executed. Thereafter, the story went, Trajan's tongue (the [illegible]instrument of just judgment[illegible]) was miraculously preserved in his skull and discovered by Pope Gregory the Great.[illegible]

Herkinbald, too, was the subject of special grace. When he was close to death, he cut his nephew's throat because

that nephew had raped a woman. But because the murder of a relative is a mortal sin, a bishop refused to administer the last rites. Herkinbald's vindication came through divine intervention the heavenly Host flew into his mouth, and thus last rites were administered. When these paintings were hung in Brussels, Latin texts accompanied them to underscore the justness of the judges.

The Basel Town Hall provided a yet more dramatic commitment to the rule of law in the personage of Charondas of Catanea, who joined Zaleucus and others on the walls. A law-giver from Thurii, he decreed that no one could wear armor in a public assembly. When he inadvertently violated his own rule, he was said to have exclaimed: By Zeus The law shall be master and then killed himself. As Ian Donaldson put it, celebrated acts of Roman virtue tended to be acts of extraordinary self-control, self-mutilation, or self-destruction.

So shall you be judged

Just as the images of Cambyses and *Les Juges aux mains coupées* were hortatory efforts to establish norms, the many displays of narratives putting law above family were normative efforts to lay claims to ideals not fully actualized. Amsterdam was a family town run by members of a few families. Four burgomasters, chosen from a pool of former burgomasters and magistrates, governed; as a result, the same people served again and again. These officials, in turn, had the power to select the town's sheriff and virtually all employees of public institutions.

The ideology of the familial pervaded the self-understanding of both Amsterdam and the Dutch Republic, of which it was a part. By showing scenes of fathers enforcing laws at the price of doing harm to their sons, leaders of the Dutch Republic sought to explain that imposing punishments on their surrogate children the local populace in the name of the law gave them no joy. Yet they were obliged to do so, for as Vondel had written: The free state flourishes, when people respect the laws But they were also trying to persuade themselves to make good on a promise of law-before-self to put the state before loyalty to their families.

One distinction between Justice narratives in European town halls and those presented by contemporary courts is this refrain that the imposition of judgment is hard, taking a deeply personal toll as one serves the state. Judges were always themselves on the line (so shall you be judged), at risk of damnation for errors. And even when upright and incorruptible (neither to be flayed as Cambyses nor delimbed like the Thebans), they were burdened by their obligations. Devotion to the law came at a cost.

Modern-day rulers turn less often to allegory but, when they do, they rarely offer scenes reflecting on the burdens of judgment. Contemporary observers recognize a statuesque woman with scales and sword as Justice but have not been schooled in Cambyses, Zaleucus, and Brutus or provided with comparable sagas about the harshness of law and the weight of imposing judgment.

By skimming centuries and moving across jurisdictions, we have captured the motifs about the imposition of justice. We do not ignore the diversity within the various allegorical paintings, statues, frescoes, and friezes. Not only were the visual depictions varied, they sat in differing polities and legal systems. And, of course, reading the images then and now one can find different kinds of messages proffered. Some served as warnings to judges, threatening them with the loss of life, limb, and skin if they failed to be honest or loyal and subservient to the power of the state. Other scenes demonstrated that to be the loyal servants of the state, applying its laws, judges had to inflict pain on themselves. In contrast, the paintings of the *Judgment of Solomon* capture something about what it takes practical wisdom and a deep understanding of human emotions to generate the information necessary to make good judgments.

But note the constants: these messages were set, time and again, in settings created for the public. Ruling powers created spectacles and built structures to link themselves to history and religion so as to convey the legitimacy of (rather than to render opaque or obscure) the violence of the law. Violence, death included, was part of a legal system's prerogatives. Law was used to justify authority, and that authority was produced and reinforced through public representations of law as an explanation for violence.

Blind to the Light and Blindfolded by the Fool

Subservience to the state and the pains of judging were not the only messages that the allegorical imagery of the Renaissance sought to entrench. Calls for judges not to favor the rich over the poor and injunctions against bribery reflected aspirations for some form of even-handedness. Maxims such as "Hear the Other Side" ("Audi Alteram partem") in the Amsterdam Town Hall stressed that the legitimate exercise of authority should be grounded in knowledge gained from disputants. Fair and transparent decisions by democratic governments in the current sense(s) of those words were centuries away, yet adjudication provided one prototype for how rulers ought to behave. Thereafter, shifts in sovereignty under democratic precepts replaced the norm of judicial subservience, elaborated in Chapter [illegible], with that of judicial independence, as discussed in Chapters [illegible], [illegible], and [illegible].

Because aspects of Renaissance judicial ideology have contributed to contemporary thought about judicial obligations, some modern viewers look at the occasions in which Renaissance Justices were shown blindfolded and assume that covered eyes then denoted what they are claimed to represent today: impartiality. As explored in the next chapter, whether a blindfold is appropriately deployed in service of that value is a distinct, and a contested, question. Before moving to that debate, a richer understanding of the use of blindfolds is in order. Like many other symbols, blindfolds were demonstrably polysemic, which is to say that their import changed over time and place. Although the blindfold has come to be valorized, it was once seen: as cartoonists often use it today: to denote a disabled Justice, blind to or hiding from the truth. In this chapter, we trace that shift in meaning.

To do so, one more aspect of the Tribunal in Amsterdam: its *Justice* (fig. [illegible]): needs to be analyzed. Carved and positioned to face the magistrates as they pronounced the sentence of death, she is one of many Justices in Amsterdam's Town Hall. But she alone is shown blindfolded.

The Blindfolded *Justice* in the Amsterdam Tribunal

The *Justice* shown in figure [illegible] is one of two Virtues that stood across from the sheriff and magistrates in Amsterdam's Tribunal. In the photograph of the Tribunal's east wall (fig. [illegible]), one can see these two full-size marble female figures by Artus Quellinus: looking like statues although they are carved in low relief. They grace the shallow niches that bracket the windows through which spectators outside could see the proceedings within. *Prudence* looks at her mirror: and (perhaps) across at *Justice,* who has an upright sword in her left hand. This Justice is no longer intact, missing both her left hand and the scales that she once held.

Like *Prudence, Justice* appears to be leaning into the room as if to watch the proceedings. But she cannot see, for her eyes are covered with what today we call a blindfold (or "the Blindfold of Justice"), and what in earlier centuries was sometimes termed a "bandage." Not only is she unlike all the other Justices inside and outside the Amsterdam Town Hall; her blindfold was not then a standard attribute for Justice. Nor, we believe, was that blindfold intended to be read unambiguously as celebrating Justice's impartiality. Rather, for Medieval and Renaissance audiences, the blindfold was laden with negative connotations. Sight was the desired state, connected to insight, light, and the rays of God's sun. That point is made repeatedly in the Amsterdam Town Hall, itself rich with a visual didacticism referencing the value of sight.

The Town Hall's designers used pictures to preach, and several of the images that they chose underscored the importance of sight. "*in*" *Solomon*" *Justice* (fig. [illegible]/[illegible]) was proof that the wise judge was a keen observer of human behavior. He gained new evidence of an infant's maternity by proposing to split the baby in half and then watching the responses of the two women claiming the child. Furthermore, the punishment that Zaleucus (fig. [illegible]/[illegible]) was to impose on his son: and that he mitigated by mutilating himself as well: was the loss of sight.

Figure [illegible] *Justice,* Artus Quellinus, [illegible], the east wall of the Tribunal (Vierschaar) of the Amsterdam Town Hall (Royal Palace), Amsterdam, the Netherlands.

Copyright: Stichting Koninklijk Paleis Amsterdam; photography: Erik [illegible] Petra Hesmerg / Amsterdam.

As for the Virtue Justice, the attributes that had by then come to mark a statuesque woman as Justice were her scales and sword. The point of even-handedness was made repeatedly through the balanced pans on Justice's scales, as is reflected in the three Justices in the Town Hall that are attributed to Artus Quellinus and that share common detailing.[illegible] The clear-eyed *Justice* who sits on top of the Town Hall's roof (fig. [illegible]), another with unobstructed vision sculpted to mark the door of the Magistrates' Chambers (fig. [illegible]), and the one inside the Tribunal (fig. [illegible]) all wear Grecian robes and have similarly styled hair. Each holds a sword in one hand and scales in the other, just as Quellinus's two *Prudences*[illegible] on the roof (fig. [illegible]) and inside the Tribunal (fig. [illegible])[illegible] wear similar garb. Although Ripa's [illegible]*conolo*[illegible]*ia,* a resource for much of the imagery in the Amsterdam Town Hall, mentioned a blindfold as a possible accoutrement (there explained as a protection from [illegible]temptation[illegible]), that suggestion was generally not followed[illegible] except in the Tribunal.[illegible]

Why was a blindfold imposed on this *Justice* but not on others[illegible] The addition should be read in the context of the dominant pre-humanist tradition in which the blindfold signified a disability. Moreover, because the blindfolded *Justice* is buffered from seeing the violent pain meted out in her name, those who selected that design could have quietly questioned what transpired in the one room in the

FIGURE 4.1 The east wall of the Tribunal with *Justice* and *Prudence*.

Town Hall dedicated to rendering irrevocable sentences of death. For, just as a lack of sight could limit "temptation" undermining even-handedness, so could it facilitate error. The blindfold could denote either a Justice gone awry or one averse to seeing punishments (even when lawful) imposed in her name.

"Open the eyes that are blind"

The idea that sightlessness is problematic, and sometimes unequivocally bad, can be found throughout the cultures and literatures explored in this volume. In Babylonia and Egypt, sun gods—the sources of light that enabled sight—were also gods of justice;—thereafter, the Greeks and Romans put a representation of the sun at the center of their zodiacs. Christianity embraced "sol justitiae"—Christ—as the God of Light, who will "appear ablaze when he will judge mankind."—Medieval Europe saw depictions of the Virtue Charity holding a torch to denote the light of God.—Within the Amsterdam Town Hall itself are carvings of the "eye of God"—seeing and knowing all.—

Such imagery is predicated on classical and biblical texts that repeatedly cast light as representing truth and darkness as misguidedness.—The parallel was that the sighted were informed and the blind limited. As either fact or metaphor, blindness signified a variety of deficits. Blindness is not the equivalent of the willful act of being blindfolded. Yet, the rare mentions in biblical texts of blindfolded persons make plain that they were disadvantaged.—

Examples come from the Old and New Testaments, in which blindness precluded a person's entry into holy areas. Further, no blind animals could be offered to God.—To be struck blind—was, in turn, a form of punishment imposed by God. Moreover, when humans punished each other, they sometimes put blindfolds on their victims. Jesus himself was made sport of—blindfolded, beaten, and mocked.— Metaphorically, blindness exemplified ignorance or abandonment (to "turn a blind eye"— or to rush blindly for-

ward□□) and impaired judgment.□□ Bandaged eyes also served as a disguise, misleading the viewer,□□and blind persons were themselves dependent (□A curse upon him who misdirects a blind man□).□□

Canonical stories exemplify these motifs. The Old Testament patriarch Isaac was deceived because he could not see and therefore bestowed his blessing on his son Jacob instead of on Esau, his elder son.□□At Mount Sinai, when the people had turned away from their god, Moses veiled his face.□□In contrast, the revelation at Sinai of God's commandments is rich with references to the □appearance of God□; a text from □□*odus* explains that □on the third day the Lord will descend upon Mount Sinai in the sight of all the people.□□□Parallels can be found in the New Testament, for Paul described his beliefs in visual terms; □whenever he □Moses□ turns to the Lord the veil is removed.□□□Isaiah promised □to open eyes that are blind□ and to □lead blind men on their way.□□□At several points, God, Jesus, or faith itself cured those who were blind.□□Turning to classical texts, in □ *edipus* □*e*□ the hero, who has blinded himself, was told, □You would have been better off dead than blind.□□□And blindness was the punishment that Zaleucus decreed for violations of his law (fig. □/□□).

As for the relationship between judgment and sight, according to □□*odus,* □bribery makes the discerning man blind and the just man give a crooked answer.□□□Further, the *Book of Jo*□ explains: □The land is given over to the power of the wicked, and the eyes of its judges are blindfolded.□□□ Isaiah proclaims: □The prophets should be the eyes of the people, but God has blindfolded them.□□□These biblical lessons became fixtures in Medieval and Renaissance literature and art, which reiterated that bandaged, covered, or blindfolded eyes□ as well as those who were physically blind□ signified profound limitations.

Exceptions exist. □The bard is expected to be blind,□□□ and a few literary figures were ennobled by or compensated for their blindness so as to become gifted seers. Sightless seers dot Greek epics,□□and both Homer and Milton provide conspicuous examples of visionaries whose insights came from sources other than their eyes.□□Blindness sets a person apart, perhaps suggesting that gifts of prophecy make the blind closer to God. Yet in *The* □*liad* and *The* □ *d*□*sse*□, metaphoric blindness also denoted folly, infatuation, and disaster brought about by impairment of the sense of sight.□□

More generally, the physically blind were portrayed as objects of pity in need of charity. Alternatively, by the Middle Ages, blind personifications were sometimes □endowed with terrifying power.□□□(A blindfolded Death was shown to be a female disemboweling victims, Lust a blindfolded female nude, and Night a woman whose eyes were covered with a bandage.□□) Such imagery prompted Moshe Barasch □ in his book devoted to exploring the idea of blindness□ to conclude that □blindness is indissolubly linked with distress.□□□

Synagoga: Blind to the □Light□ of Christianity

Two female figures□ Synagoga and Ecclesia□ and the iconography and literature that surrounded them inscribed blindness as a liability. Synagoga, □a purely Christian creation□ was deployed to signify the Old Testament and, sometimes, Jews in general.□□Ecclesia stood for the New Testament and, at times, Christianity. These two were familiar fixtures in Medieval Europe, to be found □on ivory tablets, in stained-glass windows, on church implements, in manuscript miniatures, and in monumental statuary.□□□

The examples reproduced in figures □□ and □□ are a famous pair,□□crafted around □□□□ and in place today on the south portal of the Strasbourg Cathedral,□□ near the border of France and Germany in the City of Strasbourg, which is now in France.□□The statues were placed near two areas (one outside and the other indoors) that served □as courts of law□ in the thirteenth century, where marriages were ceremonialized, municipal laws determined, oaths taken, and tributes given.□□ A sculpture of Solomon sat between the doors to the south entrance.□□Comparable sets of Ecclesia and Synagoga□ in stone or on stained glass□ from roughly the same period can be found at the Cathedrals of Rheims and of Bordeaux in France, as well in several German Cathedrals, including in Bamberg, Magdeburg, and Worms, and in England at Lincoln, Salisbury, and Canterbury. The well-known figures on the west facade of the Cathedral of Notre Dame in Paris (near a door called the □Portal of the Last Judgment□) are nineteenth-century versions, perhaps replicating earlier images.

The variation in depictions of Synagoga reflect the complexity of relations between Christianity and Judaism. Because the Old Testament is an important source for New Testament traditions, some versions of Synagoga have a measure of dignity, acknowledging that the New Covenant built on as well as (from the vantage point of Christianity) rose above the Old Covenant.□□Echoes of that approach can be seen in figures □□ and □□, for *S*□*na*□*o*□*a* is almost the same height as □*cclesia*□ But unlike that ramrod-straight, crowned, sharp-eyed, regal woman (the □bride of Christ□), *S*□*na*□*o*□*a* is a fallen queen, shown slumped with her rod broken and her eyes covered by a blindfold.□□Their hierarchical relationship is plain.□□

Among Synagoga's attributes, the blindfold was her □principal motif□ demonstrating that she was blind to the □light□ of Christianity.□□Yet, the bandage around her eyes suggested that her fault could have been remedied. Synagoga was not blind but blindfolded□ willfully obstinant, refusing (rather than unable) to comprehend the □light of redemption.□□□ Other versions of Synagoga were more aggressively hostile, reflecting antagonism toward Jews and the spread of anti-Semitism.□□In those iterations Synagoga is not only blindfolded but made to look demonic□ shown with a serpent wrapped around her head, on a donkey, holding a goat's head (denoting lust) or disheveled, with

transparent draped clothing reminiscent of that worn by prostitutes.[illegible] At Bamberg Cathedral, Synagoga stands on a pillar near a [illegible]figure of a Devil blinding a Jew, identified by standarized iconography[illegible] beard and pointed hat.[illegible] Other imagery associated her with various Vices, such as falling like Pride, or linked to Greed.[illegible] Given these many statues on Medieval churches, Synagoga was an image that [illegible]almost everybody, whether educated or illiterate[illegible] recognized.[illegible]

Synagoga was also featured in Medieval dramas in which biblical characters (Elijah and Enoch) remove her [illegible]veil, which until then has covered her eyes. Her blindness is cured, and she perceives her error[illegible] declaring her belief in Christ's gospel.[illegible] Synagoga's blindness reflects Catholic liturgy going back centuries. A prayer to be said on the Friday before Easter calls on God to [illegible]remove the veil[illegible]from the hearts of Jews and to be merciful; given [illegible]the blindness of that people; that, acknowledging the light of thy truth, which is Christ, they may be delivered from their darkness.[illegible] (After World War II, the text was revised, so that individuals prayed [illegible]for the Jews: Our Lord God deign to let your face shine upon them, so that even they may recognize the redeemer of all, our Lord Jesus Christ.[illegible] In [illegible] the prayer was again reworded to call on [illegible]God to enlighten their hearts so that they may acknowledge Jesus Christ, the savior of all men.[illegible])

Synagoga was not alone as an embodiment of the harm that blindfolds imposed. Renaissance images of romance and love placed a blindfold on Eros to mark the misguided nature of love, engendering foolishness and confusion.[illegible] Renaissance depictions of the female image of Fortuna[illegible] including illustrations in some versions of Ripa's [illegible]*conolo*[illegible]*ia* [illegible] often showed her blindfolded to denote Fortune's irrationality and randomness, indifference to human suffering, and at times its destructive force. Fortuna's caprice resulted in unfairness, [illegible]without any apparent rhyme or reason.[illegible] Blindfolded Eros and Fortuna expressed a fusion of supernatural power and sinfulness.[illegible]

Closer to law, images of executed criminals showed them hanging, blindfolded and disgraced. Lorenzetti's [illegible]*lle*[illegible]*or*[illegible]*of* [illegible]*ood*[illegible]*overnment* (fig. [illegible]/[illegible]) in Siena is one such example.[illegible] The negativity associated with blindfolds prompted Erwin Panofsky to conclude that, aside from a valorized blindness in Homer and the blindfolded Justice herself (a [illegible]humanistic concoction of very recent origin[illegible]), blindness was [illegible]always associated with evil.[illegible]

Justice and Judges as Fools

Panofsky's suspicion of the positive slant put on Justice's blindfold is borne out by turning to another important European image, *The* [illegible]*ool Blindfoldin*[illegible]*Justice* (fig. [illegible]). This woodcut, sometimes attributed to Albrecht Dürer,[illegible] was one of more than a hundred illustrations for a book called *The Ship of* [illegible]*ools*[illegible] Written by Sebastian Brant in [illegible], subsequently printed in many languages,[illegible] and full of [illegible]middle-class moralizing[illegible] the volume was remarkably well known through the seventeenth century,[illegible] and the metaphor of its title has endured in contemporary books and movies.[illegible] Brant's [illegible] chapters of stories and images[illegible] offer a host of instructions aimed at sustaining the moralism of the Reformation's civic authorities in their battle with [illegible]sin and crime in the name of God.[illegible]

The [illegible]*ool Blindfoldin*[illegible]*Justice* is one of the earliest images known to show a Justice with covered eyes.[illegible] The deployment is derisive, evident not only from the fool but from the chapter that the illustration accompanied[illegible] [illegible]Quarreling and Going to Court.[illegible] Indeed, a reader of *The Ship of* [illegible]*ools* can have no doubt of the author's attitude toward blindness. Brant, who was a noted lawyer and law professor, trained (as he said at the front of the book) in both civil and canon law, saw blindness as a fault. He prefaced the book with a warning against [illegible]folly, blindness, error, and stupidity of all stations and kinds of men.[illegible] In the chapters that follow, Brant repeatedly equated blindness with sin, ignorance, and mistakes.[illegible]

The artist who created *The* [illegible]*ool Blindfoldin*[illegible]*Justice* was Constitutio not the only one of his era to deploy a blindfold as a warning against judicial error. An illustrated [illegible] volume, *Die Bam*[illegible]*er*[illegible]*ische* [illegible] *als*[illegible]*erichtsordnun*[illegible] (also known as the *Bam*[illegible]*er*[illegible]*ensis Constitutio Criminalis*), setting forth the criminal law and municipal ordinances of the City of Bamberg,[illegible] included a parallel woodcut, *The Tri*[illegible]*unal of* [illegible]*ools* (fig. [illegible]).[illegible] A presiding judge (marked by his clothing, his rod of office, and his place of honor on the throne) and four lay colleagues are all blindfolded; they also wear jesters' caps. The legend on the scroll shown above their heads reads: [illegible]Out of bad habit these blind fools spend their lives passing judgments contrary to what is right.[illegible]

This woodcut is one of more than twenty appearing in editions of the *Bam*[illegible]*er*[illegible]*ensis* published in [illegible], [illegible], and [illegible].[illegible] Near the volume's opening is a scene of the Last Judgment in which Jesus sits on what looks like a rainbow.[illegible] Angels are at both of his sides, while supplicants, at the bottom, are either being called up to heaven or damned to hell. Other illustrations show various devices for punishment, their use, and several courtroom scenes.[illegible] *The Tri*[illegible]*unal of* [illegible]*ools* was not the only critical image; two in a [illegible] edition make a point about corruption, as rich litigants make payments to judges.[illegible] The illustrations in these turn-of-the-sixteenth-century German volumes are among the first (identified to date) that show either Justice or judges blindfolded. Their circulation grew by virtue of the printing press, but the confidence that readers would see the blindfold as derisive relied on the negative associations gained from blindfolds placed on Synagoga, Fortuna, and Eros.

Various hypotheses have been advanced about why the blindfold gained currency in law and how its meaning shifted over time.[illegible] Skepticism about law and justice has been linked to the Reformation, the Inquisition, human-

Figure [illegible] *The [illegible]ool Blindfoldin[illegible] Justice,* sometimes attributed to Albrecht Dürer, [illegible], a woodcut illustrating Sebastian Brant's *The Ship of [illegible]ools,* printed in Basel, Switzerland.

ism, the codification of Roman law, the growth of the legal profession, and the diversity of universities training new lawyers, as well as to conflicts developing around city-states in their relations to religions and to more distant secular authorities. *The Ship of [illegible]ools,* reflected Brant's loyalty to Roman law and his view that the German legal system was in disarray, plagued by local and foreign advocates able to manipulate lay judges.[illegible] Brant made his arguments in the vernacular German so as to reach an audience of lay judges and to teach them the [illegible]essentials of Roman as well as customary law[illegible] He urged that they not [illegible]vacillate in their opinions or believe that law grows on trees or dream that one does not heed what our parents thought.[illegible]

In [illegible], the year after the publication of the first edition of *The Ship of [illegible]ools,* Emperor Maximilian formally adopted Roman law,[illegible] and in [illegible] the *Bam[illegible]er[illegible] Code* was instituted in another effort to guide lay judges. Its illustration of blindfolded and dunce-capped judges leveled a critique parallel to that of Brant.[illegible] The *Bam[illegible]er[illegible]ensis,* in turn, was followed in [illegible] by the *Consitutio Criminalis Carolina,* modeled after the *Bam[illegible]er[illegible] Code* and adopted by Charles V in an attempt to standardize criminal procedure in parts of Germany.[illegible] Nicknamed the *Carolina,* adopted in many city-states including Cologne and Frankfurt, and cited elsewhere as authority,[illegible] this code continued the effort [illegible]directed against abuses caused by the legal ignorance of local court personnel[illegible] by informing [illegible]unlearned practitioners about the rules of law.[illegible]

By putting blindfolds over judges' eyes, the illustrators of *The Ship of ⍰ools* and the *Bam⍰er⍰ensis* reminded viewers of the ease with which such judges could be deceived. Their visual injunctions could be translated to read that ⍰rather than be a buffoon, use your eyes to follow the written rules⍰ These materials were part of a larger effort to professionalize law, to dispossess lay jurists of their authority, and to promote law's codification. The negativity of the blindfold was part of a message about the superiority of Roman statutory law over the customary law used by German lay judges.⍰⍰

Alciatus's Theban Judges and Ripa's Injunctions: ⍰A Steely Gaze⍰ the Eye of God, and Bandaged Eyes

The project of codifying law, exemplified by *The Ship of ⍰ools* of ⍰⍰⍰⍰ and the *Bam⍰er⍰ Code* issued in ⍰⍰⍰⍰, came shortly before a parallel effort to codify visual imagery. As explained in earlier chapters, two major catalogues⍰ the ⍰⍰⍰⍰ ⍰*nde*⍰ ⍰*m⍰lematicus* of Andreas Alciatus and the ⍰⍰⍰⍰ ⍰*conolo⍰ia* by Cesare Ripa⍰⍰⍰ joined a few books on Egyptian hieroglyphs (published between ⍰⍰⍰⍰ and ⍰⍰⍰⍰)⍰⍰ in standardizing an emblematic lexicon for artists and viewers.⍰⍰

Through our discussion of *Les Ju⍰es au⍰ mains coupe⍰s* (figs. ⍰/⍰⍰ and ⍰/⍰⍰), we began to explore the impact of Alciatus's emblem called *The ⍰ood Prince in his Council* (fig. ⍰/⍰⍰), with its central figure who might (or might not, depending on the edition) be shown with covered eyes, joined by his fellow judges, shown with their hands cut off. Alciatus's book was published a few decades after the *Bam⍰ ⍰er⍰ensis,* and the jurists depicted with the prince bear some resemblance to those shown in figure ⍰⍰, *The Tri⍰unal of ⍰ools*⍰In the two German volumes, the blindfolded, dunce-capped Justice or judges are mocked. But in the various editions of Alciatus, the sightless central figure (called a prince, a king, or a judge and described as ⍰without eyes,⍰⍰deprived of his sight⍰ or ⍰blind⍰) is presented as better positioned to judge because of his lack of vision. The explanation (given via a ⍰⍰⍰⍰ German version) was ⍰that he may recognise no-one's status and . . . judge according to his council.⍰⍰⍰ A French edition of ⍰⍰⍰⍰ put it slightly differently: ⍰Their prince, deprived of his sight, cannot see anybody, and he judges by due sentence according to what is said in his ear.⍰⍰⍰

Yet elsewhere in Alciatus's work sightlessness and blindness were shown to be a punishment. For example, in the emblem called "Just Vengeance," Ulysses puts his stake into the eye of the Cyclops and blinds him.[illegible] The [illegible] Italian version explains that the wrong-doer "may suffer bad things, since he caused them." As noted, the blindfold also has a negative valence, linked to the dishonorable lust of an amorous Cupid.[illegible] Further, in another emblem, "Mutual Aid," blindness is an incapacity; a blind man and a lame man help each other, one providing sight for guidance and the other feet for mobility.[illegible] A few decades later, toward the end of the sixteenth century, Ripa reiterated the theme of blindness as a disability. Although the first publication of his "*Iconolo*[illegible]*ia* in [illegible] was without illustrations, the more than forty subsequent versions in different languages came with various drawings and embellishments.[illegible]

Ripa described the bandage or blindfold on "Fortuna" as evidence of the arbitrariness of caprice, and he (like Alciatus) provided a blindfold for Eros to represent the foolishness of emotions. Ripa proffered a blindfold to exemplify the indiscriminate force of Ambition ("Ambizione")[illegible] and put a blindfold on a man called Error ("Errore"), who" cloaked and with covered eyes" accompanied Ignorance ("Ignoranza"),[illegible] a female who was sometimes also blind, as that lack of knowledge put her in "the shadows" rather that in the "light" of wisdom.[illegible] The blindfold that Ripa put on Furor ("Furore"), a large, angry, blindfolded man holding various weapons, denoted the loss of control from rage.[illegible] Prodigality ("Prodigalità") is shown with veiled eyes as she pours out the contents of a cornucopia.[illegible] Simony ("Simonia," the selling of Church offices), enveloped by a black veil, is a woman covered with sores.[illegible] Slander is also a woman, open-mouthed and shading her face with a veil.[illegible] In a later edition of Ripa, Sin is shown as a blindfolded man because "the blindfold is an obvious allusion to the willful blindness to God's commandments of the man who sins."[illegible] Injustice herself has one blind eye.[illegible]

And yet Ripa accorded the blindfold a positive valence when placed on the face of one of his seven iterations of Justice. In an illustrated edition published first in Padua in [illegible], Ripa described one Divine Justice ("Giustitia Divina") and six variations on "Worldly Justices" [illegible] Justice ("Giustitia"), Justice According to Aulus Gellius ("Giustitia . . . che riferisce Aulo Gellio"), Principled (or Strict) Justice ("Giustitia retta"), Rigorous Justice ("Giustitia rigorosa"), Justice of Pausanias in the Eliaci ("Giustitia di Pausania ne gl'Eliaci"), and Justice on the medals of Hadrian, Antoninus Pius, and Alexander ("Giustitia delle Medaglie d'Adriano, d'Antonio Pio, " d'Alessandro").[illegible] All but one were clear-sighted, and sight itself is specifically admired for various of the Justices. For example (as noted in Chapter "), Ripa's "Justice According to Aulus Gellius" is supposed to have "acute vision" or "piercing eyes."[illegible] She also wears a necklace where "an eye is portrayed" because "Plato said that Justice sees all and that, from ancient times, priests were called seers of all things."[illegible] The sole blindfolded one, called simply Justice and detailed in various editions, had many other attributes. A [illegible] version is excerpted below.

> A woman dressed in white with bandaged eyes; in her right hand she holds a bundle of rods, with an axe, and in her left hand a fiery flame, together with these things she has an ostrich at her side, and holds a sword and scales.
>
> This is the type of Justice that is exercised in the Tribunal of judges and secular executors.
>
> She is wearing white because judges should be without the stain of personal interest or of any other passion that might pervert Justice, and this is also why her eyes are bandaged" and thus she cannot see anything that might cause her to judge in a manner that is against reason. The bundle of rods with the axe, used in ancient times in Rome to show . . . that justice must not be remiss in punishing wrongdoing but that justice must also not be precipitous . . . .
>
> The ostrich teaches us that the things that come before justice, however intricate they may seem, must be tirelessly unraveled with a patient spirit, as the ostrich digests iron, that most durable material, as many authors recount.[illegible]

Later editions of Ripa reiterated versions of this description. For example, the [illegible] Dutch edition reads: "Her eyes are bound to show that the judge, in evaluating a given case, is not tempted away from using reason."[illegible]

Where did Ripa get this blindfold, and why did he put it on one of his seven Justices" One possible source is Alciatus, who was not mentioned by Ripa in connection with the blindfolded Justice but was cited as a source for other attributes of Justice" a river and a pillar, purportedly denoting purity and uprightness and therefore appropriate for law and justice.[illegible] Ripa may also have used the same sources as Alciatus" the "Egyptian" allegory "transmitted by Plutarch and Diodorus Siculus in which the chief justice was shown eyeless in order to illustrate his impartiality, while his colleagues had no hands with which to take bribes.[illegible] But as Erwin Panofsky argued, blindfolds were not generally valorized in the Renaissance, and the "motif" of the blindfold" is limited to representations of Worldy Justice, whereas Divine Justice has "occhi miri" [illegible] "piercing and awe-inspiring eyes."[illegible]

Bruegel's Justice (or Injustice")

The varied import accorded blindfolds by Alciatus and Ripa makes plain that twentieth-century theorists were not the first to appreciate that the meaning of symbols differs

with contexts conveying conflicting connotations. Even before Alciatus and Ripa, one can find occasions on which veiled eyes indicated humility rather than humiliation. The blind love of the Renaissance expressed not only adoration's folly but also its unquestioning acceptance, sometimes associated with divinity, illustrated by *Proverbs* : : "Hate is always picking a quarrel, but love turns a blind eye to every fault." Even Fortune's blindfold had an upside, for she "does not favor one over the other," although the results were profoundly arbitrary.

If looking back from contemporary assumptions that the blindfold denotes impartiality, one may miss the contradictory meanings that could be drawn from the layers of bandages on Justice's eyes. Our sense that the Amsterdam Tribunal's one blindfolded Justice could both be influenced by Ripa and be grounded in the traditions of Synagoga, Fortune, and Death is predicated on her singularity in that building and the relative rarity of blindfolds in that era.

Another derisive application comes from Pieter Bruegel the Elder, whose *Justice,* drawn around , was reproduced many times in prints of his series of Virtues and Vices. In an engraved version (fig.) by Philip Galle from the late s, a figure labeled "Justicia" is at the center of a large crowd. The densely populated scene includes persons whose garb indicates their class, with the well-to-do seeming to control or direct the actions of poorer people. Administrative details (adding a "documentary-like" quality) are everywhere, such as officials recording information and marking criminals for execution.

In the foreground, to the left of Justice, a man is shown stretched on a rack while fluid is poured down his throat. The picture thus details some of the "law of torture" as it was then, with the injuries inflicted in the presence of a magistrate and a registrar who were charged with monitoring the degree of pain imposed as well as hearing and recording the confessions extracted. In addition to that interrogation,

Figure *Justice,* etching attributed to Philip Galle, circa , after the drawing by Pieter Bruegel the Elder. Rosenwald Collection.

Image copyright: , Board of Trustees, National Gallery of Art, Washington, D.C.

one can see the imposition of various punishments including hanging, beheading, flogging, and burning.

Although she stands on a pedestal, Justice is not larger in size than other figures in the foreground. Moreover, she is accompanied (or constrained) by a retinue of armed men. Justice's raised sword is poised above the individual being tortured, but her scales hang much lower than her sword and close to the ground. The pans are tipped rather than even, bracketing the head of one of the men who is torturing the accused. Justice wears an odd, two-pointed cap evoking fools, courtesans, or dunces. Below her is a Latin inscription, likely taken from the preface of a [illegible] edition of the book *Pra[illegible]is rerum criminalium* (*Le[illegible]al Practice in Criminal Matters*), a manual of sorts by the Flemist jurist Joost (or Josse) de Damhoudere. The text can be translated: [illegible]It is the aim of the law that it shall correct him whom it punishes, or that his punishment shall make the others better, or that, after the elimination of the wicked, the rest shall live the more securely.[illegible]

The ambiguity of the scene has prompted disagreement about the artist's intent. Relatively little is known about Bruegel's personal history and political attitudes.[illegible] Some commentators see in Bruegel's *Justice* a naturalistic and unproblematic portrayal of the ordinary administration of criminal justice. [illegible]If these incidents seem unduly harsh to us, they were accepted by Bruegel's contemporaries as necessary to maintain public law and order.[illegible] The large cross in the far left background has been read as a [illegible]guarantee that justice thus administered has the sanction of the Supreme Judge.[illegible] Further, the image could have served (as did the reality it portrayed) as a painful reminder of what mortal sinners believed they would suffer after their death,[illegible] thereby legitimating violence in the name of Justice, both earthly and divine.

The conflicts about the rulership of the Netherlands and between Reformation and Inquisition forces ([illegible]political events between [illegible] and [illegible] were of the sort to stir up any Netherlander[illegible]), provide a predicate for other readings. Some commentators note that other images within Bruegel's Virtues and Vices series were plainly satiric.[illegible] Seeing his work more generally as oppositional,[illegible] they argue the scene to be a critique of the administration of justice, unanswerable to either [illegible]some higher (or lower) morality.[illegible] One could see [illegible]carnage[illegible] in that the [illegible]judge sentences innocent as well as guilty to the most cruel punishments.[illegible] The placement of the large cross at the far back corner of the frame could denote that the state's violence takes place without the sanction of God's righteousness, rendering this picture a [illegible]representation of perverted justice and perhaps a condemnation of the Inquisition.[illegible] Although titled *Justice,* the scene could be its inversion, Injustice, signaled not only by the female figure's odd garb and dangling scales but especially by the blindfold, which was then unusual. This Justice, like her counterpart in the Amsterdam Town Hall, is unable to see the many injuries imposed in her name. Encumbered and encircled, she lacks the power to curb those invoking her authority.[illegible]

Damhoudere's Janus-Faced Justice

Mundanae iustitiae e[illegible]ies ([illegible] *Portrait of World[illegible] Justice*) is the title placed above an intriguing Janus-faced Justice (fig. [illegible]) from a sixteenth-century book, *Pra[illegible]is rerum civil[illegible]ium* (*Le[illegible]al Practice in Civil Matters*).[illegible] This enthroned Justice can be found in the volume after the book's preface and the author's salutations to the readers as a predicate to a lengthy interpretative essay placed before the opening chapter (titled [illegible]Quae personae necessariae in Iudicio[illegible] or [illegible]Persons necessary in a legal action[illegible]).[illegible] The book, by Damhoudere, was published in Latin in [illegible] and subsequently in French, Dutch, and German.[illegible]

The author, who was born in Bruges, lived from [illegible] to [illegible]. Today Damhoudere, who was a civil servant and Flemish jurist, is known for his *Pra[illegible]is rerum criminalium* (*Le[illegible]al Practice in Criminal Matters*), which had [illegible]enormous authority and went through over [illegible] editions in Latin, French, Dutch and German, the last in [illegible].[illegible] Indeed, as noted earlier, the text at the bottom of the Bruegel *Justice* is likely taken from that book.

The rare depiction in figure [illegible] literally puts two faces[illegible] one sighted and the other with eyes covered by a blindfold[illegible] onto the body of Justice. Damhoudere's use of this two-faced Justice has drawn attention from others interested in Justice iconography; the image has been reproduced but without discussion of the labeled figures in the woodcut or on the many pages of text Damhoudere provided to explicate the imagery.[illegible] From these accompanying materials, a sense of the negativity of the blindfold becomes plain, even as Damhoudere acknowledged some positive connotations.

The face of the sighted Justice looks toward her large sword, held upright in her right hand, while the face of the blindfolded Justice turns toward her left side, where her left hand holds tipped scales. Neither face is directed toward the figures before Justice, who stand below her, positioned as disputants or supplicants. The faces also do not look at the flaming monster at the bottom left-hand corner, at the dog and the man who recline in the center foreground, or to her right and backward at a man chasing a person who seems to be fleeing on horseback as another man behind her and to her left points toward the chase. Also on the right is a bird hovering between two men sitting on clouds, one of whom holds a cross. These three figures likely represent the Holy Trinity, with the dove denoting the Holy Ghost, proximate to God the father and Jesus the son.

The Latin titles for the figures before Justice explain them as personifications. Most of the well-clad figures are on the side where Justice is sighted. Several embody self-promoting and largely negative qualities, specified as Favor (Favor), Kinsman (Cognatus); Money (Argentum); Lawyer (Causidicus, with the negative connotation of a self-interested

Figure [illegible] *Mundanae iustitiae e[illegible]ies* ([illegible] *Portrait of World[illegible] Justice*) in Joost de Damhoudere's *Pra[illegible]is rerum civilium* (*Le[illegible]al Practice in Civil Matters*), [illegible] edition.

Image courtesy of the Rare Book Collection, Lillian Goldman Law Library, Yale Law School.

pleader of causes), Advocate in Law (Aduocatus, a supporter or witness); Guardian (Tutor), and Receptor (today's Trustee, a person holding and managing property for others).

On the side where Justice is blindfolded are figures labeled Contempt (Despectus), Misery (Miseria), and Poverty (Paupertas). The children may denote Innocence (Innocentia) and Truth (Veritas); one appears either disabled or propped up on some kind of chair. Also included in this group are Widow and Ward/Orphan (Vidua and Pupillus)[illegible] the former presumably the woman holding a handkerchief as if to wipe away tears and clutching the hand of a child looking up at her. In the central foreground is a man, fatigued and lying on the ground, and under him is a phrase with negative connotations[illegible] [illegible]Everyone, the Common People[illegible] as if rabble ([illegible]Unusquisque Popellus, aut Communitas[illegible]). Two inscriptions at the bottom provide labels for the

fire-breathing monster at the left, Inferno or Hell (Infernus) and for the group in the clouds, the Holy Trinity at the top right, Heaven (Paradisus).

This imagery is accompanied by more than a dozen explanatory pages that open with a quote from Cicero that can be translated as "Justice is the virtue, by which is granted to each what is his own." The next portion begins with a heading, "Division (Divisio)," and the text "Justice is considered according to the nature, condition, office, state and person of each. Justice is therefore twofold." In the discussion that follows, Damhoudere sprinkled his commentary with quotes adapted from both the Old and the New Testament as well as maxims, some attributed to or echoing Cicero, Aristotle, St. Augustine, and classical poets. Through that melange, Damhoudere detailed his views on both divine and human justice and then offered a narrative for each of the characters in the print.

God's justice demonstrates that "he is not deaf to the cries of the oppressed" and that he judges with equity "the poor man as for the rich man." Human justice (which ought to aspire to be like divine justice) has its own two components, the judicial and the general. General justice consists of loving one's neighbor and treating others as one would want to be treated one self. When one comes to the second kind of human justice," judicial justice," Damhoudere focused on the men (judges, kings, and magistrates) "ordained by God for the regulation of human affairs." But "certain unworthy things have crept into human laws and regulations, . . . on account of the blindness of men," that God will need to correct. He also, at his pleasure, "removes" "out of the community tyrannical and stupid princes," some of whom "reign in blindness and tyranny."

After this general commentary, Damhoudere offered his explanation of "the image of human justice." The "various persons" before Justice sought to "win justice herself over to their side." But "Justice is repeatedly blind and deaf" to those with just causes, while she is more available or attentive to others, "for the most unfair reasons." Justice is "two-faced," acting in a manner that appears fair but is dissembling. "Where she is depicted with eyes," she welcomes "wealthy persons" and the "more powerful." And where she is "bound by a blindfold," her eyes are shut to "clemency." Furthermore, "because we are showing Justice here as two-faced with eyes on one side and blind on the other, we give an image of worldly justice, certainly corrupt and not at all fair." Moreover, the sighted Justice turns her eyes "toward her friends and kinsmen." Money," the figure of the man with two bags," is offering up bribes, and the commentary cites the Old Testament's *Book of* "*Exodus,* as did the frescoes in the Geneva Town Hall (fig. "/"), for the proposition that bribes "blind the eyes of wise men." Meanwhile, the Widow and Orphan beseech Justice to "turn the eyes of your clemency" and "look mercifully upon our tears and our sobs."

Yet the text also drew attention to ambiguities in the blindfold by noting that other portrayals of Justice blindfolded were to represent "the part of justice to be blind to each party, and to provide a mien either of favor or of hatred to neither." At another point, Damhoudere commented that Justice was "two-faced" to signify that "justice's governors must provide a friendly face or intent eyes not only to one of the parties, but must attend to each of the parties equally."

Moreover, while today a Janus-faced image connotes a deceitful persona, Damhoudere might have drawn on a tradition viewing Janus more positively. The month of January is named for Janus, imagined (as we know from the Roman poet Ovid) to hold the keys that unlocked the gates to the new year and, by looking backward and forward, to ease transitions. Further, when "Rome was at peace, the doors of Janus' Forum temple remained closed; during war, they stood open." But the potential for such positive implications is dwarfed by the scene in which the sighted Justice appears to be corruptible and the blindfolded Justice impervious to the needy before her. Thus, even as late as the middle of the sixteenth century, the blindfold was available to mark earthly Justice's limitations.

Turning a Critical Eye

A summary of several points spanning these many centuries is in order before we move forward in time. First, before the sixteenth century, images of Justice were shown with their eyes open. During the Medieval and Renaissance periods, blindfolds had a deeply derisive symbolism that was readily appreciated and reinscribed. Second, by the seventeenth century, closed or covered eyes for Justice were uncommon but not unknown. In the imagery identified to date, the blindfolds in Bruegel's "s drawing *Justice* (etched in the "s by Galle, fig. ") and in Damhoudere's " Janus-faced image (fig. ") were atypical for their time. In the years that followed, a few other blindfolded Justices appeared, and some likely stemmed from Ripa's admonition that a blindfold enabled better judgment.

For example, an "*lle*" *or*" *of Justice* from " in the Magistrates' Chambers of the Oudenaarde Town Hall in Holland showed an enthroned Justice with even scales and upright sword, a book on her lap, and a blindfold over her eyes. On one side is a woman who could be identified as Prudence (with her mirror) and on the other, Faith with a cross. Beneath her scales are the letters "M" and "T" for Meum (mine) and Tuum (thine), while beneath the scales is the Latin "suum cuique tribuo" or "I give to each what is his due." Near Justice's head is inscribed "praemium et poena," or "reward and punishment." Another positive deployment of the blindfold can be found in the antechamber in the old Tübingen Town Hall, where two murals from " are above doorways. A Justice sits above the door to the Council Chamber. Seated on a throne, holding a sword upright in one hand and evenly balanced scales in the other, Justice is blindfolded. The inscription below explains:

> I am known as justice
> I know the rich and poor equally
> My eyes are bound
> So that rich and poor appear the same.[illegible]

At the center of the other mural above the antechamber is a female personification of Wisdom (who could also be Prudence), also enthroned and under a canopy, holding a mirror. She is clear-sighted, and the inscription again refers to the obligation to be even-handed:

> Here I sit in God's stead
> Through me the town and land finds counsel
> I really cannot favor
> The wants of every man
> Thus my knowledge is pure.
> And God alone my comfort and reward.[illegible]

Other blindfolded Justices, sometimes with diaphanous coverings for their eyes and other times with their vision completely obscured, can be found from the seventeenth century.[illegible] One, in wood from about [illegible], stood outside the City Hall of Veere.[illegible] Another Justice, who holds scales and a sword and wears a see-through blindfold, was put into place in [illegible] as part of the renovation of the Haarlem Town Hall, a building in whose design Jacob van Campen[illegible] the designer of the Amsterdam Town Hall[illegible] likely played a role.[illegible] From a decade later, in [illegible], a painted and blindfolded Justice in the Magistrates' Chambers of the Town Hall at The Hague sits beneath a painting called the [illegible]*e of Justice,* from about [illegible].[illegible] One can also find a few Justices with bandaged eyes as well as scales and sword in engravings in books of *e[illegible]empla iustitiae* (exemplars of justice) and on lawyers' bookplates.[illegible]

Thus, by the mid-[illegible]s, the blindfolded *Justice* (fig. [illegible]) in Amsterdam's Tribunal was unusual, but had a few counterparts in the Netherlands and in Germany.[illegible] One possibility is that blindfolded images became prevelent in relatively new city-states as more complex and ambivalent attitudes toward law and authority were developing.[illegible] But to detail the blindfolded Justices is to underscore their minority status. Open-eyed Justices were typical, shown outside town halls, in manuscripts, and on tarot cards,[illegible] in northern Europe[illegible] and elsewhere.

Third, the artistic and literary sources of Plutarch, Alciatus, and Ripa provided arguments for the special utility of sightlessness to Justice. These stories, axioms, and images gained currency as popular anxiety about law's processes resulted in efforts to generate norms of judging. But, and fourth, the texts offered somewhat different rationales for the blindfold. Recall that Alciatus recommended sightlessness for the prince/judge so [illegible]that he may recognise no-one's status and . . . judge according to his council[illegible] or [illegible]according to what is said in his ear.[illegible] Deprivation of sight resulted in even-handedness, a maxim repeated elsewhere, as in the inscription from the old Tübingen Town Hall that the Justice's [illegible]eyes are bound [illegible]so that rich and poor appear the same.[illegible] Blindfolds also made it harder to solicit or receive bribes. But what, then, was to be the basis for decision[illegible]

The answer, at least from Alciatus, was that the judge/prince ought to listen to his advisors. That admonishment may have curbed the absolutism of the power of the judge/prince/king but also reaffirmed that power lies with ruling authorities (councils) and that judgment did not have to flow (as we might assume today) from the interaction of facts, based on evidence, and law. In contrast, by [illegible], Ripa had introduced what could be read as a different rationale for the blindfold[illegible] that (like Homer's blindness) it clarified knowledge: [illegible]Justice's[illegible] eyes are bandaged and thus she cannot see anything that might cause her to judge in a manner that is against reason.[illegible] The reference to [illegible]against reason[illegible] could be to bribery or to status (treat the [illegible]rich[illegible] and the [illegible]poor[illegible] alike) or, as some translations of Ripa noted, to [illegible]passion[illegible] rather than reason.

Thus, even within a convention of the blindfold as a positive attribute, the polysemic quality of representation permits diverse interpretations. Further, conflict about whether the blindfold ought to be valorized has persisted. In Chapters [illegible] and [illegible], we map arguments about whether metaphors of [illegible]blindness[illegible] and blindfolds are appropriate in contemporary discussions of justice. But before doing so, we move forward in time to trace aspects of Justice icon[illegible]graphy that have proved stable across forms of government around the world.

Transcendent, Wide-Eyed, and Amidst the Animals

Raphael's Glory of Justice

From the Renaissance through today, clear-sighted Justices have been commonplace, with several well-known renditions prominently adorning major edifices. Return, for example, to the Vatican, discussed in Chapter [illegible] when we explored the place that Justice occupied among the Four Cardinal Virtues. There, we provided illustrations of *Pru[illegible]dence* (fig. [illegible]/[illegible]), *Temperance* (fig. [illegible]/[illegible]), and [illegible]*ortitude* (fig. [illegible]/[illegible]). In the assembled group, the famous Raphael *Justice* (fig. [illegible], color plate [illegible]) is on the ceiling of the Stanza della Segnatura. That room was used for a time by Pope Julius II as a private library and office; in the mid-sixteenth century, it became the meeting place for the Segnatura Gratiae et Iustitiae (the Council of Grace and Justice), the highest court of the Holy See.[illegible]

Raphael's *Justice* graces a lunette above frescoes on a wall known as *Jurisprudence*.[illegible] Painted between [illegible] and [illegible], the imagery forms a deliberate, didactic program that has spawned a literature debating both its authorship and import. Most commentators agree that depicted below Jus-

Figure [illegible] *Justice,* Raphael, [illegible]–[illegible], detail of the ceiling of the Stanza della Segnatura, Vatican Palace, Vatican State.

tice are her Renaissance siblings, the other Cardinal Virtues, toward whom she looks.[illegible] Justice holds balanced scales in one hand and an uplifted sword (pointing toward the heavens) in her other. On either side, putti (cherubs, one winged and the other not) prop up and partially obscure engraved plaques, read together to mean [illegible]To everyone his own justice[illegible] or [illegible]Justice is rendering to each what befits him.[illegible]

This *Justice* is a part of a visual parade on the ceiling that includes female personifications of the disciplines of Poetry, Theology, and Philosophy.[illegible] In addition, in rectangular frescoes are images identified as Adam and Eve (or The Fall of Man), Apollo and Marsyas, the Judgment of Solomon, and a personification of a woman with her hand on a globe and variously identified as the Universe, Astrology, or Wisdom.[illegible] Inscribed texts augment the pictures by providing additional references to Greek and Roman classicism from Plato and Aristotle to Cicero and Virgil.[illegible]

Like the iconography of the Amsterdam Town Hall a century later, the Stanza della Segnatura's program laid claim to many historic lineages.[illegible] As in Siena's Palazzo Pubblico, the benefits that flow from good governance are depicted.[illegible] Some read the particular choices in the Vatican as an effort by Pope Julius, in a moment of political fragility, to appropriate Greek and Roman philosophical traditions. Under this interpretation, Julius claimed [illegible]a grandiose concordance or harmony[illegible] as the earthly representative of the divine Christian God.[illegible] The room aimed to convey that Julius's [illegible]right to rule Rome could be sanctioned and extended, at least subliminally, to a universal power over not only canon law but also civil law.[illegible]

In the unity of these reconciled traditions, Justice again rises to the fore. Her portrayal above the other Virtues is said to convey a Platonic idea that Justice represents the sum of all the others.[illegible] She could also be seen as dominating the disciplines[illegible] Poetry, Theology, and Philosophy[illegible] through a reading of the room as depicting the ideal Christian world, in which [illegible]all branches of knowledge unite in the service of Justice.[illegible] Moreover, because her place on the ceiling puts her between frescoes of secular and divine Justice, she is the bridge between or the embodiment of both.[illegible] And, as she looks down, no blindfold obscures her eyes.

Symbolism's Caprice: The Many Animals of Justice

The Proud and the Dead Bird[illegible] [illegible]*iulio* [illegible]*omano*[illegible] Justice *with an* [illegible]*strich in the* [illegible]*atican and Luca* [illegible]*iordano*[illegible] Justice Disarmed

Another clear-eyed *Justice* (fig. [illegible], a preparatory drawing) appears in a fresco in the Vatican's Sala di Costantino (Room of Constantine).[illegible] This room was completed after

Figure [illegible] *Justice,* Giulio Romano (School of Raphael), [illegible], detail of the ceiling of the Sala di Costantino, Vatican Palace, Vatican State.

Image reproduced courtesy of the Library of Congress, Washington, D.C.

Raphael's death by assistants, including Giulio Romano, to whom this *Justice* is attributed.[illegible] Within its walls are four large allegorical scenes[illegible] set off as if by pillars in an architectural trompe-l'oeil. On those painted columns sit various Virtues, this image included, shown in the elongated Mannerist style and identified by two attributes[illegible] evenly balanced scales and an ostrich.[illegible]

The Romano depiction was not then extraordinary.[illegible] As quoted earlier, various editions (or embellishments) of Ripa's [illegible]*conolo*[illegible]*ia* mention the ostrich (along with a white robe, sword, scales, bandages, and other attributes) as appropriate for Justice. Ripa explained the bird's presence as demonstrating that Justice had to unravel problems through a [illegible]patient attitude[illegible] like that of the ostrich, reputed to be able to digest everything, if it did so slowly.[illegible] As one invocation of Ripa put it, [illegible]the ostrich ruminates its food as Justice should testimony put before her.[illegible] Like other attributes, ostriches served more than one personification. For example, Ripa used an ostrich for [illegible]Digestione[illegible] (Digestion), described as a woman [illegible]of robust complexion[illegible] and pictured with her right hand on an ostrich, which is [illegible]even able to digest iron.[illegible]

Scholars have offered various explanations about why the ostrich was once plausible for Justice. A possible source is the Egyptian Maat (fig. [illegible]/[illegible]), sometimes represented by an ostrich feather[illegible] or shown as a woman holding or forming scales on which a feather was weighted against an individual's heart.[illegible] Renaissance artists made the Egpytian link partially through the [illegible] *iero*[illegible]*phics* of Horapollo, another of that era's emblem books, with its special focus on decoding the [illegible]hidden meanings or lost secrets[illegible] in various ancient reliefs and inscriptions.[illegible] The Renaissance painter and

author Giorgio Vasari relied on a version of Horapollo linking Justice and the ostrich allegedly based on Egyptian views of the bird's plumes' evenness of length and design. Hence, the feathers' equal length denoted law's treatment of disputants. Moreover, ancient writers associated the ostrich with the symbol of Justice because it was believed that this animal could even chew or digest iron nails. Therefore, when Giorgio Vasari painted *straea* as embodying divine justice, he capped her with a helmet adorned with ostrich plumes and reminiscent of that worn by Minerva; alongside, books represented legal codes. Vasari wrote to a patron in to explain the placement of an ostrich near Justice in another painting. The bird was aerial and terrestrial as she is human and divine, he smelts the iron because he purges for her any ignominy. He has even wings and proper features, positioned in the pyramids as a symbol of Justice by the Egyptians.

A second source for a connection between the ostrich and Justice comes from Christianity. Actual ostrich eggs were imported into Europe in surprisingly large numbers, and Medieval texts mention them hanging from church vaults. A few well-known paintings show large objects hung near the altar; they are identified by some as eggs, which were a common symbol of the Conception of Jesus. Further, Medieval lore posited that ostriches deserted their eggs, which hatched only through the warmth of the sun, providing Albertus Magnus with the aphorism If the sun can hatch the eggs of the ostrich, why cannot a virgin conceive with the aid of the true sun Under this line of interpretation, Guilio Romano's Vatican *Justice* has scales to represent the exacting nature of Justice and the bird to reference Christian mercy. Moving from theology to political economy, another explanation for the ostrich is its connection to the powerful family of the Medicis, whose own emblems included a diamond ring with three bird feathers, identified as from an ostrich. Some circularity is at work here, in that the Medicis were said to have used that emblem to show that the bearer is eternally just, since ostrich feathers (believed all to be the same length) symbolized Justice.

A sequence of images executed by Luca Giordano further documents the role that ostriches once played as proper companions for Justice. Giordano, who lived from to , worked on dozens of commissioned allegories, and his many Virtues display Ripa's influences. One image, called *lle oria della uisti ia oppressa* (*lle or of Justice Disarmed, Justice Disarmed,* or *Justice ppressed*) (fig.), survives in several iterations. Each portrays a large disheveled

Figure *lle oria della uisti ia oppressa* (*Justice Disarmed*), Luca Giordano, circa , Budapest Museum of Fine Arts, Hungary.

Image reproduced with the permission of the Szpmvszeti Mzeum, Budapest.

Justice with all her attributes awry. According to art historians, Giordano intended to depict the injustice that occurred when the Turks took Crete from Venice.[illegible] Giordano, well schooled in Ripa's *Iconologia,* relied on various objects to tell the story of Justice's capture and subjugation.

Shown on one side of Justice is a puckish, winged young man, either taking the scales from Justice's limp hand or tipping them. On her other side, the figure of an old male (who might be Ignorance) has either wrestled Justice's sword to the ground or is grabbing it from her. A small naked boy (evoking the tradition of putti and specifically Eros) flies above, with Justice's blindfold in his hands. At Justice's feet, fasces, which Ripa commended for signaling authority, are on the ground next to a disconcerted, sleeping, or dead ostrich.

That ostriches were once relevant to Justice underscores the plasticity and variety of Justice symbolism. Like the blindfold, the link between Justice and ostriches was visceral, referencing a relationship between corporeal sensations and decisionmaking. The blindfold relies on deprivation of the sense of sight to protect Justice's obligation of even-handedness, while the ostrich[illegible] with an analogy to digestion[illegible] insists that slow and deliberate processing of information results in better outcomes. And just as the blindfold was initially read negatively but has now gained positive connotations (or not, as we discuss in Chapters [illegible] and [illegible]), were one to put an ostrich next to a Justice today, most contemporary readers would assume the point was critique[illegible] that a decisionmaker's head was in the sand. Indeed, the rare mention today of ostriches in relationship to law comes by way of American criminal docrine, discussed in Chapter [illegible]; an [illegible]ostrich charge[illegible] is an instruction to a jury about the relevance of a defendant's willful ignorance.

Figure [illegible] [illegible]*lle[illegible]or[illegible] of Justice,* Peter Paul Rubens, circa [illegible].

Sheep and [illegible]o[illegible]es, Do[illegible]s and Serpents[illegible] [illegible]u[illegible]ens[illegible] Wide[illegible]ed Justice

The ostrich was not the only bird in Justice's repertoire, nor are birds the only animals now gone from sight. Ripa instructed that [illegible]Heavenly Justice[illegible] (or Divine Justice, a woman of uncommon beauty) have a dove near her head to symbolize the Holy Ghost.[illegible] Other Justices (including on tarot cards) appeared with a crane holding a rock.[illegible] (Cranes could also be found near Faith and Vigilence.[illegible]) Cranes were assigned the task of guarding the flock; were the crane to fall asleep, the rock would fall out of the crane's grip and awaken the bird. Ripa also described the figure of a judge as an old man with an eagle nearby because that bird had a [illegible]sharp and discerning eye[illegible] denoting that judges needed to [illegible]sift through often unclear material to get to the real and honest truth.[illegible]

Other animals are part of Justice's pack. Sixteenth-century editions of Ripa recommended that, to show that Giustitia Retta ([illegible]Right Justice[illegible]) was [illegible]not affected by friend or enemy[illegible] one should include a dog nearby for friendship and a snake [illegible]symbolizing hate[illegible] under foot; Justice's [illegible]raised sword[illegible] poised higher than the scales, showed her unbending for either friend or foe.[illegible] That description comes close to what Peter Paul Rubens painted circa [illegible]. The wide-eyed Justice at the center of his [illegible]lle[illegible]or[illegible] *of Justice* (fig. [illegible], color plate [illegible]) crushes a snake at her feet and has her sword held high, as if breaking through the clouds to catch the sun. (That the sword is in her left hand rather than her right suggests that the design was for a tapestry and therefore would have been reversed in a final rendition.[illegible]) This Justice stands between a sheep, often referencing the faithful, and a fox or wolf denoting heresy and scampering away.[illegible]

The Past as Prologue: Sighted or Blindfolded, and Tall

Venice as Justice, Justice as Venice

Open-eyed Justices remained commonplace, as can be seen by moving farther north in Italy to Venice, where the iconography of Justice played a prominent role in the elab-

orate pageantry of that city. In Medieval Europe, Venice served as a route and a way station for the Crusaders. During the course of several centuries, Venice succeeded in carving out its own identity, distinguishing itself successively from the Byzantine Empire and from Germanic and Papal forces; its republican form of government lasted from the end of the thirteenth century to [illegible]. [illegible] Controlled by a small, elite group, the government's titular leader was the Doge, a person posited as the embodiment of Venetian authority yet given limited power through the conceit that he was *primus inter pares* (first among equals). [illegible]

Reflecting the "civic Christianity" that permeated much of Europe, [illegible] the seat of Venice's government was in the Basilica of San Marco. [illegible] In the first half of the sixteenth century, through an architectural "reorganization" of the ceremonial space in the Loggetta of San Marco, Venetian leaders proffered a visual representation of their political premises. [illegible] As figure [illegible] demonstrates, city leaders showed "*enetia* [illegible] *ustitia* ("*enice as Justice*) on the central panel of the facade in a stone relief sculpted by Jacopo Sansovino. [illegible] In this carving Justice is solidly grounded, supported by the two lions of the city's patron, St. Mark. The personifications carved in stone near "*enice as Justice* represent the two mainland rivers of Venice. In the two other major panels are "Venus as queen of Cyprus and Jupiter as king of Crete" to" signify the pillars of Venice's maritime empire. [illegible] Nearby are embodiments of Minerva, Mercury, Apollo, and Peace.

Other seated, enthroned women, denominated Venice, Justice, or Venice as Justice, dot the Ducal Palace. Similar to the "*enice as Justice* is another statue of a woman who offers an open gaze, holding an upright sword and a scroll as she sits crowned and bracketed by lions. Some commentators label her "Venice" [illegible] and others "Venice as Justice." [illegible] A third woman, called "Justice," is again open-eyed, crowned, and enthroned; she holds both a sword and scales and is accompanied by Venice's ubiquitous lions. [illegible] A fourth stands on an enormous balcony, [illegible] while yet another Justice on the piazzetta wall of the palace holds a law book and a rod. [illegible] In short, Justice iconography "dominates the public facades of the Ducal palace, which was explicitly defined as a palace of justice." [illegible]

Justice was not the only heroine in Venice's hagiography. Rather, she joined personifications of the Virgin Mary, Venus, and Dea Roma ("the goddess Rome"). [illegible] The imagery provided an amalgam of Christian and classical themes illustrating that, like many of the other polities we have discussed, Venice laid claim to an array of protectors. Moreover, Venetian allegories (like those of Amsterdam) posited a familial connection between Venetians and their rulers, thereby relying on gendered Christian discourses of the bonds between Jesus Christ and the Church (Ecclesia as the "bride" of Christ), exercising control through an implied affective political relationship. The overall point was to have Venetians "read the figural equations of Justice = Venice or Virgin = Venice or lion = St. Mark = Venice, or the interpretive complex of Solomon, Justice, and Wisdom as embodying the highest virtues of their Republic." [illegible]

Venice also insisted on its own special position as the "New Rome" and on its unique relationship to the Pope. [illegible] Amid the various historical legends that constituted Venetian self-understanding was that, in [illegible], Pope Alexander III had given three gifts ("trionfi") to the Doge in recognition of his help and protection in the Pope's battles against Emperor Fredrick Barbarossa. The gifts included "rights" to carry white candles in processions on major feast days and to marry the sea ceremonially in recognition of the

Doge's [illegible]lordship of[illegible] and [illegible]perpetual dominion over[illegible] the sea.[illegible] According to the legend, Pope Alexander III provided a special ring for the marriage ceremony and a special sword [illegible]symbolic of the justice of the doge's cause[illegible] assuring salvation to those who touched it.[illegible] By [illegible] this legend had made its way into visual narratives in the Ducal Palace and by the sixteenth century, it was a part of the [illegible]official dogma[illegible] of Venice, providing a [illegible]standard historical justification for the Venetians' jurisdictional privilege[illegible] to control trade routes and its colonies.[illegible]

The gifts conveyed in legend were part of Venice's central pageants, as its rulers presented an unusual number of public spectacles reflective of a [illegible]Neoplatonic belief that outward beauty was a sign of inward virtue.[illegible] In such rituals, Justice iconography was prominently on display. In the ducal processions marking the [illegible]constitutional[illegible] authority in Venice,[illegible] a specially-designated nobleman carried the [illegible]sword of justice[illegible] as an emblem of law's obligations of equal treatment.[illegible] Furthermore, upon investiture, a new Doge stated that he would [illegible]govern well and to the best of his ability observe justice[illegible] as he strove for [illegible]peace and well-being for all the subjects.[illegible] A [illegible] meeting of Venice's Council began with a motion that the [illegible]principal foundation of our city and its singular ornament is justice, both at its heart and in its subject lands.[illegible]

Moreover, in the annual [illegible]great communal ritual[illegible] of the marriage to the sea, Justice herself led the procession. This formally orchestrated regatta[illegible] famously depicted in the eighteenth century by Canaletto in paintings such as the [illegible] *The Basin of San Marco with the Bucintoro* (fig. [illegible])[illegible] [illegible] was a yearly event celebrated on Ascension Day, when, according to Catholic belief, Jesus entered heaven.[illegible] After a mass at San Marco, the Doge boarded his special barge, called the Bucintoro.[illegible]

This craft, first built in the thirteenth century, described in [illegible] as gaining grandeur and gilt,[illegible] and replicated a few times thereafter with yet more elaborate models, had ornamentation that included the lions of Venice's St. Mark and emblems of the sea.[illegible] The Bucintoro had a special compartment for the Doge and dozens of seats for foreign and local dignitaries.[illegible] Near the Doge's throne were statues of Prudence and Fortitude and depictions of Apollo and nine

FIGURE [illegible] Maquette of the bow of the Bucintoro with *Justice,* undated, Venice, Italy.

Muses.[illegible] The barge and its replacements were used annually beginning in the thirteenth century and ending in [illegible] when Napoleon's French troops destroyed the last version.[illegible] As the many boats crowding the bay in Canaletto's rendition make plain, other vessels joined to form a festive parade to the sea.[illegible] Each year, the Doge dropped a gold ring into the sea and made statements of espousal, thereby enacting the political point that Venice had [illegible]legitimate rights of domination over trade routes[illegible] in the Adriatic.[illegible] (The ceremony endured long after its claims had any plausibility, and the Canaletto painting illustrates the festivities' importance to the Venetian tourist trade.[illegible])

Justice sat[illegible] literally[illegible] at the forefront of this ceremonial enactment of jurisdiction and authority.[illegible] Canaletto's painting captures the liveliness of the event. Harder to see in this rendition is the Bucintoro's large golden Justice, seated on a great throne in front of the Doge's compartment. Figure [illegible], a maquette (or model) from the Museo Storico Navale di Venezia (the Venice Museum of Naval History), makes more easily visible the features of the Bucintoro's prow. This open-eyed Justice held an upright sword and scales while lions sat at her feet. In figure [illegible], a much earlier and simpler edition (also from the collection of Venice's Museum of Naval History), the [illegible] wood frontpiece ([illegible]*ene*[illegible]*ia sotto forma di* [illegible] *iust*[illegible]*ia,* or [illegible]*enice in the* [illegible]*orm of Justice*) from a Bucintoro of that date, shows her in the same position.[illegible] Both at sea and on land, in [illegible]the visual arts a female personification of Justice holding a scale and sword ranked second only to the winged lion of Saint Mark as a symbol of the republic.[illegible] Many cities took Justice as one of their standards, but for Venice the identification was both literal and abstract; Justice [illegible]became the prime model for the figure of Venetia herself.[illegible]

FIGURE [illegible] [illegible]*ene*[illegible]*ia sotto forma di* [illegible] *iust*[illegible]*ia* ([illegible]*enice in the* [illegible]*orm of Justice*), from a [illegible] Bucintoro, Venice, Italy.

Across the English Channel

Equating a nation with Justice and parading her about were not practices of Venice alone. Moving across the English Channel to Great Britain, one finds that many of its political leaders displayed their association with Justice. Having noted Elizabeth I's link to Astrea and Justice in earlier chapters, here we turn to a second English queen, positioning herself in relationship to both Elizabeth and Justice.

Queen Anne as Justice

Queen Anne as Justice (fig.), painted in by Antonio Verrio, hangs in the Queen's Drawing Room in Hampton Court Palace, built during the reign of Henry VII. The restoration of the palace, under the guidance of the architect Christopher Wren, began when William III and Queen Mary ruled England in the late seventeenth century. After William's death in March of , Anne qualified because she was a Protestant took the throne until her own death, in . For the latter part of her reign, Hampton Court was a focus of attention.

Anne ordered the refurbishing of the Queen's Drawing Room, a room measuring about forty-one by thirty-five feet that functioned as a public space where she presided over formal assemblies. In addition to the large ceiling painting (here shown only in part), the walls depicted Britannia enthroned, receiving homage from the four corners of the globe, as well as images of the British fleet and another of Queen Anne, dispensing Mercy and Justice and flanked by Christian Truth and a Sybil while supplicants from America, Asia, Europe, and Africa were

Figure *Queen Anne as Justice,* Antonio Verrio, circa , Queen Anne's Drawing Room Ceiling, Hampton Court Palace, Surrey, England.

Copyright: Historic Royal Palaces. Image reproduced with the permission of Historic Royal Palaces under license from the Controller of Her Majesty's Stationery Office.

arrayed as heroes crushing the Vices of Evil, Sedition, Envy, and Hatred.

The Verrio ceiling puts Anne at the center, looking out at the viewer while three Graces or Muses rest at her feet. Above her head, figures representing Neptune and Britannia hold a crown that they are to bestow upon her. Other personifications arguably Peace because of the laurel she holds, Fame, and Plenty float in the clouds. Anne's regal purple dress is lined with ermine, and she holds Justice's signature attributes, the upright sword and balanced scales. Other Virtues, including Prudence with a mirror and Temperance with her pitcher, are on one side of Anne, while Fortitude, marked by her lion, is on the other. That cluster underscores the iconographical decision to select the Virtue Justice for the personification of the monarch. The addition of the cornucopia could refer to merciful generosity; Ripa advised its display with Charity and Abundance. A crane, at the bottom, sits near a personification of Faith.

Anne's identification with Justice also comes through her familiar stance. Her pose echoes the frontpiece (fig.) of the Bucintoro and some of the other Justices of (or as) Venice. Furthermore, the composition of Verrio's painting is reminiscent of another image of Europe's famous queens Maria de Medici in *The elicit of the e enc*, which was part of a cycle of twenty-four paintings by Peter Paul Rubens. That queen, surrounded by supplicants and putti, holds scales in one hand and an orb with a rod in the other. By choosing this position, Verrio placed Anne within a tradition of monarchs appropriating symbols of Justice. And their imagery was, in turn, appropriated hundreds of years later when Saddam Hussein (fig. /) repeated the gesture of displaying himself holding a sword and scales.

Critics have not showered praise on Verrio's work at Hampton Court. This, his last work, has been widely judged his least successful. One story attributed its aesthetic failures to deliberate aggression. The hypothesis is that Verrio, a Roman Catholic who had been barred from holding an office at court under the Test Acts of , was underpaid by Queen Anne and showed his anger in his art. For some period of time, the paintings were thought so indifferent that they were covered over with hangings of green damask. Whether esteemed or disliked as art, the painting of Anne (like Ferdinand Bol's *Moses Descends from Mt Sinai* (fig. /) in the Amsterdam Town Hall) is helpful as history. *ueen nne as Justice* documents the queen's self-conscious efforts to revive the ceremonial and symbolic life of the court through a carefully crafted public image. While Anne is often positioned as vestigial, the last of the Stuarts vainly resisting the inevitable triumph of political party and limited monarchy, her ability to obtain the cordial good will and sympathy of her subjects and her efforts to keep the monarchy above partisan politics made her a harbinger of the future. Part of that process was to present herself as the heir to Elizabeth I, who had likewise claimed to be a truly just and a truly English queen.

The Lord Ma or Show

While the Venetian lagoon offered a unique backdrop for the Doge's voyage on the Bucintoro, other polities staged their own versions of such civic commitment ceremonies to borrow a modern phrase. England's leaders continued Queen Anne's practices, by wrapping themselves in Justice imagery. One such display was (and is) an annual procession by the Lord Mayor of London, who has formal authority over about a square mile of that city. Each fall, the Lord Mayor goes from the City of London to Westminster Abbey to swear fealty to the crown. Begun as a condition imposed by King John in in return for permitting election of a mayor by the citizenry, the Lord Mayor's Show remains a yearly activity, uninterrupted despite two bouts of the plague, the great fire of London, and the bombs of World War II.

The event was once a simple processional through London during eras before the building of theaters enabled many spectacles to move indoors. By the seventeenth-century reign of James I, with the elaboration of state pageantry, the Lord Mayor's Show came to include specially written speeches and plays praising the sovereign. The Lord Mayor initially proceeded by decorated barge and horseback. But in , after one mayor fell off his horse, the tradition shifted to making the trip by coach. The version of that coach continues to be used in this annual event and is otherwise on display at the Museum of London. That New Grand State Coach, designed by architect Sir Robert Taylor, has panels painted by Giovanni Battista Cipriani. There appear the female personifications of Justice, Fortitude, Temperance, and a woman called Truth (with her mirror and thus looking like what others call Prudence). These four continue to be paraded along a route specified in for the procession that moves from the streets of the City to the Royal Courts of Justice, where the Lord Mayor takes an oath of allegiance to the Sovereign before the Lord Chief Justice and the Judges of the Queen's Bench Division.

The Lord Mayor's Show served not only as a space for municipal government to enact its loyalty to the state and to demonstrate its own authority but also as a site for public protest. One can make the psychological claim that spectacles *compel* a response or the political point that spectacles create circumstances permitting voices that undermine the monological perspective proffered by the state. The unruly crowds that Michel Foucault named in his classic *Discipline and Punish* can be seen in some of the mid-eighteenth-century engravings depicting mobs that almost overwhelmed the coach during the Lord Mayor's

Figure [illegible] *Lord Ma[illegible]or[illegible] Da[illegible]*, George Cruikshank, in *Comic [illegible]lmanack*, [illegible].

Show. This [illegible] print of Lord Mayor's Day (fig. [illegible]) by George Cruikshank[illegible] exemplifies the potential for protest at this kind of ritual, which was more physically accessible than other royal spectacles. As this scene suggests, although the parades of power were replayed over the centuries, the role of the audience changed. In Venice, the [illegible]marriage to the sea[illegible] came to be a show for tourists; in London, a comparable pageant sometimes provided occasions on which spectators asserted political agency.

Cruikshank offered an ambiguous scene, with people dressed to mark their lower class pressing forward either to gain a better view or to attack the parading dignitaries. The armored horseman appears oblivious of the horse and may be casting an intrigued eye toward the crowd. This print was one of several artistic satires of the Lord Mayor's processional that showed crowds surrounding the coach. Another, by William Hogarth, portrayed a boisterous crowd unconstrained by the City's militia,[illegible] and another Cruikshank print had the Lord Mayor stripped of his coach and carried in a litter held by two foot soldiers. That print foreshadowed the [illegible]downfall of the City's power.[illegible] In Chapter [illegible], we explore how public rituals of adjudication came to frame expectations of rulers as [illegible]rights[illegible] of participation replaced [illegible]rites[illegible] of spectatorship. A graphic embodiment of aspects of this shift could be found by the early nineteenth century through prints such as this one by Cruikshank, which also illustrated the roles played by the press, cartoons, and pamphleteering in the construction of what has come to be called the [illegible]public sphere.[illegible]

Returning to London in the nineteenth century, that criticism and conflict produced some reforms of municipal government, including the establishment in [illegible] of the London County Council. But, instead of being relegated to London's past, the Lord Mayor's Show gained yet more formal grandeur,[illegible] paralleling the increased extravagance of the Venetian [illegible]marriage to the sea[illegible] which also became more elaborate as the power of that city waned. These reconfigurations running from the thirteenth century to the twenty-first, all embraced under the nomenclature of the Lord Mayor's Show, bear out David Cannadine's observation that civic rituals are constant in neither content nor meaning.[illegible]

Du[illegible]lin[illegible] Justice

Moving from staged events back to Justice statuary, one can find multiple meanings[illegible] depending on where one stands

(literally and metaphorically)[illegible] in the placement of a clear-eyed *Justice* (figs. [illegible] and [illegible]) on top of a building complex called the Four Courts in Dublin, Ireland. Before [illegible], [illegible] the courts of law in Ireland were itinerant,[illegible] which is to say that no permanent and specific buildings were set aside for Irish judges to hear cases. Two legal systems prevailed: English law within [illegible] the Pale, with Dublin at its centre[illegible] and Irish (old [illegible] Brehon[illegible]) law in the outlying areas.[illegible]

Irish [illegible] Inns of Court[illegible] where lawyers and judges worked in chambers and documents were kept[illegible] came into being during the reign of Edward I in the thirteenth century. After attacks by bandits were said to have burned every record, the Inns were moved from outside the walls of the city to inside the Castle of Dublin[illegible] and then to a former monastery that deteriorated over time.[illegible] Disputes were then heard in a building adjoining Christ Church Cathedral.[illegible] After efforts to convert another of Dublin's cathedrals to a hall of justice failed, a decision was made to site [illegible] one of the noblest structures in Dublin[illegible] near that city's river where the monastery had housed the Inns of Courts.[illegible]

The Four Courts, a [illegible] stupendous neo-classical monument,[illegible] was originally completed in [illegible]. After battles during the [illegible] civil war, the complex was restored.[illegible] The building, described as [illegible] at once Palladian and Baroque[illegible] reflects the style, dubbed [illegible] Ultimus Romanorum[illegible] of one of its architects, James Gandon.[illegible] Its interior decorations include allegorical emblems such as Ireland's harp shown on a shield [illegible] resting on volumes of law books, bound together by a serpent entwined around them,[illegible] and personifications of [illegible] Justice, Security, and Law.[illegible] On the front pediment were statues (few of which have survived) identified as Moses, Justice, and Mercy. On piers of the interior dome were [illegible] colossal statues of . . . Punishment, Eloquence, Mercy, Prudence, Law, Wisdom, Justice, and Liberty[illegible]; above were medallions of [illegible] eight distinguished legislators, Moses, Lycurgus, Solon, Numa, Confucius, Alfred, Manco-Capac, and Ollamh-Fodhla.[illegible] The quest for politically authorizing ancestors[illegible] shared by Siena, Geneva, Amsterdam, and Venice[illegible] thus widened its net to reflect a broad multicultural claim to legitimacy that would, in the twentieth century, be repeated in the United States, with examples discussed in Chapter [illegible].

One of the eighteenth-century sculptures of Dublin that remains is *Justice* (fig. [illegible]), given a [illegible] prominent position[illegible] standing over a gateway into Dublin Castle, [illegible] the centre of political power in Ireland.[illegible] This [illegible] statue, almost nine feet tall, made of lead, and painted to look like stone,[illegible] is by John van Nost the Younger.[illegible] Figure [illegible] shows Justice as she is seen from inside the court, with scales in one hand (complete with drainage holes to keep water from tipping the pans) and a sword in the other. If, however, one is looking at her from the city outside the courtyard walls, one sees her back (fig. [illegible]).[illegible] Popular Dublin lore proffers the explanation that her positioning served as a protest against English rule lurking beyond the castle's walls. That gloss

supposes that Justice statuary was used to assert Ireland's rightful ownership of its own major monuments of law. Architectural commentators propose an alternative explanation that because the mid-eighteenth-century terrain made it difficult to see the roof's statues from outside, the appropriate didactic focus was to position them to be viewed by people working in the buildings.

Old Bailey's Open-Eyed and Wide-Armed Justice

Whatever their differences, the English and the Irish both rely on Justice to mark their seats of authority. In London, a twelve-foot bronze *Justice* covered with gold leaf (fig.) stands almost two hundred feet above the street at the summit of the city's central criminal courthouse. Her arms span another eight feet; she holds a sword in one hand and equally balanced scales in the other.

FIGURE *Justice,* Frederick William Pomeroy, , Central Criminal Court (Old Bailey), London, England.

Photograph reproduced courtesy of the Corporation of London and with the assistance of Stephen F. Jones, Building Manager, Central Criminal Court.

The building, the New Sessions House, is also known (as were its predecessors) as the Old Bailey and it occupies a site first used for such purposes in . As far as available records indicate, the building's architect, Edward Mountford, selected the sculptor, Frederick William Pomeroy, and directed the design. In addition, Pomeroy sculpted a sequence of allegorical figures (Mercy, Charity, Temperance, and Justice) for the dome, as well as another Justice that joined other figures in the interior. Lunettes were painted by Gerald Moira. In one, Justice (with eyes cast downward) is among the many figures shown on the steps of St. Paul's Cathedral in London where she is receiving the homage of all classes and professions. A circular window is bracketed by Time protecting Truth from Falsehood and by Justice, Righteousness and Crime. When rebuilt in , the building had four courtrooms; by the end of the twentieth century, it had nineteen.

Like the *Justice* in figure , none of the other Old Bailey Justices are blindfolded; rather most share the open-eyed vision of the version at the summit, although they lack her distinctive stance. This Justice's outstretched arms and spiky headdress echo the Statue of Liberty (built in France and erected in the New York Harbor in), and other iterations have similarly entwined Liberty and Justice. Old Bailey's *Justice* reflects a shift in aesthetics that can be found in many courthouse buildings erected during the twentieth century.

Across the Atlantic Ocean: Kansas's Sharp-Eyed Prairie Falcon and Vancouver's Peaceable Justice

Two examples from North America complete the scan of this five-hundred-year sweep in which the mix of technology and political aspirations produced ever taller and heavier Justices. As detailed in Chapter , Justice is the one Virtue who remains readily recognizable, providing a transnational sign that a building is a courthouse. And despite theories of republicanism arguing that democratic principles ought to have generated a different language, Justice continues to serve as a common idiom. Hundreds of statues erected over the past century illustrate this point, and here we proffer only two more, bringing us closer to the current era.

Like the Pomeroy *Justice* for the Old Bailey, the Bernard Frazier *Justice* (fig.) for the Kansas Judicial Center (housing that state's Supreme Court in its capital city of Topeka) reflects sculptural modeling of a particular aesthetic moment. Bernard Frazier was a sculptor-in-residence at Kansas University who had initially proposed a nude female figure, but a committee member of the Capital Area Planning Authority objected. The revision, carved from Carrera marble under the supervision of the sculptor's son Malcolm after his father's death, sits on a fifteen-foot-high base in a sixty-foot cube of space.

This cloaked and kneeling Justice has a bird in hand, as did some of her predecessors. But this one[illegible] held aloft[illegible] is not the ostrich found in the paintings of Giulio Romano (fig. [illegible]) and Luca Giordano (fig. [illegible]) nor the dove of Damhoudere but a prairie falcon. According to an official of the Kansas courts, because that particular species has the [illegible]sharpest eyesight[illegible] it was chosen [illegible]o represent the all-seeing eye of justice.[illegible] Poised for flight, the bird's potential motion draws Justice's own eyes. As a brochure for visitors explains, the statue depicts [illegible]Kansas justice as lofty, dynamic, and idealistic, with clear vision and swift action.[illegible]

The other example comes from the Vancouver Law Courts, a [illegible] building in British Columbia, Canada. The designers created a large open hall on its fourth floor, sheltered by a glass roof and bordering terraces.[illegible] The bronze Justice there (fig. [illegible]), installed in [illegible], stands near one of

the entrances. Its sculptor, Jack Harman, called his work *Themis, Goddess of Justice*. He shaped a floor-length cloak around the shoulders of this many-tonned bronze, covered her eyes with a blindfold, placed evenly balanced scales in one raised and outstretched hand, and tucked a scroll, half hidden by drapery, in her other. The court's website explained that "the artist, who was against capital punishment, replaced the sword with a scroll."

These statues from Kansas and Vancouver show that, by the late twentieth century, the various allegories of good and bad government, of noble or imprudent leadership, and of virtuous and corrupt judging had been compressed into a single image: Justice. Rendered in styles that fit their age, homogenized with a few other goddesses ranging from older Greek ones to the more recently crafted Liberty, holding birds as well as scales and swords, and only episodically blindfolded, Justice has survived as the easily intelligible sign that a particular place is a public government building devoted to law.

A Resilient, Albeit Invented, Tradition

A summary of the premises of this chapter is in order as a predicate to the next. Through a trek from Bruges in the fifteenth century to Vancouver in the twentieth, we have mapped "invented traditions" of transnational proportions. Shared by monarchies and democracies, by city-states and nations, polities shapted their legal identities by seeking to incorporate or appropriate a visual vocabulary legitimating their authority. The imagery and its explanations substantiate five propositions.

First, European public authorities once put forth a much richer pictorial array than a lone Virtue, Justice, as they sought to anchor their authority and to dictate behavior appropriate for judges. Through an iconographic and emblematic tradition that spanned a large part of that continent, ruling powers gained the capacity to select images and stories (*exempla*) to make many points. Justice was not the sole Virtue with which governments allied themselves; good governance required signifying that it was constituted from Prudence, Fortitude and Temperance, Peace and Prosperity, Concord and Harmony as well. Nor were the Virtues the only message offered. Cautionary tales were regularly broadcast when Cambyses, Zaleucus, and Brutus served as readily cognizable warnings, delivered in town halls around Europe. Repeatedly, rulers depicted their authority and sought to instantiate its legitimacy through symbolizing their legal system's imposition of judgment. On occasion, books were proffered as references to codes of law, but the acts of codification and legislation have not lent themselves to personification as readily as have moments of judgment. (Occasionally, large-scale paintings show crowded rooms of parliamentarians.) Justice iconography thus gained a special place in the civic buildings erected.

Second, the deployment of such imagery was ambitious, aimed at consolidating power by shaping new norms for judges to function as obedient servants, loyally implementing the laws of the state. In eras in which judgeships were sold (along with other positions), when judges were paid on a fee-for-service basis, and when popular distress with courts and law was high, commissioned art nonetheless aimed at making certain kinds of behavior illicit. Imagery—then and now—seeks to generate commitments to developing norms rather than to express only those that are secure.

Third, the standard bearers that have dropped out over the centuries are those foreboding reminders of the burdens of working in the name of the law. Once shown were judges ordering the deaths of their own children, gouging out their own eyes, or sitting handless to preclude accepting bribes. Once delivered were instructions to fear God and rulers whose laws judges ought not risk disobeying.

Fourth, the attributes that surround the surviving icon, Justice, were more various and variously justified than they are today. Recall that a 1603 edition of Ripa provided descriptions of six versions of "Worldly Justice" and one who was "Divine." That crew of Justices came wearing white or gold dresses, adorned with crowns or bracelets, seated or standing, and holding scepters, chalices, flames, or fasces as well as occasionally swords and scales. Only one had a blindfold, but that Justice (whom Ripa credited with being "the type of Justice that is exercised in the Tribunal of judges") also had "a bundle of rods, with an axe, . . . a fiery flame, "and" . . . an ostrich, a sword and scales." Fasces and flames are now rare, and an ostrich near a Justice is no longer comprehensible. Moreover, the attribute now assumed to be common—the blindfold—was once deployed derisively and, we have argued, as a subtle signal of the pain inflicted in the name of Justice—as in Peter Brueghel's *Justice* (fig. 1.1) and in Quellinus's relief of *Justice* (fig. 1.2) in Amsterdam's Tribunal. The valorization of the blindfold came thereafter and, as we detail in the next chapter, that symbolism remains contested, and only episodically attached. As the images from Venice, England, Ireland, and Kansas exemplify, many clear-eyed Justices continue to reign over palaces and courts.

Fifth, even as the allegorical and emblematic tradition waned, the remnant of the Renaissance that has survived provides a complacent celebration of the power of the state. Rather than suggesting a struggle (*The Judgment of Cambyses* or *Les Juges aux mains coupées*) to render judgment "without fear or favor" or the personal toll that judging takes (scenes of Last Judgments, Zaleucus, and Brutus) or a need for a range of Virtues (Prudence, Temperance, and Fortitude), Justice generally stands alone, presumptively at ease with her role. Although her sword signals the violence governments impose when rendering judgment, swords rarely draw objections or analysis, and the scales are presumed to embody fair decisionmaking. Those who commission her placement have confidence (undaunted by

postmodern skepticism) that, if noticed, such a Justice is inoffensive and reassuring.

Yet a few twentieth-century depictions of Justice have prompted controversies, to which we turn next. One set of questions revolves around sight, as artists continue to puzzle about whether to show Justice clear-eyed or blindfolded. Other issues emerged when egalitarian movements enabled persons of all kinds to bring claims to court that rendered problematic the question of whose faces and bodies ought to be seen as iconic. As we will examine, although bulked up in tonnage and height, Justice iconography is ill-equipped to symbolize all that democractic orders seek from adjudication. However well she once served monarchies and however fascinating her history or aesthetically engaging her depictions, this sole icon can no longer carry the weight of the obligations she marks.

Iconographical Conventions, Pictorial Puzzles, and Justice's Blindfold

This chapter's first purpose is to explore the remarkable reduction of Justice iconography into the form of a hefty female figure, decked out with scales, sword, and the occasional blindfold. We begin with a ⍰⍰⍰⍰ text, ⍰ *n the Paintin⍰ of Justice,* animated by a debate about how artists assigned by rulers to portray Justice ought to respond. This fictive discourse makes plain that the question of how to make a figure recognizable as ⍰Justice⍰ was then still an open one. That point was reiterated at the end of the sixteenth century when Ripa's ⍰*conolo⍰ia* (described in earlier chapters) proffered not one but seven different versions of what various Justices looked like. Today that variety has evaporated. Over the intervening centuries, rulers produced the current distillation that serves as a transnational and trans-temporal political icon of government.

This chapter's second focus is on understanding why blindfolding Justice has been and remains a source of contestation. Both the many clear-eyed versions of Justice and the satiric ⍰⍰⍰⍰ woodcut of *The ⍰ool Blindfoldin⍰ Justice* (fig. ⍰/⍰⍰) are premised on the same idea⍰ that sight produces first-hand knowledge. What flows from this proposition, however, is contested. Blindness as a *deficit* presumes that sight is requisite to understanding, whereas blindness as an *asset* assumes that sight can corrupt judgment. This pictorial conflict mirrors a doctrinal one in which real judges debate whether the law ought to be ⍰blind⍰ or to ⍰see⍰ certain facets of conflicts or of disputants.

Disputes about how to show Justice's ⍰face⍰ and about Law's ⍰sight⍰ reflect the analytic challenges that have engaged philosophers from John Locke to John Rawls, as they parsed the relationships among sensory perceptions, intuition, evidentiary truths, and cognition. The question of sight has also been engaged by leaders of justice systems acknowledging histories of exclusion and unfair subordination based on the gender, race, ethnicity, and class of disputants. Although most of the iconography of Justice placed around courthouses is complacent rather than provocative, the controversies over blindfolding unveil a persistent disquietude about state application of laws. This point was eloquently put by the twentieth-century poet Langston Hughes, who charged that the blindfold hid ⍰festering sores / That once perhaps were eyes.⍰⍰

Commitments to Representation

A once popular twentieth-century English writer, Bernard O'Donnell, who had ⍰attended every big murder trial in Great Britain during his professional career,⍰⍰ took it upon himself to account for why the twelve-foot-tall Justice at the pinnacle of London's Old Bailey (fig. ⍰/⍰⍰) is wide-eyed. He called her ⍰a unique figure, for it is the only statue of Justice in the world which is not blindfolded. When the new building was opened by the late King Edward VII in ⍰⍰⍰⍰, the Corporation of London was concerned to impress upon the world that Justice, as administered at the Old Bailey, was not blind.⍰⍰

The exuberance of O'Donnell's error is belied by our several hundred–year pictorial journey that mapped how, beginning in the seventeenth century, the blindfold came to be attached, episodically, to Justice. But he was not the only one to believe that a Justice without a blindfold is a depiction in need of explanation. Across the Atlantic, writers of a booklet celebrating the centennial of a county courthouse in Aspen, Colorado, took a similar tack, describing their statue as ⍰one of the very few figures of justice to appear without a blindfold.⍰⍰

The six-foot-tall *Justice* in Aspen (fig. ⍰⍰) was made from silver to mark the Pitkin County Courthouse, which opened as the county's seat of government in Aspen in ⍰⍰⍰⍰.⍰ According to the local lore, silver miners had been leery about ceding their own powers to convene miners' courts. They paid for the new courthouse's statue of Justice, whom they insisted be shown with scales and clear-eyed. Perhaps influenced by their own dependence on weights and measures of silver, the ⍰miners believed that Justice was

FIGURE ⊠ *Justice,* Pitkin County Court House, ⊠⊠⊠–⊠⊠⊠, Aspen, Colorado. Architect: William Quay.

Photograph copyright: William Clift, ⊠⊠⊠. Image made for the Seagram County Court House Project, reproduced with the permission of the photographer.

not blind and that she could weigh justice without being blindfolded. Apparently ministers in Prussia had a similar attitude when, in , they ordered that, in all new courthouses, Justice not be shown wearing a blindfold.

In contrast, in the s spectators complained about an open-eyed Justice painted in the s as part of a mural in a Manhattan criminal court. Audience members wanted a blindfold to be added. Viewers in London, Aspen, and Manhattan thus shared the impression that sight obscured or not has some relationship to knowledge and in turn to the fair administration of justice. Moreover, despite the presumption that allegory is dead, attention continued to be paid to whether Justice's eyes were open, shut, or blindfolded. Those debates follow a tradition established centuries ago, and hence we return briefly to the sixteenth century.

mpossile to Depict n chane etween Mantena and Momus

Battista Fiera, an Italian doctor and man of letters, published a curious pamphlet, written in Latin and called *De usticia Pinenda* (*n the Paintin of Justice*). The monograph consists of a fictitious dialogue set around – between the painter Andrea Mantegna (who died in) and his interlocutor, Momus. Their debate centers around whether a painter can properly create a pictorial version of this Virtue.

Justice needs no further introduction. But the other three participants in *n the Paintin of Justice* do. Its author, Fiera, was from Mantua and personally knew Mantegna, who was renowned in his day as well as in ours and who had done at least two paintings in which a Justice appeared. In , while in Mantua, Mantegna was appointed a court artist under the patronage of Ludovico II Gonzaga. Soon thereafter, Mantegna left for Rome, where he had been summoned to paint a series of frescoes (including a Justice) for the Vatican Chapel of Pope Innocent VIII. Because those frescoes were subsequently destroyed, documentation is sketchy, but another Justice by Mantegna is well known. Mantegna's *Pallas thena or Minerva pellin the ices from the arden of irtue,* a version of the epic battle (the *Pschomachia* discussed in Chapters and) between the Virtues and Vices, hangs today in a place of honor at Paris's Louvre. Mantegna put Justice in the clouds along with Fortitude (denoted by her column) and Temperance (with water pitchers). Holding scales and sword, Justice is a clear-sighted, solid-looking woman.

Fiera's second character, Momus, was also once well known, albeit allegorical; he was the Renaissance's stock personification of a carping critic. That was the posture in which Plato evoked Momus in an exchange in the *epulic* Socrates asked whether anyone could offer objections to a description of the philosopher as a friend and relative of truth, justice, courage, and moderation His interlocutor replied: Not even Momus could find one. Momus was also a character in a story by the first-century Greek writer Lucian, who described a quarrel among Athena, Poseidon, and Hephaestus about their artistic skills. Momus, appointed as the judge, criticized each in a fashion generally read as raising ridiculous objections. For example, Momus complained that the man painted by Hephaestus lacked windows on his chest, thereby precluding a viewer from peering inside to see whether the man lied or spoke the truth.

One could put Momus in another posture by interpreting his comment about needing a window as a sly criticism of the general challenge of eliciting spiritual and intellectual honesty. But because Momus gained popularity in the Renaissance through an essay written in by Leon Battista Alberti that cast Momus negatively, he came to personify the malevolent, ever-watchful critic. As the annotation under one print explained: My name is Momus, born of Night, without a father, the comrade of Envy. I enjoy criticizing each individual thing.

Return then to Fiera's dialogue, prompted by the fictional Mantegna's quest for advice after receiving a commission to paint a Justice that paralleled Pope Innocent's request of the real Mantegna to paint frescoes for his Vatican Chapel. The conceit is that Mantegna had heard so many conflicting accounts of Justice that he decided to consult a series of philosophers which, Momus noted, showed Mantegna's good sense in avoiding asking the lawyers. The following exchange is offered:

> MANTEGNA: I began with Saxus Hippolytus. He said Justice should be represented with one eye; the eye being rather large and in the middle of the forehead; the eyeball, for sharper discernment, deep-set under a raised eyelid.
>
> MOMUS: Suppose something happened behind her back Mght she not be taken in the rear Wll she be safe enough with only one eye in front. . . f she had an eye at the back as well, she'd be still more queenly and majestic. . . .
>
> MANTEGNA: Erasmus the Stoic said that. . . she ought to be shown seated, and holding scales in her hand. . . .
>
> MOMUS: The grocer coming out in him. . .
>
> MANTEGNA: But Erasmus advised. . . make her one-handed . . . so that she couldn't throw in a makeweight, of course.. . . Marianus instructed me to depict her standing, and with eyes all over her as Argus was of old. . . . And brandishing a sword in her hand to ward off robbers, and to protect the innocent and the unfortunate. . . .
>
> MOMUS: What did Fiera say. . .

MANTEGNA: “He” enjoined me to depict her covered with ears as well.

MOMUS: Why? Was he afraid that she might become deaf?

MANTEGNA: He was. . . . “A Carmelite theologian” maintained that Justice cannot be depicted at all.

MOMUS: And there he is certainly right. If all these different opinions of philosophers were so, I also agree with him. For how can you represent Justice both with one eye and many eyes; and how can you depict her with one hand only, and yet measuring, and at the same time weighing, and simultaneously brandishing a sword?” unless, of course, they are all raving mad. Flatly, the thing can’t be done. . . .

MANTEGNA: Justice “the Carmelite said” is the will of God. . . .

MOMUS: . . . “What about human Justice?”

MANTEGNA: He spoke about human Justice too, and no less to the point. Man, within the limits of his frail and fallible nature, is not unaware of Justice, and is subject to her laws; nor can he, by any deviation however slight, escape them. . . . He did say that “Justice” was imprinted “on the human mind”, from the outset so fixed in the core of our nature that Justice and Life might be reckoned sisters. For, he said, everyone is born with the instinct of self-protection, and with the desire to avoid pain. But why should someone impose upon another what he dislikes himself; and why should he grudge to others what he himself desires?. . .

MOMUS: “Did” your theologian” ever mention any decree of this divine Justice that is so perfect and entire, whereby all men alike should be put on their guard . . . ?

MANTEGNA: Death, Momus, for everyone the last necessity, to be avoided by none. Sooner or later we die, Momus; Death levels us all, the lowest and the highest: so sacred and stern is Justice.”

Thus, the pamphlet (echoing Platonic divisions) decries the failure of earthly Justice, inevitably corrupted by human wants and desires. But God’s Justice, represented by Death, is the great equalizer; with that “sacred” Justice comes a rigor that earthly Justice cannot maintain.

This dialogue has puzzled those who have studied it because neither its audience nor its purpose is self-evident. It could have reflected real events, both because Mantegna had, in fact, been commissioned to paint frescoes for the Vatican and because he had a reputation for seeking “advice from his humanist friends.” Fiera may also have styled the dialogue as a promotional piece for his hometown of Mantua, from whence Mantegna hailed, as did the theologian invoked as giving sage advice in the exchange.” Fiera could have meant the dialogue as satire, replete with (now indecipherable) inside jokes. Ernst Gombrich, the twentieth-century art historian who brought the dialogue into contemporary focus, read it as such: “slight and half-humorous” and “intended to echo the hunt for Justice in Plato’s “*epublic*” rather than to tell us about the relation of artists to humanists . . . ” One of its translators was harsher, finding it “no prose masterpiece” but rather a “curiosity of literature” that offered “cryptic” references, “indifferent” Latin, and a “mass of mythology, quasi-philosophy and Thomist theology.”

Creating the Canonical Elements

Whatever its literary merits, the dialogue’s interest for us is twofold. First, it is a forerunner of the contemporary discussions, exemplified by the felt need to explain the appearance of clear-sighted Justices at the Old Bailey in London and in Aspen, Colorado, and bespeaking investments in what Justice “should” look like. We pick up this theme in Chapter 8 when we examine a series of twentieth-century controversies sparked by artists’ renditions of Justice that” whether lacking a blindfold or with dark skin” violated conventions.

Second, Fiera’s dialogue serves as a reminder that the reduction of Justice to a set of relatively stable markers was not inevitable five hundred years ago. One can plot a trajectory from Fiera’s wide-ranging ruminations of the early 1500s to the tidy didacticism of Ripa, writing at the end of that century and proposing that objects and animals be attached as attributes of his seven Justices as if the connections appropriately distinguished the various incarnations. Ripa’s positivism provided a step along the way to a codification, but his seven Justices (again Platonic with one divine and the rest earthly) did not predict a single canonical version. By giving us a window (as Momus commended) into the world before Justice attributes had settled into a universally recognizable formula, Fiera and Ripa illuminate the puzzles presented by the subsequent conventions that came to surround Justice iconography.

Why did a female holding scales and sword survive as a recognizable icon over the course of the centuries skimmed here? During that time, intense conflicts erupted over the control of religious orthodoxy, new political theories developed about the sources of legitimacy for ruling powers, and radical ideas about the acquisition of knowledge proliferated. Yet Justice iconography gained and maintained an identifiable core, transcending (literally and

metaphorically) the new perspective of the Renaissance, the iconophobic ideas of the Reformation,[illegible] periods of absolutism, the invention of modern democracy, and the development of probability, psychological, and cognitive theories. Given the many competing claims of righteous governance and sources of knowledge, depictions of Justice might well have proliferated and become diffuse, akin to the instability in Christian iconography of the Devil, around whom swirled a host of different descriptions and no one particular materialization.[illegible]

But pictorial perplexity neither served the political need to legitimate state power nor captured resilient aspects of adjudicatory practices that survive across social organizations. Within a century after Ripa, his seven Justices (sometimes crowned, wearing various necklaces, holding different objects, and surrounded by a range of animals) had been distilled into one stock figure identified by scales and sword. And Ripa's mention of a blindfold as a possible marker of impartiality eventually came to be an expected accoutrement. At the pictorial level at least, the nuances among kinds of Justice, as well as the point that Earthly Justice failed to achieve Divine Wisdom, had been obliterated.[illegible]

The singularity of depiction has been sustained not only by rulers' power but also by the stability of certain ethics adhering to the judicial role despite its place within diverse political systems. Although the concepts of judicial independence and accountability are modern,[illegible] other expectations of judges developed early and have remained constant across time and place, shaping a judicial culture with aspects that were and are universal. The legitimacy of the exercise of law's violence (the sword) has long rested on even-handed treatment of disputants (the scales) and on judgments predicated on information about a given conflict rather than corrupted by bribes and status relationships. With limited roles for women of any color in political orders, a female form rendered in classical style could be deployed to embody this abstract posture. Given a polity's dependence on maintaining order through actual practices of judgment that produced socially tolerable decisions, the Virtue Justice holding scales and sword came to mark the delivery of a particular governmental service[illegible] adjudication.[illegible]

It is a part of our thesis that these [illegible]proto-democratic[illegible] elements of pre-democratic adjudication contributed to the development of democratic practices. Popular demands increasingly aspired to fair treatment and constrained the power of government more generally. Moreover, the advent of democracy added to the expectations of judges by developing aspirations for judges to be independent of the powers that appointed them, yet accountable to the public by means of transparent processes that came to entail providing reasons for the decisions rendered. Yet even under systems obliging fair treatment, problems of judgment remain acute.

Sight, Knowledge, and Impartiality

> Suppose a Man born blind, and now adult, and taught by his touch to distinguish between a Cube, and a Sphere of the same metal, . . . be made to see.
>
> John Locke, [illegible]

> It is possible that the law, which is clear-sighted in one sense, and blind in another, might, in some cases, be too severe.
>
> Montesquieu, [illegible]

> Justice is blindfolded too, to avoid being dazzled by imposters.
>
> Goethe, [illegible]

> But in view of the Constitution, in the eye of the law, there is in this country no superior, dominant, ruling class of citizens. There is no caste here. Our Constitution is color-blind.
>
> Justice John Marshall Harlan, [illegible]

> That Justice is a blind goddess
> Is a thing to which we black are wise.
> Her bandage hides two festering sores
> That once perhaps were eyes.
>
> Langston Hughes, [illegible]/[illegible]

> The principles of justice are chosen behind a veil of ignorance.
>
> John Rawls, [illegible]

Whether pre-democratic or post-democratic, the task of judging entails enormous difficulties in gaining sufficient knowledge about past events, sorting and weighing information and, if legally cognizable injuries have occurred, finding proportionate, effective, and wise responses. As suggested by this subsection's epigrams that span three hundred years, acknowledgment of these challenges comes through debates over what Justice ought to [illegible]see[illegible] Goethe aspired to a blindfolded Justice so that she would not be [illegible]dazzled by imposters[illegible] while Justice John Marshall Harlan relied on the metaphor of a [illegible]color-blind[illegible] Constitution. The political philosopher John Rawls called for self-imposition of a [illegible]veil of ignorance[illegible] but Langston Hughes derided the failure of Justice to see the injustice about her.

Hughes's disdain for blindness had deep historical roots. As we traced in Chapter [illegible], to be shrouded in darkness was a burden in Medieval Europe. The blind were to be pitied, and a purposeful imposition of a blindfold signified that a person was either ignorant or condemned to punishment. In contrast, light was equated with truth; judgments were to be [illegible]clear . . . as the morning light.[illegible] In times when people believed in an all-knowing God as the source of judgments and in the existence of a truth both universal and absolute, the image of an all-seeing Justice mirrored such a divine being. One had little need to mark the problem of sorting

good from bad information because judges doing God's Justice on earth were to know all that they could through whatever means available.

These precepts were reflected in various depictions of Justice. Fiera's *n the Paintin of Justice* recommended a Justice covered with eyes (as well as ears) to see and hear everything. Of the seven Justices whom Ripa described in , only one was blindfolded. The rest (including one labeled Divine Justice) were clear-sighted, with one especially praised for her piercing gaze. In a parallel fashion, Albrecht Dürer's *Sol Justitiae* of made the large eyes of his Judge/Christ dominant. The halo formed through the rays of the sun around his head underscored his wisdom. Even when a judge appeared blind, as he did in a s Alciatus emblem (fig. /) that analogized the Prince's Council to the Judges of Thebes and showed the Prince/Judge with vision obscured, all the other council members on whom that princely judge relied could see.

But as earthly justice came to the fore and the instances of its application proliferated in the growing urban centers, so did a preoccupation with the quality of knowledge and the caliber of those who made judgments. Eyes could play tricks and, as science had begun to demonstrate, new optical instruments could enhance sight. The camera obscura gained currency in the sixteenth century, followed around by the invention of the telescope and the microscope and by interest in the idea of probability. Moreover, in addition to being inadvertently misled, judges could be looking for bribes. Ripa put a blindfold on one Justice so she can not see anything that might be used by judges in a way that is against reason. Descartes wrote of the desirability of escaping the confusion of the senses. Lutheran theology could also be cited as supporting the need to affix a blindfold to Justice, for truth was to come from inner light.

Of course, humanism and the movement toward an Enlightenment sensibility was not the first occasion when people worried about either the correctness of a legal rule or the quality of information on which decisions rested. Ancient biblical sources specify evidentiary standards for oral testimony and physical observations, with prohibitions such as the rule in *Deuteronom* that a single witness may not give evidence against a man in the matter of any crime or sin which he commits: a charge must be established on the evidence of two or of three witnesses. But scholars of that period argue that none of the biblical law codes . . . envisage judicial error; the focus was on the possibility of falsified evidence by lying witnesses.

Epistemological doubt about the import of facts, the uncertainty of recollection, the imperfect interpretation of law, the flaws of decisionmakers contributed to anxiety about judicial failures. As theorists from various disciplines became quizzical about the nature of knowledge, authority, God, and truth, the valence of open eyes to denote unimpeded receipt of knowledge shifted. During the sixteenth century, the blindfold came to be reconceived, on occasion, as a useful addition.

By the eighteenth century, the blindfold on Justice had shed its connections to the blindness of Synogoga failing to see the light of Christianity, to jesters made buffoons because they could not see, and to the condemned blindfolded before execution. Instead, when placed on Justice, the blindfold was turned into a symbol of law's commitment to rationality and even-handedness. The depiction of a Justice whose vision was obscured came to represent something sought after a needed neutrality, inner wisdom, a lack of distraction, or incorruptibility. The absence of a blindfold, in turn, came to be seen as an omission in need of explanation.

Not yet mentioned on the list of justifications for the blindfold is what today we call separation of powers Once, the roles of judge and ruler were seen to be deeply and appropriately intertwined; Alciatus's sixteenth-century emblem (fig. /) is exemplary. The sightless presiding jurist (called the Prince, King, or Judge, depending on the translation) was to render judgment according to the advice of his council, a group of men all shown sighted. Judges were the servants of ruling powers, and the stories of Zaleucus, Brutus, and Cambyses (figs. /, /, /, /) taught judicial *su servience* to the law of the state.

The development of the idea that judges were deployed by states but sat somehow independent of state power was an ideological shift in political theory, often credited to Montesquieu's proposition that there is no liberty, if the judicial power be not separated from the legislative and executive. A yet more radical notion is that judges have the power to sit in judgment of the state, their own employer. A few famous folktales of jurisdiction, as Robert Cover called them, can be found in biblical and common law narratives in which brave judges stood their ground against threats of tyrannical kings. Those judges insisted on their own authority to speak truth to power. But until the Enlightenment, those extraordinary confrontations did not represent a required facet of the judicial role, which was not then insistently positioned to be at a critical distance from the state. Indeed, the term state was not in normal usage until around , when it referred to the powers within the exclusive purview of a small set of ruling elites. Over time and through many struggles among cities, local aristocracies, and imperial and religious authorities, the power of popular voices grew, as did ideas that judges ought not to be totally dependent on the authority of ruling powers. Aspirations for glory and greatness were leavened by quests for civil order in which some degree of individual liberty and popular opinion had value and in which kings were not the only incarnations of sovereign interests. Conceptions of civil liberty came to entail limitations on the state, including governments ruled by monarchs.

In this march to modernity (to borrow Theodore Rabb's book title), sovereignty shifted. Illustrative is the eighteenth-

century preamble of the American Constitution opening with the phrase ⍰We the People of the United States⍰ That document also specified an independent sphere for judges. Building on the English Act of Settlement of ⍰⍰⍰⍰ and on state constitutions, the United States Constitution of ⍰⍰⍰⍰ required that judges, once appointed, were to keep their jobs ⍰during good Behaviour⍰ and were to receive salaries that could not be diminished while they served.⍰⍰The provisions sought to protect judges from over-reaching by executive and legislative authorities. In the wake of these new understandings of government, the blindfold gained a different import, marking not only a judge's neutrality between parties but also his untethered stance, standing apart from the government that employed him.⍰⍰This metaphoric distance derived from deliberate restrictions on sight continues to be invoked, as illustrated by a ⍰⍰⍰⍰ volume entitled *The Blind⍰fold of Lad⍰ Justice⍰Judicial ⍰ndependence and ⍰mpartialit⍰ in Li⍰ht of the ⍰equirements of ⍰rticle ⍰⍰C⍰ ⍰ ⍰⍰uropean Char⍰ter of ⍰ uman ⍰ights⍰⍰⍰*

But not all unequivocally celebrate obscured vision, as can be gleaned from a brief overview of debates about sight's relationship to knowledge and of knowledge's relationship to justice and democracy. As we detail, both the iconography of justice and legal doctrine reflect these debates. The instability around Justice's eyes (sometimes shown clear-sighted, sometimes closed, and sometimes draped by bandages or blindfolds) has its counterpart in the difficulties of formulating fixed rules about which facets of human experience law ought to take into account when judges render decisions that reorganize other people's lives.

⍰*Suppose a Man ⍰orn ⍰lind ⍰⍰⍰⍰e made to see*⍰⍰ *Locke, Diderot, and Mol⍰neu⍰⍰ Pro⍰lem*

The centrality of sight to theories of knowledge is captured by John Locke's query about what a man, ⍰born blind⍰ and then able to see, would know. That puzzle has come to be called the ⍰Molyneux problem⍰ because Locke's friend William Molyneux ⍰put to him⍰ that issue in ⍰⍰⍰⍰.⍰⍰ The specific example was whether a blind person who had often held in his hands a metal cube and a metal sphere would, if vision were restored, be able upon first sight to distinguish between the two objects.

Writing at the end of the seventeenth century, Locke's puzzlement reflected an epistemology that classified knowledge in relationship to its source and attended (following in ⍰the footsteps of Aristotle⍰⍰) to the number of senses (e.g., touch, sight, and smell) that could bring ideas to mind. Locke built on discussions from biblical traditions, Aristotle, and the Medievalist Ockham in assuming that vision had a primary place in the hierarchy of senses⍰⍰from which intuition, cognition, wisdom, and judgment all derived.⍰⍰ Arguing that understanding came from mixing sensory perceptions and analytic interpretation, Locke responded to Molyneux's problem by positing that a person without the experience of seeing the cube and the sphere could not, at first sight, make the judgment required to distinguish and name the two objects.⍰⍰

Molyneux's problem was not only a heuristic device. Physicians of the eighteenth century were beginning to devise medical cures for the form of blindness caused by cataracts.⍰⍰Blindness, once a state of irredeemable ⍰otherness,⍰⍰⍰ became a ⍰subject of intense cultural interest⍰⍰⍰ in science, philosophy, and the arts. In ⍰⍰⍰⍰ Diderot published his *Lettre sur les aveu⍰les ⍰ ⍰usa⍰e de ceu⍰ ⍰ui voient* (⍰*n ⍰ssa⍰ on Blindness in a Letter to a Person of Distinction*).⍰⍰ He pursued and arguably deconstructed (to borrow a term from a later age) Molyneux's problem and Locke's response.

Positing that a blind person was profoundly different from a person with sight, Diderot shared the views of Locke and Molyneux that ⍰the blind⍰ were members of a discrete category.⍰⍰But Diderot's analysis rebutted the idea that ⍰the blind⍰ lacked knowledge from experience; he argued instead that those who were blind, like those who see, had understandings informed by their own ⍰bon sens⍰ (good sense or, as he noted, lack thereof).⍰⍰ Blindness did not result in a mind that was a tabula rasa,⍰⍰although blindness could inhibit the ability to provide names (⍰denomination⍰⍰⍰) for various objects. Moreover, Diderot reminded his readers that the blind were comprised of a diverse set of individuals who ought not be used as ⍰univocal symbols . . . for any single position.⍰⍰⍰ The more general proposition (and one important for thinking about juridical challenges to render judgments both fair and understood to be so) was that no ⍰single discursive mode of understanding or communication ⍰was⍰common to all individuals.⍰⍰⍰

In another essay, *Promenade d⍰un sceptiq⍰ue* (⍰ *Skeptic⍰ Promenade*), Diderot turned from the state of blindness to the agency entailed in blindfolding and invoked the Christian imagery that had put a blindfold on Synagoga as the embodiment of the Old Testament (fig. ⍰/⍰⍰) against his religious compatriots. Diderot argued that Christians were the new Jews, ⍰since the Christians themselves wear a blindfold signifying their refusal of the evidence of reason and the senses.⍰⍰⍰ That view (so to speak), coupled with much else in the *Letter on the Blind,* did not endear Diderot to the authorities, who jailed him as a result of the publication.⍰⍰

Now, more than ⍰⍰⍰ years later, Locke, Molyneux, and Diderot serve as touchstones for another generation of scholars who continue to puzzle about the relationship of sight to conceptualization.⍰⍰Contemporary work refers to sensory perception as either ⍰amodal⍰⍰ relying on audible, visual, or tactile sensations singularly⍰ or ⍰inter-modal,⍰ in which sensory information is ⍰transferable from touch to vision.⍰⍰⍰ How these senses interact to form knowledge and judgment, and in what order these processes occur remain contested by scientists focused on the workings of the brain (⍰still heirs of the ⍰⍰th century⍰⍰⍰); by psychologists and behaviorists attentive to framing, heuristics, schema, and implicit biases;⍰⍰and by political and legal the-

orists engaged in the consequences that ought to flow from what we claim to know.□□References to blindness (willful or by default) and sight continue to lace discussions about how democracies ought to allocate goods and how courts ought to render legitimate judgments.

□*awlsian □eilin*□

In the late twentieth century, John Rawls turned to the relationship between limited knowledge and judgment in his book □ *Theor*□ *of Justice*□That volume, published in □□□□, aimed to generate a methodology for deciding the basic premises of a just social order. Rawls argued that principles of justice had to be developed □behind a veil of ignorance□ so as to ensure that no one would be □advantaged or disadvantaged in the choice of principles by the outcome of natural chance or the contingency of social circumstances.□□□

Rawls explained that the veil put one in an □original position□ by excluding □knowledge of those contingencies which sets men at odds and allows them to be guided by their prejudices.□□□ Metaphorically, the veil precludes knowledge of one's own class, social status, abilities, intelligence, life plan, or generational situation, and of the surrounding social, economic, or political order.□□ Yet, Rawls explained, reasoning from such an □original position□ was not transcendent but tied to human life, □situated in the world□ with others facing the □natural restrictions□ of □moderate scarcity and competing claims.□□□From that leveling and equality, Rawls argued, emerged the possibility for □a unanimous choice of a particular conception of justice,□□□achieved by reasoning in stages about principles of justice.

Relying on the language of contracts whose terms were specified, Rawls posited that, if principles of justice were bargained for and then enforced, they would be both more stable and fair.□□ Rawls further explained that agreements reached about justice should be accompanied by □publicity□ (a term also central to Jeremy Bentham, as discussed in Chapter □□), by which Rawls meant that □citizens have a knowledge of the principles that others follow.□□□According to Rawls, courts were also required to perform in public. Adjudication had to be □fair and open□□□ enabling the public to see that the judges were □independent and impartial.□

Rawls's use of the □veil of ignorance□ serves both as a measure of the strength of visual metaphors for modern readers and as an example of how a stance of publicly displayed impartiality (associated over centuries with judges) has become a desired quality for governance more generally. Rawls's veil intersects with Justice's blindfold in that both are volitional efforts to impose an artificial limit on knowledge so as to enable better decisions, whether retrospective or prospective. Rawls sought to block out information that would result in self-serving judgments on justice, and the blindfold has a parallel aim, to prevent giving weight to what might be true (such as a litigant's status) but ought not affect outcomes. Both Rawls's veil and Justice's blindfold depend on the assumption that the wearer can, in fact, see but is committed to bounded knowledge. Further, some of the facets of Rawls's method□ even-handedness among conflicting interests, public displays of outcomes, and enforcement□ reiterate practices that inhered in predemocratic adjudication.

□*m*□*i*□*uit*□ *and Self*□□ *elp*□*Joshua* □*e*□*nolds*□ Justice *in* □□*ford and Diana Moore*□ Justice *in New* □ *ampshire*

Artists have sought to acknowledge the complex relationship between knowledge and judgment by shaping what could be described as a visual dialogue between sight and blindness.□□One such effort is the *Justice* (fig. □□, color plate □□) that Joshua Reynolds painted in □□□□ as part of a series of Virtues (along with a Nativity scene) commissioned for the anteroom of the New College Chapel at Oxford University.□□ Rather than supplying customary sketches (□cartoons□), Reynolds executed oil paintings from which Thomas Jervais completed the stained-glass window versions in □□□□.□□

There Justice joins her Cardinal siblings (Fortitude, Prudence, and Temperance) and the three Theological Virtues (Faith, Hope, and Charity) in a series known as the *Seven* □ *races* that occupies the lower compartments in the room's great west window.□□Ripa is cited as the source for the iconography of the Virtues□□ who are classically garbed. As Reynolds explained in a □□□□ letter to a fellow of New College, they are placed beneath the Nativity, which filled the window's upper chambers, so as to make a □proper rustic base or foundation for the support of the Christian Religion.□□□

Recognizable as Justice, this figure is not entirely conventional. Her eyes are in a shadow cast either by her arm or by her balance, which she holds up, perhaps to shade her eyes.□□ Reynolds used a steelyard rather than the commonly shown two-panned scales, and some perceived Justice's balance as slightly askew. Negative reviews followed, that the image was □□repugnant to the ancients' idea of justice' □ and painted □□in imitation no doubt of the wife of a □market□ butcher weighing out a leg of mutton to his dainty customer.' □□□

As for Justice's shading her own eyes, the gesture could be protective□ as if to maintain balance, Justice needed to insulate herself from the glare of the sun. One could also read her raised arm and balance as authoritative, indicating the power to decide what light (information or knowledge) ought to be brought before her. Or Justice's stance could be seen as putting her in a quizzical posture, requiring her to peer out to decipher what comes before her eyes.□□With any of these interpretations, this Justice constitutes a departure, and she was one of □several unconventional female personifications□ that Reynolds painted, which garnered some criticism when first displayed, perhaps because viewers saw the transformation of □formulaic

Figure [illegible] *Justice,* Sir Joshua Reynolds, [illegible], study for the west window, New College Chapel, Oxford University.

allegories into powerful embodiments of feminine majesty, resolution, and intellect.[illegible]

Artistic invention and some local disquietude can also be found in a [illegible] steel sculpture, *Lad[illegible] Justice* (fig. [illegible]), by Diana Moore. It stands in the center of the renovated Warren B. Rudman United States Courthouse in Concord, New Hampshire (fig. [illegible]),[illegible]a building designed, in the words of architect Jean Carlhian, with proportions that indicate [illegible]a use that is serious.[illegible] The athletic and muscular female form looms large in the entryway, standing eight feet tall on a ten-foot pedestal of granite. Greeting visitors upon their entry, the statue is visible from several angles and floors of the four-story courthouse, which was renovated in [illegible].[illegible]

The United States General Services Administration (GSA), the entity in charge of federal building, described the [illegible]highly original interpretation[illegible] as focused on the [illegible]action of blindfolding as an emblem of clear and impartial judgment.[illegible] While referencing ancient Egyptian, Greek, and Roman sculpture as well as Asian religious art,[illegible] Moore's *Justice*[illegible] like that of Joshua Reynolds[illegible] breaks with some of the conventions, for she holds neither sword nor scale.[illegible] Her hands are otherwise occupied in tying the diaphanous blindfold that covers her closed eyes, visible through the thin covering (figs. [illegible] and [illegible], color plate [illegible]).[illegible] As detailed in Chapter [illegible], some Justices dating from the northern European Renaissance also wore diaphanous blindfolds, but none that we have located offer Justice the agency of placing the blindfold on herself.[illegible]

The GSA described this volitional blindfolding as a [illegible]self-imposed neutrality . . . repeated in her unadorned robe.[illegible] Moreover, because the blindfold is diaphanous, suggestive of a mask, and reveals that Justice has closed her own eyes, the blindfold [illegible]is not an imposed hindrance, through which she struggles to see. Rather, it is a sign that she draws upon an inner source of wisdom, to allow for a fair and prudent administration of the law.[illegible] The government's brochure also detailed that [illegible]the understated shape of this dress is strikingly modern [illegible]but[illegible]its finely ribbed cloth also mimics the fluted columns of classical architecture[illegible] ancient symbols of strength and stability befitting a court of law[illegible] According to the GSA, Moore wanted the garment to be read as a constraint, representing [illegible]our civilized and rational sensibilities, which are imposed over our primordial and intuitive temperaments, symbolized by the body. Moore's *Justice* thus becomes a metaphor of the struggle for equilibrium, undertaken by both individuals and society as a whole,[illegible]offering hope for self-abrogation. As a comment on another of Moore's sculptures described, she has sought to reiterate the [illegible]simplicity of form, and a sense of stillness and self-containment evident in many ancient works.[illegible]

Yet the development of the *Justice* for Concord entailed struggle. As in many of the government commissions discussed in Chapter [illegible], artists' conceptions sometimes unnerve those involved in approving the imagery. Moore's initial plan had been to provide a more specific rendition of the

female form. One newspaper reported that Moore had suggested that her Justice wear [illegible]nothing at all,[illegible] and another quoted the building's architect, Jean Paul Carlhian, as saying that [illegible]the judges fell over backwards so in the next step she had to be clothed.[illegible] The GSA, in turn, described the initial naked mockups as only a method to enable decisions on how the figure ought to be garbed.[illegible]

Thereafter, Moore proposed clothes that some viewers thought resembled a running outfit. The model of a bared midriff (echoing the Asian traditions Moore cited as an important influence) showed an athletic female form that some linked to a Greek *kore* figure and others to a contemporary marathon runner (which Moore herself is). The media described the judges as unhappy about being greeted at the courthouse by a woman whose navel could be seen. According to the architect, [illegible]there were three women on our committee who absolutely said the navel had to be shown because woman is the mother of civilization and Justice is a woman, but the judges couldn't swallow that so [illegible]Moore[illegible] put a dress on her.[illegible] The clerk of the district court offered the explanation that a public building ought [illegible]not to offend anyone.[illegible]

The result is a full, ribbed body gown, albeit with a top that looks informal, cloaking but not hiding the outlines of breasts. In crafting the face, Moore cited influences of the Khmer figures of Cambodia and of Etruscan, Greek, and Egyptian statues as the basis of her effort to blend many traditions to denote both diversity and universality.[illegible] The closely cropped hair of the Concord *Justice* could also lend an air of androgyny were it not for the breasts with nipples, less visible than had been originally planned but still discernible through the drapery.

Whether Moore's and the GSA's metaphors of containment, strength, stability, and neutrality aptly captured the authority of federal trial courts was questioned by the editors of a legal magazine, *Legal Times*. Like the editors of the *Economist* (fig. /), they used the iconography of Justice as a way to launch their critique. An editorial argued that Moore's effort to revalorize the blindfold could not erase the negative connotations of the symbol; obscured vision, they opined, continued to undercut fairness. Their example was federal sentencing legislation in that aimed to limit judicial discretion. The newspaper saw those provisions as requiring judges to apply the law blindly rather than being able to weigh the mitigating details that can't be seen through the blindfold. Objecting to stripping federal judges of the discretion to shorten prison sentences, the editors argued that Diana Moore's *Justice* may be free to adjust her blindfold as she sees fit, but the federal judges who sit on the bench in that courthouse had their hands tied.

Constitutional Metaphors and Injustices

Color-Blind

Like journalists, theorists, and artists, judges also turn to metaphors of sight as they struggle with judgment. In , when protesting the Supreme Court's approval of segregated railway cars, Justice John Marshall Harlan spoke of the eye of the law as he insisted that the United States was a place without caste; the country had no superior, dominant, ruling class of citizens because the Constitution was color-blind.

At that time, colored had a specific referent dark skin. That point was made in in the name chosen by the National Association for the Advancement of Colored People (NAACP), committed to securing the protection for black Americans of the basic rights to life and liberty. In , twelve black lawyers (including the first black female attorney to practice in the State of Iowa) met in Des Moines, Iowa and formed the National Bar Association, an organization of practicing attorneys of the Negro race that sought to eradicate the second-class citizenship of the American of Color.

Only much later, as critical race theorists explored the social constructions solidifying the relevance and content of the meaning of race, did the idea develop that everyone has a color whether white, black, or part of the rainbow in between. Toward the end of the twentieth century, white students, white employees, and white contractors went to courts to advance what are called reverse discrimination claims, as they argued that they, too, had been subjected to unfair treatment based on the color of their skin.

In , when Justice Harlan aspired that the law's eye be blind, he knew that, were the law to see, it would (and did) discriminate against dark-skinned peoples. But in , on behalf of a majority of five, Chief Justice John Roberts adapted Justice Harlan's metaphor to invalidate an affirmative action plan that had taken into account the races and ethnicities of schoolchildren so that the lower schools in Seattle, Washington, and St. Louis, Missouri, would be somewhat diverse. Both the and the references to blindness are part of a long tradition in constitutional interpretation. The trope was used, for example, in a decision rejecting the idea that a state had sovereign immunity and therefore could not be sued by a citizen of another state. Justice James Wilson explained that courts had to evaluate the merits of claims rather than to focus on whether a state was one of the parties, because to the latter, justice is, as she is painted, blind.

But while various justices have valorized the law's blindness, other Supreme Court jurists have insisted that clear vision and inferentially the ability to take in all relevant information was the quality required. In , in the famous constitutional opinion of *Marbury v. Madison,* expounding on the authority of judges to review the constitutionality of congressional statutes, Chief Justice John Marshall explained the need for open eyes. Those then who controvert the principle that the constitution is to be considered, in court, as a paramount law, are reduced to the necessity of maintaining that courts must close their eyes on the constitution, and see only the law. More than two centuries later, in , Justice Wiley Rutledge wrote an impassioned dissent when the majority held that the constitutional right to counsel did not require states to provide lawyers to indigent defendants faced with prison terms. Rutledge protested that judges . . . owe something more than the negative duty to sit silent and blind while men go on their way to prison, for all that appears, for want of any hint of their rights.

As the iconography of Justice is transnational, so are the metaphors of blindness. Jurists outside the United States also use the image to express concern about ignoring important and relevant facts. Exemplary are opinions from two European courts, the European Court of Human Rights and the European Court of Justice (discussed and depicted in Chapter). In a decision, the European Court of Human Rights wrote that treating racially induced violence and brutality on an equal footing with cases that have no racist overtones would be to turn a blind eye to the specific nature of acts that are particularly destructive of fundamental rights. And, in the European Court of Justice, the Advocate General (whose published opinion serves as a preface to that of the court, which must be unanimous) also deployed the phrase blind eye to criticize those unwilling to take into account discriminatory patterns in the employment of women and men when elaborating the jurisprudence of equality.

As one traces the malleability of the trope, the context blind to what matters. That point was made in by Justice Felix Frankfurter of the United States Supreme Court

when he concurred in the decision that the Equal Protection Clause of the Fourteenth Amendment prohibited racial discrimination in the selection of grand jurors (who hold the power to vote a bill of indictment against criminal defendants). The court's decision found illegal the process for choosing grand jurors in Dallas County, Texas. Explaining that the large number of blacks eligible for service meant that their exclusion could have come about only intentionally, Frankfurter commented: "If one factor is uniform in a continuing series of events that are brought to pass through human intervention, the law would have to have the blindness of indifference rather than the blindness of impartiality not to attribute the uniform factor to man's purpose."

Impartial or Unjust? The "Festering Sores" behind the Blindfold in Langston Hughes's *Justice*

Justice Frankfurter's distinction (the blindness of indifference, the blindness of impartiality) assumes that the metaphor can, at times, capture an appropriate stance. He reasoned that whether blindness contributes to fairness depends on the context: the facts and claims of a particular case and the background assumptions or knowledge of a particular decisionmaker. Given the ability to construct narratives to explain how depictions of Justice either blindfolded or sighted can denote the work of filtering knowledge, one could be agnostic about whether Justice is shown with or without a blindfold.

In contrast, a keen sense of law's unfairness has propelled objections to the trope of blindness and to the imagery of the blindfold. Pointing to the role courts played in perpetuating discrimination, critics argued that placing a blindfold on Justice, as if law were committed to equal treatment of all, lends the state an undeserved legitimacy. An eloquent statement of this position came from Langston Hughes, author of the poem *Justice* quoted at the outset of this section. His *Justice,* first published in the *Amsterdam News* in [illegible], was later included as one of a series of poems and a play in verse in Hughes's [illegible] collection called *Scottsboro Limited.* The title is a reference to the convictions of nine black young men ("the Scottsboro Boys") who had been taken from a freight train, charged in Alabama courts, found guilty of raping two young white women, and in [illegible] sentenced to death.

Hughes visited the prisoners while they were on death row. He sparked and joined a chorus of protests, both national and international, about their treatment. In [illegible] Alabama released four of the nine; in [illegible] one of those still incarcerated escaped from prison. Captured in [illegible] in Michigan, that state's governor refused to return him to the South. A half-century later, Alabama's Governor George Wallace pardoned the last living defendant, who was then still in prison.

In [illegible], some [illegible] black judges met in Atlanta, Georgia. They were part of the National Bar Association that (as noted earlier) was founded in the [illegible]s for the advancement of black lawyers. The judges formed an "autonomous unit" their own Judicial Council, dedicated to the "eradication of racial and class bias from every aspect of the judicial and law enforcement processes." As the first Chair of the Judicial Council explained, they felt the need to create a distinct organization of judges who understood the degree to which "the quality of justice in America has always been and is now directly related to the color of one's skin as well as to the size of one's pocket book." Given that courts were, they believed, a significant source of that unfairness, they hoped that, as judges, they could also contribute to a remedy.

At their inaugural events, the Judicial Council embraced Langston Hughes's imagery. They chose as their pledge the statement "Let us remove the blindfold from the eyes of American justice." For an emblem, they selected a depiction of Justice taking her blindfold off her eyes (fig. [illegible]). As the Honorable George W. Crockett, addressing that first convention, explained: "Justice is supposed to be blind. It treats all individuals alike: rich or poor, black or white, male or

Figure [illegible] Logo of the Judicial Council of the National Bar Association, [illegible].

female. Well, it's time to remove the blindfold that gives the illusion of fair treatment. We want to expose to the full glare of reality the inequities superimposed on that great but unrealized objective. We want to see its errors, to identify its prejudices and to expose those who would pervert just laws with unjust penalties.

That position continues to have force as critics of the justice system document the ways in which race affects judgments and as they reiterate the objection to valorizing a Justice who is blind. The acronym DWB (driving while black) makes the point that law enforcement officers rely on race when assessing whether to stop a person. Further, social scientists have shown how the intersection of race, gender, and other dimensions of personal identity are important variables that affect various stages of the enforcement of the criminal law, from arrests and detention through sentencing. Asked whether a judge ought to know that one party to a dispute is the government and another a person whose skin is dark, some insist that disclosure is therefore essential, given that identity markers affect how evidence and arguments are credited.

Because no one is without perspective, blindness perpetuates unfairness by turning a blind eye to what everyone else sees: that 'there is no exit from race.' But, if sighted, other tensions arise; one can see that the 'scales are tipped' and the sword brings 'havoc.' In short, as women and men of all colors protest mistreatment by law and debate which distinctions ought to bear legal weight, some commentators object to efforts to make the law 'color-blind.' For them, Justice 'ought' to be clear-sighted.

Confrontation, Eyewitnesses, Prison Garb, Spectators' Badges, and Ostrich Imagery

Issues of exactly what should be made known haunt judges on a daily basis. The point of trials is to invite information to enable decisionmakers to draw important distinctions while blocking out forms of knowledge that either are distracting or could undermine impartiality. Hence, tensions abound as cases are adjudicated. Legal doctrines respond with a myriad of rules dealing with questions of what judges or jurors can hear and see, as well as what witnesses and disputants can be presumed to know.

The practices of trials themselves are rooted in visual and personal exchanges in which disputants, witnesses, decisionmakers, and the audience come together. Regulations of what happens when the group has assembled have varied across history, ranging from secret inquiries into evidence to public displays. By the eighteenth century, the United States Constitution turned traditions of public disclosure of witnesses into a right for criminal defendants 'to be confronted with the witnesses' against them. The courts have since been insistent that face-to-face opportunities are required.

Obligations that evidence be tested through personal exchanges have become part of both civil and common law practices, reflected in provisions of the European Convention of Human Rights. In addition, common law courts insist that sentencings take place in person; the convicted defendant has a 'right of allocution,' to speak directly to the judge. Confrontational opportunities are linked to concerns about how to weigh information provided by witnesses. For example, common law traditions are suspicious of 'hearsay evidence,' received from one person relating information from another who cannot be cross-examined in person. Indeed, much of the 'law of evidence' stems from concerns about the quality of knowledge proffered and the view that some information ought not be available because it can unduly influence judgment.

Examples of attempts to balance these tensions are numerous; we point to a few decisions to illustrate how the conflicting impulses to insist either on blindfolds or on clear-eyed Justices reflect legal dilemmas struggling to regulate the relationships of sight to knowledge. Take the obligation, also enshrined in the United States Constitution, that criminal defendants are entitled to be tried by jurors from the vicinage, the locality. Historically, the line between juror and witness was blurry. Local jurors were valued for what we would today call 'extrajudicial knowledge' of the context, including the people and the events in dispute. What they knew and saw outside of court was thought to contribute to deciding the merits in court. In the United States, the requirement of coming from the local geographical area remains, yet persons who actually have personal knowledge of the disputants or events are now disqualified as impermissibly tainted.

Juries are selected through a process known as the 'voir dire.' Questions are asked about the ability to be impartial, and judges are positioned to serve as a filter, authorized to prevent some materials from coming before jurors. One general evidentiary proviso in the law of the United States, for example, obliges judges to decide whether, even if information is relevant, its 'probative value' is substantially outweighed by a 'danger of unfair prejudice.' The underlying idea' that information can be both useful and biasing' is the same that animates ambivalence about the imagery of the blindfold.

Cognitive studies sharpen the point by showing how humans rely on 'scripts' and 'schema' to sort and process information rapidly. But what we know both informs and predisposes. As several experiments with eyewitness identifications have demonstrated and as the discussion of the Molyneux problem suggested, what we 'see' can be predicated on what we 'know.' Within the past several decades, those understandings have prompted new rules about testing the reliability of eyewitness identification, as well as about how to assess the demeanor of witnesses. Eyes that see, like eyes that are blind, can mislead.

One of the central predicates to the regulation of eyewitness identifications is that visual cues and context play a part. The sequencing of persons (a lineup or a set of individuals introduced seriatim) and their dress and posture affect who is identified as a culprit, as do the persons who put the questions to a witness. Awareness of the relevance of context has also shaped rules about what clothes litigants may wear in court. One case, decided in the ⍰⍰⍰⍰s by the Supreme Court of the United States, concluded that it was fundamentally unfair⍰ and therefore a violation of the Due Process Clause⍰ to try a person dressed in prison garb, for that clothing was suggestive of guilt rather than protective of the presumption of innocence.⍰⍰⍰

To recount these precepts of law is not to suggest that they are predicated only on new developments in the cognitive sciences or in the law of fairness. Indeed, some echo longstanding precepts, such as an injunction in the Old Testament, *Leviticus* ⍰⍰:⍰⍰: ⍰In righteousness shalt thou judge thy neighbor⍰ As explicated by the *Code of Maimonides,* a twelfth-century compilation of Jewish law, a judgment should be ⍰marked by perfect impartiality to both litigants . . . not to show courtesy to one, speaking softly to him, and frown upon the other, addressing him harshly. . . . If one of the parties to a suit is well clad and the other ill clad, the judge should say to the former, ⍰Either dress him like yourself before the trial is held or dress like him, then the trial will take place.' ⍰⍰⍰

Returning to the twenty-first century, new questions of implementation of the injunction to render ⍰righteous⍰ judgments come from technological developments. For example, in ⍰⍰⍰⍰ the United States Supreme Court considered but did not disturb a conviction returned after a jury was exposed to spectators who sat in court and wore badges displaying the picture of the dead victim.⍰⍰⍰The use of pictures of any kind has, in turn, generated debate. Once photography appeared to provide a marvelous solution to problems of knowledge, but whether a photograph is a uniquely helpful ⍰mirror with memory⍰ or a powerful tool of deception has generated dozens of opinions. Digital technologies intensify the questions of how to treat a photograph, and those problems are now reiterated in other forms of visual evidence, including ⍰-D reenactments.⍰⍰⍰

The criminal law doctrine of ⍰willful blindness,⍰ used to support a conviction,⍰⍰⍰is another illustration of the degree to which the imagery and problems of sight lace the law. Recall that, like the Giulio Romano *Justice* (fig. ⍰/⍰⍰) in the Vatican, Justices once were accompanied by ostriches, birds then said to represent many desirable qualities, including the ability to process food slowly, as Justice did knowledge.⍰⍰⍰But today, when charging jurors to consider whether a defendant deliberately avoided knowing something, judges sometimes give what is called an ⍰ostrich⍰ instruction: ⍰You may infer knowledge from a combination of suspicion and indifference to the truth. If you find that a person had a strong suspicion that things were not what they seemed or that someone had withheld some important facts, yet shut his eyes for fear that he would learn, you may conclude that he acted knowingly.⍰⍰⍰⍰ As one jurist distinguished the improper use of the ostrich instruction (⍰to enable convictions for mere negligence⍰) from its appropriate deployment, he relied on the popular image that ostriches were not ⍰careless birds⍰ but ⍰deliberately⍰ put their heads in the sand to avoid knowledge.⍰⍰⍰

The fascination with Justice's eyes can be explained by the ambiguity that resides within the relationships of knowledge to judgment and of judges to the states that deploy them. Today's answers to Molyneux's problem⍰ what would happen if a blind man could see⍰ are that (a) we still do not know the relationship of sight to knowledge and (b) even if we did, no ⍰we⍰ can agree on what information is requisite for, and what a hindrance to, wise and legitimate judgments.

6

Juridical Rights and Iconography

We turn from questions about what Justice ought to "see" and law ought to admit into evidence to another set of conflicts" about how Justice ought to "look." As democratic regimes came to power, governing bodies continued to insist on their own authority to select and direct artists to shape symbols claimed to signify their principles. During the twentieth century, however, as women and men of all colors came to be recognized as rightsholders, the decision about which female body was to be called Justice became more complex.

Unlike spectators at Renaissance rites of trial and punishment, modern observers began to exercise new forms of sovereignty by insisting on participatory rights in decisions about government displays. The elites of officialdom" who had previously displayed portraits of white men and statues of naked women" had to cede some power because the former imagery no longer sufficed. Not only were committees at local and national levels assigned roles in selection processes for courtroom iconography but segments of the public decided, through protests, to claim ownership of what was placed on the walls.

Five centuries after Fiera, other Momus-like critics (who could be understood either to be carping or questing for "spiritual and intellectual honesty") emerged to raise questions about artistic renditions of Justice. Yet, rather than asserting that depiction was impossible (echoing Momus's conclusion, "Flatly, the thing can't be done"), twentieth-century objectors argued that Justice was definitely representable, but that artists had failed to do so properly.

Public Art and Popular Dismay

Unpacking those conflicts" as the pictorial moved from abstraction to depictions of women whose faces mattered" is the first task of this chapter. Our focus is on the United States, where many such debates were occasioned when the government commissioned public art for new courthouses and post offices built around the country. Conflicts were sparked as observers saw that the bodies painted on the walls resembled real persons whose identities were coming to be respected. The fights over how Justice looked and whether to impose or strip off a blindfold intersected with social movements making claims for recognition on a justice system that had, de jure and de facto, mistreated many.

We detail controversies over displays of a Justice in Newark, New Jersey, said to look like a "Communist"; a "mulatto Justice" on a courthouse wall in Aiken, South Carolina; the offensively segregated murals in Jackson, Mississippi; the scenes of a lynching of an "Indian" in Boise, Idaho; and the depiction of Muhammad in midtown Manhattan and at the United States Supreme Court. Lessons unfolded (literally and figuratively) as governments tried to evade controversy through their power to cover some of the disturbing images with drapes" and to escape through retooling classicism or by turning to abstractions. These iconographical battles provide one means of expressing the disjuncture between the state's insistence on the legitimacy of its authority and the experiences of those subjected to it.

These controversies also attest to the role courts play in providing ceremonial environments that shape public narratives. But the ability of members of the public to move from the misery of silent witnessing to objection requires new understandings of self-sovereignty, group identification, and political agency or what the anthropological literature on dispute resolution calls "naming, blaming, and claiming"" identifying a wrong, understanding it to be caused by actions of another, and perceiving oneself as authorized to hold the wrongdoer to account."

Thus, the later part of the chapter is devoted to how social movements and legal innovations produced collective challenges to the fairness of the state's law. The results both widened the circle of persons seen as equal rightsholders and repositioned the judge once again, by seeking to respect judicial independence while imposing constraints on how

judges could treat litigants. Some interventions came through litigation campaigns, such as the efforts that produced the Supreme Court's ☒☒☒☒ decision of *Brown v☒Board of ☒ducation,*☒finding segregated schools unconstitutional. Other transformations are marked by legislation, such as a series of Civil Rights Acts mandating nondiscrimination in public accommodations, housing, education, and employment.☒New interpretations of federal court power and new procedural devices, such as rules permitting class actions, enabled enforcement of these legislative mandates.☒

Lawyers and judges themselves joined in identity-based organizations such as the National Bar Association and its Judicial Council, detailed in Chapter ☒, which shared Langston Hughes's sense of the unjust treatment of African-Americans (fig. ☒/☒☒). Parallel organizations focused on mistreatment based on gender, ethnicity, and sexual orientation. In some respects, these organizations were comprised of ☒insiders☒☒ accomplished and prominent attorneys and judges☒ but they also identified with ☒outsiders☒ because their members had learned by firsthand experience that law was not even-handed. From their professional perches, they pressed courts to commission special ☒task forces☒ to interrogate how women and men of all colors were treated inside courtrooms. Intersecting with concerns about improving the stature of lawyers and judges and about regulating professionals more generally, the results have been the development of ethical codes, statutory restrictions, and case law focused on judges.

By the twentieth century's end, judges were constrained by more than a blindfold, for they were subjected to judgment by a populace whose role had changed (to build on art historian Jonathan Crary's insights☒) from passive spectator to critical observer. Even those sitting on the highest courts have been challenged for failing to see their own partiality. Thus, the themes of Chapter ☒☒ the complexity of the relationships among knowledge, sight, and impartiality☒ continue to haunt the problem of judgment, and drapes and blindfolds have proven insufficient responses for those experiencing the injustices of law.

Batcolumns and Mariannes

Distress about public art erupts episodically, as critics complain that objects are ugly, expensive, inappropriate, or disorienting.☒ In the ☒☒☒☒s, a federally funded public art program was suspended after one of its commissions, Robert Motherwell's mural in the John F. Kennedy Federal Building in Boston, was interpreted as referencing the blood spilled at Kennedy's assassination.☒☒A few years thereafter, when the program was reinstated, critics objected to the fact that public funds were spent on Claes Oldenburg's twenty-ton, ninety-six-foot-tall steel and aluminum *Batcol☒umn,* erected in the plaza of the Social Security Administration building in Chicago.☒☒ In the ☒☒☒☒s, complaints about Richard Serra's *Tilted ☒rc,* a curved steel wall about ☒☒☒ feet long and ☒☒ feet high that obstructed the walkway through a plaza near New York's City Hall, resulted in its removal and demolition.☒☒

Justice is our focus here, but she is not the only female figure to have occasioned debates about ownership and identity. Parallel questions have been raised about depictions of France's icon of Liberty☒ Marianne. That female symbol was popularized by Eug☒ne Delacroix's rendition of a bare-breasted female warrior, painted in ☒☒☒☒ to symbolize that year's July Revolution. Over the subsequent century, his version had competition from more sedate and conservatively posed females who were replaced in the twentieth century by likenesses of French actresses and models.☒☒

The recognition of women's rights, intersecting with acknowledgment of racial subordination and colonialism, produced challenges to this emblem of the state. By ☒☒☒☒, in part responding to efforts by a movement focused on empowering underclass women (☒Ni Putes Ni Soumises☒☒ Neither Whores nor Doormats), the National Assembly of France placed huge photographs of fourteen different women ☒ ☒Mariannes of Today☒☒ on the front of its building, the Palais-Bourbon.☒☒Included were pictures of women whose families had emigrated from North Africa.☒☒ The press noted the irony of the display; women's faces decorated the front of the building, but those sitting inside☒ as members of the lower house of France's legislature☒ were ☒overwhelmingly male, white, and middle-aged.☒☒

The President of the Assembly explained that its purpose was ☒remaking the iconography☒ of the French Republic☒☒ to reflect the government's commitments to citizens ☒of foreign origin☒ and their loyalty to France. The photographs captured some of that diversity, yet the variously featured women were not portrayed with their diverse cultural accoutrements. No veiled heads were shown. Rather, all wore the Phrygian cap, the ancient Roman headgear given to slaves when freed and thus insistently supplied as a ☒universal☒ symbol of liberty.☒☒

Parallel concerns about designs for Justices portrayed on courthouse walls developed in the United States in conjunction with complaints about the unfairness of the government-sponsored justice system that the icon represented. As women gained juridical capacity (as litigants, witnesses, staff and, eventually, as jurors and judges), the appropriation of the female form became problematic. When a Justice bore little resemblance to the men entitled to press claims in courts, the statuary of Justice☒ naked or clothed☒ served as an abstract reference.☒☒ But when real women sought legal recognition as rightsbearers, the abstraction dissolved.

A woman presented as Justice had to look like someone. No longer only a disembodied goddess serving as a vessel to legitimate authority, she occasioned real debates about what kind of woman could be a stand-in for Justice. Fiera's questions☒ about how many eyes and ears she should have ☒ were replaced by conflicts about skin color, kind of hair,

and shape of features. The choices made had freight, for they marked one sort of woman as the embodiment of iconic Virtue and excluded others from that sphere.

Breaching the Conventions of Justice when Decorating the Public Sphere

As part of the New Deal response to the Depression in the United States in the ⍰⍰⍰⍰s, the federal government created public work projects to generate employment opportunities. One program, called the Works Project Administration (WPA), commissioned projects from artists. For a decade, under various names and with changing criteria, the government issued thousands of mandates for artists to craft works that were incorporated into various institutions (new federal buildings, state housing projects, local schools, hospitals, and a few detention centers) around the United States.⍰⍰ The program sparked the creation of some ⍰,⍰⍰⍰ murals, ⍰⍰,⍰⍰⍰ sculptures, more than ⍰⍰⍰,⍰⍰⍰ easel paintings, and ⍰⍰,⍰⍰⍰ prints produced by more than ⍰⍰,⍰⍰⍰ artists.⍰⍰ Justice-related paintings, murals, and sculptures thus made their way into new courts and post offices around the United States.⍰⍰

The federal project's ambitions rivaled those of the great Medieval and Renaissance patrons⍰ the Nine of Siena, the Popes of the Vatican, the Burgomasters of Amsterdam⍰ in using art for their own normative agendas. Federal support stemmed from the view that the arts went ⍰hand in hand with a strong economy⍰⍰ both of which were key to developing a ⍰distinctly American culture.⍰⍰⍰ The leaders of the Treasury's Section of Fine Arts wanted to fund art that was accessible, contemporary, and democratic, as they understood those terms. Hoping to promote a populist idiom celebrating America's history and future, they sought imagery that was local in character yet embodied national ideals.⍰⍰ Their preference was for ⍰literal representation of ⍰the American scene.' ⍰⍰⍰ Federal economic support aimed to inspire competitive individual entrepreneurship that, government officials believed, would demonstrate the utility of productive work.

What role artists' own political views and aesthetics played in obtaining commissions is debated. One of the program's founders, George Biddle, who was both a painter and an enthusiast of Mexican political murals, thought that American artists could contribute to and express ⍰in living monuments the social ideals⍰ of the New Deal.⍰⍰ Yet in response to traditions of free expression and the specter of the Soviet Union's control of the arts, many in the United States sought to distance themselves from government superintendence. The leaders of the federal grants programs sought instead to create what they deemed a nonpolitical and open process by which to award commissions.

Some commentators conclude that, despite fear of ⍰socialist⍰ influences and the deep ideological conflicts of the time, awards were made to ⍰artists of every political persuasion.⍰⍰⍰ Other historians disagree, arguing that ⍰competitive procedures for securing Section commissions let Treasury officials weed out Mexican partisans, abstractionists, academics and other extremists.⍰⍰⍰ As they recount, ⍰foreign subjects⍰ were disdained, nudity avoided, and inspirational scenes applauded⍰⍰ with the frequent embrace of ⍰patriotic and chauvinistic themes.⍰⍰⍰ Federal funds brought federal supervision for many artists who were not well known as well as for well-established artists.⍰⍰ The final versions often varied from the proposed designs as modifications were made in light of concerns expressed by officials.⍰⍰

Whatever the range of views tolerated at the program's inception, over time concerns grew about New Deal support of ⍰leftist⍰ artists. One newspaper headline is illustrative: ⍰WPA Murals under Fire as a Study in Red.⍰⍰⍰ Such attitudes, coupled with more general hostility to President Franklin Delano Roosevelt's programs, resulted in the imposition in ⍰⍰⍰⍰ of a requirement that those employed be citizens of the United States and sign affidavits swearing that they were not Communists.⍰⍰ Political attacks also reduced funding for some projects and eliminated others.⍰⍰ (As for aesthetics, critics have viewed much of the art to be of great historical interest but artistically ⍰bad,⍰⍰⍰ in part because the realism of WPA art was superseded by preferences for abstraction, which won the ⍰battle of styles.⍰⍰⍰) Courthouse art was at the center of some of these debates. We turn to installations, some of which were controversial at their inception and others that became a source of distress decades later, when new rightsholders looked at the walls and saw demeaning portrayals of persons they resembled.

Unblindfolded: A ⍰Communist⍰ Justice Raises a ⍰Newark Row⍰

In ⍰⍰⍰⍰, the United States Treasury Department offered ⍰⍰,⍰⍰⍰ for the winning design of a Justice statue to be placed in a new federal courthouse and post office in Newark, New Jersey.⍰⍰ Romuald Kraus, a sculptor described as having ⍰been on the relief rolls⍰ won the competition;⍰⍰ the statue that resulted from his fourteen-inch model can be seen in figure ⍰⍰ (color plate ⍰⍰).⍰⍰ As the *New ⍰ork Times* explained, Kraus's proposal trumped the sixty-some other entries by depending ⍰upon gesture and expression to convey his meaning, dispensing entirely with the conventional trappings of justice⍰ the sword, scales, blindfolding.⍰⍰⍰ Members of the Washington, D.C.–based committee that had selected Kraus praised his figure for alluding to the ⍰compassionate nature of justice and not just judicial decisions.⍰⍰⍰ A Washington official explained: ⍰We hope that an innocent man on trial for his life might look up to this figure for hope and courage and the assurance that Justice prevails.⍰⍰⍰ The plan was for a gilded bronze rendition to stand seven feet tall ⍰behind the judge's chair in Court Room No. ⍰.⍰⍰⍰

Figure [illegible] *Justice,* Romuald Kraus, [illegible] (photograph taken [illegible]), United States Federal Courthouse and Post Office, Newark, New Jersey.

Image reproduced courtesy of the court and James J. Waldron, Clerk of the United States Bankruptcy Court for the District of New Jersey and Director of the Historical Society for the United States District Court for the District of New Jersey. See color plate [illegible].

But the tiny model *Justice* was met with a barrage of criticism.[illegible] George O. Totten Jr., one of the building's architects and the spouse of an artist who had also submitted a design for the competition, objected that the commission looked like a [illegible]woman with biceps like a heavyweight prize fighter and a neck like a wrestler.[illegible] A resident federal district court judge, Guy L. Fake, in whose courtroom the figure was supposed to have been installed (and whose name might have been chosen by a novelist), pronounced the model [illegible]horrible' and asserted that it smacked [illegible]blatantly of Communism.' [illegible] He argued that the statue did not show the [illegible]spirit of Justice but that of ruthless confiscation.[illegible]

After the conflict emerged, the Newark Museum put the work of competing artists on view. A [illegible] news article provided pictures of the model by Kraus, under the heading [illegible]Communistic,[illegible] amplified by quotes from Judge Fake. The paper included photos of some of the other works. Isamu Noguchi had proposed a Justice with a book as a blindfold and a dagger in lieu of a sword, while Milton Horn (said to have been the local committee's choice) had proffered a large seated woman with scales and long robes. Another photo showed the submission of Mrs. Vicken von Post Totten (identified as the architect's wife) of an imposing standing figure of a Justice with a large sword strapped to and centered at her waist and her arms spread out, hands and head tilted upward.[illegible]

Kraus, [illegible]a rather shy man of early middle age, Austrian born,[illegible] was reportedly surprised by the turmoil and accusations. He was said to have responded, [illegible]I am a Catholic. To me justice has something of Christ. Christ would not have a sword.[illegible] A [illegible] account quoted his explanation that the figure [illegible]represents love of humanity, the great mother principle which has been the guiding force of all civilization. . . . To me justice is clear-eyed, not blind, and she is reaching

out, as I conceived her, in an earnest supplication for truth. She is not a threatening figure; that to me seemed certainly most un-American.[illegible] Commentators picked up the theme of mercy by describing the sculpture as stretching out her hands [illegible]as if she were receiving a blessing from above[illegible] [illegible]a far departure from the stern Roman goddess fitted with sword and scale. Kraus's concept of Justice ranked first the thankfulness he felt for the freedom this country offers.[illegible] A *New [illegible]ork Times* writer added that it was [illegible]hard to understand where any hint of communism comes in, unless it come[illegible]s[illegible] automatically with any and every departure from hide-bound custom.[illegible] And, while onlookers in the [illegible]s celebrated the statue's Christian roots, ancient Egyptian art could also have been a referent. As had some sculptors of Maat (fig. [illegible]/[illegible]), Kraus used the sculpture itself to form a balance. As he said: [illegible]The whole thing is a scales. Her arms[illegible] they weigh, they balance.[illegible]

In its final seven-foot-tall, almost [illegible]-pound form, the figure departed somewhat from the fourteen-inch maquette. The proposed *Justice* had been clothed and draped in something like a sarong and positioned contrapposto, with one leg clearly ahead of the other.[illegible] The cast version (seen in figure [illegible], alongside the artist) is more frontally columnar.[illegible] *Justice,* with eyes closed, is naked from the waist up and, like many other Kraus works, shows the influence of the artists Wilhelm Lehmbruck and Aristide Maillol.[illegible]

The placement in the Newark courthouse was initially short-lived. Judge Fake's objections that the statue was the embodiment of class warfare succeeded in relegating it to [illegible]a darkened room[illegible] in the courthouse. At the behest of an architect in the Treasury Department, Kraus's sculpture went on tour for an art show organized in [illegible].[illegible] When shown as part of group of modern art in [illegible] in San Francisco, Kraus's *Justice* won an award,[illegible] and the warm reviews prompted a request that it be installed in another new federal building in Covington, Kentucky.

In October of [illegible], Kraus's *Justice* landed back in Newark in the court's third-floor hallway, thereby freeing the protesting judge from her immediate presence.[illegible] (A Newark newspaper explained the statue's travels by dubbing it a [illegible]Cinderella among works of art which, . . . banished to obscurity[illegible] was [illegible]rescued from its humble corner and elevated to prominent pinnacles at two world's fairs.[illegible]) The Covington Post Office and Courthouse in Kentucky got its copy in [illegible],[illegible] and in [illegible], the Newark version was relocated to the center of the rotunda on the third floor, outside what had once been Judge Fake's courtroom.[illegible] *Justice* is lit to show off her contours and stands between and beneath two Art Deco–style medallions, with female figures labeled *Li[illegible]ht* and *Darkness* (figs. [illegible] and fig. [illegible]) designed by the architect's wife, who received about [illegible],[illegible] for her work.[illegible]

Five decades later, Newark finally also got its own monumental [illegible]blindfolded Justice[illegible] in the form of an eleven-foot, five-ton colossal gray head[illegible] *Justice*[illegible] by the sculptor Diana Moore. Unlike the artist's full-figure *Lad[illegible] Justice* (fig. [illegible]/[illegible]),

Figure [illegible] Romuald Kraus with full-sized bronze cast of *Justice,* circa [illegible].

which stands tall on a pedestal in the Rudman Courthouse in New Hampshire, the Newark head sits [illegible]flush with the granite slabs[illegible] on the plaza across the street at the front of the Martin Luther King Jr. Courthouse, which opened in [illegible].[illegible] At its base is a [illegible] inscription by Mark Strand, poet laureate of the United States in that year. It reads:

> When Justice does its public part
> It educates the human heart;
> The erring human heart in turn
> Must do its private part and learn.[illegible]

Hiding a [illegible]Mulatto Justice[illegible] in Aiken, South Carolina

The distress that greeted Kraus was paralleled by anger in Aiken, South Carolina, where another artist, Stefan Hirsch, painted the mural *Justice as Protector and [illegible]ven[illegible]er* (fig. [illegible], color plate [illegible]) for a federal courthouse and post

Figure [illegible] *Light,* Vicken von Post Totten, [illegible] (photograph taken [illegible]), United States Federal Courthouse and Post Office, Newark, New Jersey.

office.[illegible] In March of [illegible], Hirsch had been invited to submit drawings for a mural;[illegible] soon thereafter, he received the commission and was paid [illegible].

The town of Aiken had garnered national attention in the [illegible]s, when a mob killed black teenagers after their convictions had been overturned by the South Carolina Supreme Court.[illegible] A decade later, in the [illegible]s, some community members were not eager for a new federal building, perceived as a colonizing effort by an [illegible]alien bureaucracy.[illegible] Moreover, the artist who won the commission had no Southern roots. Rather, Hirsch, born in [illegible], had spent part of his youth in Germany and, upon his return to the United States, lived in the Northeast where he was a successful artist.[illegible]

Administrators at the Department of the Treasury also raised concerns about Hirsch's initial proposal. The Superintendent of the Section of Painting [illegible] Sculpture wrote Hirsch in [illegible] that the images of crime were too harsh; [illegible]even though the necessity of their presentation may be valid to your theme[illegible] wrongdoers need to be [illegible]portrayed with more subtlety. Please remember that the people sitting in the courtroom are compelled to look at the mural over a period of several hours, and any obvious treatment of crime and horror would be asking too much of the public.[illegible] In response, Hirsch made several changes, some of which he described as [illegible]radical[illegible] so as to make the mural less disquieting.

In September of [illegible], Hirsch helped to install the mural, measuring more than twelve by twelve feet, behind a judge's bench in the new federal building. Justice, labeled as such, is at the center of a triptych. She is presented as an imposing figure, open-eyed, hair drawn back in a bun, barefoot, and tanned. She wears a loose-fitting blue skirt and bright red shirt. She gestures upward with one arm, downward with the other. Some critics call the style cubist,[illegible] while others see social realism[illegible] and the influence of the Mexican muralists with whom Hirsch had studied.[illegible] Given the contrast between the bucolic imagery on Justice's right side under the label [illegible]Protector[illegible] and the aggressive vision on the left, under the heading of [illegible]Avenger[illegible] the mural calls to mind Siena and Lorenzetti's fourteenth-century [illegible]*lle*[illegible]*ories of* [illegible]*ood and Bad* [illegible]*overnment* (figs. [illegible]/[illegible] and [illegible]/[illegible], color plates [illegible] and [illegible]).

Interpretative materials from the [illegible]s came from the United States General Services Administration (GSA), the entity now in charge of federal government buildings. The GSA describes this Justice as raising a [illegible]nurturing right hand to those who live righteously[illegible] while her left hand [illegible]repels miscreants with a condemning gesture.[illegible] The scenes under the heading [illegible]Protector[illegible] include rolling hills, cows near a barn or house, children playing, a man smoking a pipe, a woman holding a baby, and a lamp and plow at the bottom of the frame. In contrast, under the label [illegible]Avenger[illegible] Hirsch portrayed what he had called [illegible]the two major kinds of crimes[illegible] those against persons and those against property; the scene includes [illegible]robbery, murder and arson.[illegible] A house burns, a man with a hat and coat holds open a door to a prison cell through which a man (garbed in prison stripes) appears to be either entering or leaving. Another man is crouching in the foreground, where a woman's body lies, and a shotgun below.[illegible]

As for the center figure, Hirsch explained that he created [illegible]a symbolic figure of [illegible]Justice' with gestures indicating the meting out of justice to the deserving and the undeserving[illegible] and that his [illegible]gigantic female figure[illegible] was [illegible]without any

FIGURE [illegible] *Justice as Protector and* [illegible]*venger,* Stefan Hirsch, [illegible], Charles E. Simons Jr. Federal Courthouse, Aiken, South Carolina.

of the customary or traditional appurtenances of such symbolic representations (scale, sword, book . . .) apparently stepping forth from an area of light into a dimmer world.[illegible] Further, Justice was a [illegible]healthy, young person striding out forward with a determined step, clad in a simple garment which is neither modish nor classical, which displays the sturdy shape and balance without flaunting it, she carries her head proudly and in her glance shows no partiality. . . . [illegible]The only allegory I permitted myself was to use the red, white and blue [illegible]of the United States flag[illegible]for her garments.[illegible]

That was not how others saw it. After the mural was installed, a local newspaper objected to the [illegible]barefooted mulatto woman wearing bright-hued clothing[illegible]while the sitting federal judge termed it a [illegible]monstrosity,[illegible] resulting in a [illegible]profanation of the otherwise perfection[illegible]of the courthouse.[illegible] The panel called [illegible]Avenger[illegible] garnered complaints that it glorified crime by showing a [illegible]shyster lawyer[illegible] (potentially a coded reference either to a lawyer who was Jewish or from the North, or both) wrongly freeing crooks.[illegible] (Hirsch protested that the scene displayed a [illegible]sheriff putting a convict into custody.[illegible]) Within the month, the judge had [illegible]ordered that the mural be hidden with a cloth until it could be removed.[illegible]

As the GSA subsequently described the events, federal officials attributed the criticisms to [illegible]ignorance[illegible] but offered a [illegible]compromise[illegible] that the artist would [illegible]lighten Justice's skin color and cover the mural while court was in session.[illegible] That suggestion appears to have come in part from the artist, who recorded his surprise and dismay at the controversy. Indeed, as Hirsch wrote to the Superintendent of the Section of Painting [illegible] Sculpture, he had been [illegible]leaning over backwards to understand[illegible] and respond to criticism, [illegible]precisely in order to avoid something like this incident. But I suppose we cannot figure out in advance *all* the perversities of *all* people at *all* times.[illegible]

In his statement for the press, Hirsch argued that his Justice was an abstraction, [illegible]far from any ideas of caricature or racial issues.[illegible] In correspondence, Hirsch credited the racialized description of his [illegible]majestic female[illegible] Justice to a reporter.[illegible] Hirsch challenged the government administrators to find [illegible]ten reputable citizens of Aiken, not under the influence of the judge[illegible]who would [illegible]feel that the figure's face really appears to have negroid traits. I should not only be willing but anxious to obliterate this [illegible]blemish,' because I had certainly intended nothing of the sort.[illegible]

The presiding judge insisted that he was not racist but offended by the avenging posture of the mural, imposed by a federal government that had failed to consult local community members or to respect states' rights. For a time, serious consideration was given to repainting. As the head of the Section of Painting & Sculpture wrote to Hirsch: "I must confess that the palette of the head of the figure of Justice, the dark shadow and the vivid red lips, made me see the criticism of the local individuals involved as it would be easy to come to the conclusion that the figure is mulatto. This is especially true if one approached the work with suspicion to begin with. In the interests of your mural and its ultimate acceptance by Aiken I am asking you . . . to see if you cannot change the flesh tones of the main figure so that no one could possibly interpret the figure as a thrust at the South." Reminding Hirsch that a "federal judge has complete authority in his court room," he told Hirsch that, as an interim measure, he had recommended a "good velvet curtain on a pole with drawstrings" so the image could be covered when the judge wanted and otherwise "readily available" to be seen.

The mural was not, however, repainted. By way of explanation, the GSA cited the concern that "the artist's return would inflame the controversy." Apparently the judge had also urged the artist not to return, as "it would be impossible to touch that painting without running into more uncalled for publicity." The "controversy" was indeed attracting attention from various quarters, including members of Congress, the Artists' Union of Baltimore (which had sent a letter to the judge demanding that he uncover the mural), and the National Association for the Advancement of Colored People (NAACP). Walter White of the NAACP argued, "If Judge Myers' sole objection to the mural is the fact that the central figure is that of a person who is not white, then a new low in judicial conduct and racial prejudice would seem to have been reached." The judge countered that he was concerned that the imagery would be disruptive, particularly when sentencing criminals. Although the judge, aided by South Carolina's governor, sought removal, the denouement was a tan velvet curtain covering the imagery.

These 1940s conflicts about depiction, which left images of "mulattos" in Aiken and "Communists" in Newark behind drapes or outside a courtroom, made plain that these figures could not pass, uncontested, into the deserving ranks of those who qualified to represent Justice. Nor, in that era, could real members of groups labeled "mulattos" or "Communists" gain much protection from the courts. Fifty years later, some legal precepts and many attitudes had been revised. In the 1990s, members of the Aiken community involved with local history took a different stance. They raised money to make the mural visible by relocating it to the Aiken County Judicial Center. Senator Strom Thurmond (who represented South Carolina in Congress from 1954 to 1964 and was once famous for his racist views) wrote on their behalf to obtain permission from the GSA for the move.

Conservators, however, deemed the mural too fragile to relocate, and it remains behind curtains. According to a local newspaper reporter, writing in 1994, the mural was not displayed during court sessions because the "flamboyant green background and the vibrant clothes on Lady Justice" made the "power of the gavel pale." Instead, the curtains are parted and the mural shown only "by request."

Life in Mississippi, Draped

Debates about status can also prompt reappraisal of images that were once tolerated. When first installed in Jackson, Mississippi in 1939 in a building now called the James O. Eastland United States Courthouse, *Pursuits of Life in Mississippi* (fig. 22) was not seen as problematic. But by 1954 it had been covered with drapes (shown in fig. 22, color plate 1954), added in the 1950s when protestors challenged the mural's version of life in Mississippi.

The artist, Simka Simkhovitch, was born in the Ukraine in 1894 and came to the United States in 1914, where he lived in the Northeast as he gained recognition for his painting. In 1938, despite the distress of the local selection committee, which wanted a Southern artist, Simkhovitch won the contract. Paid $2,000 for the depiction, Simkhovitch organized the twelve-and-a-half-foot mural around a door through which a judge enters the fourth-floor courtroom. The cut-out center helps to shape what has since been called a "segregated triptych."

If Stefan Hirsch's mural *Justice as Protector and "avenger"* offered one vision of reality by including crimes of violence, Simkhovitch provided another. His stated goal was to represent "typical people and life in Mississippi during his time." What others saw was race, gender, and segregation. On one side, a group of African-American men and women are shown in the fields as they pick and weigh cotton while a banjo player, the only dark face in full view, strums nearby. The one white person on that side could be an overseer supervising the harvesting. On the opposite side of the mural are several white males who appear to be construction workers, reading blueprints and building a house, a symbol of an expanding economy.

In the middle is an odd assortment of white individuals in front of a classical-columned building shaped to duplicate the "marble coping behind the judge's bench over which the mural hangs." The GSA's documentation explains that the two men, a "court representative and a minister," are addressing an older woman and a younger woman (who holds a child in her arms while another is nearby) to respond to the "social problems" of a family. An alternative understanding proffered by a scholar of the South is that while the occupation of this "suit-clad white man . . . is a mystery," his function is clear: he is "surrounded by waiting females," paying deference.

Beginning in the late [illegible]s, the federal courthouse in Jackson, Mississippi, was the site of important challenges to the racist system then in place. There Constance Baker Motley and Robert Carter, lawyers for the NAACP's Legal Defense Fund who worked with Thurgood Marshall, tried a case objecting to the state's refusal to pay black teachers, then working only in all-black schools, the same salary as white teachers in all-white schools. (Both Motley and Carter later became judges, appointed to sit on the federal bench in the Southern District of New York. Thurgood Marshall went on to become the first African-American to serve as the Solicitor General of the United States and as an Associate Justice on the Supreme Court.)

In the [illegible]s, federal courthouses did not have segregated seating, while some state courthouses did. As Motley described in her autobiography (titled [illegible]*ual Justice* [illegible] *under Law*), when she entered the Jackson courtroom with her co-counsel, the room was packed. Yet because the [illegible]black citizens did not know that there was no racial segregation in a federal courthouse[illegible] and found no balcony in which to sit, they stood along the walls.[illegible] Having learned the following day that they could sit where they wanted, blacks filled the courtroom seats. As Motley recounted, the trial judge then opened the doors to the courtroom so that [illegible]whites could parade by during the day . . . to see the [illegible]Negra' lawyers from New York, one of whom was a woman.[illegible]

Motley detailed how looking at the Simkhovitch mural was [illegible]not only emotionally agonizing but disconcerting in that it was contrary to Mississippi reality.[illegible] Unlike the mural's depiction of [illegible]the separation of the races[illegible] and the [illegible]inferior social status of blacks[illegible] Reconstruction in Mississippi had been [illegible]run by blacks, and blacks were part of the

state's middle class.[illegible] Yet in [illegible], no one commented [illegible]in open court[illegible] about the oppression represented on the walls, which served as a [illegible]stark reminder . . . [illegible]that[illegible] notwithstanding the no-segregation policy with respect to seating[illegible] the courthouse was very much a part of a racist system.[illegible] As Motley explained, she thought it would [illegible]take another century before the mural's depiction of Mississippi society would be erased.[illegible]

As she wrote later, her prediction proved wrong. By the [illegible]s, Jackson had become the [illegible]eye of the storm[illegible] serving as [illegible]a crossroads for those who upheld segregation and those who vowed to dismantle it.[illegible] In the early part of that decade, the town was the site of boycotts aimed at ending segregated public services; in June of [illegible] Medgar Evers, the head of the state's chapter of the NAACP, was killed as he returned from a meeting. As for the judiciary, one of the federal judges sitting in the Jackson Courthouse was infamous for making racist comments from the bench.[illegible] In the wake of those events, civil rights groups were vocal in their objections not only to their treatment by judges and other government officials but also to representations in federal buildings of blacks, including Simkhovitch's imagery. Motley noted that, from the vantage point of [illegible], the speed with which authority shifted was remarkable: [illegible]None of us could have foreseen that, within a short time, blacks would . . . gain enough political leverage to shame the federal courthouse crowd into making [illegible]a[illegible] change.[illegible]

The response[illegible] as in Aiken, South Carolina[illegible] was drapes. Covered in the [illegible]s, the mural was briefly on view in the

[illegible]s, but after renewed protests, the curtains were drawn again.[illegible]

An [illegible]Indian[illegible] Hung in Boise

Drapery covering disquieting courtroom imagery is not a phenomenon unique to the South. In [illegible] another WPA mural, [illegible]depicting an Indian being lynched[illegible] (fig. [illegible], color plate [illegible]), generated controversy when the Idaho State Legislature used what had been the Ada County Courthouse in Boise as its temporary residence.[illegible] Among the two dozen WPA murals is one showing an [illegible]Indian in buckskin breeches, on his knees with his hands bound behind his back . . . flanked by a man holding a rifle and another armed man holding the end of a noose dangling from a tree.[illegible]

In the [illegible]s the Chief Justice of the Idaho Supreme Court had ordered the mural covered; the flags of the state and of the United States were used as drapes. He explained that the imagery [illegible]would be offensive, and rightfully offensive, to some people.[illegible] In [illegible], when the Idaho Legislature was using the building, the question debated was whether the mural ought to be painted over, preserved as reminders of atrocities of the past, or displayed in new educational programs.[illegible] Exactly what lessons ought to have been drawn was also in question. As the chair of Idaho's Council on Indian Affairs remarked, the history of the state

Figure [illegible] Mural, attributed to Ivan Bartlett, circa [illegible] (photograph taken [illegible]), Old Ada County Courthouse, Ada, Idaho.

Copyright: Paul Hosefros for Lemley International. Photograph reproduced with the permission of photographer Paul Hosefros. See color plate [illegible].

was not fairly presented. In fact, the first man hung in Idaho was a white man who had been convicted of murdering an Indian. In the state legislative committee, reportedly guided by the views of local Indian tribes, decided that the murals were to remain on view, framed through official interpretive signs. One state official explained: They reflect our values at the time.

Thus, unlike in Aiken and Jackson, where the government literally rendered the problematic depictions invisible, officials in Idaho raised the possibility of conversation. Although the minutes of discussions within the Idaho legislature do not cite Michel Foucault, the outcome displaying murals of lynching opens up what he termed a fissure in law's authority, providing current opportunities to glimpse what the state once displayed a lynching scene, shown as if that activity were not despicable.

Returning to Newark, New Jersey, the display of Kraus's Justice occupies a middle ground between the responses in the South and the West. Artistry that might have been somewhat adventuresome in the s was tamed by public praise, rendering it closer to a classical reinterpretation. One can argue that putting that Justice in the hallway gives her a grander stand, but her s placement there mollified judicial objections to her appearance. Her relocation to the central rotunda in is a form of vindication for an object that was, by then, no longer seen as provocative.

Across the Atlantic Ocean, the use of draperies can also be found in the International Court of Justice at The Hague. There a portrait of Czar Nicholas II hangs in the entryway to the small chamber used by the Permanent Court of Arbitration, discussed in Chapter . In , the Czar was a moving force for the creation of both that court and its building, completed in and still called the Peace Palace. But when subsequent Russian governments sought to distance themselves from their past, drapes provided a measure of tact.

Muhammad in Midtown and at the United States Supreme Court

In , a group of heavy stone statues (ten famous lawgivers and six allegorical statues) were placed on the roof of a New York state courthouse that opened in in midtown Manhattan (figs. and). The building was notably expensive; the architect, James Brown Lord, was given the then unheard of sum of , a third of which he devoted to decorative features, like statues and murals.

Lord's interests put him in the midst of an architectural sculpture movement aimed at the great unwashed in art members of the public in need of moral lessons that they could not learn on their own. Enthusiasts drew on Renaissance examples of didactic artistry, which they praised for achieving aesthetic and cultural unity. These architects and sculptors, supported by business interests, hoped to influence urban design as well as to familiarize people with the best aspects of past and present cultures. They created organizations such as the Sculpture Society, founded in and in renamed the National Sculpture Society, and worked with the Municipal Art Society of New York and the National Society of Mural Painters. These groups were a part of the City Beautiful Movement, which aimed to design vital city centers expressive of civic values.

Lord exemplified the role architects could play in shaping opportunities for courthouse art and, often, in controlling the commissions awarded. In Lord became a member of the National Sculpture Society, and he provided many of his sculptor colleagues with commissions for the new courthouse. Some of the statuary was to stand against the sky, akin to that setting off the roof line of the seventeenth-century Amsterdam Town Hall (figs. / , /). Sixteen sculptors and ten painters worked to implement the theme, World Law that Lord had selected for his building, expressed through the building's neo-Palladian design and in its thirty sculptures.

To imbue the viewer with a sense of the majesty, purpose, and righteousness of the Law, Lord chose a statue of Justice to crown the pediment. Clear-eyed, Justice holds two torches of equal height above her head. One of the two men at her feet can be seen in figure ; they represent Power and Study. Beneath her a group called the *Triumph of Law* includes, in the middle, a seated female called Law holding tablets in each hand, with one inscribed Lex scripta (Written law) and the other Lex tradita (Customary law). Kneeling men, some with swords and shields, are placed about Justice, as are two reclining nude men. Below, at street level and symbolizing their role as the foundation of the courthouse and the triumph of law, are huge statues of men representing Wisdom (with an open book) and Force (attired as a Roman soldier).

The building's roof sculptures, each about eight feet tall, once included the Spartan leader Lycurgus, the Athenian Solon, the Byzantine Justinian, the Hindu Manu, the Saxon Alfred the Great, the French Louis IX, and religious figures including Moses, Zoroaster, and Muhammad. This sequence of lawgivers is a motif that can be found in many law buildings, from Ireland's s Four Courts building to state capitols and the United States Supreme Court.

A photograph of the Muhammad statue accompanied a story in the *New York Times* that described the protests then occurring. That picture portrayed him garbed in robes, sporting a flowing beard, wearing a turban, and holding a book and a scimitar. How many viewers from the street, three stories and more than fifty feet below, recognized him or any of the other figures or perceived the message that law was triumphant is not clear. Lycurgus, Solon, Justinian, and the others were (and are) not regularly invoked in popular culture. But in the early s when New York City's renovation plans brought the official identity of each of the stone statues into public view, the statues became a subject of discussion.

The publicity about the persons represented by the sculptures prompted complaints that the figurative display of Muhammad violated Muslim religious practices. The ambassadors of Egypt, Pakistan, and Indonesia registered objections on behalf of their countries. In response, the eight-foot, half-ton Muhammad was taken down and, unlike other statues that were removed for repairs, was not restored to a pedestal.[illegible] In [illegible], in the wake of protests against aggressive cartoons linking Muhammad's image to violence, the *New [illegible]ork Times* returned to the story with a photo showing an empty pedestal and reporting that the statue was last seen lying sideways on the ground.[illegible]

In contrast, another sculptor's version of Muhammad remains in place in Washington, D.C. It stands in a line of eighteen lawgivers depicted across two forty-foot friezes that run on the south and north interior walls near the ceiling of the room in which the United States Supreme Court hears cases. Cass Gilbert, the building's architect, relied on Adolph A. Weinman, a Beaux-Arts sculptor, to [illegible]choose the subjects and figures that best reflected the function of the Supreme Court building,[illegible] that opened in [illegible].[illegible] The Supreme Court's website[illegible] distancing the Court from the content[illegible] stressed that [illegible]Weinman's choice of symbols and figures were his own.[illegible]

From available materials, the details of the design do appear to have been left to Weinman. In a June [illegible], [illegible], file memo that Gilbert dictated, he reported that he had encouraged Weinman to make the panel above the Supreme Court justices' bench [illegible]the most important sculptural group[illegible] and proposed that it [illegible]would probably be composed of a single idealistic figure with supporters on each side.[illegible] (Gilbert's idea of using a lone figure was not taken up by Weinman.) Further, Gilbert suggested that

> the work [illegible]should[illegible]be very serious and classical, and impersonal in character. . . . I especially wanted to avoid the picturesque or anything that might be a matter of passing fancy. As I see it, these panels should be rather flat in their general achievements, perhaps more of the character of some early Renaissance, like the work of . . . Donatello, but strictly classical in character and not too heavy or robust. . . . [illegible]T[illegible]he type of Michelangelo would be too rugged and forceful, and the frieze of the Parthenon, for example, would be too active in movement. What I did tell him was that it should be very serious, dignified, beautiful in line, and of the most perfect modeling. . . . [illegible]T[illegible]he pictorial element should be subordinated to a sculptural character of the design.[illegible]

Gilbert then stated his [illegible]absolute confidence[illegible] in Weinman's [illegible]skill as a designer and as an artist[illegible] He remarked that he would feel [illegible]free to express[illegible]his views, and Weinman should be [illegible]equally free in combatting them if he thought differently[illegible] although Gilbert [illegible]doubted if there would be any differences of opinion.[illegible] Before completion, Weinman submitted photographs of scale models to the group forming the Supreme Court Building Commission, which did request minor alterations.[illegible]

Weinman designed four friezes to form an integrated narrative rich with historical and allegorical figures associated with the rule of law.[illegible] Of equal lengths and carved in Spanish ivory-colored marble, the friezes are framed by twenty-four large interior Ionic marble columns, each thirty-two feet tall, which encircle the room.[illegible] Were the lawyers and spectators who face the justices to gaze up at the frieze high on the eastern wall, they would see two enthroned male figures. One is called the *Ma[illegible]est[illegible] of the Law*[illegible] Under one elbow he holds what could be part of the Ten Commandments but is described instead in the Supreme Court's literature as a tablet to [illegible]symbolize the first ten amendments[illegible] the Bill of Rights[illegible] to the United States Constitution.[illegible] The second seated male, the *Power of [illegible]ov[illegible]ernment,* holds fasces, the Roman symbol of authority (detailed in Chapter [illegible]). These men are bracketed by two Virtues, this time incarnated as two bare-chested, muscular men[illegible] Wisdom with a lantern and Justice, whose shield has scales carved onto it. On each side of the courtroom are groups of figures. In the set called *The Defense of [illegible] uman [illegible]ights and Protection of [illegible]nnocence,* figures (including one, judge-like, holding a book) stand around a woman sitting on the ground with a child clinging to her. On the other side is *Safe[illegible]uard of the Li[illegible]erties and [illegible]ights of the People in their pursuit of [illegible] appiness,* comprised of men, women, and children.

The justices, in turn, look at the west wall; its frieze, [illegible] *ood [illegible]ersus [illegible]vil,* echoes the Medieval *Ps[illegible]chomachia,* the battle for the soul (described in Chapters [illegible] and [illegible]), with the Virtues arrayed against the Vices. Two female figures are at its center; Justice, [illegible]staring down the forces of Evil[illegible]leans on a sheathed sword, while Divine Inspiration holds scales.[illegible] These two, in turn, are flanked by Wisdom, with an owl; Truth (or Prudence), with a mirror; and figures called Defense of Virtue, Charity, Peace, Harmony, and Security. The group of male figures representing Evil includes Corruption, Slander, Deception, and Despotic Power.

On the south and north walls (to the left and the right of the justices and the spectators) are eighteen lawmakers, punctuated by eight allegorical figures named Fame, Authority, Light of Wisdom, History, Liberty and Peace, Right of Man, Equity, and Philosophy. Like the number of justices who now sit on the Supreme Court, the famous lawmakers are grouped in sets of nine. Each has an attribute that marks his association with law. Those on the south wall frieze date from [illegible] BCE to the beginning of the Common Era and include Menes of Egypt, Hammurabi of Babylon, Moses (holding tablets with Hebrew lettering) and Solomon from the Old Testament, Lycurgus of Sparta, Draco of Athens,

Confucius of China, Solon the Athenian, and Octavian of Rome.[illegible] The group in the north wall frieze spans the last two millennia and features (in order) the Byzantine Emperor Justinian (with his Code), Muhammad, Charlemagne, King John (with the Magna Carta), Louis IX, Hugo Grotius, Sir William Blackstone, John Marshall, and Napoleon. As the repetition of the lawgiver theme in the courthouses in New York and Washington suggests, the motif was a popular Beaux-Arts method of linking a building to law. The wide-ranging cluster could also be seen as ecumenically embracing what today we call diverse traditions.

Whether all the figures should be understood as appropriate for a government committed to keeping a critical distance from religion is a question that has been raised in various contexts. Several lawsuits have challenged displays [illegible] alleged to be religious[illegible] in public buildings; a series opposed deployment of the Ten Commandments, whose texts differ depending on traditions in different faiths.[illegible] Judges have thus considered the propriety of depictions of the Ten Commandments on the walls of school classrooms,[illegible] in courthouses, and outdoors. One lawsuit involved the installation of a [illegible]two-and-one-half ton monument[illegible] of the Ten Commandments erected, at the behest of the then–Chief Justice of the Alabama Supreme Court, as the [illegible]centerpiece of the rotunda of the Alabama State Judicial Building.[illegible] Another case dealt with a Ten Commandments momument, about six feet tall and three and a half feet wide, located along with sixteen other monuments on twenty-two acres around the buildings of the Texas State Capitol and the Texas Supreme Court.[illegible] A third opinion addressed two [illegible]large, gold-framed copies of an abridged text of the King James version of the Ten Commandments including a citation to the Book of Exodus[illegible] one mounted in the McCreary County Courthouse and another in the Pulaski County Courthouse, both in Kentucky.[illegible]

The Supreme Court's doctrinal response distinguishes between a display impermissibly advancing a religious agenda and one appropriately forwarding a [illegible]secular purpose.[illegible] When discussing that divide, a few of the justices have adverted to the Supreme Court's own iconography. Justice John Paul Stevens alluded to the Weinman frieze in a footnote in a [illegible] decision, explaining that:

> a carving of Moses holding the Ten Commandments, if that is the only adornment on a courtroom wall, conveys an equivocal message, perhaps of respect for Judaism, for religion in general, or for law. The addition of carvings depicting Confucius and Mohammed may honor religion, or particular religions, to an extent that the First Amendment does not tolerate any more than it does the [illegible]permanent erection of a large Latin cross on the roof of city hall.[illegible] . . . Placement of secular figures such as Caesar Augustus, William Blackstone, Napoleon Bonaparte, and John Marshall alongside these three religious leaders, however, signals respect not for great proselytizers but for great lawgivers. It would be absurd to exclude such a fitting message from a courtroom . . . .[illegible]

Justice David Souter also referenced the Weinman frieze in the [illegible] litigation about the Ten Commandments on the walls of county courts (which the Court found impermissible): [illegible]We do not forget, and in this litigation have been frequently reminded, that our own courtroom frieze was deliberately designed in the exercise of governmental authority so as to include the figure of Moses holding tablets exhibiting a portion of the Hebrew text of the later, secularly phrased Commandments . . . in the company of [illegible] other lawgivers, most of them secular figures[illegible] He concluded that there was [illegible]no risk that Moses would strike an observer as evidence that the National Government was violating neutrality in religion.[illegible]

In contrast, when upholding the placement of the Ten Commandments monument on the Texas State building grounds, Chief Justice William Rehnquist wrote for a different majority that

> acknowledgments of the role played by the Ten Commandments in our Nation's heritage are common throughout America. We need only look within our own Courtroom. Since [illegible], Moses has stood, holding two tablets that reveal portions of the Ten Commandments written in Hebrew, among other lawgivers in the south frieze. Representations of the Ten Commandments adorn the metal gates lining the north and south sides . . . as well as the doors leading into the Courtroom. Moses also sits on the exterior east facade of the building holding the Ten Commandments tablets.[illegible]

In the [illegible]s, it was the Supreme Court's depiction of Muhammad that drew criticism. The Council on American-Islamic Relations protested the sculpture, [illegible]shown with the Quran, Islam's Holy Book, in one hand and sword in the other, reinforcing long-held stereotypes of Muslims as intolerant conquerors.[illegible] In response, Chief Justice Rehnquist noted that swords were symbols of justice used throughout the building ([illegible]a dozen swords appear in the Courtroom friezes alone[illegible]), that remodeling would impair [illegible]the artistic integrity of the whole[illegible] and that laws specifically protected the Supreme Court's architecture from alteration.[illegible] Subsequently, some commentators also argued that Islamic legal sources did not necessarily render the depiction improper and that it ought to be seen as a gesture

of recognition from a culture that relied on imagery to celebrate authority.

The sculpted frieze remains in place, but the accompanying written materials, more easily changed, have been revised with the help, as the Chief Justice explained in his response, of numerous Muslim groups. The Supreme Court's literature on the building had read that Muhammad was the founder of Islam; instead the description was revised so as to describe Muhammad as the Prophet of Islam . . . depicted holding the Qur'an, the primary source of Islamic Law. The materials explained that the figure was a well-intentioned attempt by the sculptor, Adolph Weinman, to honor Muhammad, and it bears no resemblance to Muhammad. Muslims generally have a strong aversion to sculptured or pictured representations of their Prophet.

Lady of Justice but No Moco Jumbie for the Virgin Islands

One artistic rendering of a non-white Justice commissioned and federally funded is in plain view. That statue (fig. , color plate), installed in , stands at the door of the federal courthouse in St. Croix in the Virgin Islands, a territorial possession of the United States. Bought in from the Danes, the islands continue to reflect the influence of the colonial Dutch who once dominated the West Indies. Of the , people who live in the U.S. Virgin Islands, about three quarters are black, and many are descendants of slaves brought from Africa and emancipated in .

In regular federal courts created under Article III of the United States Constitution, district judges are appointed for life. In contrast, the federal court for the Virgin Islands is a territorial court operating under Congress's wing. The court's two judges serve renewable ten-year terms. The case load in the Virgin Islands is also relatively small. While life-tenured judges elsewhere averaged about cases filed per year as of , the two territorial judges sitting in the Virgin Islands have fewer than half that amount on their dockets.

Jan Mitchell, the artist who designed the Virgin Islands' *Lady of Justice,* comes from Philadelphia; she has lived for many years in St. Croix. Mitchell received a commission for artwork from the contemporary federal art program called Art-in-Architecture, run by the GSA (discussed in Chapter) as the successor to the s WPA program. Under federal guidelines, one-half of one percent of the estimated construction costs of new federal buildings is set aside for public art and awarded through a competitive process. The GSA describes the Mitchell sculpture as a modern-day version of Themis shown as a local resident of St. Croix. She holds her traditional scales but her unconventional . . . attire underscores the civil responsibility that every citizen has in maintaining a democratic society.

Figure *Lady of Justice,* Jan R. Mitchell, , Almeric L. Christian Federal Building, St. Croix, United States Virgin Islands.

Photographer: Steffen Larsen. Photograph reproduced with the permission of the artist and the photographer and courtesy of the United States General Services Administration. See color plate .

Although Mitchell's *Lady of Justice* is innovative in bringing a dark-skinned Justice into view in a federal courthouse, the figure was selected in lieu of two gritty alternatives proffered by the artist to evoke the Virgin Islands' ties to African history and the struggles for freedom by enslaved Africans. Some of the government-sponsored art discussed such as the Justices by both Kraus and Hirsch underwent minor modifications by virtue of the interaction between patron and artist. Mitchell's completed work is at the end of that continuum, for it is wholly different from what had originally been proposed by the artist.

In the early s, Mitchell suggested a nine-foot-tall bronze statue (fig.) based on an island legend of Moco

FIGURE [illegible] *Moco Jum[illegible]ie,* Jan R. Mitchell, [illegible].

Photographer: Steffen Larsen. Photograph reproduced with the permission of the artist and the photographer.

Jumbie[illegible]an African folklore figure that, as Mitchell explained to the local committee members assembled by the GSA, had become specially and uniquely connected to the Virgin Islands.[illegible] Mitchell's exuberant proposal reflected myths that the Moco Jumbie descended from trees in times of need to assist islanders. One theory of the Moco Jumbie's origin traces the figure to the cultures of the Upper Guinea region (specifically those of the Kono, Toma, and Dan peoples) that came to the Virgin Islands through the enslavement of West Africans in the Caribbean.[illegible] The name Moco Jumbie may be derived from the language of the Kimbundu tribe; Moco Jumbie could be a combination of the English word *mock* and a corruption of the word [illegible]*um*[illegible]*i,* used by the Kimbundu to denote a ghost or departed spirit.[illegible] Moco may also come from a word used by the Kongo to refer to a [illegible]doctor or curer[illegible] Alternatively, moco (or moko) may be a corruption of macaw[illegible] a tall palm tree covered with thorns.

In the Virgin Islands, Moco Jumbies are [illegible]thought to bring good luck and bestow beneficence.[illegible] Records from the [illegible]s indicate their display in Caribbean festivals, and drawings from the [illegible]s show a masked [illegible]stilt dancer in a woman's dress[illegible] wearing a conical hat and holding a whip in hand.[illegible] Figure [illegible] (color plate [illegible]), an evocative photograph by Robert Nicholls, whose extensive scholarship informs this discussion, was taken in [illegible] during the Virgin Islands Carnival and provides a modern-day incarnation.[illegible] Nicholls described the Moco as a [illegible]supernatural scarecrow[illegible] that ridicules ghosts and spirits and scares them away.[illegible] Their elongated height enables them to oversee a village, perhaps also enabling them to [illegible]mediate disputes among the living when all else has failed.[illegible] Moco Jumbies sometimes sport mirrors, which in [illegible]both European and West African cultures . . . dispel evil.[illegible] Further, like the Renaissance Virtue Prudence (fig. [illegible]/[illegible]), who was regularly shown with a mirror and at times a second face looking backward, Moco Jumbies can [illegible]metaphorically . . . see what is happening both in the present and in the future.[illegible] In carnivals the figure can represent [illegible]fun, laughter and merriment[illegible] at times performing as a [illegible]sort of clown on stilts.[illegible]

That association was part of the basis on which Mitchell's proposal was rejected. According to records from the GSA, the [illegible]District Court family[illegible] thought that putting a statue of a Moco Jumbie outside of its court would be [illegible]unsuitable as a symbol of justice[illegible] While [illegible]definitely Caribbean[illegible] it was [illegible]a jester of sort[illegible] whose name was associated with mockery. In the view of court personnel, their building was a place for the community to [illegible]look for fair play and justice, tempered with mercy[illegible] hardly a place for clowning or jesting.[illegible]

When news of that disapproval became public, supporters protested that the rejection was itself a display of ignorance about local culture. Under the headline [illegible]Moko Jumbie: No Mockery of Justice[illegible] a St. Croix paper published a letter arguing that jesting was but one of the roles of the character, who could also transform into a [illegible]village ancestor[illegible] with the power of judgment to [illegible]reprimand those who violated the laws.[illegible] An editorial in the [illegible] *in*[illegible]*in* [illegible]*slands Busi*[illegible]*ness Journal* went further, insisting that the use of the Moco Jumbie figure would be an antidote to the oppressive conditions that had reduced its historical significance to that of

Figure [illegible] *M[illegible]stical Mocko Jum[illegible]ies,* United States Virgin Islands Carnival, [illegible].

a carnival figure. As the editors explained, Moco Jumbies had traditionally been a source of protection but were relegated to carnivals by plantation owners who prevented slaves from observing their religions. Supporting the project, the newspaper argued that using the figure would be a [illegible]reclamation by the oppressed of a measure of justice.[illegible]

When the protests failed, Mitchell proffered alternatives. One, titled [illegible]*eachin[illegible] Man* (fig. [illegible]), was a bare-chested man shown struggling to free himself from the block in which he was sculpted, explained by the artist as symbolizing the Islanders' [illegible]struggle for freedom.[illegible] The other, called *Mar[illegible]ket Woman,* was a woman with market scales and a basket.[illegible] After beginning work on [illegible]*eachin[illegible] Man,* Mitchell received an order to suspend activities because the court preferred *Market Woman,* who emerged with the name [illegible]*sland Themis* and is now called *Lad[illegible] of Justice*[illegible]

This Justice stands, in bronze, six feet tall and on a pedestal to the right of the doors of the courthouse. Her skirt is cropped at the knees, belted at the waist, and slightly swirled. Her shirt is open-collared, and on her feet

Figure ⍰⍰ ⍰*eachin⍰ Man,* Jan R. Mitchell, ⍰⍰⍰⍰.

Photographer: Steffen Larsen. Photograph reproduced with the permission of the artist and the photographer.

are sandals. As the close-up of her torso and head (fig. ⍰⍰) makes easily visible, this Justice has her hair mostly covered in a bandana-like scarf, with a few curls visible at the top of her head. Her vision is unobstructed, and she looks at the evenly balanced scales held in her hand. Comments from selection committee members noted her ⍰good, strong features⍰ reflecting the role of women in the family and serving as a representative of ⍰the culture.⍰⍰⍰

Figure ⍰⍰ *Lad⍰ of Justice* (detail), Jan R. Mitchell.

Those descriptions suggest that the mix of classic Justice iconography and darker skin can feel comfortable when associated with roles once assigned specially to black women, such as service providers and caretakers for white children.⍰⍰⍰

The Safety of Abstraction: Ellsworth Kelly in Boston

In the early ⍰⍰⍰⍰s, the architect Henry Cobb was selected to design a new courthouse for the federal appellate and trial courts that sit in Boston, Massachusetts. His enthusiasm for creating a special building was shared by Douglas Woodlock, a judge on the district court, and by Stephen Breyer, who sat on the Court of Appeals for the First Circuit before he was appointed Associate Justice on the United States Supreme Court.⍰⍰⍰Eager for a contemporary building to serve a public role, Cobb, Woodlock, and Breyer took as their model a one-room courthouse in Virginia that, in ⍰⍰⍰⍰, had been ⍰the center of its community.⍰⍰⍰

The result in Boston was a ten-story building with twenty-seven courtrooms supported by ⍰three quarters of a million square feet of bureaucratic support space⍰ that opened in ⍰⍰⍰⍰.⍰⍰⍰A huge conoidal section of glass forms one wall of the courthouse, emblematic (in the architect's words) of the

effort to have the building perceived as "open and accessible to all," yet also specially situated as distinct and separate from "everyday life of the street." As can be seen from figure [illegible] (color plate [illegible]), the glass wall dominates the public space by sheltering an atrium that permits views of seven stories. Since its opening, the courthouse, which includes some [illegible],[illegible] square feet aimed at providing "meaningful spaces" for visitors and community programs, has sponsored several outreach initiatives, including a series of programs for school children.

The art commission went to Ellsworth Kelly, one of the United States' most prominent contemporary artists who is also recognized around the world in both public buildings and major museums. Kelly's twenty-one aluminum and enamel panels of varying colors (fig. [illegible], color plate [illegible]) installed in seven locations within the building, are intended to function as a single work of art. In the [illegible]s, federally funded arts programs had avoided abstraction, preferring "representational" to "nonrepresentational" art. By the [illegible]s, the design committee chose *The Boston Panels,* as they are called, rather than overtly didactic images. The nine horizontal panels in the central rotunda are about eleven feet by thirteen and a half feet, while the verticals are about the same height but narrower, just under seven and a half feet wide; they hang in pairs at the ends of the hallways on several floors.

Ellsworth Kelly's monochromes, bright blue, green, yellow, orange, and black, avoid the questions of what Justice might, could, or does look like. As for what "she" might say, carved into stone are English texts from Abigail Adams, John Adams, Louis D. Brandeis, William Cushing, Frederick Douglas, Felix Frankfurter, Oliver Wendell Holmes, Sarah M. Grimké, John F. Kennedy, Leila Josephine Robinson, and Daniel Webster, as well as from

the constitutions of Maine, Massachusetts, New Hampshire, Rhode Island, and Puerto Rico, thus representing an array of diversely situated historic figures and all of the geographic entities that comprise the First Circuit (if not all of their languages).[illegible]

Kelly explained that *The Boston Panels* were themselves governed [illegible]by measure and balance.[illegible] The architect Cobb praised them for their serenity. The GSA described the colors as without [illegible]symbolic[illegible] purpose while aiming [illegible]to provoke an emotional, and even spiritual, response from viewers . . . left . . . to create their own meanings for the work[illegible]; as the artist had not specified a meaning, his work was [illegible]inherently democratic.[illegible] As one commentator suggested, the horizontals are landscapes and the verticals portraits, waiting to be inscribed.[illegible]

While some commentators enthused[illegible] describing the paintings as [illegible]stark yet lush, [illegible]with[illegible]the visual punch of traffic lights[illegible] others were dismayed, objecting to their [illegible]decorative neutrality and hunkered-down presence.[illegible] If their blank expanses of color can be read as potential portraits, they could equally well be read as portraits stripped of individuals. The Kelly panels offer a safe haven, for their abstraction avoids having to choose any particular body type to be iconic. What the WPA formerly considered avant-garde, ironically, can now be read as conservative.

Judging Judges: From Spectator to Critical Observer

Various shifts in perspective materializing across many disciplines have been linked to modernity. The cubism of twentieth-century art broke the linear planes of earlier conventions and offered views from multiple perspectives. (Cezanne's still-life paintings permit one to see simultaneously pears, tables, and table cloths from angles not available through one's own eyes.) Deconstructionism objected to the hegemony of a single meta-narrative confidently promulgated by one authoritative voice.[illegible] These intellectual shifts can be understood as constituting a [illegible]rupture with

Renaissance, or *classical* models of vision,□□□ which had posited an objectivity borne from a single point of view, sometimes exemplified by the fixed vantage point of a person looking through a camera obscura.

A modern understanding, both reflected and produced through the multiplication of images and texts, makes palpable the subjectivity of what is seen. As theorist Jonathan Crary has argued, a □spectator□ sits passive, while an □observer□ produces as well as receives information. Observers are not, however, autonomous, nor are their eyes □innocent□;□□□ embedded in a system of conventions and limitations□ they (we) are situated to see □within a prescribed set of possibilities.□□□ Linking his work to some aspects of Michel Foucault's *Dis□ cipline and Punish,* Crary examined how □new methods for administering large populations□ dispersed power□ including to observers□ yet disciplined their behavior through the development of norms in a host of fields.□□

In Chapter □□, we examine the fragmentation of adjudicatory functions that could serve as analogues to these theoretical and visual perspectival shifts. In this chapter, we focus on how this new stance authorizes critical appraisals of judges. In some respects, judges have long been subject to oversight, warnings (as detailed in Chapters □ and □) against bribes and mandates for even-handed treatment of disputants. But the injunctions thickened over time to elaborate the judicial role. By □□□□, Matthew Hale, a circuit judge in England, recorded □eighteen Rules to be observed in his conduct as judge.□□□ Drawing in part from biblical sources, Hale insisted on honesty, impartiality, and compassion. Moreover, he described the business of judgment as □full of labor and pains□ requiring □incessant attention□ and □a steadfast resolution and courage to do what is just.□□□ Hale reflected that no matter how just decisions were, judges could □never escape the imputation of partiality and unjustice from some party.□□□ (Hale's actual □sentencing of two witches to death□ has been a lasting source of criticism of his judgment.□□) Hale argued, however, that as a judge he answered only to God, on whose behalf all judges judged and by whom all judges would be judged.□□

The Appearance of Impartiality

No longer can judges presume that they have only heavenly powers as overseers. Democracy empowers a □demos□ a people making decisions about the institutional framework and obligations under which they live and authorizing governments to implement their will.□□ Renaissance spectators have been replaced by observers empowered to critique rather than only to watch. The public, including disputants, have gained forms of authority over judges, even as judges themselves have also gained degrees of insulation from the rulers (executive and legislative) who are the sources of their jurisdiction.

In contemporary terms, some of the public power over judges operates at an institutional level□ when decisions are made about judicial selection or retention. In some jurisdictions in the United States (including California, Ohio, and Wisconsin), judges are elected or their appointments are approved by popular vote.□□ In others, the executive's appointment powers are somewhat constrained by special committees (often called □merit selection commissions□), typically comprised of professional and lay members creating lists of candidates from which appointments are made.□□ In the United States federal system, the Constitution authorizes the President to nominate persons but gives to the Senate, another popularly accountable branch of government, the power of confirmation.

Once individuals are empowered to judge, the question of the degree to which observers can exercise control turns on questions of whether judges sit for fixed or renewable terms, the forms of reappointment, and the conditions under which judges serve. English judges once lost their positions when the king who had appointed them left office. The □□□□ Act of Settlement, which required a vote of Parliament to remove a judge from office, is an oft-cited marker of judicial independence.□□ The □□□□ United States Constitution translated the concept of judicial independence into tenure □during good behaviour□ (understood to guarantee jobs for life) and salaries protected from diminution. Federal judges cannot lose their jobs unless bills of impeachment are voted and a trial is held by the Senate, and the Constitution limits removal to certain grounds □ □Conviction of, Treason, Bribery, or other high Crimes and Misdemeanors.□□□ Over the course of more than two hundred years, few (about a dozen) federal judges have been impeached.□□ Further, as rights developed to enforce government obligations through lawsuits, judges themselves shaped doctrines of their own immunity from suit, as they reasoned that such liability would undermine the ability to discharge their duties.□□

Yet critical viewers (from a range of perspectives) found these forms of judicial accountability too thin. One watershed in the United States is a famous speech delivered in □□□□ to the American Bar Association by Roscoe Pound, who called his talk □The Causes of Popular Dissatisfaction with the Administration of Justice.□□□ Pound's critique ranged from substantive rules of law to the organization of courts and the work of lawyers. □Popular dissatisfaction□ then as now, was wrapped up with views about the merits of decisions that judges rendered on matters of great moment (whether early twentieth-century property rights claims or late twentieth-century judgments on same-sex marriage). But one cause of □dissatisfaction□ judicial misbehavior, is more readily subject to responsive regulation than are complex questions of the scope of judicial authority and the roles courts ought to play in a democracy. In □□□□, in an express effort to shore up public confidence after particular scandals, the American Bar Association promulgated □Canons of Judicial Ethics□ which built on a □□□□ code of ethics for lawyers.

Even though the reforms were circumspect (the Canons described what judges ⧫should⧫ do and initially imposed no absolute mandates), ⧫⧫⧫ the fact of their promulgation demonstrated the importance accorded to the observer. ⧫Popular opinions⧫ had come to matter. And although federal judges could banish a ⧫Communist⧫ Justice (fig. ⧫⧫), or drape darker-skinned ⧫avenging⧫ Justices (fig. ⧫⧫), judges themselves could be⧫ and were⧫ subject to a barrage of publicity when they did. Whether the audience was constituted via the immediacy of live proceedings or from afar and mediated through the press, public perceptions could undermine judges'⧫ and hence the state's⧫ authority.

The ⧫⧫⧫⧫ code made the idea of critical judgment explicit by insisting that judicial behavior be free not only of ⧫impropriety⧫ but also of the ⧫appearance of impropriety.⧫⧫⧫ By the twenty-first century, that standard of the ⧫appearance of impropriety⧫ included, for example, admonitions that judges not hold memberships in exclusionary clubs that did not welcome all persons in those informal settings where public and private powers mixed.⧫⧫⧫ Further, the hortatory language of the Canons had shifted to suggest that compliance was obligatory, ⧫⧫⧫ and judges were expressly charged with striving to ⧫maintain and enhance confidence in the legal system.⧫⧫⧫ Indeed, by ⧫⧫⧫⧫ the ABA Model Code of Judicial Conduct put judges to the tasks of initiating and participating in ⧫community outreach activities for the purpose of promoting public understanding of and confidence in the administration of justice.⧫⧫⧫

Duck Blinds in ⧫⧫⧫⧫

The audience now understands itself as positioned to assess whether judges are adequate to their jobs and whether their substantive and procedural rules deliver on promises of equal treatment. In response, some jurisdictions developed ⧫performance reviews⧫ for judges, at times through surveying lawyers and litigants. Court systems also provided mechanisms for individuals to level complaints against judges who engaged in ⧫conduct prejudicial to the effective and expeditious administration of the business of the courts.⧫⧫⧫

Litigants in individual cases gained the power to object to the assignment of a particular judge to a specific case. English common law had long recognized that ⧫no man shall be a judge in his own case⧫ but had interpreted that precept narrowly, to instances of direct monetary interests, and had not applied it to all levels of courts.⧫⧫⧫ Through the evolution of doctrine and statutory provisions, broader ⧫objective⧫ criteria have been specified, including whether a judge has an indirect financial stake (for example, as a shareholder in a corporation) or a range of personal ties (for example, a familial relationship to litigants or their lawyers).⧫⧫⧫ Thus, in contrast to Amsterdam's deployment of Zaleucus and Brutus (discussed in Chapter ⧫ and shown in figs. ⧫/⧫⧫ and ⧫/⧫⧫), who were idealized as judges because they stood in judgment of their children, contemporary judges are not put in the position of having to prove loyalty to the state by ordering punishment of their own kin. Rather, such relationships and other connections prompt disqualification, because a ⧫judge's impartiality might reasonably be questioned.⧫⧫⧫⧫ Over the past century, the bases for ⧫reasonable questioning⧫ have been elaborated, often prompted by specific incidents of revelations about economic or other ties between judges and disputants.⧫⧫⧫

In some jurisdictions, the power to remove a judge is ⧫peremptory⧫ in that each disputant can strike a judge without explaining why.⧫⧫⧫ In addition, judges may voluntarily recuse themselves, and litigants can request disqualification based on specified grounds. Although the right to bring such a challenge against a judge bespeaks modernity in that it accepts the validity of multiple points of view, the method of deciding the question does not. Some courts refer disqualification requests to another judge, but in many jurisdictions it is the very judge challenged who decides. Presumed loyal to the judicial role and with firsthand knowledge of the facts, that person is to assess the propriety of continuing to work on a given case.⧫⧫⧫

Many questions exist about the criteria for evaluating the appearance or the fact of partiality. For example, ought judges to recuse themselves if they have accepted paid travel to attend seminars aimed at educating them on economic theory, environmental hazards, anti-trust doctrine, or human rights⧫⧫⧫ What about participation on boards, friendships with lawyers or litigants, public speeches commenting on questions relevant to a lawsuit, or connections with issues based on work prior to becoming a judge⧫⧫⧫ Litigants have asked judges to step aside for a range of reasons that have prompted public debate about what ⧫the appearance of impropriety⧫ could mean.

One such episode that garnered enormous attention is recorded in a Jeffrey Danziger cartoon, ⧫Don't Worry, She's Blind⧫ (fig. ⧫⧫), appearing in newspapers in March of ⧫⧫⧫⧫.⧫⧫⧫ Shown sitting on the pans of Justice's scales are two figures, each wearing a hunting cap and holding a shotgun. One is a caricature of then–Vice President Richard Cheney and the other of Supreme Court Associate Justice Antonin Scalia. At the time the Supreme Court was considering a lawsuit filed by two organizational plaintiffs, the Sierra Club Judicial Watch, challenging the refusal of a committee, called the National Energy Policy Development Group (NEPDG) and chaired by Vice President Cheney, to provide access to information about its proceedings.⧫⧫⧫ The plaintiffs named Vice President Cheney as one of the defendants and charged that the NEPDG, created by the President to develop a ⧫national energy policy designed to help the private sector, and government at all levels, promote dependable, affordable, and environmentally sound . . . energy,⧫⧫⧫ inappropriately permitted ⧫private lobbyists⧫ to participate.⧫⧫⧫ At issue was whether the Vice President had improperly constituted the group and then failed to dis-

FIGURE ⊠ ⊠Don't Worry, She's Blind⊠ Jeff Danziger, ⊠⊠⊠⊠.

Copyright: Jeff Danziger, New York Times Syndicate. Image reproduced with the permission of the artist.

close (or, as one legal ethics professor put it, had been ⊠lying about⊠) how the group was constituted.⊠⊠⊠

One of the legal questions raised was whether the NEPDG fell within the parameters of a federal statute, the Federal Advisory Committee Act, requiring public disclosures of meetings.⊠⊠⊠If so, the public would have been able to learn about the role played by private lobbyists in shaping the Energy Group's report to the President. If the Vice President had a nondiscretionary duty to provide such disclosure, a federal court had the power to mandate compliance with that obligation.⊠⊠⊠Under federal law, through a process called ⊠discovery⊠ opponents in lawsuits have to give each other information on matters relevant to establishing claims or defenses. The plaintiffs sought to use discovery to learn about the Energy Group's membership and structure. But the Vice President resisted, arguing that his position in the Executive Branch immunized him from having to comply with such discovery requests. A trial-level court disagreed and ordered the Vice President to provide the information.

That order was enforceable immediately. Because federal law generally permits appellate review only when a case is over and a ⊠final judgment⊠ has been rendered, the decision could not be challenged through that route. Instead, the Vice President invoked an unusual legal proceeding called mandamus and asked the intermediate appellate court (the Court of Appeals for the District of Columbia) to halt the lower court's discovery order. The Court of Appeals for the D.C. Circuit refused, and the Supreme Court agreed to review the appellate court's unwillingness to ⊠mandamus⊠ the trial judge.⊠⊠⊠

Two levels of revelation were thus at issue⊠ whether the National Energy Policy Group was the kind of ⊠advisory committee⊠ to which the public had a statutory right of access, and whether the Vice President was the kind of litigant required to comply with court-ordered discovery. But what came to light was another disclosure: that Justice Scalia had joined the Vice President on his official jet, Air Force Two, when both had flown to Louisiana for a duck-hunting trip hosted by a businessman.⊠⊠⊠Indeed, as Justice Scalia later explained, because he was ⊠well acquainted (from our years serving together in the Ford administration)⊠ with Vice President Cheney, Justice Scalia knew that both shared an enthusiasm for duck hunting. Justice Scalia had proposed to his friend, the host, that the Vice President be asked to join the trip. The Vice President, in turn, had suggested that the Justice travel with him aboard Air Force Two. Justice Scalia also reported that the trip arrangements (including invitations for Scalia's son and son-in-law to fly on Air Force Two) had been made before the Supreme Court agreed to hear Cheney's appeal.⊠⊠⊠

When the trip came to light, the Sierra Club (one of the litigants seeking public access to the Energy Group) asked Justice Scalia to recuse himself because his impartiality could ⊠reasonably be questioned.⊠⊠⊠ As evidence of reasonableness, the Sierra Club cited the call from ⊠⊠⊠ of the ⊠⊠ largest⊠ newspapers for the Justice to step aside.⊠⊠⊠In a written memorandum filed on March ⊠⊠, ⊠⊠⊠⊠, Justice Scalia declined to do so. He provided additional details, including how the hunters were in ⊠two- or three-man blinds⊠ and that he ⊠never hunted in the same blind with the Vice President.⊠⊠⊠Further, Justice Scalia reported that he had spent no time alone with Cheney and that ⊠we said not a word about the present case.⊠⊠⊠

Justice Scalia provided a lengthy account of why friendship was not and ought not to be a ground for recusal by

justices when issues of "official action" were the predicate, "no matter how important the official action was to the ambitions or the reputation of the Government officer." Further, Justice Scalia explained that he had neither gained monetary benefit nor spent taxpayer funds. He had purchased round-trip tickets and, he noted, the expense to the government was that of using the Vice President's jet, whether filled or not. Moreover, while doubts might be resolved in favor of recusal on lower courts, Justice Scalia relied on the idea that his presence was essential ("a duty to sit") to avoid a four-to-four split, which would mean the lower court's decision would stand. Noting that he had "received a good deal of embarrassing criticism and adverse publicity," Justice Scalia commented that it would be tempting to silence the critics by "getting off the case," but in his judgment, no basis existed for doing so.

As for the merits of the case, on June [illegible], [illegible], the Vice President won, with seven justices supporting his point of view. The majority decision, written by Justice Anthony Kennedy, sent the case back to the appellate court to rethink whether, in light of the separation of powers, it had the discretion to tell the trial judge that the Vice President ought to be protected from being forced to make disclosures. Justice Clarence Thomas wrote a concurrence in which Justice Scalia joined. They agreed with the return to the appellate court but urged the court to consider whether the trial court even had jurisdiction to address the merits. Justices Ruth Bader Ginsburg and David Souter dissented, arguing that the defendants had been overly broad in resisting all discovery and that the trial court's ruling had been appropriately limited. When the case was returned to the D.C. Circuit, the Vice President won again.

Much debate among legal ethicists followed about whether the Justice ought to have stepped aside, whether the decision to do so ought to have rested solely with him as contrasted with the Supreme Court as a whole, and how to evaluate Justice Scalia's testimonial descriptions of the events that transpired. Objectors protested rules that gave a member of the court both the power to narrate the events and the sole and unreviewable discretion to assess their import.

Justice Scalia's response can be analogized to John Rawls's conception of adopting an "original position" and to Moore's *Lady Justice* (fig. [illegible]/[illegible]) in Concord, New Hampshire. Justice Scalia claimed that he was able to tie the blindfold's knot himself, and that he could bracket his situation at both personal and institutional levels when assessing the merit of the legal claims. In his twenty-one-page response, Justice Scalia provided a historical account of what he saw as comparably embedded justices working in close relationships with various officials. He described the many judges who had obtained their positions through such connections and then continued to socialize with their powerful colleagues in both public and private settings.

But, as Brian Barry has explained in *Justice as Impartiality*, it "[illegible] a 'common sense' definition of impartiality for judges both obliged them "to be unmoved by personal interests or the congeniality or otherwise of those who appear before them" and disqualified them "from hearing a case if they have financial interests in it or if they have personal connections with any of those involved." The issue was not congeniality but connections, which is the point made by Danziger's cartoon, capturing the widespread sense that friendship between a justice and a government official, especially one forged when both served together in a prior administration, undermines the perception of the fairness of the judgments rendered. Justice Scalia's efforts to resort to the impersonality of the judge and the official, functioning within a Weberian bureaucracy as if they were strangers, seemed counterintuitive to many.

In Danziger's depiction, the blindfold is a wholly negative attribute, as can be seen from the posture of and the words assigned to the caricature of Justice Scalia. He turns away from the blindfolded Virtue, a large, robed Justice on whose scales the two men perch, as he offers his compatriot the reassurance "Don't Worry, She's Blind." Danziger's use of the blindfold is paralleled by that of hundreds of other cartoonists over the last century, and the ease with which they retrieve its negative associations raises questions about the effort to revalorize it in this, a post-Enlightenment era. However pragmatic were Justice Scalia's justifications, the outpouring of concern from more than two dozen newspapers reflected an audience acutely uncomfortable with the revealed interplay of public and private authority in making law. Like the blindfold of Bruegel's Justice (fig. [illegible]/[illegible]), the gesture of covered eyes, claimed to buffer the decisionmaker from seeing (and perhaps therefore from fully knowing) what has occurred, does not obscure from other viewers the very activities that have invoked unease.

For John Rawls, the point of veiling was to enable impartial judgments that took into account perspectives beyond oneself and one's time. "Purity of heart, if one could attain it, would be to see clearly and to act with grace and self-command from this point of view." What Justice Scalia failed to see was that the trip to hunt ducks was a reflection of a set of relationships that seem unremarkable to those encircled by power and yet are troubling to those who stand outside that circle. The underlying litigation revolved around the same point, for the statute requiring public disclosure of committee meetings of governmental bodies was enacted in recognition of the potency of informal opportunities to affect decisions. The Rawlsian approach would have been, at the least, to forgo the trip and other opportunities for private socializing while issues of access to the Vice President's power were pending before the court. The time for veiling had come long before the case was argued.

Restructuring Law's Possibilities

The development of professional ethics and of rules governing judges was an element of many twentieth-century

changes in the legal landscape, to be previewed here and elaborated in other chapters. The growing numbers of lawyers and judges sought to maintain control over professional norms through canons shaped in response to "popular dissatisfaction" with the legal system. But criticism also came from within, as women and men of all colors became lawyers and judges. These new entrants questioned prevailing assumptions about the acceptability of various practices, from courtroom etiquette (such as whether women litigants should be addressed as "hon" or "girl") to the substance of legal rules (such as whether marital rape ought to be a crime and alimony a right) to the extrajudicial activities of judges (such as the propriety of membership in exclusionary clubs).

As the conflicts over who should be shown on courthouse walls as "Justice" made plain, the demographic transformations in the last decades of the twentieth century were dramatic. Until the [illegible]s, the bench and the bar had themselves been exclusionary clubs. In [illegible] in the United States, women made up less than [illegible] percent of entering law school classes; forty years later, women were more than [illegible] percent of entering students. In [illegible], women and men of color composed less than [illegible] percent of the student body in law schools; it [illegible] that figure was almost [illegible] percent. [illegible] The trend is similar in other common law and civil law countries. [illegible]

But it was not only who was becoming a lawyer that changed; it was also how they lawyered and who had rights to bring claims to court. The lawsuit against Vice President Cheney was made possible by one of hundreds of federal statutes that conferred new rights enabling individuals and groups to challenge governmental action. Those would-be plaintiffs were able to proceed because of new opportunities for representation afforded by a diverse public interest bar that had developed over the preceding century as both a product and a producer of new rights. Some organizations, such as the NAACP Legal Defense Fund, the American Civil Liberties Union, and the National Resources Defense Council, are small, specialized entities focused on particular kinds of legal problems. Others aim to provide services to the poor, such as the Legal Aid Society of New York and, since [illegible], the federally financed Legal Services Corporation. On the criminal side, in the wake of the [illegible] Supreme Court decision in [illegible] *ideon* v. *Wainwright* concluding that the constitutional right to counsel required that poor criminal defendants be provided lawyers, public defender organizations came into being. [illegible] In the [illegible]s, law schools expanded their clinical programs to assist indigent clients; in addition, individual lawyers and firms around the United States contributed their time to enable representation for those otherwise without counsel.

Not only did lawsuits multiply but their shape and aspirations changed as new procedures and statutes opened the doors to courts. Claimants came together in class actions and other kinds of aggregations to raise issues that single plaintiffs did not have the resources to pursue. They sought new and varied remedies in cases involving school desegregation, equal pay, and prisoners' rights. [illegible] As litigants pressed issues related to their intersecting collective identities (plaintiffs or defendants, employers or employees, women, blacks, children, prisoners), questions emerged about whether judges accorded fair treatment to all who appeared before them. As segments of the population questioned the justice of the law, they developed an array of mechanisms" filing lawsuits, bringing class actions, and participating in identity-based organizations, including those composed of lawyers and judges" to give voice to their complaints.

Judiciaries, in turn, reorganized, coming to resemble other government agencies seeking funds, facilities, and staff. Judges no longer operated as solo actors but became part of institutional contexts in which they were subject not only to ethical rules but also to administrative regimes. In the [illegible]s, administrators within the federal court system thought that "the idea of a "school for judges' would lend itself to ridicule"; judges were, by definition, learned. But by the [illegible]s, judges in both the state and federal systems regularly attended educational and professional training programs. [illegible] The question changed from whether judges needed education to whether regulation of providers was in order, given that certain purveyors had the resources to pay for judges to travel to pleasant locations for seminars on subjects such as law and economics or the use of scientific data as evidence.

Systemic Unfairness in Individualized Justice

On occasion, when rendering judgments in cases, judges have intervened as they recognized structural injustices, such as legally mandated segregation of schools. But often, when confronted with evidence of systemic unfairness, courts have retreated" refusing to focus on more than particular evidence of harm to a particular individual. That approach is exemplified in the United States by a [illegible] decision, *McCleske*" v. [illegible] *emp*[illegible] At issue was whether Georgia courts imposed the death sentence in a racially discriminatory fashion, demonstrated by statistical patterns showing that defendants charged with killing white victims were more likely to be sentenced to death than those charged with killing black victims and that black defendants were more likely to be sentenced to death for that crime than their white counterparts. [illegible]

A five-person majority of the Supreme Court declined to find those data demonstrative of "a constitutionally significant risk of racial bias affecting the Georgia capital sentencing process." [illegible] The majority stated that it would consider evidence that a particular person was sentenced to death because of intentional and manifest racial prejudice directed at him or her but blinded itself to the claim that the judicial administration of the death penalty" as a whole" violated the Equal Protection Clause. By way of explanation, the majority argued that, were racism in death penalties to be considered, judges would also have to consider the

effects of racism in sentencing more generally, and, moreover, the irrelevant factor of race easily could be extended to apply to claims based on unexplained discrepancies that correlate to membership in other minority groups, and even to gender. Of course, that was in fact the point that a confluence of factors that law aspired to make irrelevant systematically produced unfair outcomes.

Structural Interventions: Judicial Task Forces on Bias in the Courts

Critics read the *McCleskey* decision as willfully blind, as well as oblivious to the intersection of race and gender. Moreover, the ruling largely eliminated the federal courts as a forum for the consideration of statistically based claims of racial discrimination in capital sentencing, as if such claims were not as susceptible as others to identification, to adjudication, and to correction. The *McCleskey* opinion marked a wider retreat from court-based efforts to remedy the residue of slavery through adjudication.

But members of organizations such as the National Bar Association (founded in the s), the National Organization for Women's Legal Defense and Education Fund (begun in), and the National Association of Women Judges (founded in) had an understanding very different from that of the *McCleskey* majority. As the logo for the National Bar Association's Judicial Council (fig. /) displayed, these lawyers and judges had personally experienced courts as places of partiality. Fully appreciative of what critical theorists call the subjectivity of the observer, the members of these groups knew (as Constance Baker Motley recounted in her autobiography) that stereotypes not only hung on the walls of courthouses in Jackson, Mississippi (fig.) but also animated the decisions of many judges.

By the s and s, as litigators pressed claims for gender and racial equity, they repeatedly experienced some of the pain of discrimination in the very places to which they brought claims the courts. For example, some jurists shared with defendants the view that women's place in the world was at home, with children. Time and again, judges ignored claims of violence in households, belittled the value of women's contributions of household labor, and rejected employment discrimination cases challenging policies that kept pregnant women from teaching elementary school or working in various jobs.

In response, associations of women lawyers and judges crafted special education programs aimed at helping judges to understand their own stereotypes and biases. But when given real cases illustrating problems, judges often dismissed them as anecdotes that did not demonstrate a systemic dysfunction. Moreover, if the example came from one jurisdiction (such as New York), judges in another state (such as New Jersey) might offer a jurisdictional disclaimer that perhaps judges in New York behaved that way, but those in New Jersey did not. Consistent in some ways with *McCleskey*'s rejection of statistical patterns, programs on bias found that judges were likewise loath to take individual instances of real cases in real courts as evidence of system-wide problems.

How could those who experienced the unfairness of adjudication get judges to see such problems These identity-based organizations pressed the chief justices of state courts to move beyond educational programs to research by commissioning special projects to study, jurisdiction by jurisdiction, problems of partiality. Gender bias in the courts and race and ethnic bias task forces became the short-hand terms attached to the issue, with task forces as the primary means for gathering information specific to a particular court system. In , the New Jersey Supreme Court led the way by being the first to create a gender bias task force. Within a decade, court-based task forces devoted to race and ethnicity followed, as did efforts in some of the federal courts.

These official commissions looked at the application of substantive legal doctrine, courtroom interactions, the demography of courthouses, and courts' roles as employers. As one state's chief justice explained, it was the duty of the task force to determine the presence and extent of gender bias in that state's courts and to develop strategies for its eradication. Within fifteen years about sixty thick reports had been produced, some focused on gender, others on race and ethnicity, and a few on the intersection of various forms of subordination. Many studies relied on survey data, complemented by focus group reports and research into case law and statutes. Thousands of lawyers, judges, and staff were surveyed; much less information came from litigants, who were harder to find and therefore more expensive subjects from whom to seek information. Most of the reports proffered parallel answers that despite emblems of equal justice under law, many litigants, lawyers, and even some judges found courts, at certain times and in specific ways, venues of discrimination. By reading the set of reports together, one can find that in states as disparate as California, Georgia, Kentucky, Maryland, and Minnesota, women seeking redress for domestic violence reported that they were blamed, accused of provoking their attacks, treated as if their experiences were trivial, or disbelieved.

A Report of the New York Task Force on Women in the Courts detailed the ways in which identity undermined the fairness of the justice system in that state. As the New York Report explained, gender bias against women . . . is a pervasive problem with grave consequences. . . . Cultural stereotypes of women's role in marriage and in society daily distort courts' application of substantive law. Women uniquely, disproportionately, and with unacceptable frequency must endure a climate of condescension, indifference, and hostility. Five years later, Connecticut's gender report reached a parallel conclusion: Women are treated differently from men in the justice system and, because of it, many suffer from unfairness, embarrassment, emotional pain, professional deprivation and economic hardship.

Similar findings came from task forces focused on race and ethnicity. Studies indicated that people of color detained on charges for certain offenses were less likely to be released on bail than whites held for similar offenses and more likely than whites to be jailed while awaiting sentencing. Despite the court's rejection of statistical evidence in *McCleskey*, some state court reports found a "perception, supported in some aspects by research findings, that there is a disparity that can be attributed only to race in the rate of convictions and the types of sentences." Michigan's "" report illustrated what several others concluded: that "there is evidence that bias does occur with disturbing frequency at every level of the legal profession and court system."

As a result of these various inquiries and the social movement that supported them, some courts changed their rules of practice, their ethical obligations for judges and lawyers, and their methods of selecting judges. In many jurisdictions, courts developed sexual harassment policies; revised processes for employee orientation, training, and selection; promulgated local rules mandating fair treatment of witnesses and lawyers; rewrote canons of ethics; enacted legislation; and created special programs on the problems of victims of violence. Gender, race, and ethnicity became topics of judicial conferences, of meetings and continuing education programs for lawyers, and of private discussions. Moreover, a few courts overturned decisions by concluding that jurists had predicated their judgments on unacceptable biases and stereotypes. A small body of case law now speaks about how proceedings can be infected by stereotyping, such as addressing women lawyers and litigants in demeaning terms" and making racial and ethnic slurs." Task forces "saw" the problems and moved criticisms of courts from allegation to fact, making discernible the patterns that judges had been loath to face.

Such affirmative efforts to deal with disparities produced through court-based projects were eventually met by critics pressing to limit their reach and effect. Even though task forces were professionally based, judicially sponsored, and generally well mannered in tone, opponents (some within the courts and others from outside) began to attack them. In Chapter , we discussed the debate about whether law should be "color-blind" and what such a phrase could mean. The reproach leveled against gender and race bias task forces was part of a broad effort to undermine race-conscious and gender-conscious remedies that fall under the heading "affirmative action." Critics objected that to identify bias was to produce it and that blindness to difference, rather than identification of its impact, was the route to take. In the mid-'s, at the behest of a member of the Senate, the United States General Accounting Office launched an investigation into federal funds spent on task forces." Other attacks came through litigation challenging remedies spawned by task forces. For example, in the wake of a report from a task force in Florida, that state's legislature required that judicial selection panels include non-white, non-male members. The lower federal courts held that the statute unconstitutionally created a forbidden quota."

Attacked from the "right" for being too aggressive, task forces were also criticized from the "left" for being too mild-mannered and too nested within an ideology committed to judicial legitimacy. Although task forces proffered patterns and instances of discrimination, many of the reports insisted that such discrimination was extrinsic to the basic structure of courts. Seeking to cushion the discomfort caused by even inquiring into instances of discrimination, task forces in the United States chose for their titles "fairness," "justice," "equality" or "gender bias" rather than referring to discrimination, subordination, or sexism. In contrast, a parallel project in Canada styled itself as a Commission on Systemic Racism in the Ontario Criminal Justice System."

Glimpsing the Gaps

Our excursion into the law and institutions of twentieth-century judging in the United States has illustrated why the blindfold continues to serve cartoonists well. The blindfold retains an ability to jar and to disturb, providing (ironically given that it serves literally as a cover) a Foucauldian "gap" or "rupture" that can remind a viewer of potential breaches in the state's claim to neutral impartiality." Whether on the walls in Jackson or Boise or in reports from late twentieth-century task forces, evidence of law's unfairness requires debate about whether and how to respond. Even when critical, lawyers and judges retain strong commitments to the aspirations of law. The logo of the Judicial Council (fig. /) shows a Justice pulling the bandages off. Yet, unlike Langston Hughes's image of "festering sores" beneath the blindfold, the Justice displayed is regal, facing the viewer squarely, with two open eyes.

The blindfold's continuing saliency underscores that, like the question of financing judging (detailed in Chapter), the tensions about knowledge's relationship to power and judgment (Chapter), and the debate set forth in this chapter over whose stories of Justice would make it onto the walls and into decisions, these questions are not only unresolved but not subject to any single or fixed resolution. Yet, as the Idaho legislature understood when deciding to show rather than to drape the mural of an Indian about to be lynched, covering up problems sits uncomfortably with contemporary aspirations for democratic transparency and accountability. The risk of festering sores, of unfairness in the name of Justice, is too great to continue to celebrate obstructions. Willful obliviousness and reliance on role provide no solution. Before further exploration of what law should "see" and how its aspirations should be represented, we consider more of what law has come to "do" over the course of the twentieth century.

Public and Social Traditions in Town and Country Courts

Dutch Law and Practice in Civil and Criminal Matters, a book written by the prominent legal scholar Bernhard van Zutphen, was published in Europe in [illegible], the year in which the Amsterdam Town Hall opened. The volume begins with an engraved title page (fig. [illegible]) displaying a densely populated courtroom scene. In the foreground, some spectators focus on the court proceedings, others chat, and dogs hang out. At the center, the presiding jurist is seated behind a table and beneath a statue of Justice, who holds scales and a sword; her thin blindfold is dimly visible. This very scene can, with minor variations, be found in several other volumes of that era, all illustrating how these seventeenth-century town halls served as public gathering places in which court proceedings were ordinary events.

Accounts of England during that era detail comparable uses of scores of town halls (also called guild-halls, moot halls, and court halls) where courts and assemblies convened, testimony was taken, decisions rendered, fines imposed, weights and measures housed, and records kept. The magnitude of the construction projects in relation to the small size and relatively meagre resources of many towns made the commitment to civic building all the more impressive.

And the point was to impress. Some buildings, such as the Amsterdam Town Hall, announced the surplus capital of prosperity as well as the power (briefly) to impose peace. In contrast, in other towns, spending funds for construction stretched a locality's coffers. The decision to build a civic hall reflected a need to symbolize a particular administrative reality that a municipality had a degree of autonomy and could collect taxes and convene judicial proceedings. Holding court also promoted commerce. Judicial sessions especially brought a great multitude of people to the town, not only for the conduct of business or in litigation, but also to partake in the public occasion provided by such meetings. Therefore, in addition to running its own local courts, English towns competed to host the assizes or quarter sessions so as to attract an influx that helped their innkeepers, shopkeepers, and farmers.

Civic halls, providing the stage for the ceremonial display of power, came to mark city centers. In seventeenth-century England, a parade of horsemen and coaches announced the approach of the circuit-riding justices from the King's Bench in London, who joined the local establishment in prayers and meals before setting down to business. By then, administering justice in civic halls had become the norm rather than the exception. As we have recounted, the pageantry and publicity that surrounded the work of these courts were not the result of democratic commitments to transparent and accountable decisionmaking by governing powers. Nor were judges independent of the executive branch. What the elaborate ritualism of civic ceremony aimed to make plain was the hierarchy of authority that enabled local rulers to give content to the practices with which they sought compliance. Buildings served not only as stages but also as constraints. Bringing rituals (theatrical performances included) indoors undercut the opportunities for subversive eruptions of large audiences gathering in outdoor spaces.

In Chapters [illegible] and [illegible], we examine how attributes of predemocratic adjudication influenced the development of democratic values and how democracy alters the work of courts as it also challenges their capacities. Here, we focus on some of the continuities between Renaissance town halls and the courthouses that came to replace them. For centuries after the [illegible] Zutphen engraving, courts provided sites for socializing and draws for commerce. They served to anchor local governance activities and to inculcate the value of deference to authority. One testament to those roles is a rich literature documenting courthouses over time and place, intersecting with more general analyses of the social meaning of civic spaces. Some accounts position the courthouse as a venue for dramatic encounters, while others are more skeptical, counseling against taking theatrical

Figure [illegible] Engraved title page, *Dutch Law and Practice in Civil and Criminal Matters* (*Practycke der nederlansche rechten van de daghelijcksche soo civile als criminele questien*) by Bernhard van Zutphen, [illegible].

dramaturgy too literally.[illegible] For example, in colonial Virginia, [illegible]-confrontation was rare, ceremonial oaths at the start of court day were as tedious as reading the fine print of a contract, and the court docket was enveloped in a monotonous litany of procedural motions uttered before a distracted audience that could barely hear or care.[illegible]

Whether boring or engrossing, courts defined the "status, rights, and obligations" of local residents.[illegible] Further, in eras before archives were commonplace, courts served as repositories for records of both personal and public life.[illegible] The wealth of surviving materials demonstrates the importance attached to the very creation of written records ritualizing authority.[illegible] In the United States, as in Europe, a court also marked the seat of local power. As an [illegible] account of the development of the state of Nevada put it: "A king without a kingdom, a general without an army, a county without a Court House." What are they[illegible] Thus, like the seventeenth-century burgomasters of Amsterdam, local leaders continued to establish notable public spaces in competitive efforts to bring people to towns, to draw attention to their prosperity, and to legitimate their authority. Committed to monumentality when resources permitted, communities deployed prominent architects to showcase their corporate identities and their legal authority.[illegible]

The deployment of courthouses to signify government was not simply an outgrowth of the expansion of political

and economic power. Rather, this special form of building reflects the intersecting interests of three professions lawyers, judges, and architects that generated the building type now known as a courthouse. Jurists pressed for unique sites in which to work, and architects sought commissions and crafted subspecialties (exemplified in the twentieth century by the Academy of Architecture for Justice) to mark their expertise in crafting this particular genre. Together, these professionals shifted courthouse layouts to elaborate a distinctive building type with separate spheres of circulation for various participants.

The old town hall or municipal building split into various structures, with prisons sited further afield, more capacious jails built to hold detainees, and courthouses distinguished from other edifices of law enforcement by prominent central settings and gracious architectural embellishments. The interior layouts gave formal recognition to the power of judges by putting them on pedestals and behind tables or benches, delineated the place of lawyers and judicial staff by assigning them special stations, and segregated observers behind railings. The designs not only reflected but also shaped professional identities through increasing the isolation of judges, their staffs, and lawyers from the other participants within courthouses and through the separation of courts from other buildings that provided different kinds of government services.

In the preceding chapters we focused on Justice as a symbol of law and government. Here we show how she came to compete with courthouses, which have become in her stead the major iconic markers of government. The growth in the numbers of courts and the size of the buildings reflects new understandings of whom law will hear and what law can do. Although jails and prisons have likewise proliferated, they are hidden from view, leaving courts as the primary public displays of law enforcement. Our example in this chapter is the development of courts in conjunction with the creation and expansion of the United States, and thus we sketch changes from the seventeenth century to the first decades of the twentieth century.

Building a New Legal System in the United States

A Grounding in Colonial and State Court Systems

The early courts in what became the United States date from the colonial era. Architectural historians identify the first building in North America designed for governmental purposes to be the Palace of Governors in Santa Fe, New Mexico; it served as the territory's executive office under Spain, Mexico, and the United States. During the seventeenth century, local magistrates or judges presided in houses, in taverns, or in buildings with layouts borrowed from churches and English town halls, capturing that their authority also rested on an amalgam of religious and secular legal precepts. Long-term incarceration of prisoners was not then routine, and detainees were generally kept in holding cells near or in these buildings.

Occasionally, structures were purpose-built to serve as either courts or jails and prisons. In those called courthouses, the central space was devoted to courtrooms, where rules of decorum sought to impose order and rules of address aimed to confirm the authority of presiding jurists. Judges often sat behind wooden tables, sometimes elevated. As professional roles and bureaucracies thickened during the eighteenth century, spaces began to be delineated for lawyers, clerks, sheriffs, and jurors, and sometimes the area for observers was set off by wooden bars.

Purpose Built Structures rom ouses and Taverns to Courts

When local communities prospered during the eighteenth century, their civic buildings became more substantial structures, usually made of bricks and adorned with towers and turrets. Although court spaces had once been homogenized with religious, commercial, or other public spaces, by the s the inside of the county courthouse could be mistaken for nothing else. A sense of what was proper for courthouses had developed as familiar formulae reassured onlookers that a building was meant to serve its particular purpose. Sometimes courts nested near local stores; at other times they were sited at a distance to create a new landscape of justice aiming to legitimize lawyers' claims of professionalism by defining law as separate from, and untainted by, market transactions.

One can read such buildings both as monuments to the growing clout of lawyers and judges and as efforts, born from distaste for unscrupulous lawyers, to imbue jurists with professional values by using the space to organize their interactions. Upholstered chairs designed by furniture makers denoted the distinctive roles and hierarchies of the various actors. The increasingly commodiously appointed rooms reflected not only the impact of lawyers but also the emergence of craftmakers producing new consumer goods and of professional architects influencing views about appropriate urban aesthetics.

Se re atin nteriors oles and ace

Law played a central role in shaping the identity of the United States, willed into being in the late eighteenth century through legal documents of separation from England and committed by its Constitution to add federal courts to the extant state court systems. Nineteenth-century lawyers and judges, embedded in the political structure and secure in their monopoly over the processes of courts, were invested in having places in which to ply their trade and to make plain the import of their work. Early courtrooms permitted a ready mix of participants and spectators but,

over time, courtroom interiors developed rigidly delineated spaces to enhance formality. Lawyers sought to be placed proximate to judges, and the public was moved a degree away. To denote the professionalizing of clerks, magistrates, and lawyers and the special status of jurors, □face-to-face proceedings were restricted to only a very few.□□□Moreover, some activities moved □backstage□ to enclosed judicial chambers and to clerks' offices.□□

The privilege of the insiders was visually confirmed by a barrier walling off those who lacked authority from entering the gated area without permission.□□Jury-based procedures did put some lay people in a □box□ (also set off by railings) near the front, close to lawyers and judges. Witnesses were also often situated close to the judge, with lawyers grouped about, confining drama and conflict, if they emerged. □Strict policing of the gates of the bar created a hard line of authority, which in turn led to the provision of bench seating for the public near the public entrance, sometimes supplemented by a public balcony above.□□□The public, however, was differentiated. In segregated state courthouses, if blacks were admitted, they were consigned to those upstairs seats or to standing alongside the walls.

By the nineteenth century, the rules of decorum and the special status of courthouses made plausible the term □Temples of Justice□ which provided a general reference to the Neoclassical style then in vogue and sometimes a specific acknowledgment of the influence of Thomas Jefferson's designs.□□Because designation as sites of courts gave communities resources and recognition, localities fought □courthouse wars□ to obtain □the honor of being the county seat.□□□Those ambitions were fueled in the westward expansion by federal legislation permitting counties to keep hundreds of acres as seats of government and to sell certain parcels exclusively to fund their □public buildings.□□□Thus settlers had opportunities to create □courthouse squares□ to embody their hopes (realized only some of the time) for permanence and prominence.

The patterns of building courthouses have been traced in several states. In Massachusetts, for example, between □□□□ and □□□□, every county in Massachusetts . . . acquired a new courthouse□ as buildings □devoted only to court proceedings and containing strictly specialized spaces such as jury rooms and judges' rooms took the place of multipurpose town houses and small courthouses.□□□Locations continued to provide connotations. Some courthouses were sited at a distance from commercial and other governmental functions (so as to be □distinct and isolated from the taint of commerce and politics□□□), and others were placed in town centers in self-conscious status-seeking efforts (akin to those of the Burgomasters of Amsterdam) to make the public building the largest in town. The physical embodiment of the □pride and resourcefulness of the community□ sometimes also represented the significant debt occasioned to fund such imposing structures.□□

□rchitecture and □dornment

The courthouses that sprouted around the United States in the nineteenth century were wildly eclectic□ multi-storied, turreted, towered, gabled□ as various architects embellished styles known as Greek Revival, French Second Empire, Italianate, Gothic, Neoclassical, Victorian, and Beaux-Arts.□□ Some buildings included a range of municipal services, while others, dedicated solely to holding court, were often placed in a cluster with other government buildings. One way to denote that a building housed a court was to display a statue of Justice□ often set aloft at the top of a tower or turret.□□

To capture some of the vast and varied buildings marked by a Justice, we reproduce a two-page brochure (figs. □□ and □□, color plate □□) of fifteen courthouses built in New York State between □□□□ and □□□□.□□Published in □□□□ by the Historical Society of the Courts of New York,□□the set includes four statues on the tops or the exteriors of courthouses,□□a few from interior murals and paintings,□□ and some displayed as part of replicas of the Great Seal of New York on which Justice is depicted.□□As this montage suggests, courthouses remained very important to community life into the twentieth century□ arguably serving as the □most prominent and widely experienced example of public architecture.□□□

A description from an account of Nebraska's ninety-three county courthouses explained how such buildings served □every public purpose, including political meetings, home talent plays, school and entertainment, school examinations, social and church gatherings.□□□Ohio's eighty-eight county courthouses formed □an essential part of its landscape and history□ (even as they are no longer sufficient to meet the demands for judicial services),□□ and a book dedicated to Minnesota reported that the state had more courthouses (eighty-nine) than counties (eighty-seven).□□The relevance of county courthouses continued in some areas into the twenty-first century□ made evident by comments of a then relatively newly elected governor of Indiana. He told a gathering of chief justices and administrators from all fifty state courts that, during his election efforts in □□□□, he had paid visits to all of the ninety-plus county courts of that state.□□

By the end of the twentieth century, the number of courts and the volume of matters brought to them were impressive. By one count, some thirty-six million cases (not including traffic violations or certain family conflicts) were filed annually in state courts around the country.□□California alone had □□□ buildings with trial facilities in its fifty-eight counties; more than □,□□□ courtrooms provided □□ million square feet of usable space.□□

Juridical Privile□e, □□clusion, and Protest

Before embracing either an uncomplicated image of courthouses as cheerful community centers or the critical stance that they embodied professional prerogatives, one

Figure ⍰⍰ Brochure for Lady Justice banner exhibit, Albany, New York, Summer ⍰⍰⍰⍰.
Photographer and designer: Teodors Ermansons.

Image reproduced with permission of the New York Court of Appeals. See color plate ⍰⍰.

also must account for their role as exclusionary sites of privilege to which all were not welcome. As a volume dedicated to courthouses in California explained, ⍰African Americans were barred by law from giving testimony in California courts until ⍰⍰⍰⍰; Asians and Native Americans were excluded until ⍰⍰⍰⍰.⍰⍰⍰ Courts not only segregated their spaces by walling professional people away from laypeople; in some parts of the United States, they also sorted people by race. In several Southern states, the courts were segregated, de jure or de facto,⍰⍰ and blacks were consigned either to standing or sitting in a back section or upstairs. Moreover, courts were not only sites of discrimination, but also *sources* of legal rulings upholding that regime.⍰⍰

These practices lasted well into the twentieth century. As we discussed in Chapter ⍰, Jackson, Mississippi's federal courthouse featured a segregated scene on its walls (figs. ⍰/⍰⍰, ⍰/⍰⍰ and color plate ⍰⍰). When trying a case in Jackson, Mississippi in the ⍰⍰⍰⍰s, Constance Baker Motley observed that members of the black community assumed that the federal courthouse would be segregated and were surprised to learn that, unlike in the state courts, they could take seats.⍰⍰In Virginia in the early ⍰⍰⍰⍰s, Ford T. Johnson Jr. refused to comply with the request of a bailiff who had asked him to move to the ⍰section reserved for Negroes.⍰⍰⍰ The City Attorney for Richmond, Virginia defended the ⍰long established practice⍰ of segregated seating on the grounds that it avoided friction and preserved ⍰order and decorum in the courtroom.⍰⍰⍰ He explained to the United States Supreme Court that the ⍰same number of seats ⍰were⍰ available for citizens of each race⍰But by then, the Supreme Court had already concluded that segregation of public facilities was unconstitutional and invalidated Mr. Johnson's contempt conviction for refusing to move out of a section reserved for ⍰Whites.⍰⍰⍰

Mr. Johnson's quiet protest has been paralleled by noisier dramas, such as when the citizens of Massachusetts rebelled

FIGURE [illegible] Brochure for Lady Justice banner exhibit, Albany, New York, Summer [illegible].

See color plate [illegible].

in the nineteenth century against the enforcement of federal laws that required the return of fugitive slaves to their owners. In [illegible], [illegible]two women, detained as slaves, were rescued from the Boston courthouse during their trial.[illegible] The [illegible]mainstream Boston newspapers[illegible] recording distress at the disruption, insisted on the [illegible]importance of sustaining the dignity and supremacy of the public tribunals'[illegible] on which the state depended.[illegible] That act of resistance came in the name of liberation, but other mobs have stormed courts and threatened to take African-American defendants away to lynch them. Such violence[illegible] recurrent through the first part of the twentieth century[illegible] is now kept at bay, in part by policing the space. Legislation bans popular protests within a certain distance of a courthouse.[illegible]

Marking a [illegible]Federal Presence[illegible]

During the pre–Civil War period, the federal court system was a small addition to the pre-existing state courts that had grown from the colonial period.[illegible] The Declaration of Independence had listed as one of its grievances that English judges were beholden to the Crown.[illegible] The [illegible] United States Constitution, in contrast, provided a measure of insulation by giving judges security of tenure during good behavior and salaries that could not be diminished.[illegible] The Constitution also created one Supreme Court but, by way of a compromise about what kind of lower court system to craft, the Constitution left to Congress decisions about when to [illegible]ordain and establish[illegible] lower courts.[illegible] The Congress did so in the First Judiciary Act of [illegible] by creating a two-layer system.[illegible]

Each state was given a single trial-level judge, who was to [illegible]reside in the district for which he was appointed[illegible] and to sit as the [illegible]district court[illegible] within its territorial boundaries.[illegible] (In [illegible], Congress added a judge for the District of Columbia.[illegible]) Congress also created three [illegible]circuit courts[illegible] which had a mix of trial and appellate jurisdiction. After [illegible], each circuit court was staffed by district judges joined by

one of the Supreme Court justices ☒riding circuit.☒☒ While this system might have been ☒economical☒ it did not prove pleasant.☒☒ Unlike the stately parades described for the arrival of English judges who came to town, the accounts of the movements of justices in the new America report inelegant and, given road conditions, at times unsafe transit.☒☒

Borrowin☒ Space, ☒ules, and ☒dministrative Support

In terms of the place in which the justices of the United States Supreme Court presided, no building was dedicated to their exclusive use when they first began their work in New York or moved to Philadelphia, or thereafter to the nation's capital. In New York, the justices camped in a market hall; in Philadelphia during the ☒☒☒☒s, the justices worked inside city hall, borrowing the courtroom of that state's Supreme Court.☒☒ (There, acting in its constitutional capacity to exercise ☒original jurisdiction,☒ the United States Supreme Court had a few jury trials.☒☒) Upon moving to Washington, the justices first worked in a committee room inside the Capitol and then took up residence in ☒☒☒☒ in the remodeled former chambers of the Senate.☒☒ Thus, although the Congress and the President had ☒their own distinct accommodations, the Supreme Court made do with borrowed space for fourteen decades☒☒☒ until ☒☒☒☒.

As for where the justices alighted when they rode circuit, ☒designating places of courts ignited political conflicts between municipal competitors☒ just as localities in the states fought to use court sitings to mark (and to make) their import.☒☒ But even when a federal court was ☒seated☒ in a designated spot, federal judges presided in borrowed quarters and used local hotels, homes, or state buildings☒☒ whose availability ☒depended on cooperation from a separate government☒☒☒ the host state. The federal justice system was similarly dependent on local jailers from whom it rented space, sometimes on an as-needed weekly basis.☒☒

The physical environment made plain what the Constitution's drafters had known well☒ ambivalence surrounded the making of a national judicial force. To cushion the potential abrasion, federal courts assimilated local litigation practices by using the procedural rules of the various states in which they sat. Thus, the federal district court in Virginia operated as did the state courts there, while the federal court in New Jersey relied on New Jersey rules.☒☒ But relying on state procedures and borrowing state housing and jails did not avoid all conflicts. The federal courts brought some forms of federal law that provoked animosity in some jurisdictions, such as the opposition in Massachusetts to the enforcement of national fugitive slave laws.

Just as judges shared space for their work, they also borrowed administrative support from Executive Branch institutions that were not singularly focused on their needs. In ☒☒☒☒, Congress authorized its new Department of Treasury to deal with all finances of the new government, including those of federal judges.☒☒ The requirement that clerks of the federal courts provide a list of all judgments to which the United States was a party marked the beginning of a measure of central recording. In ☒☒☒☒, responsibilities for federal court administration shifted from Treasury to the newly created Department of the Interior,☒☒ authorized to pay the bills for renting spaces for judges as well as for their salaries and travel. Between ☒☒☒☒ and ☒☒☒☒, the State Department also played a role, issuing commissions to and keeping records on those persons appointed to serve as federal judges.☒☒

Custom ☒ouses, Marine ☒ospitals, and Post ☒☒ces

The United States Constitution did contemplate some dedicated spaces for and some construction by the federal government. Article ☒, Section ☒, authorized Congress ☒to establish Post Offices and post Roads☒ as well as to create a capital city and to acquire land for both civilian and military purposes (☒the Erection of Forts, Magazines, Arsenals, dock-Yards, and other needful Buildings☒). The Constitution also stated that Congress could implement its various powers by making all laws ☒necessary and proper☒ to their effectuation.☒☒ The work of building fell under the auspices of the Treasury Department and Customs Services that, like the federal judiciary, came into being in ☒☒☒☒. In that year, Congress also created a fund for marine hospitals to take care of ☒men, who, by their labor and perth in peace and war, contribute so largely to the wealth and power of the nation.☒☒☒

Thus, before federal post offices and courthouses became familiar outposts of the national government, the first wave of buildings that created what Lois Craig termed a ☒federal presence☒ across the country were custom houses and marine hospitals,☒☒ joining the other national buildings in Washington, D.C., that were dedicated to the legislative and executive branches.☒☒ During much of the nineteenth century, Congress proceeded in an ad hoc fashion through an independent authorization for each construction project,☒☒ some of which also required cooperation from states that owned the parcels of land to be purchased.☒☒☒ Commissions awarded in this piecemeal process by Congress varied; sometimes the legislature prized ornamentation, at other points economy, and, on occasion, sought to control the designs.☒☒☒

As revenues grew and the nation gained a modicum of stability, ambitions for more building followed. Like their European predecessors, the leaders of the new country were self-conscious about their image. Repeatedly, they saw the best expression of the virtues of the United States to be captured through a somber architectural Classicism acknowledging the country's debt to ☒the ancient Greek republic.☒☒☒ In ☒☒☒☒, President Thomas Jefferson named Benjamin Henry Latrobe to be the ☒Surveyor of the Public Buildings☒ Latrobe designed and supervised the construction of the Capitol and the expansion of the White House.☒☒ By the ☒☒☒☒s, as both the federal budget and the professions related

to buildings grew,[illegible] Robert Mills [illegible] served more or less officially[illegible] in a position sometimes called Architect of the Public Buildings.[illegible] Mills designed several custom houses as well as the George Washington Monument.[illegible] Mills was committed to making Jefferson's ideal of classical architecture the [illegible]national style[illegible] and [illegible]when the full temple form was not used, at least the great colonnade was.[illegible] Mills was also a source of centralization in that he sought to impose standards, such as requiring that buildings be made of materials more fireproof than not.[illegible]

Congressional legislation funding the various projects of the first half of the nineteenth century made minimal mention of courthouses. Some federal legislation authorizing construction of custom houses did make reference to paying for furnishings for judges[illegible] thus revealing the assumption that a courtroom was to be tucked inside. In addition, Congress occasionally provided expressly for the construction of courts and jails in its territories.[illegible]

By mid-century, the federal government owned eighteen marine hospitals and twenty-three custom houses, and fifteen more buildings were underway.[illegible] The meager references to facilities for judges were appropriate when considered against the backdrop of the size of the federal courts of that era. In [illegible], some thirty-seven federal trial judges were dispatched to the forty-five district courts in the states,[illegible] including two to California, which had gained statehood that year.[illegible] Beginning around [illegible], government planners called specifically for courthouse construction.[illegible] That interest in courthouses dovetailed with new goals[illegible] for more federal building in general and for the centralization of decisionmaking about such building. In [illegible], the Treasury Department created a unit called the Office of Supervising Architect, which affected the shape of structures for the nation in the century that followed.[illegible]

The government's ambitions had to be put on hold for a period, as the violence and financial stress of the Civil War required a hiatus in national construction. But in the war's aftermath, two creations of the first Congress of [illegible] the lower federal courts and the Treasury Department[illegible] came into closer contact as Congress repeatedly turned to the federal courts as instruments for enforcement of federal norms.[illegible] In [illegible] Congress gave federal courts authority to hear habeas corpus petitions from individuals held in state custody;[illegible] in [illegible] Congress endowed the federal courts with the power to hear cases alleging deprivations of civil rights;[illegible] and in [illegible] Congress authorized federal courts to exercise [illegible]general federal question jurisdiction,[illegible] enabling them to hear various kinds of claims alleging rights under federal law as long as a certain amount of money was in controversy.[illegible]

The implementation of federal rights required more organization for the lawyers representing the national government. In [illegible], Congress created the Department of Justice to add a layer of control over the dispersed system that had long existed by virtue of individual appointments, made by the President, of United States Attorneys for each of the federal districts.[illegible] The [illegible] legislation also centralized most of the court-related work in the Justice Department by transferring [illegible]supervisory powers . . . over the accounts of the district attorneys, marshals, clerks, and other officers of the courts of the United States[illegible] from the Secretary of Interior to the Justice Department.[illegible] To gain efficacy in requesting funds from Congress on behalf of the judiciary, the Justice Department began to compile statistical information about the federal courts. Beginning in [illegible], the Attorney General provided annual reports to Congress on cases pending as well as those terminated. Hence, we know that in [illegible] almost [illegible],[illegible] cases were on the docket and, by [illegible], that number had risen to just under [illegible],[illegible].[illegible]

The number of judges increased along with the docket. While several federal districts continued to have only one judge, between [illegible] and [illegible], Congress gave thirteen states a second judgeship.[illegible] The result was some sixty-four judgeships by [illegible]. That expansion was part of the growth in the paid civilian employment of the federal government. In [illegible], some [illegible],[illegible] individuals were employed; by [illegible], almost [illegible],[illegible] were on the federal payroll.[illegible]

New construction was a complementary technique to materialize this new federal authority. [illegible]Between [illegible] and [illegible] . . . the federal government built nearly three hundred new buildings throughout the Union.[illegible] Spaces inside (and sometimes whole buildings) went to courts, used by Congress as a colonizing force to make meaningful the North's victory over the South. Appropriations for buildings rewarded loyal members of Congress by giving them funds[illegible] [illegible]federal presents[illegible] to bring to their local constituents. ([illegible]For example, Memphis received a courthouse even though no federal courts were held there.[illegible])

In the early part of the twentieth century, Congress [illegible]opened the floodgates . . . by inventing . . . the [illegible]omnibus' public building bill, which replaced for the most part the previous practice of enacting individual bills for each building.[illegible] In the [illegible] act alone, Congress supported more than [illegible] new buildings. That [illegible]wholesale authorization[illegible] gave every member of the House [illegible]the possibility of providing their district with a federal building, regardless of need.[illegible] (Not until [illegible] did Congress authorize surveys for [illegible]needs[illegible] prior to appropriations.[illegible]) The chartering of new judgeships to sit in those buildings was a part of the patronage packet[illegible] creating jobs that Presidents, with senatorial input, doled out.[illegible]

Given these pork-barrel opportunities and hopes for commercial development, towns and cities sought to be the sites of federal construction.[illegible] Congressional records reflect regular calls for courthouse construction from state officials asking for permanent accommodations for their federal judges,[illegible] as well as occasional reports from grand juries complaining of a lack of ventilation and space.[illegible] In response, [illegible]appropriations for courthouses and other federal buildings . . . often reflected local political considerations

rather than the requirements of the court or the design decisions of the supervising architects, several of whom resigned in exasperation. The impact can be measured in various ways. One is a building count. By , the federal government had an inventory of almost three hundred buildings, with another ninety-five projects underway.

Professional Architects and Public Patronage

Localities were not the only ones lobbying for funds. Private architects insistently sought a piece of the public action. Within a decade of the creation of the Office of Supervising Architect in the s, architects aimed for federal patronage as they also sought to avoid government control. In , the American Institute of Architects (AIA), which had (despite its name) functioned more as a local New York group until then, became national in scope and ambition as it pressed for government design contracts for private architects. How to get awards was a matter of debate, as some but not all AIA members were enthusiastic about competitions for building contracts. Accusing the Office of Supervising Architect of producing repetitive designs (with an apparent sameness . . . even if picturesque), private architects argued that their proposals, positioned as more adventuresome and inventive, should be funded by the government. The Office of Supervising Architect also faced other accusations of wasting public money and of corruption.

When the AIA was launched in the s, its membership consisted of twenty-three men; the census reported people identified as architects. By , more than , architects were counted in the census, and ten architectural journals served their specialized interests. That growth helped to sustain the AIA's legislative battle . . . against the federal architecture program. The AIA was occasionally victorious via congressional directives requiring, in specific bills, that private architects provide the building designs. More generally, those efforts came to fruition with the passage in of legislature called the Tarsney Act that enabled the federal government to use independent architects selected through competitions.

For a time, the victory was more on paper than in practice. Government officials were not eager to implement the Tarsney Act (which had used language of discretion rather than requiring the selection of private architects), and relatively few projects were immediately affected. In , over the objections of the AIA but in the wake of accusations that competition awards were biased in the AIA's favor at the expense of taxpayers, the act was repealed. In its stead, a year later Congress delegated to its Public Buildings Commission the task of recommending processes for decisionmaking on the construction of federal structures, and the resulting procedures yielded a mix of private and public designs.

The rate of building in the pre–World War I era was impressive. In , about building projects were underway; by , the number of projects had grown to , producing a new building every fourth day in the year. By the s, enough architects were government-based to create their own Association of Federal Architects that aspired to improve the esprit de corps of civil service personnel involved in construction.

Although the Tarsney Act did not last, the preference for private design that it embodied did. In and again in , just after the Depression began, Congress funded buildings and renewed authorizations for the Department of Treasury to use private architects as it desired. While a boom in private building made government contracts less appealing for a time, the market crash of the s left many eager to gain commissions under the New Deal. The various struggles for control over design, episodic challenges to a particular person serving as the Supervising Architect, occasional allegations of mismanagement or of corruption in particular projects, and the transformation of public needs in the wake of the Depression resulted in an administrative reconfiguration.

In , the Office of Supervising Architect was folded into the Public Buildings Administration. In , that entity became part of the General Services Administration (GSA), which continues to be the government unit charged with overseeing federal buildings, from land purchase to construction and maintenance. Functioning now as the landlord for other federal agencies, the GSA is (as detailed in Chapters and) sometimes a co-venturer and other times in conflict with the federal judiciary.

Courts: From California to the New York Island

Many of the best-known examples of national building are in Washington, D.C., but our focus is the work that courthouse facilities play in demonstrating changing roles of judges and of governments. As this overview has detailed, federal judges were (and are) a small set of individuals in the federal bureaucracy. In the late nineteenth and early twentieth centuries, many district judges remained solo actors, with one assigned to states as large as Indiana, Massachusetts, and Maryland and hardly needing a building of his own. But handsome buildings could offer prestige to the federal courts, which previously had met in an assortment of state offices and rented buildings.

Thus, for several decades after the Civil War, courtrooms were built into multi-purpose federal spaces that, akin to Renaissance town halls, often combined the functions of courthouse, customhouse, and post office. These single structures housing various federal services provided tangible evidence of the national government's new responsibilities and a reminder of its supremacy, as Washington sought to extend its authority . . . to every region of the

Appellate Division, First Department

This mural of Justice by artist Robert Reid was completed in 1899 and is one of a series of murals painted on the walls of the courthouse of the Appellate Division, First Department, on Madison Avenue in New York.

Ontario County Courthouse

On the dome of the Ontario County Courthouse in Canandaigua stands this statue of Lady Justice, crafted by Dexter M. Benedict, of cast aluminum covered in gold leaf.

Appellate Division, First Department

This Lady Justice is part of the central segment of a 62-foot wide mural. The transmission of the Law by H. Siddons Mowbray. Completed in 1899, it graces the lobby of the courthouse of the Appellate Division, First Department, on Madison Avenue in New York.

Bronx County Courthouse

A Works Progress Administration (WPA) project designed by Max Hensel and Joseph Freelander, Bronx County Courthouse was completed in 1934. This figure of Lady Justice appears on the Great Seal of New York repeated on all four sides of the building.

Court of Appeals Hall

This Lady Justice is carved into the side of a table in the H.H. Richardson-designed courtroom now located in Court of Appeals Hall in Albany. It was wrought to Richardson's specifications by craftsmen working in the basement of the New York Capitol.

Borough Hall

Brooklyn Borough Hall is an 1835 Greek revival building. In 1902, under the direction of architect Axel Hedman, a new ceremonial courtroom in the beaux-arts style was built for the Appellate Division, Second Department. This Lady Justice is a carving on the courtroom's bench.

Chenango County Courthouse

Chenango County built its Greek revival courthouse in Norwich in 1837 and crowned the structure with a seven-foot white pine statue of Lady Justice. In 1977, the original statue was restored and moved inside the courthouse. This replica now graces the dome.

New York County Courthouse

Rendered in trompe l'oeil, this Lady Justice decorates the pendentives supporting the courthouse dome. It was painted in 1934 as part of the Works Progress Administration (WPA) by artist Attilio Pusterla, born in Italy in 1862.

Borough Hall

Brooklyn Borough Hall was designed in 1845 by architect Gamaliel King, a major figure in Brooklyn civic and ecclesiastical architecture in the 19th century. The statue of Justice, part of the original plan, was finally installed on top of the cupola in 1988.

Court of Appeals Hall

This depiction of Lady Justice is part of the "Romance of the Skies" mural that adorns the inside of the dome in Court of Appeals Hall. It was designed and painted by Eugene F. Savage and was installed during the 1939 renovation.

Ontario County Courthouse

Located in Ontario County, this bronze statue of Lady Justice may have been the model for or a replica of a statue of Lady Justice that stood atop the courthouse dome.

Montgomery County Courthouse

This Lady Justice is part of the Great Seal of New York installed in 1910 on the gable above the entrance to the old Montgomery County Courthouse in Fonda, New York.

Court of Appeals Hall

This bronze of Lady Justice now hangs on the marble walls of the main lobby in Court of Appeals Hall. In 1917, when State Hall became Court of Appeals Hall, the bronze coat of arms was installed on the exterior wall over the main entrance.

Kings County Supreme Court

Carved into the stone of the 1958 Kings County Supreme Courthouse, this Lady Justice graces the limestone and granite building designed by Shreve, Lamb & Harmon, best known as the designers of the Empire State Building.

Onondaga County Courthouse

When Archimedes Russel of Syracuse, New York designed the Beaux Arts Onondaga County Courthouse in 1901, Gustav Gugenon was commissioned to paint this mural of Lady Justice.

country.[illegible] As for their aesthetics, of [illegible]the more than two hundred and fifty [illegible]federal[illegible] buildings erected . . . between [illegible] and [illegible] the predominant style was some form of medieval architecture to which each architect gave his own interpretation.[illegible] In contrast to the pre–Civil War era buildings self-consciously devoted to classic Greek design, those of the later part of the nineteenth century were eclectic, with turrets and towers deployed to varying effects. Buildings ranged from Romanesque fortresses to classical Renaissance and Gothic knock-offs as different Supervising Architects [illegible]scrambled their historical allusions.[illegible] The [illegible]panoply of federal buildings stretching across the nation[illegible] shared only [illegible]the common bond . . . that they all owed their parentage to a single office in Washington.[illegible]

Some of the results can be seen by looking at federal buildings around the United States in the years from shortly before the Civil War through the [illegible]s. During that period, federal construction was under the aegis of the Office of Supervising Architect in the Treasury Department, which enlisted both public and private architects for design.[illegible] Further, with the benefit of the recordkeeping on the federal docket begun in the [illegible]s under the fledging Department of Justice, we can trace the rise not only of buildings but also of the numbers of lawsuits filed. In the [illegible]s, about [illegible],[illegible] civil and criminal cases were filed. By the [illegible]s, court business had grown to include some [illegible],[illegible] cases.[illegible] Through the mix of new buildings and new cases, courthouses themselves came to replace Justice as icons of government. To document this proposition, we offer an abbreviated travelogue of the rise and proliferation of such edifices around the United States.

Statehood for Texas and a New Federal Building in Galveston

We begin with the [illegible] United States Custom House in Galveston, Texas (fig. [illegible]),[illegible] because it was the [illegible]first federally owned building for civic purposes[illegible] that was built in Texas after it gained statehood in [illegible].[illegible] In [illegible], legislation authorized construction for the [illegible]accommodation of the custom-house, post-office, and United States courts[illegible] and directed that the building be made of brick.[illegible] Providing space for several uses, the structure's title[illegible] Custom House[illegible] denoted the centrality of the [illegible]oldest federal agency[illegible] to the national fisc in the era before the Sixteenth Amendment (ratified in [illegible]) authorized Congress to create a federal income tax system to [illegible]lay and collect taxes on income, from whatever source derived.[illegible]

Also evident in the two-story Classical Revival–style building was the success of the senators from Texas, who in [illegible] had obtained an appropriation of [illegible],[illegible] from Congress to fund construction that was to entail the [illegible]best quality mahogany[illegible] for interior counters.[illegible] Situated not far from the waterfront, the exterior walls were made (as required) from hand-fired bricks, its columns were Ionic and Corinthian, and most of the exterior decorative elements were cast iron, fabricated in New York and sent to Galveston.[illegible]

The building reflects the imprint of the Office of the Federal Architect. The initial plans were executed by Ammi Burnham Young, who served as Supervising Architect from [illegible] to [illegible] and who created similar (and in some instances close to identical) multi-use federal facilities in Cincinnati, Ohio; Newark, New Jersey; and Oswego and

Figure [illegible] United States Custom House, Galveston, Texas. Supervising Architect: Ammi B. Young. [illegible]; converted for use as a federal courthouse in [illegible].

Image reproduced courtesy of the National Archives and Records Administration.

Buffalo, New York.[illegible] Under Young's tenure, the federal style drifted away from the classicism of Thomas Jefferson and Robert Mills toward [illegible]Renaissance villas[illegible] that came to [illegible]house the federal presence.[illegible]

The Galveston building weathered the Civil War,[illegible] and its changing uses over time capture the variation in the demand for services provided at the national level. Initially both a custom house and post office with a courtroom tucked inside, the building was converted into and renamed a federal courthouse in [illegible]. That space proved insufficient and, in [illegible], a new U.S. Post Office, Custom House, and Court House opened that remained in use throughout the remainder of the century.[illegible] (The [illegible] building now serves as the home of the Galveston Historical Foundation.)

Building and Rebuilding in Des Moines and Biloxi

This pattern of building, recycling, and building anew can be found repeatedly, as shown by a few examples drawn from around the country. In [illegible], a United States Courthouse and Post Office (fig. [illegible]) designed by Alfred B. Mullett (the [illegible]best known of the fifteen men who served as supervising architect of the Treasury Department[illegible]) opened in Des Moines, Iowa. That building was enlarged soon thereafter but, in [illegible], the federal government urged new construction and, in [illegible], Congress allocated funds in its Public Buildings Act.[illegible] When the next building (designed in Classical Revival style) opened in [illegible], it was named a [illegible]courthouse[illegible] even though it also housed several offices for administrators from the Departments of Agriculture and Commerce) as well as a post office.[illegible] In [illegible], the federal government wanted more space and built an annex.[illegible]

James Knox Taylor, who held the position of Supervising Architect from [illegible] until [illegible], designed the three-story [illegible] Post Office, Court House, and Custom House for Biloxi, Mississippi (fig. [illegible]). He was personally responsible for courthouse designs at many sites ([illegible]nearly all . . . classical or colonial revival[illegible]) and oversaw the selection of private architects for the designs of thirty-five other federal buildings.[illegible] That [illegible]Taylor could provide such a diversity of high-quality buildings . . . at the breakneck speed demanded by the largess of Congress, is a tribute to his talents both as architect and administrator.[illegible]

The Biloxi building was one of many that sparked complaints of [illegible]pork-barreling[illegible] as new federal construction outpaced the growth in population and in the volume of services.[illegible] The initial low volume of business may explain

why the [illegible] arched and columned building remained in use until [illegible], when a new United States Post Office and Court House was built. The [illegible] building became Biloxi's City Hall.[illegible] In [illegible], the court for the Southern District of Mississippi moved to the town of Gulfport, where, in [illegible], the Judge Dan M. Russell Jr. Federal Building and Courthouse opened. (Its [illegible]abundance of natural light[illegible] was described as fostering [illegible]a sense of openness between the public building and the surrounding community.[illegible])

Movin[illegible] [illegible]urther, [illegible]arther, and [illegible] [illegible]ther

Westward Expansion: Denver, Missoula, and San Diego

In [illegible], a three-story federal building, once seen as monumental, opened in Denver, Colorado. Designed by two men, Mi[illegible] in E. Bell and Will. A. Freret, who served as Supervising Architects, the building (fig. [illegible]) was crowned with a tower at its top and appointed with columns.[illegible] Yet by [illegible], it was considered [illegible]outdated,[illegible] and shortly thereafter Congress authorized a new building.[illegible] As supporters in the Senate explained, Denver was the [illegible]largest city between the Missouri River and the Pacific coast. It was therefore the capital, as it were, of a vast empire.[illegible] The Senate Report also cited complaints of a federal judge that the building's other uses interfered with the court: [illegible]The post-office draws a crowd at all hours of the day, and it is the favorite point for newsboys and vendors, whose cries constantly disturb the sessions of the court.[illegible]

The Tarsney Act had by then shifted more work to the private sector and, after funds were appropriated in [illegible], Supervising Architect James Knox Taylor picked a private firm to design the structure (fig. [illegible]). Completed in [illegible] and called, when it first opened, the Denver United States Post Office and Courthouse, the building is four stories high and occupies a city block.[illegible]

The building remains in use. For several decades, the press of work in the United States Postal Service resulted (with the exception of one courtroom) in devoting the structure to that use. But by [illegible], the Post Office had left and the facility, reopened after renovations, was renamed in honor of Byron R. White, the first person from Colorado to serve on the United States Supreme Court. The revamped facility serves as the headquarters for the Court of Appeals for the Tenth Circuit; it houses four appellate courtrooms and one trial courtroom.[illegible]

The size, scale, and elegance of the Neoclassical architecture made the [illegible] building a major landmark of the federal government. The structure features a three-story portico that is formed by sixteen symmetrical Ionic columns decorated with eagles at their tops. The classical theme celebrating federal power continues in the street-side inscriptions, invoking Cicero in Latin ([illegible]Lex Nemini Iniquum, Nemini Injuriam Facit[illegible] [illegible]The law causes wrong or injury to no one[illegible]) and the Magna Carta ([illegible]Nulli Negabimus, Nulli Differemus, Jutitiam[illegible] [illegible]To no one shall we deny justice, nor shall we discriminate in its application[illegible]).[illegible]

The classics return inside, with four Latin inscriptions in a courtroom now used by the district court. There inscribed are [illegible]Justitia Virtutum Regina[illegible] (Justice is the Queen of Virtues); [illegible]Justitiae Soror Fides[illegible] (Faith is the Sister of Justice); [illegible]Nemo Est Supra Leges[illegible] (No One is Above the Laws),

and ⊠Ita Lex Scripta Est⊠ (Thus is the Law Written).⊠⊠ In the original appellate courtroom, the judges hearing appeals look at the words ⊠Peace Dependeth on Justice⊠ while litigants looking at the judges can read the inscription ⊠Reason Is the Soul of All Law.⊠⊠⊠ On the walls of another room, once a library and now used as an appellate court, are the names of various lawgivers including Blackstone, Cicero, Moses, Justinian, Coke, Napoleon, and Grotius. (The first floor, once dedicated to the Post Office, has the names of famous Pony Express riders, Bill Cody included, carved in marble at both ends of the lobby.) Fasces⊠ the Roman symbol of governmental authority⊠ can be found throughout the building, dotting clocks and brass fittings for curtains.

Farther north, a Post Office and Courthouse in Missoula, Montana (fig. ⊠⊠⊠), shows both the imprint of Supervising Architect James Knox Taylor and the success of local politicians in bringing a federal building to the city less than thirty years after it was incorporated.⊠⊠ The town's newspaper called the ⊠classically-inspired⊠ three-story building in a Renaissance Revival style an ⊠ornament to the city.⊠⊠⊠ It was indeed a highly ornamented building, with arched entrances and two-story attached columns (pilasters) crowned with ornate Corinthian capitals. Completed in ⊠⊠⊠⊠, the federal building has also provided housing for the Northern Region of the United States Forest Service, in part as the structure was expanded in ⊠⊠⊠⊠, ⊠⊠⊠⊠, and ⊠⊠⊠⊠.⊠⊠

James Knox Taylor was also responsible for the U.S. Post Office and Customs House of ⊠⊠⊠⊠ in San Diego, California (fig. ⊠⊠⊠). When first constructed and not then called a courthouse, the building sheltered the federal district court as well as the Immigration and Naturalization Service and the Weather Bureau. Taylor thought the Spanish Colonial Revival building of stucco-brick masonry, adorned by ten two-story columns and crowned by a red tile roof, appropriate for the state's history as well as the ⊠climate and the desires of the people.⊠⊠⊠

Expanded in ⊠⊠⊠⊠, reconfigured after the Post Office left in ⊠⊠⊠⊠, and abandoned in the ⊠⊠⊠⊠s in favor of a new court and office complex, the building was renovated and returned to use as a courthouse in the following decades.⊠⊠ Those efforts garnered a ⊠TOBY⊠ (The Office Building of the Year) award for the GSA in ⊠⊠⊠⊠,⊠⊠ and another award in ⊠⊠⊠⊠ from a jury that worked under the umbrella of the GSA Design Awards Program and that was led by architect Moshe Safdie.⊠⊠

Offshore and Across Land: Puerto Rico and Alaska

Taylor designed another version of a Spanish Colonial Revival–style building for the territorial court in San Juan, Puerto Rico (fig. ⊠⊠⊠).⊠⊠ During its planning stages in ⊠⊠⊠⊠, the building was heralded by a newspaper as ⊠one of the largest and best buildings constructed by the American government in its insular possessions.⊠⊠⊠ Once again, pilasters mark the facade, and the roof is tiled, but the smaller windows and grill work, aimed at protecting the building from the winds and rains of the Atlantic Ocean, lend something of a fortress look to the ⊠⊠⊠⊠ building.

Augmented by an ⊠Art Deco high-rise addition completed in ⊠⊠⊠⊠⊠ the courthouse also provides space for the Court of Appeals for the First Circuit when it sits annually in Puerto Rico.⊠⊠Renamed in ⊠⊠⊠⊠ the Jos⊠ V. Toledo Federal Building and United States Courthouse, the building received a prize, in ⊠⊠⊠⊠, for preservation from the federal government's Society for History. Soon thereafter, the Academy of Architecture for Justice cited the design's reclamation for public use of the ⊠deep porches that shade the windows from the strong tropical sun⊠ and awarded it another prize.⊠⊠One could also see its massive structure as reinforcing the scope of federal power over the ⊠unincorporated territory⊠ of Puerto Rico, which remains in a complex relationship with the United States.⊠⊠

Moving from the Atlantic seaboard to the far Northwest brings us to the other territorial extreme of the United States, Alaska, which, during the same era, had a courthouse of very different dimensions. The former territory of Alaska's [illegible] United States Courthouse and Jail (fig. [illegible]) stood adjacent to the Bank of Alaska in Fairbanks.[illegible] This building was the second federal facility for this part of Alaska; a first, erected in [illegible], was destroyed by fire in [illegible]. Before then, the court had met [illegible]in the Episcopal log church and hospital,[illegible] as well as in a warehouse of the North American Trading and Transportation Company.[illegible]

Credit for both structures is given to James Wickersham, who served as the first judge of that part of the territory that spanned [illegible] square miles (half of Alaska) and stretched [illegible] miles from the [illegible]Arctic Ocean to the Aleutians.[illegible] As Wickersham explained, Congress had [illegible]empowered the district judge to reserve a tract of public land, forty by one hundred feet for a court-house site, and another of equal size for a jail.[illegible] With congressional authorization, Wickersham funded the first courthouse with license fees collected from saloons and other stores; the building cost [illegible].[illegible]

A second site in Fairbanks[illegible] which by [illegible] was the largest city in Alaska[illegible] was authorized; Congress eventually provided about [illegible] for construction.[illegible] By [illegible], the structure, seen by city officials as poorly constructed and in bad shape, was demolished. Its [illegible] replacement was an [illegible]Art Deco monument symbolic of the federal government's role in establishing Fairbanks.[illegible] That facility, built for [illegible], was used as a post office and courthouse from [illegible] until [illegible].[illegible]

Sky High in New York City

The tour ends with a return to the East Coast, where, in [illegible], a Neoclassical high-rise United States Court House (fig. [illegible]) for New York City was [illegible]among the first federal skyscrapers ever constructed.[illegible] The building is emblematic of the changes in the number of federal judges and of federal cases. Between [illegible] and [illegible], the number of federal judges rose from [illegible] to [illegible], and filings in the district courts increased from under [illegible] to some [illegible] cases annually.[illegible]

The building was designed by Cass Gilbert who, although a private architect, is likely the best-known [illegible]federal architect[illegible] for his design of the United States Supreme Court building, which also opened in [illegible].[illegible] Aspiring to create a monument in New York, Gilbert provided the courthouse with its [illegible]version of Saint Mark's campanile[illegible] in Venice. The New York Court House also has local referents, for it resembled the Nebraska State Capitol and the Custom House Tower in Boston.[illegible]

The New York City building houses judges who sit on the District Court for the Southern District of New York and on the Court of Appeals for the Second Circuit, overseeing federal decisions in New York, Connecticut, and Vermont. Colloquially called Foley Square (where it is sited), the building was named in [illegible] in honor of Thurgood Marshall, the first African-American to serve on that circuit before his appointment in [illegible] to the United States Supreme Court, where he remained until [illegible]. The Thurgood Marshall Courthouse rises [illegible] feet; its six-story base supports another two dozen stories above. Ten four-story Corinthian columns mark its entrance, and, like the frieze discussed in Chapter [illegible] in the United States Supreme Court, some [illegible]lawgivers[illegible] Plato, Aristotle, Demosthenes, and Moses[illegible] are on display on outdoor roundels shaped to look like antique coins.

The original structure had sixteen courtrooms; the expanded building contains thirty-five. Those spaces did not suffice, and, in the [illegible]s, an additional building[illegible] the Daniel P. Moynihan United States Courthouse, also known as [illegible]Pearl Street[illegible] (on which it sits)[illegible] opened. One commentator who worked in the [illegible] Gilbert building described its provision of [illegible]psychic income[illegible]: [illegible]Everyone who enters a Gilbert building designed for public use realizes that they have arrived at a significant place.[illegible]

Gilbert designed the New York City building as he was also working on what has become his signature edifice, the United States Supreme Court (fig. [illegible]). On October [illegible], [illegible],

the justices began hearing cases in the building, the first dedicated exclusively to their use. Credit for its existence is regularly given to William Howard Taft, who, after serving as President from [illegible] until [illegible], was appointed in [illegible] by Warren Harding as the Chief Justice. Taft found the [illegible]twelve rooms for offices and records . . . scarcely adequate[illegible] for the Court's work.[illegible] While serving as President, Taft had been a strident advocate for [illegible]a change in judicial procedure,[illegible] and as Chief Justice he carried that agenda forward while also pressing for the Supreme Court to have its own home. In a [illegible] appropriations bill for public buildings, Taft found a vehicle in which to insert authorization for the Secretary of the Treasury to [illegible]acquire a site for a building for the Supreme Court of the United States.[illegible]

When testifying before the House of Representatives in [illegible], Chief Justice Taft detailed his argument for the Supreme Court to have a building of its own. In part, his claims were functional. Taft noted that the courtroom provided in the Senate sufficed but the Supreme Court needed to have a [illegible]place for our consultations,[illegible] for [illegible]our records,[illegible] and for the lawyers who appeared before the court.[illegible] But Taft was also in the market for symbolism; he wanted a structure exclusively devoted to the Supreme Court to mark its [illegible]independent existence.[illegible] In the [illegible]s, the Department of Justice still provided all administrative services for the federal courts, yet Taft rejected the suggestion of sharing space. Noting that Department of Justice cases [illegible]comprise[illegible]d [illegible]about two-fifths[illegible] of the Court's docket and insisting on the need to [illegible]hold ourselves independent of the Department of Justice,[illegible] Taft offered the rhetorical flourish that [illegible]to be tied up with them would be a good deal worse than to be tied up with the Senate.[illegible]

The Architect of the Capitol would have been expected to guide the project, but Taft secured a seat for himself as Chief Justice (as well as for an associate justice) to serve on the new Supreme Court Building Commission authorized to oversee the design and construction.[illegible] Taft was chair, and the Building Commission hired Cass Gilbert, who had been President of the AIA from [illegible] to [illegible]. Gilbert also had a long relationship with Taft who, when President, had appointed Gilbert to serve as a charter member of the Commission on Fine Arts created in [illegible].[illegible] Moreover, Gilbert was a [illegible]loyal Republican.[illegible] Gilbert's [illegible] submission met Taft's expectations by proposing a courtroom of [illegible]impressive proportions and monumental style.[illegible]

In [illegible], Congress appropriated funds for a building of [illegible]simple dignity.[illegible] Some justices and architects later had reservations about its [illegible]chilly opulence,[illegible] and one called it [illegible]almost bombastically pretentious.[illegible] The Corinthian architecture, with [illegible]its semiotic allusions to Greek temples[illegible] aiming to evoke reverence,[illegible] returned to the style deployed for federal buildings during the early years of the Republic. Although Gilbert insisted that the [illegible]building's principal claim to beauty lies in its proportions, not its adornment,[illegible] it is also rich with iconographical detail. In addition to the frieze of the many lawgivers that, as we discussed in Chapter [illegible], prompted concerns in the [illegible]s for its depiction of Muhammad, the building has several sculpted Justices.[illegible] Other allegorical figures (such as [illegible]Liberty Enthroned, Guarded by the figures of Order and Authority[illegible] on its West Pediment) appear at its main entrance, and ten sets of bronze gates in the courtroom include scales, tablets (with the Roman numerals I–X), torches, eagles, acorns, oak leaves, and lions' heads.[illegible] As for the costs, the [illegible] final report filed on behalf of the Supreme Court Building Commission recorded their coming in about [illegible],[illegible] under the [illegible],[illegible],[illegible] that had been budgeted.[illegible]

Before [illegible]/[illegible], the building had [illegible],[illegible] visitors a year. By [illegible], the number hovered around [illegible],[illegible], augmented by more than [illegible],[illegible],[illegible] hits on its internet site.[illegible] The response from architectural critics has been mixed. John Brigham commented that the adoption of a classical form associated with the South was ironic in that it came at a time when [illegible]the traditional temple was least expressive of what courts in America were doing.[illegible] He argued that the triadic shape of the roof[illegible] as if law through doctrine con-

tained and deflected ⊠the discontent of the losing party⊠⊠ was belied by the shift toward rationalization and bureaucratization of justice.⊠⊠ As Paul Spencer Byard put it, Gilbert's ⊠problem was that the modernists were on to something very important . . . that the world had had enough of pomp and papering over.⊠⊠⊠Yet, over time, the building has come to be ⊠treated with almost excess affection . . . as officially old⊠ even though it is not very old.⊠⊠⊠One admiring writer is illustrative: ⊠Austere, gleaming white in all weather, it stands watch on Capitol Hill, a national monument to the virtues of clarity, integrity, and fairness.⊠⊠⊠

Architectural Statements and Obsolescence

When the collage provided by the images of these eleven federal buildings constructed between the ⊠⊠⊠⊠s to the ⊠⊠⊠⊠s is set against the backdrop of the pre–Civil War construction efforts, several propositions become clear. First, courts were not in the initial wave of federal construction; hospitals, custom houses, and post offices were. Only during the latter part of the eighteenth century did courthouses become a part of the effort to demonstrate the importance of the national government through the erection of distinguished buildings.

Second, the chronology illustrates the change in the kind of services provided by the national government. Once, major federal buildings were called custom houses, but that name is now relegated to architectural history as the function of revenue collection through import fees has been eclipsed by the national taxing authority. The successor nomenclature for federal government buildings was often ⊠post offices⊠ rather than ⊠courthouses⊠; the ⊠judicial, customs, and other federal functions⊠ were tucked inside rather than put on the nameplate.⊠⊠

Further, as the two Denver buildings of ⊠⊠⊠⊠ and ⊠⊠⊠⊠ (figs. ⊠⊠⊠ and ⊠⊠⊠) illustrate, many of what had been large-scale and impressive buildings in the nineteenth century were, in relatively short order, seen to be obsolete. A few were lost to fires, and some were torn down or recycled for other uses as politicians succeeded in getting resources for expanded replacements or augmentation.⊠⊠Moreover, the multi-function buildings were superseded by facilities dedicated to specific uses. Both postal and court services outgrew their allotted spaces and spun off into separate facilities, purpose-built and purpose-named.

Third, the span between the ⊠⊠⊠⊠s and the ⊠⊠⊠⊠s reveals the shift from the centralization of building services to diffusion through outsourcing. During the second half of the nineteenth century, the contours of the federal government gained definition at the same time as professionals in law and in architecture were also defining their own institutions and gaining sway. The building stock of the Office of Supervising Architect increased ⊠seventeen-fold⊠ in the forty years between ⊠⊠⊠⊠ and ⊠⊠⊠⊠.⊠⊠ And from the ⊠⊠⊠⊠s to ⊠⊠⊠⊠, the personnel of that office had increased more than forty-fold. In the ⊠⊠⊠⊠s, the Office of Supervising Architect consisted of two architects, ⊠one clerk, six draftsmen, and one bookkeeper-draftsman⊠; by ⊠⊠⊠⊠ it employed about ⊠⊠⊠ people, ⊠⊠⊠ in Washington and another hundred in the field.⊠⊠

Although the number of federal employees involved in building projects continued to rise, their control diminished. Federally employed architects designed projects during the first decades of the Office of Supervising Architect, but the AIA's several decades of efforts to dislodge them succeeded in the twentieth century and continues to do so in the twenty-first. Building design has been outsourced and, as we detail in Chapter ⊠⊠, so have court services.

Fourth, courthouses have come to the fore as monumental statements of government authority because the federal judiciary has had remarkable success in lobbying for these buildings. Credit for obtaining the funds from Congress must go (as we explain in Chapters ⊠ and ⊠) to the leadership of the federal judiciary working in conjunction with colleagues around the country. Credit for the infrastructure that generated that leadership goes to William Howard Taft, who not only pressed for a building for the Supreme Court but also laid the groundwork for the bureaucratic form of today's federal courts.

Taft helped to turn a scattered lot of federal judges into a corporate force able to forward its agendas, including need for more space. Decades later, Taft's worthy successor was Chief Justice William Rehnquist, who shepherded the development of the judicial administrative apparatus able to capture more than ⊠⊠ billion dedicated to courthouse renovation and construction. One feature of the late twentieth-century spate of federal building⊠ the names⊠ reflects the success of the first wave. During the first period of federal building, the point was to instantiate federal authority, and the buildings did so by putting the words ⊠United States⊠ front and center. By the later part of the twentieth century, federal structures referred to members of Congress or to judges in whose honor the facilities are named.⊠⊠That shift assumes that federal power is stable (no longer in need of announcing itself), so that buildings instead can be named after specific members of Congress funding the structure or after judges from a particular locality.

Fifth, art has taken a backseat to the architecture. Unlike the unified conception of architecture and art exemplified by the Amsterdam Town Hall, interior decorations in United States federal buildings were not generally planned at the outset.⊠⊠ Public commissions of major murals or sculpture have been ⊠occasional . . . and isolated.⊠⊠⊠ Although the federal government committed itself to an Office of Supervising Architect in the ⊠⊠⊠⊠s, it created no comparable national office for art during that century. Not until the twentieth century did a sufficient number of interests coalesce in support of national programs aiming to conceptualize ⊠American⊠ artists as offering a distinctive

aesthetic to be displayed at major public sites. Yet, as we detail in Chapters [illegible] and [illegible], the art is conceived to be [illegible] in [illegible] the architecture, a decorative element dominated by the buildings that are intentionally designed as the vehicles for didacticism about the justice system.

Sixth, the discussion of federal courthouse buildings needs to be put into a larger context historically, in part by way of a preview of the materials to come. Courthouses are both majestic and disproportionately salient on various metrics. The several hundred federal court facilities extant by the end of the twentieth century were a small subset of the national footprint, as measured by either the number of facilities or the area in square feet. In [illegible], the GSA oversaw [illegible] percent of Federal workspace, adding up to over [illegible] million square feet [illegible] (about half owned and half leased), resulting in what the GSA described as its supervision of the [illegible] largest office real estate portfolio in the world. [illegible] The inventory of federal buildings ranged from visitor centers and fish hatcheries to space labs; by the [illegible]s, more than [illegible],[illegible] buildings were on the roster. [illegible] Similarly (as discussed in Chapter [illegible]), the number of federal cases filed [illegible] some [illegible],[illegible] civil and criminal cases and another million or so bankruptcy petitions [illegible] was dwarfed by the volume in state courts and in federal agencies.

On the other hand, the resources devoted to federal courts bespeak their political and social import. To complete an understanding of these functions in contemporary times, more must be explained about the interactions among architects, artists, lawyers, judges, and politicians during the second half of the twentieth century, producing the largest federal building program since the New Deal.

8

Institutional Girth: In-House Administration, Research, and a Corporate Voice

The [illegible] Supreme Court building (fig. [illegible]) marked the ascendancy of the federal courts in the national pantheon of institutions and the beginning of a much greater expansion in the caseload, staff, facilities, and import of the federal judiciary. The building is emblematic not only of that court but also of the lower courts it oversees, the administrative structures it has sprouted, and the twentieth-century imagery that enshrined it as the model of how courts should look. The ambitions and achievements of federal judicial leaders can be seen through the twentieth-century history of the courthouses they brought into being. By the end of that century, the federal judiciary had succeeded in obtaining the [illegible]largest public-building construction campaign since the New Deal: a [illegible]-year, [illegible] billion effort to build more than [illegible] new Federal courthouses and significantly to alter or add to more than [illegible] others.[illegible]

To construct the narrative of this work entails tracking three interrelated streams of activity. One is the growth in federal adjudicatory authority, enabled by an institutional infrastructure shaped to respond to expanding dockets. A second is the expansion of the federal building program as the national government turned itself into a major real estate owner and manager. A third is the aspiration for a national identity expressed through architecturally significant buildings and government-funded art. Hence three agencies[illegible] the Judicial Conference of the United States with its Administrative Office (AO); the General Services Administration (GSA) with its subdivisions, the Public Buildings Service and the Art-in-Architecture Program; and the National Endowment for the Arts[illegible] come to the fore as they cooperated and competed for authority and for dollars to shape representations of the federal government and its justice.

William Howard Taft's Innovations

From his term as President through his time as Chief Justice, William Howard Taft was pivotal in generating an administrative apparatus and a collective judicial identity that, in turn, helped to document the need for new facilities. In classic Weberian fashion, the increasing number of buildings also provided a rationale for more resources in-house. Recall that through the [illegible]s, the federal judiciary relied on the Department of Justice for administrative services.[illegible]In [illegible], soon after Taft became Chief Justice, he complained in a speech to the American Bar Association about the isolation of federal judges[illegible] each left [illegible]to paddle his own canoe.[illegible] Taft's metaphor made the point that no structure wove federal judges into a collective body. Trial level judges, scattered around the United States, had little that linked them together in a shared enterprise. They used the diverse procedures of the states in which they sat; a federal judge in Connecticut relied on different rules of court than did a federal judge in New York, Texas, or California. And when judges wanted a clerk, a typewriter, or a travel stipend, they asked the Department of Justice.

Taft's agendas included increasing the number of federal judges and gathering them under his wing by adding the role of chief administrator of the federal judiciary to the chief justiceship. Taft lobbied Congress to authorize eighteen new lower-court positions for what he called [illegible]judges at large[illegible] (dubbed a [illegible]flying squadron[illegible]) that he, as Chief Justice, could dispatch to districts as needed.[illegible] Taft also sought authority and funding to bring senior judges together yearly in Washington, where their discussions of workload demands would help make the case to Congress for yet more new judgeships and support. Taft wanted a national procedural regime to supplant the practice of using the variety of rules in place wherever federal judges sat. Further, he sought to unify the treatment of cases, whether requesting legal or equitable relief.[illegible]To deal with the Supreme Court's docket, Taft wanted discretion to select cases through the device known as [illegible]cer-

tiorari, in which petitioners request that the court take a case, in lieu of the obligation under a system of mandatory jurisdiction to hear so many appeals. Over time (but with only some of these changes taking place during his lifetime), Taft's aspirations have materialized.

In 1922 Taft obtained congressional authorization to convene what was then called the Conference of Senior Circuit Judges, chartered to meet once a year in Washington to advise the Chief Justice on "the needs of each circuit and as to any matters in respect of which the administration of justice in the courts of the United States may be improved." Congress also created twenty-four new lower court judgeships which, given the 121 judgeships that had been authorized as of 1922, increased the workforce by more than a fifth.

But Congress did not accede to Taft's request to leave the assignments of those new judges to the discretion of the Chief Justice. As Taft explained, given conflicts over Prohibition, some worried that he would "send dry judges to wet territory and wet judges to dry territory." Instead, Congress specified (as it continues to do), line by line in legislation, what particular districts and circuits received new judgeships. Yet Congress did give the Chief Justice the authority, on a request from a borrowing court and with the permission of the lending court, to "designate" a judge to sit elsewhere temporarily. That power has since been used for hundreds of ad hoc assignments, deploying (in some measure as Taft had hoped) a "flying squadron" of federal judges to give relief to their sibling jurists in specific districts or circuits.

To garner the power to create shared federal rules, Taft worked with lawyers aiming to nationalize their profession. Just as architects had created the American Institute of Architects (AIA) in the 1850s and moved it to a national level in the 1890s, attorneys shaped professional organizations aimed at national markets. In 1878, the American Bar Association (ABA) was founded, and its annual conventions became occasions for setting agendas that included responding to "popular dissatisfaction" with the courts. In the first decade of the twentieth century, the ABA championed several projects, such as the crafting of legal ethical codes, discussed in Chapter 3, as well as "court reform" that promoted legislation to give federal judges the power to promulgate one set of nationwide rules of procedure. Strong populist opposition prevented enactment of such authorizing legislation until 1934, when Congress passed the "Rules Enabling Act" giving the Supreme Court the power to set forth such rules. In 1938, the Court issued its first set: the Federal Rules of Civil Procedure.

Those rules reflected concerns that the means of getting into court were overly cumbersome, intricate, and technical, reflecting the remnants of the English system's juridical categorization of causes of action. To lower barriers to entry, the reformers crafted a trans-substantive set of procedures that provided the same governing regime regardless of the kind of lawsuit (contract, tort, patent, federal statutory right) or the form of relief (damages or injunctions). Further, liberal rules of pleading and joinder permitted different kinds of claims and various parties to be brought together in a single lawsuit, thereby widening the parameters of lawsuits. In addition to relaxing the risk of procedural errors, the Federal Rules reshaped the course of lawsuits by adding a system of information exchange ("discovery") among parties in advance of trial, as well as an occasion (called a "pre-trial") for lawyers and judges to meet informally in advance to plan for trial.

Rulemakers did not only aspire to change how lawyers brought cases to courts. They wanted to shape how federal judges saw their role. But more than rules are needed to change behavior. The infrastructure that Taft had helped to build: the Conference of Senior Circuit Judges: created its own subcommittees and programs to implement new ideas. Energetic and evangelistic judges, who were committed to revamping the attitudes and practices of their peers, promoted a new vision of judging. By the 1930s, they had convinced their colleagues to create a "school for judges" to teach new ways of being judges: in terms of their daily practices in court and their persona vis-à-vis other branches of government.

Building the Administrative Apparatus

Under the leadership of a succession of Chief Justices (from Taft to Charles Evans Hughes to Harlan Fiske Stone and Fred Vinson), the Conference of Senior Circuit Judges pressed for more capacity to minister to its own understanding of judicial needs. In 1939, Congress permitted the judiciary to bring its management in-house by authorizing the creation of the Administrative Office (AO) of the United States Courts. Initially working with a staff of twenty, the AO took over tasks from the Department of Justice and the districts' own clerks offices. The AO expanded the data collected as it submitted budgets and oversaw the operations of the courts, from clerks to probation offices, from supplies to caseloads. In addition, the AO monitored congressional legislation related to the judiciary. Over time, the AO became the liaison between the judiciary and Congress, sometimes expressing views on behalf of the judiciary about pending proposals and other times initiating requests for legislation.

In 1948, a general recodification of federal statutes related to the federal courts produced a new name for the Conference of Senior Circuit Judges, which became the Judicial Conference of the United States. By statute, each of the chief judges of the now thirteen circuits gained a seat on the Judicial Conference. In the 1950s, Chief Justice Earl Warren persuaded that group to accede to adding representative district judges, such that one district judge is elected from each circuit. By serving as the chair of the Conference, the Chief Justice has significant forms of

authority that augment the powers of opinion writing on the Supreme Court.[illegible] The [illegible]Chief[illegible] appoints members to committees in a structure that has expanded over time. In the twenty-first century, the Judicial Conference has some twenty-five subgroups focused on projects ranging from rulemaking, facilities, technology, public defenders, and security to relations with judiciaries in other countries. The Conference uses formal voting rules as it approves policy positions on behalf of the judiciary.

In [illegible], the judiciary's bureaucratic apparatus expanded through the congressional addition of another entity[illegible] the Federal Judicial Center (FJC)[illegible] charged with education and research for the federal courts.[illegible] The FJC runs what is informally called [illegible]baby judge school[illegible] to orient new judges, conducts specialized programs, and undertakes[illegible] at the behest of the various committees of the Judicial Conference[illegible] targeted research projects. By the early twenty-first century, the AO had more than [illegible],[illegible] employees as a central resource for the [illegible],[illegible] judicial workforce;[illegible] the FJC staff relied on about [illegible] staff,[illegible] and Congress supported the work of both offices with some [illegible] million annually.[illegible]

[illegible]Court Quarters[illegible]

From its inception in the [illegible]s, the judiciary's leadership focused on augmenting the resources of the courts. Acting as a corporate voice for judges, the Judicial Conference repeatedly asked Congress to create new judgeships for those circuits or districts it identified as particularly needy.[illegible] The Conference also sought to equip judges with law books and staff and to gain support for travel and other expenses.[illegible] But buildings[illegible] courthouses[illegible] were not a focus point of discussion in the formal reports made to Congress until after the creation of the AO in [illegible].

The AO's enabling statute had given it several tasks, including to provide [illegible]accommodations for the use of the courts[illegible] and their staff. As the AO's Director explained in [illegible], it was [illegible]well known[illegible] that the AO was not [illegible]equipped to construct or operate buildings[illegible] but would instead [illegible]discharge its duty[illegible] by obtaining [illegible]suitable provision from the agencies[illegible] that managed the building system, specifically from the Public Buildings Administration of the Federal Works Agency as well as the Post Office Department, which then had independent authority to obtain property.[illegible] As of the early [illegible]s, World War II limited what could be done, save for requests to attend to the serious need for a new courthouse in the District of Columbia, [illegible]which long ago outgrew its present quarters and is seriously hindered in its work by their utter inadequacy.[illegible]

In [illegible], the problem of lack of space prompted the Judicial Conference to authorize the appointment of what would be its first of many committees devoted to the question of facilities.[illegible] That committee's assessment in [illegible] was that several spaces were [illegible]seriously inadequate[illegible] and that an [illegible]urgent need[illegible] existed for improvement in what were then called [illegible]quarters for the courts.[illegible] Within a year, the Conference's [illegible]Committee on Postwar Building Plans for the Quarters of the United States Courts[illegible] circulated a manual on courthouse design that was published by the Public Buildings Service. That template proved to be the first of many such design guides.[illegible]

Exchanges in the [illegible]s and [illegible]s detail efforts of the judiciary to work with its sibling agencies to improve [illegible]quarters[illegible] as well as concerns that the general building regime was insufficiently attentive to the special needs of the judiciary. For example, although the Judicial Conference obtained a commitment in [illegible] from the Commissioner of the Public Buildings Service that the federal courts were one of [illegible]the highest of priorities[illegible] for allocations of space,[illegible] the Conference objected to the Commissioner's proposal to [illegible]reduce the public space in the courtrooms . . . from [illegible] seats to [illegible] seats.[illegible] On the other hand, complaints were also leveled against judges, some of whom had failed to [illegible]permit the use of court facilities in public buildings by other Government agencies.[illegible]

Air conditioning became a bone of contention in the [illegible]s. As the judiciary went to Congress for more judgeships, some members of Congress questioned that need, given the practice of closing courts during the summer months. Such long adjournments undercut the justification that workloads required more courthouses. The Judicial Conference responded by arguing that [illegible]extreme heat[illegible] interfered with [illegible]the efficiency and output of the courts during the hot months of the year[illegible] and requested air-conditioned facilities. In [illegible] and again in [illegible], the Commissioner of the Public Buildings Service met with the Judicial Conference and reported that funds for air conditioning were lacking[illegible] with little prospect for a change in the coming year.[illegible] Thereafter the Conference created its own Committee on Air Conditioning, surveyed the need, and went directly to Congress for funds, coming back in [illegible] with a direct appropriation of [illegible],[illegible],[illegible].[illegible]

Upgrading available space was a leitmotif of the reports over the [illegible]s and [illegible]s. The Judicial Conference did not request separate courthouses but instead focused on finding facilities within the building stock extant or planned. For example, in [illegible], the Director of the AO listed seventeen new buildings that would include court quarters.[illegible] Further, he counseled appreciation for the GSA, which he said merited praise for its [illegible]skill and ingenuity in adapting the space available, often unpromising on first sight, to the needs of the courts. . . . [illegible]While sometimes the new quarters are smaller or different in shape from what would have been ideal . . . they are usable, they have a high degree of functional efficiency, and they are fitting and attractive in appearance.[illegible] Throughout the [illegible]s, a growing number of life-tenured judges as well as the creation of the auxiliary role of judicial magistrates drove the need for more [illegible]court quarters[illegible]

Time and again, the locution of the Judicial Conference was to refer to "buildings containing court quarters" or to "court facilities" rather than to courthouses themselves.[illegible]

Putting Cases into Courts: The Second Reconstruction

In Chapter [illegible] we provided a brief tour of federal building from the Civil War era through the [illegible]s. Those many images (figs. [illegible]/[illegible]–[illegible]/[illegible]) made the point that, despite variations in style, America's leaders reiterated what European rulers had done before them: constructing imposing public spaces to represent their authority. Moreover, as all the windows and doors suggest, these buildings were readily accessible to foot traffic, such as the person mailing a letter, or the litigant filing a lawsuit. And up until the [illegible]s, one could enter those buildings freely: without emptying one's pockets or passing screening devices.

The pre–World War II building program also tells us something about the demand for adjudication (as well as for postal services). Cass Gilbert's [illegible] New York City courthouse, ascending stories beyond its predecessor three-story models, is emblematic of the evolving contours of legal rights. Dockets: the increasing numbers of cases filed: are but one measure. Not only did filings increase but the content of cases changed over time, driven by dynamic variables including the kinds of legal rights recognized, access to legal services, and government regulatory policies.[illegible]

Rights across the Board

In the wake of the Depression, many saw federal governance as a necessary and desirable response to political and economic conditions. Expansion of federal jurisdiction was a mechanism by which to spread and enforce a national legal regime. In the [illegible]s, the Civil Rights movement turned to the federal courts and, under the leadership of Chief Justice Earl Warren in the [illegible]s, constitutional interpretation looked favorably upon court-based processes to enable racial equality and to enhance human dignity. Congress not only supported but expanded this project, time and again authorizing government officials and private parties to bring lawsuits as a means of enforcing federal law.

This commitment to rights assertion spanned both civil and criminal dockets. The procedural requirement in the Sixth Amendment of a right to the "Assistance of Counsel,"[illegible] which had sat substantively vacant in the United States Constitution for almost two hundred years, was suddenly given new meaning. The Constitution was read to insist on state subsidies for criminal defendants to protect their constitutional rights. The Supreme Court required that indigent criminal defendants be provided with state-paid lawyers who (in theory) were to be accorded respect and the requisite resources, including experts if necessary, to mount a defense.[illegible] Further, the idea that individuals ought to be empowered and equipped in the contest with the state migrated from the criminal side to civil litigation. The Supreme Court: borrowing Charles Reich's insight that statutory entitlements were forms of "property" to be protected from state deprivation by "due process of law"[illegible] required that final decisionmaking about government entitlements employ judicial modes of process to ensure fairness.[illegible]

Rulemakers revamped other kinds of civil litigation to reflect a concern about the need to equip litigants and to welcome them as rights seekers, whether in conflict with the government or disputing others. Fees for access to courts were lowered, mostly by statute.[illegible] Congress established a Legal Services Corporation that employed lawyers, paid by the government, to represent poor litigants in certain kinds of civil disputes.[illegible] And a very small sliver of civil litigants: individuals faced with state efforts to terminate their status as parents: gained constitutional rights to have state-paid lawyers under certain conditions.[illegible]

Aggregate processing became another vehicle for enhancing access to courts. Class actions generate subsidies for litigants by relying on economies of scale to induce lawyers to serve a wider set of claimants.[illegible] In the [illegible]s, the Federal Rules were modified to facilitate large-scale litigation through a new rule on class actions,[illegible] which was complemented by statutes authoring consolidation across federal district courts.[illegible] Together these provisions reshaped the prospects of what litigation might accomplish, as did the growth in the number of lawyers, providing a diversified set of professionals who both fueled and staffed the regulatory state and ferreted out forms of injury imposed on a diverse array of individuals.

Through new information technologies, patterns of problems experienced by large numbers of individuals became visible, permitting the connection of incidents previously perceived as isolated or idiosyncratic events. Individual "cases" came to be understood as parts of "a litigation" comprising dozens or hundreds of claims. Phrases like "the asbestos litigation" or the "tobacco litigation" capture the practice of court recognition of an enormous array of parties and of varying forms of injury prompting interrelated judgments. Proceedings with hundreds and thousands of individuals, some in search of institutional reform and some in search of money, became routine. While some claims arose from tort or contract, many litigants entered the federal courts because Congress had welcomed them through enactment of new rights. The legislature embraced adjudication by authorizing litigants to bring: whether as individuals or as parts of aggregates : a widening array of lawsuits aimed at enforcing civil rights, environmental rights, consumers' rights, and workers' rights.

Another factor, under-appreciated in the literature on courts, is women's rights. As we discussed in Chapter ⊠, the many images of Justice as a woman did not reflect women as participants in courts. Women gained full juridical voice only in the last century, and the radical reconception of women as rightsholders, both in and outside of their families, drove up the volume of disputes. Whole fields of litigation now taken for granted⊠ the arena denominated ⊠family law⊠ is exemplary⊠ did not much exist in the nineteenth century. A growing circle of ⊠persons⊠ of all ages and ethnicities, sometimes as single actors and at other times in groups, obtained recognition of their rights in court. They pursued both private stakeholders and governments. State officials were themselves reconceived as subject to lawsuits holding them to their obligations. The result has been an avalanche of claimants, ranging from veterans seeking benefits within administrative tribunals to victims of crimes against humanity seeking acknowledgment of horrific wrongdoing in domestic as well as in international courts.

Adjudication's flowering in the United States can be seen through the congressional creation of hundreds of new federal rights and the filing of more cases.⊠ As tracked by figure ⊠⊠⊠, the docket of the federal courts grew from under ⊠⊠,⊠⊠⊠ civil and criminal filings in ⊠⊠⊠⊠ to more than ⊠⊠,⊠⊠⊠ in ⊠⊠⊠⊠ and almost ⊠⊠⊠,⊠⊠⊠ in ⊠⊠⊠⊠.⊠ Moreover, the mix changed. In ⊠⊠⊠⊠ more criminal than civil cases were filed; by the ⊠⊠⊠⊠s, the civil docket had begun to surge and, by ⊠⊠⊠⊠, the number of civil filings (roughly ⊠⊠⊠,⊠⊠⊠) was more than four times that of criminal filings.⊠

From a Three-Story Courthouse in Grand Forks to Twenty-Eight Floors in St. Louis and ⊠⊠⊠,⊠⊠⊠ Square Feet in Boston

To complement the caseload bar graph, another graph (fig. ⊠⊠⊠) charts the growth in the numbers of life-tenured federal judges in the United States over one hundred years. At the beginning of the twentieth century, seventy trial judges staffed all the country's district courts nationwide. The change in the judicial landscape can be seen through a few more pictures. In the days of fewer federal filings and fewer federal rights, courthouses like the three-story ⊠⊠⊠⊠ federal building (fig. ⊠⊠⊠⊠) in Grand Forks, North Dakota, sufficed. As the GSA described, this ⊠imposing architectural statement⊠ included a courtroom whose ⊠monumental proportions⊠ represented ⊠a dignity apropos of its function as a Federal courthouse.⊠⊠

But dignity (and its employees) soon required more space. As the bar graph in figure ⊠⊠⊠ shows, during the first half of the twentieth century, the number of trial judges roughly tripled every fifty years, jumping from ⊠⊠ to ⊠⊠⊠ between ⊠⊠⊠⊠ and ⊠⊠⊠⊠ and then moving up to ⊠⊠⊠ by ⊠⊠⊠⊠. During the second half of the twentieth century, staff for the judiciary far outpaced judgeships. About ⊠,⊠⊠⊠ individuals were employees of the federal judiciary (judges included) in the early ⊠⊠⊠⊠s, and about ⊠,⊠⊠⊠ were in the workforce by ⊠⊠⊠⊠.⊠ In contrast, by ⊠⊠⊠⊠, more than ⊠⊠,⊠⊠⊠ were so employed⊠ creating what one (concerned) jurist calculated was a ratio of ninety-two support personnel per judge.⊠

That employment spike is reflected by the height of the Thomas F. Eagleton Federal Courthouse (fig. ⊠⊠⊠), which opened in ⊠⊠⊠⊠ in St. Louis, Missouri.⊠ Standing ⊠⊠⊠ feet, it became the tallest and the ⊠largest Federal courthouse in the United States,⊠⊠ with more than one million square feet that took ⊠⊠⊠⊠ million to construct.⊠ Further, unlike the ⊠⊠⊠⊠ Grand Forks structure that was emblematic of its era through the denomination ⊠Federal and Court Building⊠ the St. Louis courthouse represents the shift to naming a federal building for a person (either a member of Congress or a local judge).⊠ Here, the honor went to Thomas F. Eagleton, who served three terms in the Senate before returning to St. Louis in ⊠⊠⊠⊠. The architects explained their design as continuing the civic traditions of St. Louis, where ⊠domes and columns are the icons of civic architecture.⊠⊠ The GSA termed the result a ⊠noble Federal building . . . ⊠that⊠ enhances the vitality and quality of the city's downtown, and it presents the judiciary, a cornerstone of our democratic system, as both dignified and approachable.⊠⊠

A description enables insights into the normative messages provided. One enters a towering five-story rotunda in which two-story marble columns mark a series of balconies. Inscribed on the wall are the statements ⊠The Place of Justice Is a Hallowed Place⊠ and ⊠The Administration of Justice Is a Firm Pillar of Government.⊠⊠⊠ The entry to each courtroom also has considerable stature; the vestibules outside the courtrooms have two-story windows, responsive to the judges' insistence on natural light.⊠⊠ At the sixth floor and above, the windows are sufficiently high above street level to meet security demands. Inside the courtrooms, windows also permit daylight to enter.

Twenty-five courtrooms were built for use by the District Court, the Court of Appeals of the Eighth Circuit, bankruptcy and magistrate judges, as well as by the Tax Court. Reconfigurations could make space for an additional thirteen courtrooms.⊠⊠ Although ⊠equipped with the latest audio-visual and digital technologies, other aspects of courtroom configuration are traditional.⊠⊠⊠ Jury boxes are near judges' benches, and some public seating is at the opposite side of the room.

The building was designed to accommodate a large number of non-judge staff. The court's tower, which the architects described as echoing nineteenth-century predecessors, has twenty-first-century functions. The many floors provide space for seven hundred judicial employees. As for the art, GSA booklets on new courthouses described installations as an ⊠important feature of great architecture⊠ rather than as important in and of itself.⊠⊠ According to the GSA, plans for the Eagleton building had called for an ⊠untitled landscape project⊠ by the artist Mary Miss.⊠⊠ What came to

fruition were two outdoor gardens, both named for former judges.[illegible]

Another late twentieth-century design aiming at the iconic is the Boston Courthouse (fig. [illegible]), which opened in [illegible]; in Chapter [illegible], we discussed it as the site of the abstract Ellsworth Kelly panels (fig. [illegible]). The Boston Courthouse provides space for both the federal district court for Massachusetts and the headquarters of the United States Court of Appeals for the First Circuit, embracing Maine, New Hampshire, Massachusetts, Rhode Island, and Puerto Rico. Because the planning for the building entailed an unusual degree of deliberation and became both a model for and target of criticism about federal court construction, details of its contours are in order.

Two judges, Stephen Breyer (then on the Court of Appeals and thereafter an Associate Justice on the United States Supreme Court) and Douglas Woodlock (on the District Court) launched and then documented the design process. The judges went outside what had been standard government procedures (detailed later) for selecting architects and enlisted expert consultants. Together they identified historic examples of courts that [illegible]were not ostentatious, flamboyant, or overbearing . . . but simple, warm, and inviting.[illegible] Although fully aware that historical buildings also represented courts' roles in perpetuating discrimination,[illegible]Breyer and Woodlock sought designs that would invoke a [illegible]conversation between generations.[illegible]They also had other concerns. Given that [illegible]the surrounding bureaucratic space[illegible] could [illegible]flood the building,[illegible]Judge Woodlock worried that a structure might appear to be the [illegible]empty raiment of an office building[illegible] rather than a courthouse focused on the courtroom (the [illegible]pearl within the shell[illegible]). Another challenge was how to craft [illegible]a secure environment without burying the courthouse's important civic program in a bunker.[illegible]

Figure [illegible] John Joseph Moakley United States Courthouse, Boston, Massachusetts.
Architect: Henry N. Cobb, [illegible].

Photograph copyright: Steve Rosenthal, [illegible]. Photograph reproduced with the permission of the photographer and courtesy of the court.

They settled on Henry Cobb as their architect, who cited as his inspiration a one-room [illegible] building, the Hanover County Courthouse in Virginia. Translated into late twentieth-century terms, Cobb said that its [illegible]big idea[illegible] was that [illegible]every courtroom should be visible from the outside of the building and from the main space on the inside of the building.[illegible] The point was to give a [illegible]sense of accessibility, of transparency of the system of justice[illegible] which was what the [illegible]courthouse is about.[illegible]

Thus Cobb produced twenty-seven such courtrooms in a [illegible],[illegible]-square-foot building named in honor of Congressman John Joseph Moakley.[illegible] Adorned by the Ellsworth Kelly panels, the building has garnered both praise for its architecture and criticism for its cost.[illegible] As the GSA's monograph on the building details, a [illegible]-foot-high glass-domed cupola rising above the building distinguishes the entrance to the courthouse. It is a beacon that further proclaims the special status of the courthouse and the Federal Judiciary.[illegible] The masonry walls connote the permanence, solemnity, and probity of the judiciary[illegible] and the craft-work reflects the [illegible]same respect for tradition[illegible] that characterizes judicial proceedings.[illegible]

The site overlooks Boston harbor. As the GSA explained, the building's [illegible]siting, form, layout and materials express the fundamental democratic principles of equality, fairness, openness, and accessibility.[illegible] The courthouse's two ten-story wings of brick form an L-shape, with windows overlooking the water; the wings are joined in the middle by a large cylindrical [illegible]hinge.[illegible] The entry is marked by a flat arch, and the interior is dominated by the vista of the harbor, revealed through a curving many-storied glass wall[illegible] a conoid section [illegible] feet high and [illegible] feet long that is supported by steel frames (fig. [illegible]/[illegible]).[illegible] As a consequence, the entrances to the twenty-seven courtrooms on different floors are visible from the outside. Further, to [illegible]signal the importance of the courtrooms, elliptical brick recesses with half domes[illegible] a derivation of the Greek and Rome exedra[illegible] define the entrances that lead to vestibules, which in turn lead to the courtrooms.[illegible] Inside, the motif of arches reappears to outline each of the four sides of the interior space of each courtroom.

The designers wanted to provide a place for community events in addition to court proceedings. The courthouse and the surrounding [illegible].[illegible]-acre park have [illegible]more space dedicated to public use than any other Federal courthouse in the nation.[illegible] On the inside, a crescent-shaped Great Hall is available for educational and cultural programs, many of which are run by a specially incorporated lawyer-supported organization.[illegible] Forty inscriptions[illegible] giving [illegible]permanent voice[illegible] to some of [illegible]New England's most articulate sons and daughters[illegible] are carved into exterior and interior walls.[illegible] A central Registry of Designers and Builders listing the [illegible],[illegible] people involved [illegible]is the final democratic element a visitor encounters before leaving the building through the main street entrance.[illegible] As Justice Breyer put it, the point was to provide a building that [illegible]belongs not just to the judges or courts or lawyers but to the public as well.[illegible]

Housing the Corporate Judiciary

These monumental courthouses are not the only corporal embodiments of the federal judiciary generated toward the end of the twentieth century. In addition to dozens of new or renovated facilities, another building marks the judiciary's presence in Washington[illegible] the Thurgood Marshall Federal Judiciary Building, located on Columbus Circle next to a [illegible] landmark, Union Station, designed by Daniel Burnham for travelers entering the nation's capital.[illegible] As one

can see from the photograph in figure [illegible], the massive [illegible] structure picked up the train station's motif of arches in a stone facade.[illegible] Further, it sought to establish a comparable presence, designed, as the AO put it, [illegible]to last two hundred years[illegible] proof that beauty and economy can coexist.[illegible]

The opening of the Marshall Building provided a new landmark reflecting two propositions[illegible] the expansion of the administrative apparatus of the federal judiciary and the judiciary's ability to garner support from the government to fund so many new facilities. The Marshall Building thus serves as the gateway to our discussion of how, in the [illegible]s, Chief Justice William Rehnquist, working with AO Director Leonidas Ralph Mecham and with federal judges around the country, designed the strategy that produced the most important federal building program since the New Deal.[illegible]

When the AO began in [illegible], it shared space in the then-new Supreme Court building.[illegible] As the AO staff rapidly grew to number more than one hundred, employees were dispersed to various buildings in Washington.[illegible] Employees of the FJC (created thirty years after the AO) worked in the Dolley Madison House (fig. [illegible]), a Federal-style structure named after the wife of President James Madison and built by her brother-in-law in the [illegible]s.[illegible] The contrast between that quaint townhouse ([illegible]one of Washington's most historic buildings[illegible]) and the million square feet constituting the [illegible]monumental[illegible] Marshall Building reflects the legislative sophistication of the judiciary, which in [illegible] called for the construction of a building proximate to the Supreme Court to house support services. By [illegible] the Architect of the Capitol had identified the site adjacent to Union Station, and in [illegible], the Judicial Conference formally called on Congress to authorize the project.[illegible]

In [illegible] the judiciary obtained congressional authorization to enter a public-private partnership that produced the Marshall Building ([illegible]one of the largest construction projects to be completed on Capitol Hill in over a decade[illegible]).[illegible] Senator Daniel Patrick Moynihan of New York sponsored the legislation and then chaired the Commission for the Judicial Office Building formed to oversee construction.[illegible] Designed by Edward Larrabee Barnes,[illegible] the building cost [illegible] million to construct.[illegible] Its exterior is [illegible]clad with light grey granite that complements the stone used for Union Station[illegible] and its interior wood finish was to [illegible]look like that used in the Supreme Court Building.[illegible] Initially denominated the [illegible]Judiciary Office Building,[illegible] a decision was made after Justice Thurgood Marshall's death to name it in his honor. The federal courthouse designed for lower Manhattan in the [illegible]s by Cass Gilbert was also renamed to honor Justice Marshall.[illegible]

The glass atrium (rising several stories and fifty-five feet) shelters green plantings as it welcomes daily some two to three hundred visitors. The building's seven floors provide space for [illegible] [illegible]tenants[illegible] offering conference rooms on each floor and an auditorium for large sessions. In addition to the AO and the FJC, the building houses [illegible]other Judicial Branch agencies[illegible]such as the United States Sentencing Commission and the Panel on Multidistrict Litigation. AO Director Mecham described the Marshall Building as putting [illegible]a face on a branch of government that is spread out across the nation, and serves as a strong testament to the important

Figure ⊠⊠⊠ The Dolley Madison House, Washington, D.C., ⊠⊠⊠⊠.

work that is accomplished here.⊠⊠⊠There the central staff of the federal judiciary compiles data, convenes meetings, plans educational programs, drafts impact statements on the possible effects of proposed legislation, and lobbies Congress on behalf of the federal courts.⊠⊠

The AO thus deserves a special place⊠ now literal as well as metaphorical⊠ in any narrative on the federal courts. Under the leadership of William Rehnquist, who served as Chief Justice from ⊠⊠⊠⊠ until his death in ⊠⊠⊠⊠, the AO and the Judicial Conference impressed on the public a sense of a crisis in judicial facilities and advocated for solutions involving monumental buildings that conformed to standards set by judges. To put that process into perspective and to understand the normative implications of the current instantiations of federal justice⊠ the buildings and the peripheral role played by their art⊠ requires picking up the thread of federal building activities in general and sorting out the respective roles of other twentieth-century inventions: the Commission on Fine Arts, the General Services Administration, and the National Endowment for the Arts.

Redesigning Federal Buildings

The Peripheral Role of ⊠Fine Art⊠

In Chapter ⊠ we detailed the creation in the ⊠⊠⊠⊠s of the Office of the Supervising Architect. In contrast, no expert government body existed to provide oversight of government commissions for other art forms.⊠⊠The absence of an art-focused institution comparable to that dedicated to building meant that federal facilities were not laden with symbolic art. The structures⊠ not their art⊠ were the intended icons of the ⊠federal presence.⊠

By the end of the nineteenth century, however, interests aligned to press for national legislation to create an arts commission. The ⊠⊠⊠⊠ Chicago World's Fair appears to have energized the AIA which, joined by the National Academy of Design and the National Sculpture Society, wanted to obtain government authorization to use their own members' expertise to shape an American identity around the arts.⊠⊠ In ⊠⊠⊠⊠ the Senate responded with a charter for its own Parks Commission to give advice on artistic design; in large measure, the Parks Commission deployed architects to do so.⊠⊠

Pressed further by many (including a committee chaired by Cass Gilbert), in ⊠⊠⊠⊠ Congress established the Commission on Fine Arts⊠⊠ that again put architects at the fore, giving them authority to design the sites for public art and often roles in awarding contracts to artists.⊠⊠ Then-President William Howard Taft appointed Gilbert to serve as one of ⊠seven well-qualified judges of the fine arts⊠⊠⊠and chose for the Chair of the Commission on Fine Art another leading architect, Daniel Burnham (who had designed Washington's train station, discussed as a model for the Thurgood Marshall Building, fig. ⊠⊠⊠).⊠⊠Working without pay for four-year terms, commissioners were to ⊠advise

upon the location of statues, fountains, and monuments and the selection of artist for the nation's capital as well as to advise more generally upon questions of art when asked to do so by the President or Congress. But the minimal budget and a mandate to focus on the District of Columbia limited the Commission's impact. Described in the s as a cheerleader for good design, the Commission on Fine Arts continues to function. It superintends the development . . . along the lines of good order, good taste, and with due regard to the public interests involved and imposes a reasonable degree of control . . . over the architecture of private or semipublic buildings adjacent to public buildings and grounds of major importance in the District of Columbia.

A broader focus on the arts grew out of the Depression. As mapped in Chapter , the New Deal response produced national funds for architecture and art across the United States. For about a decade, the Section of Painting and Sculpture (in renamed the Section of Fine Arts) within the Treasury Department shaped an energetic program through running competitions as well as providing commissions. Under an executive order, the Treasury Department reserved one percent of new building construction for embellishments' or public art and over the course of its nine years sponsored more than sculptures and , murals. But the Section of Fine Arts had complex and conflicting relationships with the Office of Supervising Architect and, over time, was beset by anti–New Deal complaints about its support for art perceived to lean left.

That Cold War shadow constrained federal support for the arts. When reporting to President Dwight D. Eisenhower in , the Commission he had chartered on Art and Government explained: Here we have had no centralized control of art activities on the part of the Government, such as exists in many other countries. For that reason the Commission is opposed to efforts to create a Ministry of Fine Arts or to combine in a single bureau art activities now carried on effectively in a number of Government agencies. But that report did call for greater use . . . of sculpture, mural painting, mosaics, ceramics and stained glass in the decoration of public buildings. Further, the Commission on Art and Government picked up the Treasury Department's concept of what came to be called a set-aside for art. The Commission recommended that the GSA reserve an adequate amount, in relation to the cost of each building as well as that it give an occasional opportunity . . . to select the architect, painter, and sculptor by means of competition and in this way to discover new and promising talent.

A reminder is in order, however, about the relationship between the judiciary and the various government forays into fine art. The Commission surveyed the art related to various departments of government, including the Departments of State, Treasury, Defense, Post Office, Agriculture, Interior, and Health, Education and Welfare, as well as the Veterans' Administration and the Federal Communications Commission. The report of the Eisenhower Commission made no mention of courts or their art. Rather, just as the Judicial Conference of that era had spoken about court quarters rather than freestanding federal courthouses, neither the buildings of the judiciary nor their art were focal points. Yet fifty years later, courthouses were the signature monuments of the federal government and central sites for major government commissions to artists. Having shown some pictures of those results, we need to explain more about how they came into being.

John F. Kennedy, Daniel Patrick Moynihan, and Government Space: The s Guiding Principles

Most accounts identify the election of President John F. Kennedy in as the beginning of a new appreciation for the contributions that art and architecture could make to the civic life of the country. Prompted in part by concern about the precarious financial underpinnings of major cultural institutions and in part by the national government's own need for more space, in President Kennedy chartered the Ad Hoc Committee on Government Office Space.

The Committee's work resulted in Guiding Principles for Federal Architecture a new quality-conscious federal attitude toward architecture . . . that led directly to a mandate for fine art in public buildings. The Ad Hoc Committee was chaired by Arthur Goldberg, then Secretary of Labor, who later served on the United States Supreme Court and thereafter as the United States Ambassador to the United Nations. The lead staffer was Daniel Patrick Moynihan, who later served as a Senator from New York and who helped bring the Thurgood Marshall Judiciary Building and many others into being. Moynihan is given credit for the vision represented by the report as well as for drafting a one-page set of Guiding Principles that is regularly invoked in contemporary discussions of federal buildings.

The precepts that Moynihan laid out in have served since then as the touchstone for discussions of federal building in general and, when courthouse construction came in the s to dominate government projects, Moynihan's presence was both literal and symbolic. The Guiding Principles also constituted a rebellion of sorts. They reflected particular distaste for the Beaux-Arts buildings that had become commonplace in federal construction as well as a dislike of uniformity in general. The Ad Hoc Committee concluded that government buildings were often undistinguished and sometimes mediocre. Further, the Committee was concerned about the banality of urban architecture and about the harms inflicted on neighborhoods by programs styled urban renewal, which stood in contrast to certain admirable private-sector buildings. The causes included, the Committee argued, unwise pressures to economize that had produced government buildings that were the least efficient use of public money.

What should the federal government seek to buy? The premise, shared across centuries by leaders of European city-states, the early American republic, and the maturing United States, was that public architecture should exemplify values. What were those values? Shadowed by the Cold War, the [illegible] goals set forth a mantra repeated in the decades to follow. Federal buildings were to "provide visual testimony to the dignity, enterprise, vigor, and stability of the American Government." The implicit comparison to the Soviet Union, coupled with distaste for "faceless Modern style buildings" and for cookie-cutter repetition (whether Beaux-Arts or Modern), produced another premise: the need to avoid adoption of a new "official style."

Rather, the "Government should be willing to pay some additional cost to avoid excessive uniformity in design of Federal buildings." Preference should be accorded to designs incorporating "regional architectural traditions." When wearing his academic hat, Moynihan had been a critic of highway construction that had torn neighborhoods apart; the Ad Hoc Committee called for buildings to be thoughtfully sited with a "generous development of landscape" so as to be part of the "general ensemble of streets and public places." Where was art in the discussion? Where "appropriate, fine art should be incorporated in the designs with emphasis on the work of living American artists."

To accomplish these goals, the Guiding Principles argued that the government should not be seen as a source of "standards" for quality building. Instead (and consistent with the premises of the [illegible] Tarsney Act), the private sector was the place to look: "Design must flow from the architectural profession to the Government and not vice versa." Competitions for design were to be held, "where appropriate," and the "advice of distinguished architects ought to, as a rule, be sought prior to the award of important design contracts."

But these principles were neither recorded in law nor implemented in practice in the [illegible]s and [illegible]s; "the leading architects of the day were not bidding for government work or being asked to do it." The impact and continuing vitality of the Ad Hoc Committee's work thus requires explanation. Moynihan, "a master of the arts of publicity as well as government," gave the Ad Hoc Committee's report an unusual presence for a government document. When he became a senator in [illegible], his political acumen helped to produce appropriations for "expensive buildings" and legislation authorizing design competitions for various new courthouses.

Inelegant Design: The National Endowment for the Arts as Architectural Critic

Although regularly invoked in the two decades after their issuance in [illegible], the Guiding Principles had relatively little operational bite. The GSA endorsed those premises under the nomenclature of "Standards for Federal Architecture," but few buildings met the goals because (as GSA publications later explained) the chief "concerns" of the GSA remained "efficiency and economy." Critical attention, however, returned to federal construction as a result of President Kennedy's attention to other forms of art.

Kennedy's special consultant, August Heckscher, reported in [illegible] on his survey of museum acquisitions and of publicly commissioned art ranging from stamps and performances to paintings in post offices. His monograph, entitled *The "rts and the National "overnment,* concluded that the arts were under-appreciated and under-funded. Heckscher recommended what the [illegible] Eisenhower Commission's majority report had expressly declined to do: "the establishment of a national arts foundation providing federal subsidies for artists." Within a few weeks, President Kennedy issued an Executive Order creating the President's Advisory Council on the Arts. After Kennedy's assassination and under the presidency of Lyndon B. Johnson, Congress established the National Endowment for the Arts (NEA) to fund (often amidst controversy) a wide range of activities.

By the early [illegible]s, staff of the NEA had become critics of government-funded architecture. NEA staff saw that the federal government was "'into' building" rather than "'into' architecture" and hence that the [illegible] Guiding Principles had not gone "far enough" to ensure that public buildings would "never repel" citizens. Under the authority of a White House directive, the NEA chartered its own "Task Force on Federal Architecture." That group raised several concerns, including that the deliberate abandonment of distinctive national templates for government buildings during the pre–World War II era had undercut the "federal presence" by erasing the "line between the federal and private style." Both corporate and public sectors used similar styles and materials to denote important buildings. The Task Force also worried about the quality of government construction, the selection of sites that isolated federal buildings from community life, the lack of attention to landscaping and art, and the inattentiveness of the "clients" (federal agencies) to the needs of the diverse users of the buildings. As ameliorative efforts, the NEA group produced a series of staff reports and a major book whose title, *The "ederal Pres" ence,* we have invoked. The NEA shaped its own "Federal Design Improvement Program" encouraged agencies to open competitions for buildings and, for a period of time, gave awards for the "best" designs. (That program lapsed but, in [illegible], the GSA established another one.)

The NEA activities were part of a cycle of critique akin to the efforts that had resulted in the enactment of the Tarsney Act toward the end of the nineteenth century. Critics complained that federally commissioned buildings were miserable places either to look at or in which to work. Further, they argued that design choices were made because of patronage rather than quality. Some of the discomfort stemmed from distaste for the austerity of International-style buildings, erected to replace older buildings as part of "urban renewal."

Such concerns were central to congressional hearings in [illegible]. There, various senators expressed concerns about the quality of federal buildings[illegible] as the President of the AIA called for the federal government to be [illegible]a leader in establishing high design standards and in exemplifying good design.[illegible] The NEA staff, in turn, reported that communities did not [illegible]fondly[illegible] regard federal buildings in their midst.[illegible] And, as the GSA would later describe architectural choices made into the [illegible]s, federal government building veered to [illegible]safe' [illegible] and [illegible]noncontroversial designs.[illegible]

Subsequent Precepts: Preservation, Conservation, Accessibility, Sociability, and Security

The focus of design was on buildings, not art. But how to identify [illegible]safe[illegible] designs (with the several possible meanings of that phrase) was becoming less clear, and the [illegible] Guiding Principles had not forecast all the challenges. One could no longer rest comfortably on the assumption that if one built a building, people would come to use it. The Amsterdam Town Hall, which had centered a city through the many services under one roof, had once provided a model emulated around Europe and across the Atlantic. But the volume and specialization of government services prompted a proliferation of single-use buildings. Post offices split off from courthouses, cities sprouted suburban sprawl, and local municipal centers became less places in which people stayed to chat and more venues of long and lonely lines of those waiting for help in obtaining licenses or deeds.

The [illegible] NEA Task Force report recommended that buildings have more inviting atmospheres so that federal workplaces could be both functional for and attractive to government employees while also serving to reduce the [illegible]diminished human vitality[illegible] of many downtowns.[illegible] In response, in [illegible] Congress enacted the Public Buildings Cooperative Use Act.[illegible] The [illegible]cooperative[illegible] in the act's title reflected the new authority given to the GSA to lease federal building space to tenants for [illegible]social and commercial uses[illegible] to wit, shops and restaurants[illegible] aiming to respond to the [illegible]perceived barrenness[illegible] of federal offices. The slogan [illegible]living Buildings[illegible] captured the hope that varied activities (eating, shopping, and working) would bring people in.[illegible]

That [illegible] legislation also picked up concerns from the [illegible] National Historic Preservation Act, instructing that attention be paid to [illegible]acquiring and reusing historic and architecturally interesting buildings.[illegible] Therefore, before proposing new construction, the GSA was required to consider whether historic buildings could satisfy federal needs for space. The impact of the [illegible] legislation was reflected more than two decades later in the GSA mission statement that it was

> responsible for providing work environments and all the products and services necessary to make these environments healthy and productive for Federal employees and cost-effective for the American taxpayers. As builder for the Federal civilian Government and steward of many of our nation's most valued architectural treasures that house Federal employees, GSA is committed to preserving and adding to America's architectural and artistic legacy.[illegible]

In addition to sociability and historicity, attention turned in the [illegible]s to the environment and to the challenges of persons with disabilities. In [illegible] Congress had enacted the National Environmental Policy Act,[illegible] which required federal construction to address the impact of new building on natural resources and habitats. Within a few years, the GSA came to describe its buildings as incorporating [illegible]energy conservation technology.[illegible] Aiming to save costs, to commit federal funds to support urban centers, and to encourage use of public transportation, the GSA developed performance goals and energy conservation standards. Words such as [illegible]sustainability[illegible] and [illegible]green[illegible] entered the lexicon. Further, worried about their own health and comfort, office workers sought better lighting, ergonomic works stations, and control over room temperatures.[illegible]

The [illegible] Guiding Principles had called for buildings to [illegible]be accessible to the handicapped,[illegible] but no enforcement mechanism had followed. Earlier aspirations for grandeur made courthouses particularly challenging to negotiate. Many staircases forming processional entries to public spaces functionally barred those who could not walk. In [illegible] Congress took up the aspirational terms of the Principles and required (in the obliquely named Architectural Barriers Act of [illegible]) that any building constructed for or used by the United States government had to meet standards to ensure [illegible]that physically handicapped persons will have ready access to, and use of, such buildings.[illegible] Congress instructed the GSA and other federal agencies to prescribe guidelines for accessibility design that resulted in uniform federal accessibility standards.[illegible]

In [illegible] federal law went further in the Americans with Disabilities Act (ADA), which mandated accessibility in state and private facilities.[illegible] But problems of compliance were pervasive. For example, in public hearings convened in the late [illegible]s at the behest of the Chief Justice of California, some [illegible] percent of the speakers reported on physical barriers to courts followed by mobility problems for those who could make it past the entrance.[illegible] California's specially chartered task force detailed the many courts that could be entered only by traversing stairways that sometimes lacked even handrails. The state's Access and Fairness Advisory Committee recommended that a [illegible]substantial improvement in physical access[illegible] be a priority, along with changing signage, providing transportation, and educating staff to make accommodations for people with disabilities.[illegible]

In ⌧⌧⌧⌧ the United States Supreme Court upheld a provision of the ADA that permitted individuals to seek monetary damages from states for failing to comply with the federal law requiring accommodations to enable persons with disabilities to use courts.⌧⌧ As the bare majority described the underlying facts of the case at bar (a sadly apt phrase), the plaintiff George Lane, who was wheelchair-bound because he was a paraplegic, had ⌧crawled up two flights of stairs to get to the courtroom⌧ in Tennessee where he was to answer to criminal charges.⌧⌧ When the case was argued before the Supreme Court, several newspapers ran photographs of the grand steps of that building as demonstrators climbed those stairs on their hands and knees (fig. ⌧⌧⌧).⌧⌧ Determining that states were not immune from damage actions, the Court explained that ⌧affirmative obligations⌧ flowed because access to courts was such a foundational constitutional value.⌧⌧

In addition to sociability for workers and users, environmental friendliness, preservation, and accessibility, the other factor that reformatted federal buildings during the last decades of the twentieth century was security. In ⌧⌧⌧⌧ a bomb was found in a locker at Grand Central Station in New York City⌧ prompting what in hindsight were very modest measures of security at federal courthouses. As a former Chief Judge of the Eleventh Circuit (the federal courts in Alabama, Florida, and Georgia) noted, the public could then easily enter courthouses; ⌧in the South, anyone could walk into a district judge's chambers, the door was open.⌧⌧⌧ By the ⌧⌧⌧⌧s, the vulnerability of federal sites became painfully evident. In ⌧⌧⌧⌧, Timothy McVeigh bombed an Oklahoma City federal building that also housed a day care center and killed more than ⌧⌧⌧ people.⌧⌧

Although Daniel Moynihan insisted, ⌧We will not let Timothy McVeigh be our most influential architect,⌧⌧⌧ the GSA and the federal judiciary have since focused a good deal on barriers and fortification.⌧⌧⌧ The part of the federal judiciary's budget devoted to security grew from ⌧⌧⌧ million in ⌧⌧⌧⌧ to ⌧⌧⌧⌧ million in ⌧⌧⌧⌧, representing a ⌧⌧⌧ percent increase, adjusted for inflation.⌧⌧ Indeed, security became the ⌧Objective No. ⌧⌧ in a late ⌧⌧⌧⌧s GSA guide for architects and engineers competing to obtain commissions.⌧⌧⌧ That guide emphasized the importance of physical barriers, surfaces that could withstand ⌧ballistic or blast attacks⌧ and it also required control over vehicle access, enclosed parking for federal personnel, screening for both persons and parcels, and installing surveillance devices to monitor movements about buildings. In addition, designers were to provide ⌧dedicated, separate, and restricted corridors⌧ as well as elevators for the exclusive use of judges to provide ⌧safe movement within the building.⌧⌧⌧ The September ⌧⌧, ⌧⌧⌧⌧, attack on the World Trade Center in New York reinforced these concerns.

More generally, and reflecting an amalgam of precepts from the ⌧⌧⌧⌧ Guiding Principles and the post-⌧⌧⌧⌧s developments, the GSA listed the other facets it would evaluate when making selections among design proposals. After security, the other criteria were (in the order discussed) ⌧Optimum Tenant Productivity,⌧ ⌧Space Flexibility,⌧ ⌧Acoustic Quality,⌧ ⌧Accessibility,⌧ ⌧Fire/Life Safety,⌧ ⌧Seismic Safety,⌧ ⌧Building Structure Integrity, Durability, and Maintainability,⌧⌧ ⌧Building Systems Energy Efficiency,⌧ ⌧Emergency Systems/Reliability,⌧⌧ ⌧Materials Handling Efficiency,⌧⌧ ⌧Building Automation,⌧⌧ ⌧Innovative Technologies⌧ and ⌧Project Cost Containment.⌧⌧⌧ Thus the GSA was seeking proposals of ⌧architectural merit⌧ (⌧sensitive to the art and architecture of the region⌧) that created ⌧a community presence⌧ while ensuring a ⌧safe, efficient, flexible, comfortable, and healthy environment.⌧⌧⌧

GSA's Design Excellence Program

To accomplish its goals, the GSA retooled its processes for awarding architectural commissions as it responded to criticisms from the NEA, various senators, and the AIA. The agency acknowledged the dearth of "creative or imaginative" government design work.[illegible] While some great buildings had been built in various states (such as the [illegible]s Marin County Civic Center in San Rafael, California by architect Frank Lloyd Wright[illegible] and the [illegible] Paul Rudolph courthouse in Goshen County, New York[illegible]), relatively few impressive federal buildings stood alongside them.

For example, in [illegible], when the GSA revived what had been the NEA program of giving awards for notable structures, the first set of honors went primarily to "historic buildings designed by dead architects."[illegible] Those words come from the explanation by the GSA of its decision to shift to the "excellence" model. As its model, the GSA relied in part on the process crafted by Justice Breyer and Judge Woodlock, who had enlisted sophisticated consultants when shaping the Boston Courthouse, designed by Henry Cobb and adorned with panels by Ellsworth Kelly.[illegible] In [illegible] the GSA formally adopted its Design Excellence Program" aiming to attract world-renowned architects to federal projects.[illegible]

Recall that Daniel Moynihan is credited with coupling political acumen and creative commitment that reshaped federal building aspirations in the [illegible]s. His counterparts in the [illegible]s were Robert Peck, Commissioner of the GSA's Public Buildings Service from [illegible] to [illegible], and Ed Feiner, the GSA's Chief Architect from [illegible] to [illegible].[illegible] Peck, who graduated from Yale Law School, had gone on to work at the NEA before becoming Chief of Staff for Senator Moynihan and then spending time practicing real estate law; Peck also had deep connections to the AIA, which he had served as a Vice President.[illegible] His admirers saw him as an "unusual friend of cities" and praised his commitments to "preservation, downtown revitalization, "and" fostering civic spaces."[illegible]

Peck put Ed Feiner ("Uncle Sam's design conscience"[illegible]) in the role of Chief Architect; Feiner oversaw government building until his retirement in [illegible].[illegible] Running "the biggest federal building program since the New Deal,"[illegible] Feiner rejected the "concrete bunkers and gun-slit windows of the Great Society buildings" in favor of innovation aimed at inspiring "esteem" for the government. Advocates of "progressive, humane design in the civic sphere,"[illegible] Feiner and Peck made "the GSA more hospitable to design-minded architects."

The GSA reengineered procurement procedures that had produced a "cumbersome, time-consuming, and costly process that relegated creativity and quality to the bottom of the evaluation criteria."[illegible] The GSA shifted from submissions of building mockups to selections based on architects' portfolios and their brief statements of intent.[illegible] As it explained in its "Design Excellence Program Guide" competitors went through a three-stage process" submitting portfolios, being interviewed by a team of evaluators, and then entering the "Vision Competition"[illegible] by making proposals for "design concepts."[illegible] The GSA occasionally advertised its program ("Design Competition New United States Courthouse, Los Angeles, California" [illegible],[illegible] gross square feet, [illegible]M" construction cost[illegible]), as the GSA both invoked Moynihan's aspirations for buildings that would provide "visual testimony to the dignity, enterprise, vigor, and stability of the American Government"[illegible] and added another goal, "diversity."[illegible]

Feiner mediated between traditionalist federal judges and contemporary architects as he sought to wean judges from the classical Greek idiom. As Feiner explained, the judges "come to see that these buildings represent not Greek or Roman ideals but American ideals. . . . "We" are using American statements and iconography for the first time."[illegible] Feiner also convinced architects that it was worth their while to work with judges to develop buildings acceptable to both. ("I like to tell architects that they get one opportunity to make their lasting presence on the landscape of this country."[illegible])

Under the Design Excellence Program, the GSA invited "distinguished private-sector professionals . . . to serve as "peers" " to review proposed concepts for buildings.[illegible] The National Register of Peer Professionals began with twenty-three architectural experts in [illegible]; by [illegible] the National Register included [illegible] and had expanded to include "engineers, interior designers, landscape architects, urban planners, and artists."[illegible] Initially used in relationship to buildings costing [illegible] million or more, the Design Excellence approach came to apply to "virtually all new GSA construction projects" as well as to renovations.[illegible] By [illegible] the GSA Design Excellence Program had been "responsible for the selection of architects for several hundred federal projects worth more than [illegible] billion."[illegible] The roster of designers succeeded in attracting world-famous architects. Federal courts have been designed by several, including Henry N. Cobb (in Boston, Massachusetts); Richard Meier (in Islip, New York, and Phoenix, Arizona); Robert Stern (in Savannah, Georgia, Beckley, West Virginia, and Youngstown, Ohio); Thom Mayne (in Eugene, Oregon); and many others.[illegible]

The GSA's stated goals were to create federal buildings that were "welcoming, accessible, and participatory" facilitating a sense of openness through "clear glass that allowed views of interiors" and making plain a "cost-conscious, nonauthoritarian, sensitive and inclusive government."[illegible] By [illegible], the GSA argued that it had succeeded in providing "the American public with government office buildings and courthouses that are not only pleasing and functional, but that also enrich the cultural, social, and commercial resources of the communities where they are located. Such public statements of American culture are meaningful contributors to the vibrancy of our democracy."[illegible] Buildings" not imagery, allegorical or not" provided the normative thrust and, in the [illegible]s, federal courthouses became the signature government projects and the sites of much of the public art commissioned during that decade.

Renovation, Rent, and William Rehnquist

Judicial Space Emergencies

The next landmark in a narration of the history of federal courts and of federal building is the commitment by Congress to replace, expand, and renovate hundreds of courthouse facilities. In constitutional law circles, Chief Justice William Rehnquist is appreciated for his strategic capacity to change the contours of many legal doctrines. He should also be appreciated as an equally brilliant administrative strategist who, working with judges across the country and the judiciary's D.C. staff, had a profound impact on the budgets for and the footprints of courthouses. Rather than complain as architectural critics might (and have) about how dreary the buildings were, the federal judicial leadership conveyed a sense of urgency that the inadequate housing for the judiciary put both the system and the safety of its workers in jeopardy.

During the Rehnquist era, plans were made for courthouse constructions or renovations, to be supported by billion. While not all those plans came to fruition, the federal judiciary tripled the amount of space it occupied in the largest buildings program since the Great Depression. As portrayed in figure , borrowed from the federal judiciary's monthly newsletter *The Third Branch,* construction projects were sited around the United States. In the decade between and , the judiciary gained new courthouses or annexes at a cost of . billion with more underway.

Recall that from the s through the s, the focus had been on court quarters not courthouses. Furthermore, in the post-war period, Judicial Conference committees had reported their confidence in the General Services Administration's (GSA) Supervising Architect, who was praised for his painstaking care and thorough understanding reflected in the manual he had prepared. Working under that system for over thirty years, the judiciary accumulated a fair amount of space. By , staff of the Administrative Office (AO) of the United States Courts reported that the appellate courts had courtrooms and the trial courts , providing a total of courtrooms for use by federal judges.

Yet, during the s, the AO became increasingly distressed with the GSA. In hearings before a House Subcommittee in , AO staff member James Macklin reported on persistent problems in the delivery of services that caused expensive delays. Further, Macklin testified that some judges believed that housing delays were caused by incompetence or intransigence at the regional level of GSA. Cooperative efforts at the national level were part of a solution, Macklin opined, and one such example was the drafting in of design guidelines for courts that the AO had developed in coordination with the GSA.

The parameters of that guide were shaped, in part, by the views of Chief Justice Warren Burger (Chief Justice Rehnquist's predecessor) and the Judicial Conference's Ad Hoc Committee on Court Room Facilities and Design, as they dealt with more demands for space and limited dollars. In , Congress had created the auxiliary position of magistrate (later renamed magistrate judge) to license a cadre of judicial officers without life tenure initially with a more limited mandate that grew over the decades that followed. In , Congress authorized a major increase in new life-tenured judgeships adding district and new appellate appointments. These expanding judicial resources reflected growing numbers of filings, including various kinds of high-profile cases such as those involving civil rights.

In the s, the judicial leadership responded to the influx of new judges with proposals to downsize courtrooms and to share space. In light of an increase in building costs, new technologies, and needs for greater security and to simplify court room control the Judicial Conference recommended that the size of courtrooms be cut back substantially as long as each courthouse had one or two large court rooms for special cases. The s Conference adopted a policy that judges could share courtrooms when possible: courtrooms needed to be available on a

Figure [illegible] Construction and/or Site [illegible] Design Projects, [illegible] to Present, graphic, *The Third Branch*[illegible]*Newsletter of the* [illegible]*ederal Courts* (Dec. [illegible]).

Facsimile, Yale University Press.

case assignment basis to any judge. No judge of a multiple judge court should have the exclusive use of any particular courtroom.[illegible] That injunction can also be found in a [illegible] federal court *Des*[illegible]*n* [illegible]*uide* prepared by the GSA in cooperation with the AO.[illegible] This less courtroom-centric approach also fit with Chief Justice Burger's commitment to [illegible]alternative dispute resolution[illegible] (ADR) programs such as mediation or arbitration and, more generally, with his interest in retreating from an expansive role for federal adjudication that is identified with Earl Warren's chief justiceship during the [illegible]s.

In the late [illegible]s, Chief Justice Rehnquist and his senior staff took another tack on courtroom size and allocation[illegible] that dedicated, more, and larger spaces were needed. Instead of the policy of courtroom sharing embraced under Chief Justice Burger, the judiciary shifted to the presumption that each judge needed a courtroom of his (or her) own.[illegible] Specifically, [illegible]one courtroom must be provided for each active judge,[illegible] including magistrate and bankruptcy judges and ideally those [illegible]senior judges[illegible] who had formally shifted from [illegible]active[illegible] status to make another slot available for the constitutional appointment process. Extra courtroom spaces were also needed for [illegible]visiting judges[illegible] who augmented a district's workforce. Given the increased number of judgeships, the one-courtroom-per-judge approach translated into a more severe housing shortage than did a shared courtroom policy.

During the late [illegible]s, the GSA, working with the AO, had developed guidelines for court construction.[illegible] But, by the late [illegible]s, the AO reported [illegible]excessive delays and costs related to the acquisition and management of space and facilities.[illegible] Enlisting the National Academy of Public Administration, the AO explored whether responsibility for [illegible]defining requirements, designing, leasing, constructing, managing, and performing other functions related to space and facilities[illegible] could be transferred from the GSA to the AO.[illegible] Thereafter, the judiciary sought to distance itself from the GSA by gaining authority to expand its own building stock and to take charge of courthouse design.[illegible]

In [illegible] the judiciary proffered the term [illegible]Judicial Space Emergency[illegible] to capture concerns about its [illegible]housing crisis[illegible] stemming in part from what it saw as the GSA's failures. As Ralph Mecham, Director of the AO, explained, [illegible]During the [illegible]s, when the federal judiciary experienced its greatest caseload growth in history, very few courthouses were built, which resulted in a proliferation of court facilities with varying degrees of deteriorating and overcrowded conditions.[illegible] The AO complained of the [illegible]years of lack of attention from GSA[illegible] and estimated that (as of [illegible]) [illegible] court buildings will be unable to accommodate additional judicial officers within the next five to [illegible] years.[illegible] (The judiciary was not the only unhappy [illegible]customer[illegible]; the GSA's [illegible]much advertised and deplored deficiencies[illegible] had prompted congressional oversight and intra-agency evaluations.[illegible])

To resolve what had become a [illegible]vexing relationship[illegible] with the GSA, the judiciary sought legislation to wrest power from the GSA.[illegible] The goal of obtaining independent real property authority became [illegible]a top legislative priority[illegible] in [illegible],[illegible] as the judiciary argued that the [illegible]provision of space and facilities[illegible] by the GSA left it [illegible]a separate and independent branch of government . . . fully dependent on another branch.[illegible] Members of Congress (including Daniel Patrick Moynihan) proposed

companion bills in the Senate and the House to give the judiciary authority to buy land ⍰independent of GSA⍰ so as to turn the Public Buildings Service into the ⍰judiciary's agent rather than its landlord.⍰⍰⍰ Despite Senator Moynihan's support, GSA objections sent the question back for negotiations between the AO and the GSA.⍰⍰ Although the provision did not become law, in ⍰⍰⍰⍰ the judiciary won ⍰a comprehensive review of court space needs and the initiation of a major courthouse construction program.⍰⍰⍰

To garner support for expansion, the judiciary made the case for more and better space to various audiences, with diverse and important exchanges between federal judges at the local level in contact with members of Congress.⍰⍰ Both media reports and congressional appropriations reflect the success of the judiciary's framing of the problems. As one reporter explained, facilities were inadequate given the ⍰complicated modern trials in which teams of lawyers crowd federal courtrooms to litigate multi-party mob and drug conspiracy sagas burdened with casts of expert witnesses.⍰⍰⍰ Further, staff had no place to work; the size of the judicial workforce had ⍰jumped ⍰⍰ percent⍰ over twelve years.⍰⍰ Moreover, went the popular descriptions, the old courthouses were ⍰nightmares for the federal marshals in charge of security, mainly because existing circulation forced the public, judges, and defendants to traverse the same corridors and use the same restrooms.⍰⍰⍰

Some accounts also acknowledged the judiciary's strategic efforts, reporting that the AO ⍰alerted the GSA in ⍰⍰⍰⍰ that a massive construction project would be needed just to keep the courts functioning. Ever mindful of the pork potential, Congress bought into the idea⍰ and underwrote ⍰⍰⍰ courthouse renovations and new buildings, launching the ⍰largest public construction spree since the New Deal.⍰⍰⍰ In ⍰⍰⍰⍰ (called by the AO ⍰a watershed⍰ year), the judiciary secured ⍰⍰⍰⍰ million in new construction and, between ⍰⍰⍰⍰ and ⍰⍰⍰⍰, it secured approval for projects ⍰totaling ⍰⍰.⍰ billion.⍰⍰⍰ As funding flagged in the late ⍰⍰⍰⍰s when the Executive Branch did not prioritize courthouse construction, the AO described how it ⍰launched a full court press⍰ enlisted judges to obtain funds directly from Congress, and was ⍰ultimately successful.⍰⍰⍰ The GSA concurred, reporting in ⍰⍰⍰⍰ that, in the decade before, it had ⍰delivered ⍰⍰ new courthouses or annexes . . . at a cost of ⍰⍰.⍰ billion.⍰⍰⍰

Court Design Guides

Another (wise) step taken by Chief Justice Rehnquist was, in ⍰⍰⍰⍰, to use his position as Chair of the Judicial Conference of the United States to charter a standing subcommittee devoted to ⍰space and facilities.⍰⍰⍰ That committee was charged with the oversight of long-term planning, construction priorities, and design standards. Further, while Congress did not enact the judiciary's ⍰⍰⍰⍰ bill to extricate itself from the GSA, the judiciary found an alternative route to increasing its authority over courthouse building. The AO created its own Space and Facilities Division and recruited former GSA employees to take leadership roles.⍰⍰ To document space needs, the AO developed ⍰guidelines and worksheets⍰ for judges to explain their problems, district by district and courthouse by courthouse. Such ⍰long-range facility planning⍰ was, according to the AO, ⍰an essential building block toward the Judiciary's successfully managing its own space and facilities program.⍰⍰⍰ By ⍰⍰⍰⍰, the judiciary had thus ⍰identified approximately ⍰⍰⍰ of ⍰⍰⍰ existing court facilities as ⍰out of space⍰ within the coming decade.⍰⍰

Another ⍰building block⍰ in the process of gaining judicial authority over space was the drafting by the judiciary of its own ⍰design guide⍰ First published in ⍰⍰⍰⍰ and revised several times thereafter,⍰⍰ the ⍰⍰⍰ *Courts Design ⍰uide* put judges at the forefront by issuing ⍰policy guidance for the overall planning, programming, and design of federal court facilities throughout the United States and its territories.⍰⍰⍰ As the introduction explained, one of the *Design ⍰uide*'s ⍰three major objectives⍰ was to provide ⍰relevant information⍰ to the GSA and architectural/engineering teams ⍰to effectively plan, program, and design a functional, aesthetically appropriate, and cost-effective court facility.⍰⍰⍰ In addition, to improve in-house expertise, the Administrative Office approved requests for judicial circuits to hire their own architects, who then worked with GSA personnel to oversee proposed and pending projects.⍰⍰

⍰*escalin*⍰ *the Proportions*

The ⍰⍰⍰ *Courts Design ⍰uide*'s dozen-plus chapters detailed ⍰state-of-the-art design criteria for courthouses.⍰⍰⍰ By creating its own manual, the judiciary trumped GSA planners who had long set forth standards for public buildings,⍰⍰ including the ⍰⍰⍰⍰ and ⍰⍰⍰⍰ *Design ⍰uides* that the GSA had written ⍰in cooperation with the Administrative Office of the United States Courts⍰ for ⍰architects and engineers who design federal courts.⍰⍰⍰ Flipping back and forth between the ⍰⍰⍰⍰ and ⍰⍰⍰⍰ ⍰ *S⍰ Design ⍰uides* and the subsequent ⍰⍰⍰ *Courts Design ⍰uides* produced by the federal judiciary clarifies how the vision for federal courthouse buildings changed and the size of courtrooms grew under the aegis of Chief Justice Rehnquist.

What were the GSA ⍰design goals⍰ expressed in the ⍰⍰⍰⍰ and ⍰⍰⍰⍰ volumes⍰⍰ An important characteristic in a court's design is flexibility within its operational space. . . . The designer is encouraged to use open planning techniques in areas where specific function permits.⍰⍰⍰ Moreover, while emphasis had been placed on ⍰expressing the dignity and solemnity of the administration of justice⍰ that aspiration needed to be balanced by designs aiming to enhance the ⍰efficiency of performance.⍰⍰⍰ The utilitarian ⍰⍰⍰⍰ and ⍰⍰⍰⍰ GSA manuals described aspects of the federal judiciary⍰⍰ and suggested a decentralized process by which the ⍰design team⍰ would sort out how to accomplish what was

needed.” The ‘‘‘‘ *Design Guide,* which, unlike the ‘‘‘‘ version, was formally approved by the Judicial Conference, did put judges a bit more in view. The ‘‘‘‘ discussion included a paragraph recommending that architects, before design began, “meet with the chief judge” and other court representatives to gain an understanding of courthouse functions.”

In contrast, the importance of the federal courts and their judges are central to the judiciary’s ‘‘‘‘ *Courts Design Guides.* As the ‘‘‘‘ Guide’s discussion of “Aesthetic Considerations” explained:

> Federal Court architecture should symbolize the Judiciary as a co-equal branch of Government. Courthouse design should reflect the seriousness of the judicial mandate and the dignity of the judicial system.
>
> The scale of a courthouse should be monumental, and the materials used on its exterior durable. The spirit of the architecture should be impressive and inspiring. . . .”

The ‘‘‘‘ version modified but expanded on those ideas under its “General Design Guideline.” Instead of monumentality, the ‘‘‘‘ Guide explained:

> The architecture of federal courthouses must promote respect for the tradition and purpose of the American judicial process. To this end, a courthouse facility must express solemnity, stability, integrity, rigor, and fairness. The facility must also provide a civic presence and contribute to the architecture of the local community.
>
> To achieve these goals, massing must be strong and direct with a sense of repose, and the scale of design should reflect a national judicial enterprise. All architectural elements must be proportional and arranged hierarchically to signify orderliness. The materials employed must be consistently applied, natural and regional in origin, durable, and invoke a sense of permanence. Colors should be subdued and complement the natural materials used in the design.”

The ‘‘‘‘ *Design Guide* offered a modest variation, by replacing the sentence “massing must be strong” with the admonition that “‘‘courthouses must be planned and designed to frame, facilitate, and mediate the encounter between the citizen and the justice system.”

Moving from overall aspirations to specific provisions, both the GSA and the judiciary’s design guides address courtroom and building layouts.” The ‘‘‘‘ *Guides* had discussed two areas within a courtroom, the “activity zone” for formal proceedings and the “public zone” where observers could sit.” For courtroom sizes, the ‘‘‘‘ ‘‘‘‘ *Guide* relied on Judicial Conference decisions under Chief Justice Warren Burger who, as noted, supported alternative dispute resolution and had proposed small (“Tom Thumb”) courtrooms. While the ‘‘‘‘ Judicial Conference guidelines had called for ‘,‘‘‘-square-foot courtrooms,” in the ‘‘‘‘s when Chief Justice Burger presided, the Judicial Conference downsized somewhat, settling on four sizes of courtrooms ranging from ‘,‘‘‘ square feet to ‘,‘‘‘ square feet.” The ‘‘‘‘ ‘‘‘‘ *Design Guide* incorporated those standards and also detailed the height for ceilings” twelve feet, except for the large courtroom, where heights of sixteen feet were recommended.” As for the number of courtrooms, the ‘‘‘‘ ‘‘‘‘ *Design Guide* had specified that, in accordance with Judicial Conference resolutions, “no judge of a multiple-judge court will have the exclusive use of any particular courtroom.” Although it was tacitly still the policy, that comment was not included in the ‘‘‘‘ version formally approved by the Judicial Conference.

Once the judiciary was the author of its own *Design Guide,* the dimensions changed and the commitment to a courtroom for each judge became entrenched. The judiciary’s ‘‘‘‘ *Guide* prescribed ‘,‘‘‘ square feet for a district judge’s courtroom, with ceilings sixteen feet high; ‘,‘‘‘ square feet for magistrate and bankruptcy courtrooms, and appellate courts varying from ‘,‘‘‘ square feet for the full (“en banc”) court to ‘,‘‘‘ square feet for three-judge panels.” The ceiling heights were to “contribute to the order and decorum of the proceedings,” and the ‘‘‘‘ ‘‘‘‘ *Courts Design Guide* noted that ceilings could be raised higher than sixteen feet if additional height space was “available at minimal additional cost.”

The judiciary’s design guides also detailed the layout of courtrooms as well as some of the decor of judges’ benches, jury boxes, witness stands, and lawyers’ tables: “Finishes in the courtroom must reflect the seriousness and promote the dignity of court proceedings.” Millwork similarly needed to “complement the aesthetics and dignity of the courtroom.” Capacious jury boxes were required, designed to accommodate eighteen jurors so as to be useful for grand juries as well as petit juries and to provide space for alternates.” While a few items such as lecterns could be movable, most of the furnishings were to be affixed to the floor.

Public space was also specified, with benches for observers set at the far back of the room. The presumption was that “spectator and media attendance” at most appellate hearings would be “minimal”; forty to eighty seats sufficed for regular appellate courtrooms.” At the trial level, constitutional guarantees of “public” trials necessitated “a certain volume of general public seating” so sixty-five to eighty-five seats ought to be made available.” The cost of each such courtroom and its adjacent office spaces was estimated to

be, on average, about [illegible] million.[illegible] Translating that figure (and many others for the rest of the spaces in courthouses), the forty-five projects planned for the time span between [illegible] and [illegible] were budgeted to require [illegible] billion.[illegible]

In keeping with its [illegible]more aggressive role in managing its own space program,[illegible] the Judicial Conference also provided for [illegible]variances[illegible] that permitted courtrooms larger than the standards set forth in its own design guides. The Conference empowered its standing Committee on Space and Facilities to authorize changes.[illegible] For a few years, terms such as [illegible]exceptions,[illegible] [illegible]deviations,[illegible] [illegible]waivers[illegible] or [illegible]departures[illegible] were instead described as [illegible]special requirements.[illegible] (That euphemism was rescinded in [illegible] in the wake of conflicts with Congress over space, and the Committee returned to its earlier terminology.[illegible])

In addition to the dimensions of courtrooms, the size of judicial office space also grew over the years. The [illegible] and [illegible] *S[illegible] Desi[illegible]n [illegible]uides* had proposed the standard of [illegible],[illegible] square feet for trial judges' chambers and [illegible],[illegible] to [illegible],[illegible] for appellate judges' suites, a figure that included areas for a secretary, law clerks, and books.[illegible] The [illegible] [illegible] *Courts Desi[illegible]n [illegible]uide* called for more capacious rooms: chambers for trial judges were to be [illegible],[illegible] square feet and chambers for appellate judges to be [illegible],[illegible] square feet.[illegible] The winds of austerity (detailed later) prompted some scaling back; by [illegible], appellate chambers were to be closer to the [illegible] GSA numbers.[illegible]

[illegible]outin[illegible] *Circulation to* [illegible]*void Contact*

Segregation of space inside a courtroom[illegible] with litigants separated from the lawyers and judges by a bar[illegible] is a perennial topic; movement into courtrooms and around buildings is another. Congressional records from the [illegible]s reflect judicial distress at having to [illegible]pass through the courtroom to get to the bench[illegible] Federal architect Robert Mills responded by redesigning the access route so judges went [illegible]through the marshal's room[illegible] to enter the courtroom.[illegible] A century later, the [illegible] [illegible] *S[illegible] Desi[illegible]n [illegible]uide* accorded judges [illegible]a private passage[illegible] into courtrooms.[illegible]

More generally, in [illegible] security concerns were reflected in calls for chambers to be located above the ground-floor level and for judges to be able to get from the parking lot to their office spaces [illegible]without public contact.[illegible] Other details [illegible] the need for alarms, emergency lighting, the keying of elevators to permit private use by judges and, in new construction, the provision of one or more elevators exclusively for judges[illegible] were consigned to an appendix.[illegible] That approach mirrored that era's annual reports of the Judicial Conference, which noted that security was needed and commended an [illegible]appropriate separation[illegible] for participants so that judges, juries, witnesses, and the public need not all share the same entrance. Yet those issues were not at the forefront.[illegible] As one judge recalls, during that era [illegible]p[illegible]ublic access was practically . . . unlimited.[illegible]

Tragic shootings of judges and bombings of federal buildings brought security to the forefront by the [illegible]s. By twentieth century's end, the pattern of three circulation routes[illegible] [illegible]public, restricted and secure[illegible] had become a common feature of courtroom construction, both state and federal. New design standards provided for separate entries, elevators, and corridors for the public (civil litigants included), for judges, and for criminal defendants. Passage in and out of courthouses was also to be secured. Design proposals were to specify how judges could enter buildings through [illegible]a restricted parking structure within the confines of the building. From this restricted area, they have access to a restricted elevator system that transports them to their chambers and courtrooms[illegible] all connected to clerks' offices through a [illegible]restricted and private judges' circulation system.[illegible] Prisoners were likewise walled off, entering through a secured sally port and held in a central cellblock.

While the public was to have a sense of [illegible]free movement[illegible] after passing through security at entrances to courts, and while the interiors were to be [illegible]barrier free[illegible] and [illegible]accessible[illegible] to persons with disabilities,[illegible] boundaries were thus guarded.[illegible] The courtroom (when in use) served as the place for [illegible]interface[illegible] among the differently routed individuals, but that space remained segregated internally, with each group entering through different doors and sitting in designated areas.[illegible] Courthouses were also vertically segregated (or [illegible]stacked[illegible]), with offices for judges placed on higher floors and the public and staff on the floors below.[illegible]

The segregation of spaces aimed to avoid what the press had described as the [illegible]nightmares[illegible] of the public, judges, and defendants mingling. Inscribed through the various routes is the premise that these different users ought not[illegible] either sequentially or concurrently[illegible] be in the same halls, elevators, or other spaces.[illegible] As interior spaces are so allocated, a sense of security presumably flows from warding off what one critic called the [illegible]contamination[illegible] emanating from criminal defendants and potentially disruptive spectators.[illegible] Rather than trying to disaggregate the relatively small number of terrifying individuals from the many law-abiding ones, all defendants are classed as potential risks. Moreover, to the extent that any of the texts or imagery inscribed on the walls aim at didacticism or that windows and skylights bespeak transparency, the narrow path through secure tunnels and bridges taken by defendants excludes them from the normative prescriptions offered.

Because the three circulatory patterns buffer against the possibility of such contact, [illegible]circulation space often accounts for [illegible] to [illegible] percent of the usable space in a building.[illegible] Indeed, the multiple paths and security add significantly to the costs; as early as [illegible], the GSA estimated that courthouses cost [illegible]at least [illegible] per gross square foot more to build than a comparably sized federal office building[illegible] and thus estimated that courts cost about [illegible] per gross square foot.[illegible] Not only are remarkable amounts of space devoted

to ensuring that people do not meet each other; remarkable amounts of funds are allocated for that separation.

Dedicated Courtrooms

The other central judicial policy decision of the ⌧⌧⌧⌧s was to revisit the idea that judges could share courtrooms. Instead of the premises of the Burger years that courtrooms were to be ⌧available on a case assignment basis to any judge⌧ and that no judge on multi-judge courts was to have ⌧the exclusive use of any particular courtroom,⌧⌧⌧ Chief Justice Rehnquist's Judicial Conference took the position that a courtroom had to be dedicated to each judge.⌧⌧ As recorded in the ⌧⌧⌧⌧ ⌧⌧s *Courts Desi⌧n ⌧ uide⌧*

> Recognizing how essential the availability of a courtroom is to the fulfillment of the judge's responsibility to serve the public by disposing of criminal trials, sentencing, and civil cases in a fair and expeditious manner, and presiding over the wide range of activities that take place in courtrooms requiring the presence of a judicial officer, the Judicial Conference adopts the following policy for determining the number of courtrooms needed at a facility:
>
> With regard to all authorized active judges, one courtroom must be provided.⌧⌧

Further, until ⌧⌧⌧⌧ the Judicial Conference left the question of dedicated courtrooms for ⌧senior,⌧ ⌧visiting⌧ and magistrate judges to decentralized decisionmaking.⌧⌧ Then, faced with conflicts over rent and congressional oversight (detailed later), the Conference moved to the position that in new court construction, senior trial judges were to share courtrooms, as might magistrate judges and possibly others.⌧⌧

As the courtroom-of-one's-own discussion suggests, the late twentieth-century courthouse focused on the courtroom as its centerpiece⌧ the ⌧pearl within the shell⌧ to borrow Judge Douglas P. Woodlock's terminology.⌧⌧ For a brief period of time, the judiciary's *Desi⌧n ⌧ uides* also called for ⌧alternative dispute resolution suites⌧⌧ spaces designed for mediation, arbitration, or settlement conferences rather than courtrooms laid out for trials.⌧⌧ Amendments were formally made in ⌧⌧⌧⌧ to incorporate that change, but ⌧⌧⌧⌧ revisions⌧ made in a context of fiscal limitations⌧ deleted those provisions rather than calling for courtroom sharing or reducing the size of courtrooms.

On many metrics, the judiciary's work⌧ intersecting with the retooled GSA Design Excellence Program⌧ succeeded, garnering praise for both agencies. As the judiciary's monthly newsletter reported in ⌧⌧⌧⌧, the new procedures and guidelines provided a ⌧Renaissance⌧ for federal courthouses that had previously been ⌧box-like structures.⌧⌧⌧ Allusions to pre-Enlightenment Europe also came from architectural critics, who described the era as the ⌧golden age of federal architecture⌧⌧⌧ and invoked the parallel of the patronage of the Medicis.⌧⌧ The Design Excellence Program itself received awards from the National Design Museum and the American Architectural Foundation, among others.⌧⌧ In ⌧⌧⌧⌧, the Center for Architecture in downtown New York City held an exhibit, ⌧Civic Spirit: Changing the Course of Federal Design⌧ displaying drawings, models, and photographs of some twenty buildings, all exemplary of the ⌧future of federal design.⌧⌧⌧ Of the courthouses shown, several broke with various conventions, departing either from a ⌧linear layout⌧ or from a single structure for chambers and courtrooms.⌧⌧ Descriptions invoked the openness provided by the glass that, after dark, lent some of the new buildings a resemblance to beacons or lanterns.

Amidst the celebrations, some conflicts existed between the ⌧trads⌧ (traditionalists) and ⌧rads⌧ (post-modernists), prompting the Office of Chief Architect of the GSA and the Design Excellence and the Arts Program to convene a conference, ⌧Function, Form, and Meaning: Design Excellence in Federal Courthouses⌧ to review the portfolio of buildings and to reflect on future directions.⌧⌧ The ⌧⌧⌧ people assembled in ⌧⌧⌧⌧ by Chief Architect Les Shepherd and Director Tom Grooms renewed the commitments to the vision of Daniel Moynihan, Ed Feiner, and Robert Peck⌧ that courthouses provide ⌧a sense of place and vitality ⌧through⌧ appropriate scale and symbolic value.⌧⌧⌧ The montage in figure ⌧⌧⌧ (color plate ⌧⌧) of nine courthouses that were built or renovated between ⌧⌧⌧⌧ and ⌧⌧⌧⌧ by world-renowned architects (such as Henry Cobb, Richard Meier, Thom Mayne, Michael Graves, and Robert Stern) captures some of the exuberance.⌧⌧

Negotiating Rent and Space

More than a century ago, in ⌧⌧⌧⌧, a member of the House Committee on Public Buildings and Grounds noted that forty-one proposed bills had come before that body for construction of federal buildings. In support of such proposals, he argued that the government was then ⌧paying about ⌧⌧,⌧⌧⌧,⌧⌧⌧ annually for rent of public buildings⌧ and that ⌧this enormous rent should be decreased as much as possible⌧ through its own construction programs.⌧⌧

In retrospect, those were halcyon days in terms of the cost of space. For fiscal year ⌧⌧⌧⌧, the federal judiciary reported paying the GSA more than ⌧⌧ percent of its budget (⌧⌧⌧⌧ million) in ⌧rent⌧ for occupying forty million square feet⌧⌧⌧ albeit with some significant amount of that money recycled to the federal judiciary as part of new building funds. Readers might well be perplexed at the idea that rent is the word used in a discussion of funding for federal buildings. Hence, a brief overview of how that word became apt is in order.

As detailed in Chapters ⌧ and ⌧, Congress allocated building funds through site-by-site appropriations to be spent under the aegis of various entities such as the Office

of the Supervising Architect and the GSA. But in the early ⧫⧫⧫⧫s, Congress reorganized its rules to require agencies to pay ⧫rent⧫ to the GSA for the buildings used. Those monies were to support a Federal Building Fund to finance new acquisitions as well as construction and maintenance; Congress sought to have agencies internalize the costs of whatever space they inhabited.⧫⧫ Under the ⧫⧫⧫⧫ amendments to the federal building laws, the GSA, as owner and landlord, set the rent for its tenants (federal siblings included) in a manner determined by its Administrator.

The GSA developed a measure of what it termed ⧫commercially equivalent charges⧫ in an effort to create incentives for agencies to minimize the amount or cost of office space they occupy.⧫⧫ Because this revenue did not result in the full internalization of building costs, Congress continued to appropriate funds for new work as well as to rely on contract-lease arrangements using private monies for construction, such as for the Thurgood Marshall Federal Judiciary Building (fig. ⧫/⧫⧫⧫). To impose control over the GSA as well as its federal tenants, Congress required that for projects over a certain value (as of ⧫⧫⧫⧫, pegged at ⧫⧫.⧫ million), the GSA needed approval through resolutions from the Senate's Committee on Environment and Public Works and the House's Committee on Transportation and Infrastructure.⧫⧫

Cuttin⧫ into the Judicial Dollar

The rent provisions went into effect in July of ⧫⧫⧫⧫, and the judiciary thus began to pay for space and related services.⧫⧫ If measured by the responses from the judiciary, the new accounting system made an impact. Within a year, the annual reports of the Judicial Conference, which had before then regularly noted requests for construction and appropriations, began to include data on building costs. For example, in ⧫⧫⧫⧫ the judiciary reported paying ⧫⧫⧫,⧫⧫⧫,⧫⧫⧫ in rent for its ⧫⧫⧫ buildings with their ⧫.⧫ million square feet of space. Noting that the rent costs represented ⧫⧫ percent of its budget and seeking to reduce those costs, the Judicial Conference also released more than ⧫⧫,⧫⧫⧫ square feet of ⧫unneeded space.⧫⧫⧫

The budgetary and psychic impact of the new rent arrangement can be readily seen by comparing various versions of the depiction of the ⧫Judicial Dollar⧫ provided annually for several decades in the Report of the Director of the AO. As the ⧫⧫⧫⧫ ⧫Dollar⧫ shows (fig. ⧫⧫⧫), the judiciary's budget allocations went to salaries, staff, and miscellaneous costs (including travel and the air conditioning for which the Conference had obtained direct appropriations), all represented as cents on the Dollar diagram.⧫⧫ At the time, no cents were allocated to represent the cost of courthouses. But in ⧫⧫⧫⧫, the year after the new rent provisions became effective, the Judicial Dollar (fig. ⧫⧫⧫) showed ⧫⧫ cents allocated for ⧫Space and Facilities,⧫⧫⧫ and as long as the AO used that depiction, it continued annually to mark the percentage spent on its buildings.⧫⧫

Over time the data became a source of distress. Concerns about rent came to feature in the Annual Reports of the Judicial Conference. In the decade between ⧫⧫⧫⧫ and ⧫⧫⧫⧫, rent bills grew from ⧫⧫⧫⧫ million to ⧫⧫⧫⧫ million, or from ⧫⧫ to ⧫⧫ percent of the judiciary's budget, with projections that rent would soon account for almost a quarter of the judiciary's expenditures.⧫⧫ On the other hand, for much of that period the judiciary's budget was also growing. While in the ⧫⧫⧫⧫s, about ⧫⧫⧫ million had been allocated to the federal judiciary, by ⧫⧫⧫⧫ the judiciary received more than ⧫⧫.⧫ billion in funding.⧫⧫ (By ⧫⧫⧫⧫ the judiciary's budget topped ⧫⧫ billion.⧫⧫)

But what space was ⧫needed⧫ and what was extra⧫ And how much should it cost⧫ In the late twentieth century, as in the seventeenth, construction project funding depends

on a polity's sense of its own wealth and its attitude toward judges. While at some points Congress felt flush, during hearings in [illegible] a member of Congress recounted that requests for appropriations for courthouses included [illegible]Savannah, [illegible] a square foot; Brooklyn, [illegible] a square foot; Eugene, Oregon, [illegible] a square foot; Springfield, [illegible] a square foot; Denver, [illegible] a square foot. This is just too much.[illegible]Such political complaints, inter-branch conflicts, and fiscal constraints that accelerated after [illegible]/[illegible] prompted the Executive Branch to pause when the judiciary put in its requests for courthouse construction. Some planned projects went unfunded, while others carried forward as building costs rose.

Questions about needs are embedded not only in questions about finances and about the function of adjudication but also in the politics of judicial selection. Given the constitutional provisions that presidents nominate individuals to serve as life-tenured federal judges and that the Senate must confirm, congressional decisions to add slots give a particular occupant of the White House patronage opportunities. On the other hand, sometimes the politics of [illegible]judge bashing[illegible] claiming that judges overstep their authority when making decisions[illegible] results in calls for cutting back on judgeships. For example, during the [illegible]s, Congress held hearings on whether to decrease the number of federal judges or to delay filling vacancies. Added to the mix were conflicts about whether some federal courts ought to be closed. The GSA complained to Congress that more than seventy facilities [illegible]occupied by the Judiciary[illegible] were not in fact occupied in that no full-time judge was a resident.[illegible] But the judiciary responded that it was Congress[illegible] not the courts[illegible] that specified the number of judges and designated so many sites (presumably reflecting constituent requests) at which courts were to be held.

Inter-Agency, Inter-Branch Diversion or Intrusion

As dislike for paying "rent" grew within the judiciary, complaints by judges about the GSA as a landlord did as well. That inter-agency conflict spilled over to the two other branches of the federal government, with questions raised about both the expenses of and the needs for courthouse building.

Concerns about building costs became acute in the mid-[illegible]s, during what the AO termed "times of severely limited financial resources and enhanced fiscal accountability." Voices from both the Executive and Congress questioned decisions about the number of courthouses and courtrooms and the size of chambers. Furthermore, a [illegible] Senate "investigation of the federal courthouse construction program" had found wasteful practices: "Judges have regularly intervened with GSA to have larger courtrooms and offices built, the addition of private kitchens . . . and Terrazzo marble tile." Criticism was also leveled against the GSA for failing to control "excessive, duplicative, erroneous, unallowable, or poorly documented" costs. Targets of criticism included federal courthouses in New York City and Boston; newspaper stories described their embellishments as too elegant and too expensive. (Which entity—the judiciary or the GSA—was to blame was another question, producing "inter-agency finger-pointing" about the approval of items such as a [illegible], bronze fire hose holder, a [illegible], stone engraving with gold lettering, and an out-sized courtroom with seating for forty judges.)

A Senate report recommended that a moratorium be imposed and no new construction be permitted absent reform. A proposed statute sought to give more power to the GSA, which would be obliged to submit to Congress design guide standards specifying "the characteristics of court accommodations that are essential to the provision of due process of law and the safe, fair, and efficient administration of justice by the federal court system." In addition, members of Congress wanted to put the Commission on Fine Arts in charge of reviewing the "conceptual design" of new courthouses so as to advise whether new designs both comported with Moynihan's principles—"the dignity, enterprise, vigor, and stability of the American Government"—as well as with "the accepted standards of courthouse design."

To respond to congressional oversight and to ward off a suggested "moratorium or restriction on the acquisition of space for the courts," the judiciary took four tacks. One was to downsize through centralizing control over reformulated design requirements, space needs, and priorities. A second was to lobby individual members of Congress to enlist support for building. A third was to seek direct budget subsidies for rent and to renegotiate the formulas producing the charges for rent. The fourth was to try to separate from the GSA. When pursuing these paths, members of the judiciary regularly invoked constitutional commitments to an independent judiciary and separation of powers. They argued against management by other branches and that needs for more judges, based on workload measurements, and for more buildings stemmed from obligations to discharge duties imposed by Congress and the Constitution.

For example, in [illegible] the judiciary reported on efforts to reduce "the overall growth of rental costs" by decreasing the size of new buildings through the elimination of certain kinds of spaces within new construction. Specifics included cutting out meeting rooms for each circuit's judicial council as well as suites for alternative dispute resolution. In addition, the [illegible] version of the [illegible] *Courts Design Guide* proposed that judges share auxiliary spaces and books so as to decrease the dimensions of chambers. Attention was also given to the expensiveness of decor: revisions to the [illegible] *Courts Design Guide* ruled out "the use of exotic hardwoods" in favor of low-maintenance and highly durable materials. And when prioritizing among building requests coming from judges across the country, the Conference raised the possibility of returning to earlier practices of sharing facilities with state and local governments.

The Judicial Conference also stepped up efforts to control individual project spending. The [illegible] *Design Guide* stressed the need for projects to come in on budget, as the Judicial Conference prohibited any action taken by a court or circuit judicial council that would lead to extravagance in courthouse construction or renovation. Shifting from a liberal "variance" policy, the Conference ruled that no changes in designs adding costs above a specified level were permissible without multiple levels of approval within the judiciary and then from the GSA. Chief Justice Rehnquist also appealed for direct funding from Congress. Seeking [illegible] million for fourteen projects, he explained that the projects were critically needed "if the federal courts are to adequately and safely carry out the responsibilities placed upon them by the Constitution and statutes." The judiciary detailed the five-year priorities and specified courthouses lacking facilities for witnesses or attorneys and those with acute security issues. Repeatedly, the AO reached out to leaders on Capitol Hill and to the President, and such efforts resulted in "substantial success" as new projects were funded.

Rent Relief

The judiciary's insistence on the need for space was coupled with efforts to fund or to reduce its significant rent bills. One option was to obtain additional appropriations directly from Congress to pay the GSA, and another was to change the way rent was calculated so as to lower the charges. The Judicial Conference tried both, with some measure of success.

As the AO reported, between [illegible] and [illegible] (during [illegible]times of fiscal restraint[illegible]), it was able to increase [illegible]the judiciary's budget fourfold from about [illegible] billion in [illegible] to approximately [illegible] billion in [illegible].[illegible] In [illegible] the judiciary also went directly to Congress for courthouse funding and obtained [illegible] million for nine new courthouses and [illegible] million for office buildings and repairs.[illegible] In support of such requests, the judiciary registered its views that critical analyses of its use of space were [illegible]seriously flawed.[illegible] Testifying before Congress, the Chair of the Judicial Conference Committee on Space and Facilities explained that between [illegible] and [illegible], appellate filings had [illegible]increased [illegible] percent; civil filings [illegible] percent; criminal filings [illegible] percent; bankruptcy filings [illegible] percent; and . . . [illegible]the[illegible] total number of judges increased [illegible] percent and total court staff increased [illegible] percent.[illegible] Thus, Congress was the source of demands for judicial services as well as its sites, with statutes designating more than four hundred places for holding court.[illegible] At many locations, facilities had [illegible]outdated horizontal and vertical circulation patterns that mingle court personnel, persons in custody, and the general public.[illegible] Even as the judiciary had tightened its own budget controls, changed its design guide, and was indeed reconsidering courtroom utilization (whether each judge needed a dedicated courtroom),[illegible] more facilities were needed.

From the GSA's perspective, however, the rent bills were doing just the job Congress had intended[illegible] creating incentives for more efficient use of space.[illegible] Indeed, in [illegible] the AO developed a database called [illegible]Rent[illegible] to enable court executives to monitor costs. As one clerk of a federal district court explained, [illegible]Space can no longer be viewed as a free commodity, but rather we must view it as we do all other items purchased from a private vendor . . . subject to the same spending decisions.[illegible]

But in terms of paying for space, the judiciary disagreed with the GSA's method for calculating the amounts due. The GSA set the rent by what it termed [illegible]investment pricing[illegible] which it keyed to the costs of commercial rent space for comparably high-quality offices and to the cost of construction, which was especially high for the judiciary given security and other architectural demands.[illegible] The charges imposed on the judiciary, under the GSA calculations, appropriately tracked the increase in space, growing from [illegible] to [illegible] by [illegible] percent, or from [illegible].[illegible] million to almost [illegible] million [illegible]rentable square feet.[illegible] With its [illegible] courtrooms in [illegible] million square feet in [illegible] owned and [illegible] leased buildings,[illegible] the judiciary was a major user of space. As the GSA reported in [illegible] to Congress: [illegible]Measured in terms of the square feet of space provided,[illegible] the federal judiciary was its [illegible]second largest customer,[illegible] occupying [illegible] percent of the total footage in the GSA inventory.[illegible] Congress asked the General Accounting Office (GAO, whose abbreviation remained after the name later changed to the Government Accountability Office[illegible]) to report on these issues. The GAO concurred that the rent increase corresponded more or less to space increases. Under the GAO calculations, charges for rent rose about [illegible] percent (controlling for inflation), or from about [illegible] million to [illegible] million.[illegible] That rent somewhat outstripped space reflected the unusually high cost of judicial building, with its three discrete circulation patterns.[illegible]

Both the GSA and the GAO noted that courthouses were unusually and, in some respects, unduly expensive.[illegible] Various [illegible]architectural elements make courthouses among the most expensive federal facilities to construct in GSA's inventory.[illegible] Some cost came from perceived judicial excesses; the GSA cited an example of rent for [illegible],[illegible] square feet of office space for a judge who also had chambers of [illegible],[illegible] square feet in another court.[illegible] Complaints were also directed at space allocations for libraries, [illegible]rarely used[illegible] due to the shift to electronic databases, and for dedicated appellate courtrooms not planned to hold argument daily.[illegible] One member of Congress commented that the judiciary had [illegible]failed to manage their space requirements[illegible] by acting as if it were a family wanting a [illegible],[illegible] square foot mansion, but . . . able to afford the more conservative [illegible],[illegible] square foot home.[illegible]

The judiciary, however, had a different view of what numbers were relevant to understanding how high rents had soared.[illegible] Rather than basing calculations on a [illegible]–[illegible] time frame, the more [illegible]meaningful[illegible] analysis came from a twenty-year span during which rent had [illegible]increased [illegible] percent, adjusted for inflation[illegible] In contrast, the judiciary's space had grown at half that rate[illegible] by [illegible] percent in square footage.[illegible] Further, the judiciary argued that the high cost of space stemmed from [illegible]escalating rent charges for the existing inventory[illegible] including many older facilities, not new space.[illegible] And through an analysis of [illegible] of its [illegible] facilities, the judiciary reported some [illegible] million in GSA overcharges[illegible] that GSA acknowledged to some extent.[illegible]

Further, as Ralph Mecham, Director of the AO, testified, the federal courts were faced with a [illegible]funding crisis[illegible] and despite [illegible]heroic efforts . . . some degradation in service[illegible] was occurring because of the GSA rent.[illegible] The judiciary's newsletter encapsulated the claim in its headline [illegible]Either Pay Staff or Pay Rent.[illegible] Eleven [illegible]senior members of the Senate Judiciary Committee[illegible] wrote to the GSA to request rent relief.[illegible] When Chief Justice John Roberts took office in the fall of [illegible], he joined the chorus protesting rent. In January of [illegible], in the first of his annual reports on the state of the judiciary, he took up the topic[illegible] and contrasted the budget outlay by the judiciary to the GSA[illegible] then [illegible] percent[illegible] with what the Department of Justice spent[illegible] [illegible] percent of its budget.[illegible] The Chief Justice argued that while the GSA charged [illegible] million in rent, the [illegible]actual cost for space to the judiciary was [illegible] million.[illegible] He argued that the [illegible]federal judiciary cannot continue to serve as a profit center for the GSA[illegible] as he pointed to a reduction of about [illegible],[illegible] employees that he attributed, in part, to the budgetary drain of rent.[illegible]

The real problem was that Congress was not funding the transfer from one federal agency to another at a rate sufficient to make it a wash for the courts. As the Chair of the Committee on Space and Facilities told members of Congress, the courts faced the situation where mandatory rent payments to GSA have been increasing at a faster rate than the Judiciary's appropriations increased. What the judiciary wanted was rent relief. Unsuccessful in gaining sufficient reimbursements through appropriations, the judiciary focused on another route: changing the way rent was calculated. The judiciary argued that the GSA "investment pricing" policy failed to take into account the unique and special needs of courts, making "commercially equivalent" values the wrong metric for court facilities. Moreover, even if one used a commercial rate, the relevant baseline, argued the judiciary, ought to be what would be paid by a long-term tenant, leasing a facility that was "built-to-suit" rather than a short-term renter in a building constructed for speculation.

In the judiciary asked the Administrator of the GSA for a "permanent annual rent exception" under which the courts would pay operating costs (utilities and security) but not a separate fee for rent. The amount requested was about half the annual rent payment, or "a permanent, annual rent exemption of million from rent that the "GSA" charges the judiciary to occupy space in courthouses. In the Office of Management and Budget turned the judiciary down. Losing in the Executive Branch, the judiciary went directly to Congress, where Senator Arlen Specter, the Republican chair of the Judiciary Committee, introduced a bill to "provide relief for the Federal Judiciary from excessive rent charges" to make the GSA charge on the basis of "actual costs of operating" rather than on a commercial rent basis. Further, a group of senators led by Specter called on the GSA to provide its own rent exemption. Although legislation passed the Senate in , members of the House" and prominently Eleanor Holmes Norton" objected to the "rear guard' action" to try to cap rent when the House had asked for government investigation of the use of space. That bill was not enacted.

Thus the Public Building legislation again seemed to fulfill its promise by creating incentives inside agencies to reduce the costs of their operations. The judiciary imposed its own "annual cap on rent" by provisionally aiming to limit growth to an annual rate of . percent. The Conference further revised its design parameters as it looked to close facilities that had no full-time resident judge and imposed a moratorium on several projects. Yet, in , the judiciary was able to obtain a revision in the way the GSA billed its rent that would reduce the pressures. Negotiations under a new director of the AO, James C. Duff, resulted in a revised rent calculation that the AO "expected to translate into tens of millions of dollars in annual rent reductions for the Judiciary." A "memorandum of agreement" between the two agencies set forth that for a ten-year period, new court construction was to be priced on a modified "return on investment" system rather than the market-based approach that had been used. In turn, within a few months thereafter and "in furtherance of its aggressive cost containment efforts" the Judicial Conference announced that it would retreat somewhat from its fierce opposition to judges' sharing courtrooms.

Courtroom of ne wn

During the s, "courtroom sharing" had become a particular point of contestation, as members of Congress questioned the judiciary's insistence that a dedicated courtroom be provided for each authorized judgeship as well as for judges who had taken senior status and thereby opened up a vacancy. As of , , courtrooms were available for district court judges, with others for magistrate and senior judges" in total, about , to , courtrooms. Estimates were that building new courtrooms cost about . million, and the question was how often judges used them. In a federal appellate court reversed a conviction because a judge in the Virgin Islands had refused to grant a continuance, explained as denied in part because of the unavailability of courtroom space at a later time. That ruling came while a "Republican-held Congress" continued to "cast a skeptical eye on courthouse construction and use" as one journalist put it. Focused on what it called "courtroom utilization," Congress commissioned studies from both the GAO and the Congressional Budget Office (CBO). Examining seven districts and using as a metric "lights on" for any event from full-day trials to activities that "lasted less than an hour" the GAO reported that as of the late s, courtrooms were in use about half the time.

The judiciary then hired a firm, Ernst and Young, to conduct its own study. Its report concluded that courtroom sharing would not be feasible in small districts and would impose serious scheduling problems in larger ones. That analysis was criticized by the GAO, which described the Ernst and Young report as based on a flawed mathematical formula (lacking "data, rationale, or analytical basis"). Yet another study, from the CBO, modeled the effects of a reduction in courtroom space based on trial rates as of ; the CBO concluded that some delays would occur but that overall, even with fewer courtrooms, no one would be using them between about and percent of the time.

Congressional inquiries were complemented by concerns from the Executive. To the chagrin of the judiciary, on more than one occasion the Executive Branch did not forward judicial requests to Congress for buildings. By , while maintaining its commitment to dedicated courtrooms, the Judicial Conference announced a "space cost containment plan" through which it would explore whether courtroom sharing was feasible. At issue was whether

circuits or districts might ask senior or visiting judges to share courtrooms.

In the fiscal year budget request, the Executive did include funding for seven courthouse construction projects but proposed a budget that assumed two courtrooms for every three judges. The Judicial Conference objected that the proposal was a direct contradiction of the judiciary's policy that had been developed after analysis of two major studies on courtroom utilization and case management and that had recognized the indispensible need for a courtroom to fill the essential judicial responsibilities. The Conference strongly condemned the unilateral efforts of the Office of Management and Budget to impose a courtroom sharing policy on the judicial branch, as an unwarranted and inappropriate intrusion into the constitutionally mandated independence of the judiciary.

The judiciary also tried to ward off proposed legislation obliging it to submit detailed plans to Congress for building projects of a certain value. Instead the Conference determined to present its housing needs by way of a formal narrative statement directly to educate key legislative and executive branch decision makers. As it made its case, the judiciary relied on the vocabulary developed in the late s by deploying the concept of a judicial space emergency, which it defined as impairing the ability of each court to execute its responsibilities . . . by the unavailability of space. The Judicial Conference identified certain courts (such as those with heavy immigration dockets stemming from efforts to close the Southwest border) as having such emergencies and requiring funds in light of intolerable security and operational problems.

The other two branches pushed back. In response, the Judicial Conference imposed its own internal two-year moratorium on planning for upgraded projects in order to reevaluate the underlying assumptions in light of constrained budgetary environments. In the Conference called on chief circuit judges to cancel space requests wherever possible. (In some exemptions from that moratorium were authorized.) In an effort to take the theory of internalizing the costs of buildings from the national to the circuit level, the Conference also imposed a rent budget cap per circuit.

In , at the request of the chair of the House subcommittee focused on federal building, the Federal Judicial Center (FJC) undertook yet another study of courtroom utilization. To answer the ultimate question of whether judges could share courtrooms without compromising the administration of justice, the FJC looked at courtrooms in twenty-three districts. When evaluating those facilities, the FJC added to the metric of actual courtroom use the concept of latent use to denote time scheduled in a courtroom and then not used. Availability, rather than use, was relevant because a firm trial date and availability of a courtroom often prompt parties to settle or plead. Further, the FJC distinguished among users, separately assessing how much time active, senior, and magistrate judges spent in court.

The FJC reported widespread enthusiasm for dedicated courtrooms from the judges surveyed (as well as from lawyers). Moreover, the study found a higher rate of use (percent of work days for district judges) than had earlier studies. On any given day, to percent of courtrooms were in use . . . for either actual or scheduled trials or case proceedings. On the other hand, in a courthouse where judges shared courtrooms, there were no days on which a courtroom was not available. . . .

While the study was underway, the relevant House subcommittee passed a resolution that directed the revision of the *Courts Design Guide* to provide in new court construction for one courtroom for every two senior judges. Not surprisingly, the denouement was the reshaping of Conference policy to require some sharing of space. In , the Judicial Conference committed itself to revised planning assumptions that entailed some courtroom sharing for senior judges and magistrate judges, exploration of opportunities for courtroom sharing for active district judges if on large (ten or more) multi-judge courts, and studying courtroom allocation policies for bankruptcy judges. As the AO's relatively new Director, James Duff, explained, those provisions struck the appropriate balance between the Judiciary's fundamental responsibility of ensuring the fair and efficient administration of justice and the general governmental responsibility to be good stewards of the taxpayers' money. But as the judiciary retreated somewhat from its one-courtroom-per-judge stance, what it got in return was a new way in which to calculate the money it paid to the GSA in rent estimated to save the courts some million dollars over the coming two decades.

Judicial Political Acumen and Incongruity: The Rehnquist Judiciary's Monuments to Federal Adjudication

This review of the thirty years from the late s through demonstrates the judiciary's success in obtaining dozens of new and renovated facilities and in securing a new method of financing that substantially lowered (and made somewhat less vivid) the dollars spent for its facilities. From the facilities in use in the s, the judiciary grew to be housed in some locations by . Over a thirty-year period, the courts tripled their dedicated space and, between and , nearly doubled it. As architects involved in courthouse construction put it, federal courthouses provided visible expression of this third branch of government as separate from the legislative and executive branches. New and renovated courthouses

thus demonstrated the prestige and power of the federal judiciary, richer on various measures (fewer cases, more staff, larger facilities, often better salaries and pensions) than its state counterparts.

Along the way, Congress imposed a modest degree of supervision on the judiciary's building plans. Some projects were cut back, and the Judicial Conference stepped up its own monitoring of what had been decentralized and delegated decisionmaking. When restating its aspirations in , the judiciary espoused "core values" for space and facilities that sounded somewhat more utilitarian than the call in the *Courts Design Guide* for "solemnity, stability, integrity, rigor, and fairness." The new goals were "availability, function, adequacy, sufficiency, cost, and structural security." Moreover, by , the judiciary acceded to reducing space demands somewhat through requiring senior judges to share courtrooms and considering a return to the s presumption under Warren Burger that, in large districts, judges would share courtrooms. Yet the judiciary's leadership also returned to what Chief Justice Rehnquist had sought in "independent real property authority" to get out from under the GSA. But even as some projects were scaled back, a new cycle of building proposals came into shape for fiscal years –. By then, the AO and the GSA had became joint venturers in the quest for first-rate federal architecture. In , both sought to deflect criticism from the Government Accountability Office in congressional hearings questioning spending and construction.

One could assess the decades either as a remarkable victory for the judiciary or as evidence that the conflicts were bureaucratic rather than ideological. The repeated investment in courthouses is evidence that the judiciary's sibling branches were also committed to a thriving independent federal court system and to instantiating the nation's identity through its facilities. As one long-time observer and former chief judge of a circuit explained, in "the end . . . , the authorization for courthouse construction has been the product of compromises between the Judiciary, GSA, and Congress, salted with considerable amounts of lobbying (of Congress) by the judges and others in the local community." Federal courthouses succeeded in conveying something of the relative material wealth of the federal government, able to retain world-renowned architects to produce buildings of impressive dimensions.

Given that government spending could be (and was) also devoted to prisons, border stations, and other facilities, devotees of the rule of law should take pride in the political commitment made to the federal judiciary. In the quantity, the dollar value, and the quality of designs, the buildings made a statement that the federal government was prepared to invest specifically in marking the importance of adjudication.

For those steeped in the doctrine of the federal courts, some irony attends the fact that the building program for the judiciary took place under the aegis of Chief Justice Rehnquist and gave the courts the "fastest growth in square footage" of any sector the GSA served. In his role on the court, Chief Justice William Rehnquist was a major architect of legal rules that limited access to the federal courts. In a variety of different contexts, he led the court in crafting doctrines, often argued under the rubric of "federalism," that ceded authority to state courts. For example, major Rehnquist decisions narrowed access to habeas corpus and limited remedies for civil rights plaintiffs.

But even as the agenda for facilities succeeded, another goal" increased salaries" was not achieved. To the frustration of the judiciary's leadership, support for buildings was not complemented by raises in pay. Throughout the twentieth century, federal judges repeatedly complained that their remuneration was too low. Focusing on the same thirty years that spawned the remarkable tripling of its facilities, judges' "real" dollar income declined. Despite repeated pleas to Congress and the creation in the late s of a special commission chaired by the former head of the Federal Reserve, Paul Volcker, to document the economic loss in judicial pay, and despite numerous appeals by Chief Justice Rehnquist, Congress refused to provide raises and sometimes withheld cost-of-living increases.

As of , life-tenured appellate judges earned about , a year and district judges about , a year. While better compensated than many state judges, federal judges saw their former law clerks, hired as associates by law firms, making more money. To capture the problem, the judiciary switched its nomenclature from seeking "pay raises" to pressing for "salary restoration." In , Chief Justice Roberts devoted a good deal of his first annual address to salaries, as he argued that the levels set "threatened" to undermine the strength and independence of the federal judiciary." But Congress did not respond with higher salaries. Buildings and staff" that represented not only courts but also federal investment in localities across the country" were the places where Congress spent federal funds, rather than for salaries or significant increases in the number of life-tenured judgeships.

"Art-in-Architecture"

This chapter's narrative has been architecture-centric because buildings were the vehicles chosen to express federal norms. Continuing the pattern discussed in Chapters and , twentieth-century lawyers, judges, staff, and architects obtained funds for courthouses, with art as an afterthought if considered at all. Some of that lack of interest can be attributed to intellectual disdain for the didacticism of allegory, to dislike of ornamentation, and to aesthetic affection for line and form, as well as to the absence of institutional structures pressing for art production.

During the last four decades of the twentieth century, however, a market in government art came into being. As discussed in Chapter , in the early s the Ad Hoc Com-

mittee on Government Office Space that produced Moynihan's Guiding Principles had considered proposing that budgets for buildings include reserve funds for art, which had been the practice of the Treasury Department in the ⍰⍰⍰⍰s and had also been proposed by the ⍰⍰⍰⍰ Eisenhower Commission on Fine Art. On the table for the ⍰⍰⍰⍰s Ad Hoc Committee was a recommendation that ⍰up to one percent of a building's cost⍰ be devoted to art.⍰⍰ That statement, however, did not become part of the final report. Rather, Bernard Boutin, who was then the head of the GSA as well as a member of the Ad Hoc Committee, instituted a set-aside directly pegged at one-half of ⍰ percent of a construction budget.⍰⍰ Between ⍰⍰⍰⍰ and ⍰⍰⍰⍰, the GSA program (called Fine Arts in New Federal Buildings) commissioned forty-five artworks for installation around the United States.⍰⍰ That set-aside lapsed amidst budget cuts and complaints that the government had funded Robert Motherwell's mural *New ⍰n⍰land ⍰le⍰*, interpreted by some to be inappropriately referential to the Kennedy assassination.

In the ⍰⍰⍰⍰s, GSA Administrator Jay Solomon revived and expanded funding under the nomenclature of Art-in-Architecture (AiA),⍰⍰ a phrase repeated in federal regulations.⍰⍰ The set-aside for art (at one-half of ⍰ percent of the building projected costs) could be understood as appropriately small, a minor outlay in large projects. In ⍰⍰⍰⍰, for example, the GSA committed ⍰⍰.⍰ billion for construction and renovation that qualified for AiA funds, creating a sum of ⍰⍰⍰ million available for art. Even then, the GSA spent less than it could have; actual outlays were two-tenths rather than one-half of ⍰ percent.⍰⍰

But using the baseline of funds spent on construction could mislead, because that small percentage nonetheless rendered the federal government the ⍰nation's No. ⍰ art patron in direct commissions.⍰⍰⍰ Like Peck and Feiner who mediated between judges and architects, senior administrators such as Marilyn Farley and Susan Harrison of the AiA program shepherded renowned artists through procedures that resulted in installations of art, some of which were adventuresome and a few of which provoked criticism.⍰⍰ Harrison provided what artist Jenny Holzer described as a ⍰shield⍰ advising artists about how to deal with skeptical responses and how to help judges in particular to see the qualities of an artistic contribution.⍰⍰

As a result, the government supported a roster of artists that ⍰read like a Who's Who of American Art: Calder, Oldenburg, di Suvero, Nevelson, Noguchi,⍰⍰⍰ and those whose work we have shown, including Ellsworth Kelly in Boston (fig. ⍰/⍰⍰), Dorothea Rockburne in Maine (fig. ⍰/⍰⍰), Diana Moore in New Hampshire (figs. ⍰/⍰⍰, ⍰/⍰⍰, ⍰/⍰⍰), and Jan Mitchell in the Virgin Islands (figs. ⍰/⍰⍰, ⍰/⍰⍰, ⍰/⍰⍰). This national patronage created a ⍰network of consultants, commissioners, and other professionals committed to spreading the work of contemporary artists throughout the public domain.⍰⍰⍰

Selecting Community-Friendly Art to ⍰stand the test of time⍰

Putting significant money into art does not resolve the questions of how to select either artists or art. As detailed in Chapter ⍰, when a diverse group of persons gained rights of access to courts, they rebelled against what they saw on the walls and insisted on participatory roles in shaping their environment. Reflecting the democratization of adjudication, the government's selection procedures evolved as the ⍰fine arts program⍰ of the ⍰⍰⍰⍰s developed into the late twentieth-century process entailed in AiA.⍰⍰

Different constituencies pressed for procedures to enhance artistic quality and community engagement, goals that sometimes are seen as in conflict with each other. In the ⍰⍰⍰⍰s, the National Endowment for the Arts (NEA)⍰ which had revived the Moynihan quest for better architecture⍰ sought a wider range and more adventuresome choices for public art. In turn, when communities protested various installations, members of Congress reacted to damp down constituent distress. In ⍰⍰⍰⍰, for example, five thousand people petitioned to remove a ⍰⍰⍰,⍰⍰⍰ abstract sculpture installed in front of a federal building in Huron, South Dakota.⍰⍰ Critics described ⍰ *oedown* by the artist Guy Dill as ⍰four large steel plates propped up by telephone poles.⍰⍰⍰

That artwork remained in place but the procedures for selection changed. Members of Congress proposed to give residents of the communities where art was to be sited a majority of seats on selection committees.⍰⍰ That statute was not enacted,⍰⍰ but in ⍰⍰⍰⍰ a joint GSA-NEA task force developed new processes to identify high-quality art (⍰able to stand the test of time⍰) that would also be appreciated by local communities.⍰⍰ For a time the NEA convened the panels and GSA staff participated in advisory roles. The coordination was not tension free. For example, the NEA did not want to let project architects vote on artists.⍰⍰ By the late ⍰⍰⍰⍰s, authority shifted to a GSA-run process⍰⍰ in which some selections were made through the designation of two panels, one with GSA staff and art experts and another (the ⍰community arts panel⍰) composed of local actors who were either officeholders or people involved in cultural activities.⍰⍰ The revamped process was ⍰a matter of public policy⍰ that, as the GSA explained, reflected ⍰its responsibility to U.S. citizens⍰ to seek their ⍰support and involvement . . . in the selection of appropriate artwork⍰ for their localities.⍰⍰

Collaborative Diversity

What those committees were to look for in art is another question. The Code of Federal Regulations (detailed later) provided only the general mandate that federal agencies ⍰must incorporate fine arts as an integral part of total building concept.⍰⍰⍰ Various memoranda and documents from

the GSA repeated what Daniel Moynihan had set forth for architecture in his ⍰⍰⍰⍰s Guiding Principles: art, like architecture, should ⍰reflect the dignity, enterprise, vigor, and stability of the American National Government.⍰⍰⍰

As part of an overhaul of the Art-in-Architecture program in the mid-⍰⍰⍰⍰s, another description was proffered as better suited to a post-modern period sensibility⍰ that public art was to be a ⍰collaboration between artist and community to produce works of art that reflect the cultural, intellectual and historic interests and lifeways of a community.⍰⍰⍰ The GSA wanted ⍰meaningful cultural dialogues⍰ between art and ⍰diverse architectural vocabularies⍰⍰⍰; it enabled that collaboration in part through diversifying the contributors, as is reflected in GSA lists of the numbers of ⍰women and ethnic minorities commissioned through the Art-in-Architecture Program.⍰⍰⍰

In the late ⍰⍰⍰⍰s, selection processes were reconfigured again; the prior procedures meant that art selections came too late to be integrated into construction concepts. Early selections were encouraged to achieve ⍰a more holistic approach towards art and architecture.⍰⍰⍰ The GSA developed its own registry of ⍰peers⍰ as it put together a mix of GSA officials, experts, and community members charged with developing short lists of artists. To capture the effort to ⍰foster closer collaborations between architect and artist in order to integrate artwork more fully into each building⍰ the GSA renamed the program ⍰the Center for Design Excellence and the Arts.⍰⍰⍰ Proposals for building commissions needed to have ⍰an art in architecture statement⍰ provided at the outset.⍰⍰ Further, the GSA created its first ⍰traveling exhibit⍰ of art commissioned specifically for federal courthouses as it sought to bring attention to the importance played by historically rich as well as newly crafted imagery.⍰⍰

The ⍰⍰⍰⍰ regulations explain the basic policies:

> Federal agencies must incorporate fine arts as an integral part of the total building concept when designing new Federal buildings, and when making substantial repairs and alterations to existing Federal buildings, as appropriate. The selected fine arts, including painting, sculpture, and artistic work in other media, must reflect the national cultural heritage and emphasize the work of living American artists.⍰⍰

Funding, as the regulations explained, came through the allocation of ⍰a portion of the estimated⍰ building cost within ⍰a range determined by the Administrator of General Services,⍰⍰⍰ which is to say that the amount of the set-aside remained a matter of discretion and convention and not of law.

In terms of the process, the official regulatory statement (reiterating the ⍰⍰⍰⍰s goals) was that to ⍰the maximum extent practicable, Federal agencies should seek the support and involvement of local citizens in selecting appropriate artwork⍰ so that artists, in collaboration with communities, ⍰produce works of art that reflect the cultural, intellectual, and historic interests and values of a community.⍰⍰⍰ The regulations also acknowledged roles in selection for the ⍰architect of the building and art professionals⍰ and the aspiration that the artwork be ⍰diverse in style and media.⍰⍰⍰ Moreover, federal agencies have responsibility to ⍰facilitate participation by a large and diverse group of artists representing a wide variety of types of artwork.⍰⍰⍰ As AiA has described these efforts, the GSA sought ⍰the fullest possible spectrum of aesthetic, conceptual, and theoretical movements⍰ in America's contemporary art; it had melded ⍰creative disciplines⍰ through commissioning poet laureates to collaborate on projects with artists⍰ winning accolades as an ⍰enlightened sponsor⍰ of public art.⍰⍰

Quietly Quizzical: Tom Otterness in Portland, Oregon and Jenny Holzer in Sacramento, California

The eclecticism in the selection of materials and genres is well captured by the GSA publication ⍰*n* ⍰ *klahoma Tri*⍰⍰ *ute,* published in ⍰⍰⍰⍰. The monograph commemorated the art that had adorned the Alfred P. Murrah Federal Building, partially destroyed in ⍰⍰⍰⍰ by a truck bomb that killed ⍰⍰⍰ people.⍰⍰ For that building, the GSA design selection process had settled on thirty-two artworks from more than twenty-five artists, many of whom were from Oklahoma. As the GSA also noted, the group was ⍰almost equally divided between women and men, and represented racial diversity, including several artists of Native American descent.⍰⍰⍰

Some twenty-two pieces survived the bombing and were restored for display.⍰⍰ Sculptures of ⍰wood, clay, metal, stone, and acrylic⍰ thus joined tapestries, weavings, photographs, and quilts.⍰⍰ The work ranged from a quilted pattern of oil derricks, windmills, and buffaloes to a six-foot assemblage of oak carved to create an abstract mural and a set of three ten-foot stainless steel panels swiveling to reflect the light.⍰⍰ Some of the pieces made references to United States history and to the region in particular, but none were provocative comments on justice and the legal system.

The GSA thus succeeded in bringing contemporary aesthetics and innovative artists into federal buildings. But, despite staff efforts supportive of more politically engaged projects, the selection procedures generally weeded them out or damped them down. Gentle and ironic exceptions to the celebratory posture of most of the art selected can nonetheless be found in the installations of works by Tom Otterness⍰⍰ in ⍰⍰⍰⍰ for a courthouse in Portland, Oregon and by Jenny Holzer⍰⍰ in ⍰⍰⍰⍰ in a courthouse in Sacramento, California. Both are world-famous artists who came to the fore in the ⍰⍰⍰⍰s when they worked in New York as

part of a group called Collaborative Projects Inc. (Colab), composed of some fifty □politically engaged young artists who rejected the cool muteness of Minimalist abstraction and saw art as a force to change society.□□□

Otterness has been described as an artist □who could say something serious about our world without scowling or pointing fingers.□□□By the early □□□□s, he had developed a sculptural motif of □Ur-people□ plump, small figures that had heads, hands, and feet and were □in all kinds of antic activity□ mostly working, cavorting, and fighting.□□□These forms enabled him to provide a □universal image of man, a figure that is not specific as to sex, race, or culture.□□□ Rejecting some of the □sphinx-like□impenetrability of some modernist sculptures, Otterness offered an accessible vocabulary.□□□ He then moved from deploying □pneumatic volumes . . . compared to the Pillsbury doughboy□ to □robots with wind up keys.□□□

Thereafter Otterness turned to small bronze animals that have since been sited in outdoor locations □coast to coast and throughout Europe.□□□Commentators sometimes categorize his work as a □riff on capitalist realism□ reflecting the interaction between mass media and the art market in commodifying □supposedly autonomous objects of disinterested contemplation.□□□Yet, unlike some artists whose appropriations have an air of condescension, Otterness □demonstrates kinship with viewers of all stripes.□□□

Holzer (□one of America's best-known artists□□□ and □the first woman artist to fill the U.S. pavilion at the Venice Biennale□□□) is famous for her □truisms□□ statements posted on placards, etched into stone, projected onto walls, or put into motion through LEDs or other electronic forms around the world.□□□Typically the different aphorisms are presented with a strict sameness that implies neutrality about their deployment. The visual structure□ clear and uncluttered□ could be perceived as decoration before being understood as text.

In art critic Arthur Danto's view, Holzer's □medium is language rather than words□ used to remind viewers that there is no escape from □considerations that belong to rhetoric or to poetry, and issues of truth and falsity.□□□Danto described Holzer's □singular symbolic imagination□ as sending □messages from an oracle, or a sibyl, or a fortune teller or someone's slightly dotty aunt□ who might possibly get us □to believe what is false.□□□By placing □incompatible and contradictory ideological positions in direct conflict□ Holzer achieves an interaction between text and context that exposes □the mechanics by which linguistic power catches hold.□□□The words themselves are simultaneously authoritative yet potentially banal. One commentator saw the body of her work as □involved in a delegitimation of power,□□□ while it can also be seen as requiring that attention be paid to the sources of and claims made for authority.

As the descriptions of both artists suggest, Otterness and Holzer are innovative critics puzzling about politics and life. Both found imagery that raised questions about fairness, and both have had□ remarkably in some respects□ commissions for more than one federal project.□□□After the give and take of GSA selection committees, both Otterness and Holzer settled on a discourse that was more subdued and subtle than had been their initial proposals.□□□(In addition, Holzer's moving LED texts grace a courthouse in France□ the Nantes Palais de Justice designed in the late □□□□s by Jean Nouvel and discussed in Chapter □□.)

Law of Nature is what Otterness named a sequence of small bronze sculptures of various animals comprised of □vignettes□ on the roof terrace of the Mark O. Hatfield United States Courthouse in Portland, Oregon.□□□ In one scene (*Cat on Trial,* fig. □□□, color plate □□), a shackled cat□ with a feather in its mouth□ sits on what is termed a witness box, shaped as a small platform. The cat sits near an owl, perched higher and placed as would be a judge, close to the testifying witness. Watching from another slab is a group akin to a jury; this one is comprised of four bronze animals□ a bird, a dog, a mouse, and a crouched figure looking something like a mix of a dog and a walrus. The prosecutor, wearing a jacket and questioning the defendant cat, is a dog.

In another scene called *Tree of □nowled□e* (fig. □□□), Otterness has used scales, a blindfold, and a sword to turn a small bronze bird into Justice, shown perched on a limb near the top of a pole-like tree barren of leaves. Otterness's blindfolded Justice holds scales upright; two small helmeted turtles sit in each of the balance's pans, as one detail (fig. □□□) makes plain. But Justice's other hand, behind its back, hides a menacing sword-like knife pointed upward (fig. □□□, color plate □□).

That vengeful posture could either be a job requirement, a response to the particularly precarious position occupied by this bird-Justice, or a more general comment about the vulnerability of justice. The bird sits on a lonely limb in what may be a vain effort to avoid both an assault by a serpent creeping upward with its mouth close to the turtles hanging in the balance, as well as an attack by a beaver (an animal Otterness often uses to denote lawyers) gnawing the trunk below.□□□Alternatively, the efforts to topple this Justice could be justified by the fact that it holds a dagger behind its back and that its counterpart, a figure nearby arguably representing Law, is upside down□ an opossum-like animal with its head, hanging toward the ground, behind a book. Another beaver, suited, watches from afar as another sits on top of a pile of books and bronze figures that look like television or computer screens with extended outreached hands that could be signaling for help or expressing distress. Small figures representing a □paper and a computer flee the scene.□□□

One critic called the imagery □playful,□□□ which was what the artist had hoped. In his own description of the project, Otterness wrote of the need to offer □relief from the often stressful life of the courts□ and how humor, if □used judiciously□ can provide □reflection and relaxation at the

FIGURE [illegible] *Cat on Trial* in *Law of Nature,* Tom Otterness, [illegible], Mark O. Hatfield United States Courthouse, Portland, Oregon.

same time.[illegible] Moreover, by using bronze ([illegible]a particularly seductive material[illegible] hard, resilient, able to withstand hundreds of years of abuse[illegible]), Otterness invited the public to touch the objects as a [illegible]source of delight.[illegible] Whether the public can do so is a question, as the artwork is placed on a terrace on the eighth floor of the building, accessible only after passing through security and obtaining directions to its location. (One blogger called the setting a [illegible]secret sculpture garden[illegible] entered only after being [illegible]frisked[illegible] at the gate; there one finds the small figures, [illegible]outside the building, outside the law . . . the opposite of the ghosts in black robes which haunt the interior halls.[illegible])

Otterness described this work as upholding [illegible]the dignity and purpose of the law[illegible]but it also combines what one critic called his general style of [illegible]cute and cutting[illegible]commentary.[illegible] (Another noted that one must look for some time at Otterness's art [illegible]to realize just how dark its content can be.[illegible]) Justice is both threatening and tottering, and the dogs and owls seated to judge the cat do not signal the impartiality of the law, which is likely why one of the federal judges involved in commissioning the work asked Otterness not to focus too much on a [illegible]court[illegible] or to be too [illegible]literal[illegible] in its depiction.[illegible] Otterness appears to have followed some of that advice; earlier sketches for that vignette had laid out an unmistakable courtroom complete with a flag, a seal behind the bird-judge's bench abutting a full witness box, and spectator seats on which could be found an anxious-looking cat and a baby kitten. The final version, in contrast, has eliminated most structural markers of a courtroom and thus requires the viewer to situate the scene.

The selection of animals was not without freight, some from the artist and some from the audience. Otterness deliberately chooses creatures both wild and domesticated. As one journalist explained: [illegible]Although the animals inhabit these roles with differing degrees of civility, it is still the political state, not the state of nature, which defines them.[illegible] The political implications were not lost on one judge, worried that showing an owl would raise hackles in Oregon, where litigation over the habitat of spotted owls had been intense.[illegible] (Otterness reported that he told the judge it was a barn owl, not a spotted owl.[illegible]) In another Otterness installation, the GSA had cautioned against an

elephant, potentially perceived as a [illegible]Republican.[illegible] On the other hand, showing lawyers as obsessive beavers seems not to have prompted objections, even though the beaver-lawyer in Portland is trying to bring the bird-Justice down by gnawing destructively on the tree-like pole where it sits.

Otterness had negotiated criticism before his Oregon drawings. In [illegible], when his small, round-bellied, naked, bronze human-like figures were installed in a display titled *The New World* in front of the Roybal Federal Building in Los Angeles, federal officials (including a judge and Edward Roybal, the member of Congress for whom the building was named) objected vehemently.[illegible] That semi-circular sculpture entailed about two hundred small male and female figures surrounding a naked bronze baby holding up a globe. Nearby a female figure in chains crouched in a cave, named by Otterness the [illegible]Hermit Philosopher[illegible] and representing [illegible]chained intellectual freedom.[illegible] The GSA described the group as [illegible]boisterously active figures[illegible] scrambling about a [illegible]-foot pergola frieze that connected a new federal building to an older one.[illegible] The infant at the center provided a presence that [illegible]portends the need within society for continual rebirth and renewal through truth, freedom and democracy.[illegible]

In contrast, Congressman Roybal said the figures would attract [illegible]perverts[illegible] while a judge described the imagery as a [illegible]shrine to pedophiles.[illegible] After a GSA regional administrator, citing the risk of vandalism, ordered removal of two of the small nude sculptures,[illegible] the Mayor of Los Angeles raised free speech concerns and the American Civil Liberties Union became involved.[illegible] The denouement included the deletion of six figures (again explained as responsive to [illegible]the possibility of vandalism[illegible]) and the addition of guardrails.[illegible] Otterness was reportedly not surprised; the [illegible]basic rules for government commissioned public sculpture do not allow nudes.[illegible]

Otterness also showed flexibility for another courthouse installation in Sacramento, California. In [illegible] he had proposed a chess set of characters, [illegible]rooks as banks, bishops as lawyers, king and queen as rich entrepreneurs[illegible] arrayed against [illegible]an army of working-class pawns bearing shovels, mallets and serving trays.[illegible] As Otterness explained to the GSA selection committee, the knights were [illegible]shaped like police in police cars, the bishops symbolize politicians or lawyers.[illegible] The knights, kings, and queens were shown with a [illegible]money bag' head imprinted with a dollar sign[illegible] whereas the pawns were imprinted with cent signs. Otterness hoped that viewers would ask, [illegible]what is the game' and [illegible]what are the rules[illegible] and thus discuss the implications of the class system in the United States.[illegible] As a GSA staff member noted, the proposal could also read as [illegible]if you have money, you can win in court.[illegible]

Otterness was thus offering his signature mixture of the playful and the resistant, a stance some described as the [illegible]reliability of Otterness's narrative[illegible] taming the content.[illegible] But the proposal was not tame enough for the Sacramento arts panel, which rejected it. Some of the members (including the sitting federal judge who was on the committee) explained that even though one could think that money had an effect on outcomes, [illegible]it was not an appropriate message for the courthouse[illegible] to send. As discussions about modifying the chess game were underway, the judge argued that he [illegible]did not want viewers to draw the analogy that being in court was a game[illegible] After the group deemed [illegible]the idea inappropriate and asked [illegible]the artist[illegible] to try again, a normal part of the back-and-forth nature of public projects,[illegible] Otterness offered various revisions before pursuing a different design.[illegible]

The result in Sacramento[illegible] called [illegible] *old [illegible]ush*[illegible] is a [illegible]tableau depicting the history of Sacramento, with salmon, gold miners, a covered wagon and scenes from the building of the railroad.[illegible] Populated by [illegible]knee-high characters[illegible] ranging from pioneers to fish and birds near flowing water, the imagery aimed to remind viewers of the role played by migrants to California.[illegible] That piece joined several others,

including Daniel Galvez's mural *olden Mountain olden ields,* that pursued the theme of immigration by focusing specifically on the role of Chinese pioneers in the city's history. The other motifs for the art selected were the concepts of justice and law, exemplified by several pieces such as Jack Nielsen's *The reement,* a mixed-media sculpture symbolizing the letters and books of the law, and writings chosen by Jenny Holzer.

The Sacramento installation was not Holzer's first GSA courthouse commission. In Jenny Holzer had selected various aphorisms (from her works called *Truisms* and *Survival*) for inscription on fourteen granite benches in the federal courthouse in Allentown, Pennsylvania. But a resident federal judge . . . crossed out a number of the proposed sayings. Among the deletions were Men don't protect you anymore and Romantic love was invented to manipulate women. Among the substitutions were a positive attitude makes all the difference in the world. As GSA memos recorded, the proposed texts were reviewed in detail by the court's chief judge, working closely with Holzer to arrive at inscription text that could be supported by the Court and memorialized in an editorial agreement between the two that was then approved by the community arts panel. As a consequence, most of the messages that evoked political themes were replaced with more benign phrases that the artist provided as alternatives.

Holzer's installation in the Robert T. Matsui Courthouse in Sacramento where it eventually joined the Otterness *old ush* scene followed a similar path of editorial deletions and substitutions. Rather than excerpt dozens of lines from her s *Truisms* and *Survival* as she had done for the Allentown benches, Holzer initially proposed engraving every fourth stone of the granite pavers on the plaza to provide quotations. Holzer's plan was to cull commentary from over the last twenty-three centuries on the themes of the nature of law, truth and justice. But the community arts panel found too many quotations unacceptable At a meeting in , one judge raised the concern that visitors would read the words as sanctioned by the Court. He thought it would be preferable to have inspirational comments, albeit perhaps with texts that play with paradox and balance.' Another suggested that, rather than be critical of the court Holzer use excerpts from the Constitution, the Bill of Rights and the Declaration of Independence. Under the guidance of the GSA's Susan Harrison, the denouement was to ask Holzer to return with another proposal.

The revised submission in reduced the number of aphorisms to ninety-nine, a group that Holzer hoped would educate and inspire with words about law, truth, and justice and spark both reflection and passion in all who approach. Again shepherded by Harrison, that submission along with those made by Tom Otterness, who had shifted from his chessboard to pioneer wagons, and submissions by several other artists gained the approval of the designated GSA panel. But even then, settling on specific texts for Holzer's installation proved difficult. Panel members, including one of the court's judges, objected to many of the epigrams. Indeed, several judges were hostile to the whole project. (One judge commented to the press: Personally, speaking as an individual, I don't think much of it. I'm not sure at all just where the art is, or what she did that merits , or , .) Holzer was amenable to some editing, but one sticking point was her desire to keep a quote from Susan B. Anthony that said, It was we, the people, not we the white male citizens . . . who formed this Union. One judge (attempting to mediate) argued that litigants could be offended. He gave as an example that the court heard cases alleging reverse discrimination brought by white men aiming to halt affirmative action; singling out white male citizens as a group could be seen as making an inappropriate reference. What was needed, advised the judge caught in the middle, was to appreciate that a good many of the accepted commentaries were provocative, contemporary and tense and that the Anthony quote ought to be deleted in favor of a saying with a more positive tone.

Other statements also raised ire. Objections were registered to Poverty or wealth will make all the difference in securing the substance or only the shadow of constitutional protections, to I am ashamed that law is such an ass, and to The law sees and treats women the way men see and treat women. After many back-and-forths, the statements inscribed in stone included It is a fair summary of history to say that the safeguards of liberty have frequently been forged in controversies involving not very nice people, shown in figure and taken from a dissent by Justice Felix Frankfurter. Ninety-eight other statements, from a wide array of commentators, were placed so as to be oriented at various angles, allowing pedestrians traveling from any direction across the plaza the opportunity to read a sampling of quotations. A GSA monograph summed them up as aiming to elicit both reflection and passion from readers with maxims that both compliment and contradict one another from the vast network of interlocking texts that constitute legal and judicial discourse.

Some of the sayings draw on ancient texts, akin to what had been put in Renaissance town halls. Seneca's injunction A judge is unjust who hears but one side of a case, even though he decides it as a judge is inscribed, as is Aristotle's It is best that laws should be construed as to leave as little as possible to the decision of those who judge. Leaping forward centuries, concern about law's capacity can be found in a comment by suffragist Elizabeth Cady Stanton: To make laws that man can not, and will not obey, serves to bring all law into contempt. Law's dependency on popular obedience is explained by a statement by Hubert Humphrey: There are not enough jails, not enough

FIGURE ⊠⊠⊠ ⊠*nstallation for the Sacramento Courthouse,* Jenny Holzer, ⊠⊠⊠⊠, United States Courthouse and Federal Building, Sacramento, California.

policemen, not enough courts to enforce a law not supported by the people.⊠⊠⊠

Criticism of the government is also implied by the line ⊠Great nations, like great men, should keep their word,⊠ but only if one knows it came from a ⊠⊠⊠⊠ dissent by Justice Hugo Black, protesting that an Indian tribe had been wrongly treated. (In the opinion, Black added, ⊠I regret that this Court is to be the governmental agency that breaks faith with this dependent people.⊠⊠⊠) Similarly, the power of a ⊠⊠⊠⊠ comment by Russian Aleksandr Solzhenitsyn, ⊠After a certain level of the problem has been reached, legalistic thinking induces paralysis,⊠⊠⊠ relies on knowing his experiences in the Soviet Gulag.

Some sense that the texts engaged and elicited inquiry, as Holzer had hoped, came from commentary responding to the reproduction of excerpts from the ⊠⊠⊠⊠ Declaration of Sentiments⊠ propounded in Seneca Falls and calling for women's equality⊠ that is also chiseled into the pavers. ⊠We hold these truths to be self evident that all men and women are created equally⊠ is the quote that prompted a story in the local newspaper, the *Sacramento Bee,* which noted that uninformed visitors might assume the text was a ⊠politically corrected misquote of Thomas Jefferson.⊠⊠⊠

If the Otterness and Holzer installations required viewers informed by background knowledge and attentive to details to interpret the import, other objects in the Sacramento building did not. A ⊠monumental, golden scale of justice⊠ by Larry Kirkland that dominated the courthouse rotunda provided, as the GSA monograph on the art noted, ⊠an unambiguous emblem of the building's function.⊠⊠⊠ The twenty-three-karat gold surface also referenced the city's Gold Rush history, while the twelve marble chairs beneath the huge scales denoted a jury. On the other hand, those empty chairs, set in a circle with inscriptions on their backs, did reiterate some of Holzer's critiques. Some of the texts, composed by United States poet laureate Rita Dove, invoked the pain of judgment: ⊠Did my job, then / looked into / their eyes / what had I / become⊠⊠⊠⊠

The various pieces inside the federal courthouse joined other displays of public art that a construction boom had brought to Sacramento, which had been ⊠one of the first cities in the country to adopt a public art ordinance⊠ to protect set-asides in budgets as did the federal Art-in-Architecture program.⊠⊠ Responses to the Sacramento courthouse's assemblage were mixed. News reports focused on the cost⊠ ⊠⊠⊠⊠,⊠⊠ that ⊠taxpayers plunked down⊠ as well as on a dislike of the installation ascribed to some courthouse personnel.⊠⊠ One unnamed staffer called some of the art ⊠just as ugly as can be⊠ while another referred to a sculpture as a ⊠bunch of rusty iron imported from France.⊠⊠⊠

The exchanges over the proposals by Otterness and Holzer parallel the conflicts detailed in Chapter ⊠ but with an important difference. During the ⊠⊠⊠⊠s, artists wandered into controversies they had not expected. Neither archival nor contemporary discussions of their work reveal interest in provoking reflections on the unfairness of the justice system or the failures of law. Indeed, when criticized, Romuald Kraus protested that he had sculpted a Christian image of Justice, not a ⊠Communist⊠ one (figs. ⊠/⊠⊠ and ⊠/⊠⊠), and Stefan Hirsch disavowed intending to depict a ⊠mulatto⊠ Justice in *Justice as Protector and* ⊠*ven*⊠*er* (fig. ⊠/⊠⊠). Yet Kraus's *Justice* was sent to a government attic in Washington and then to a corner hallway in Newark, New Jersey, while Hirsch's *Justice* was put behind drapes in Aiken, South Carolina.

Late twentieth-century artists, in contrast, did have questions about the history and practices of the justice system. But, when raised, these artists were subjected to preinstallation editing that obviated the need for post-installation coverings. The examples of Otterness and Holzer join several other instances in the ⊠⊠⊠⊠s and ⊠⊠⊠⊠s when ⊠potentially inflammable content⊠ in provocative or challeng-

ing art was censored from federal installations.[illegible] Despite efforts of some GSA staff, the interactions between community panels and artists provided occasions for local and government commentators to resist displays they found disquieting.

To make it into courthouses, artists responded by modifying their art to mollify the critics. Once deemed to have put insufficient or inappropriate clothes on her *Justice* for a federal courthouse in New Hampshire, for example, Diana Moore added different garb (figs. [illegible]/[illegible], [illegible]/[illegible], [illegible]/[illegible]). When Jan Mitchell's proposed figure of a Moco Jumbie (fig. [illegible]/[illegible]) was rejected for lacking gravitas and her [illegible]*eachin*[illegible] *Man* (fig. [illegible]/[illegible]), referring to slavery, was seen as too provocative for the Virgin Islands court, her *Lad*[illegible] *of Justice* (fig. [illegible]/[illegible]) resembling a friendly local resident, took their places.[illegible]

In many instances the critics were *ri*[illegible]*ht* to worry that viewers could find the imagery unsettling. That was the point. The tensions between community arts panels and artists bespeak their shared commitment to what political theorists term the [illegible]public sphere[illegible] Both sides of the debate took seriously that they were trying to constitute civic environments that had didactic messages. They disagreed about what lessons to provide. While some commentators[illegible] Jürgen Habermas (discussed in Chapter [illegible]) is emblematic[illegible] called for dialogues that engaged complex questions of social ordering in democracies, many of those constructing courthouses wanted celebration. Otterness and Holzer thought to reflect on law's failures and to raise questions about the legitimacy of power but were met by art patrons who, while open to whimsy, wanted comfort and inspiration.

[illegible]Plop art[illegible] and Building Norms

How might one assess the results of thirty years of AiA efforts[illegible] One measure can be the public acclaim for the art. Unlike many of the WPA artists, the artists on AiA's list included internationally appreciated artists who contributed distinguished works to public buildings and museums in various countries. Several commissioned works garnered critical praise,[illegible] albeit some of it derived from a circle of congratulation in which commissions awarded by the GSA receive citations from juries convened by the GSA.[illegible] Another measure would be the variety of artists supported and the diversity and eclecticism of the genres engaged. What Daniel Moynihan's [illegible]s Guiding Principles had commended for architecture became true for the art; no one [illegible]official[illegible] style prevailed. Courthouses now display a wide array of materials, ranging from inscriptions to mosaics and murals, from clay and cloth to bronze shaped into representational images (Justice included) and abstractions.[illegible] If anything, eclecticism is the signature.

Yet another metric could be popular enthusiasm, or at least acceptance, in the localities where the works are sited. Relatively few of the late twentieth-century commissions generated public protests from either communities or members of the judiciary. In some instances the absence of controversy denoted that the GSA procedures had succeeded in producing a generative exchange between audience and artist; in others (exemplified here by Otterness and Holzer) the process defused conflicts by editing the art before its display. On yet other occasions, proposals were aborted altogether.[illegible]

Looking for enthusiasm or acceptance presumes that attention has been paid to the art. But it is also possible that the art has been seen as either too tangential or too deeply integral to the building to elicit engagement. As an architect involved in the GSA Design in Excellence program put it, many selections were [illegible]plop art . . . set in front of a wall designed to be a backdrop[illegible] rather than integrated into the concept of a building.[illegible] As one critic described the art in the Oregon courthouse where Otterness's *Law of Nature* perched on an eighth-floor outdoor patio, [illegible]these elements are only add-ons to architecture.[illegible]

Moreover, on occasion the art itself served as a wall[illegible] functioning as a literal barrier to entry. In a few instances the allocation for AiA went to artistically designed bollards, stanchions that form barricades against direct entry.[illegible] The art funding was used in one courthouse [illegible]to provide [illegible]an[illegible] external vehicle standoff.[illegible] As GSA administrators testified, money was thus saved [illegible]by reducing the distinctions between an architectural element and a security element.[illegible]

If some art was [illegible]plopped[illegible] and a few pieces guarded entries, other selections were so deeply a part of structures that they were rendered invisible. When choices moved beyond [illegible]abstract lumps of metal in plazas[illegible] and took form as [illegible]glass windows, skylights, murals, plaza designs, and even lighting installations,[illegible] that art's import was lost to some viewers. GSA building-specific monographs reflected the positioning of the art by repeatedly describing it as an [illegible]important feature of great architecture[illegible] rather than objects independently aspiring to offer instruction on or insight into a building's purposes. Didacticism came, instead, from the buildings, designed to express the normative program of Moynihan's mantra[illegible] America's [illegible]dignity, enterprise, vigor, and stability[illegible] or the aspirations of the [illegible] [illegible]S[illegible] *Courts Desi*[illegible]*n* [illegible]*uide* to capture [illegible]solemnity, stability, integrity, rigor, and fairness[illegible] But architectural critic Paul Spencer Byard took a different lesson from the constructions: [illegible]Like our times, contemporary court architecture is about effect, not substance; about how great we have been, not how great we might become.[illegible]

What might one have hoped for[illegible] When bringing national attention to art in the [illegible]s, President John Kennedy argued that art not only served to enrich and celebrate the nation but was also a method to [illegible]question power[illegible] Evoking a longstanding romantic view of the artist, Kennedy proposed funding those [illegible]last champion[illegible]s[illegible] of the individual mind and sensibility against an intrusive society and an officious state.[illegible] Late twentieth-century federal courthouses, how-

ever, did not herald individual freedoms but rather made plain what President Kennedy called the "officious state" guarding access to its officials, shuttling defendants to enclosed byways, and displaying its sense of self-satisfaction through rich detailing. Both public purposes and private-sector interests converged to create federal monuments to national authority, security, and prosperity. The primal motif is the courtroom itself, which remains the centerpiece, as if litigants, lawyers, and judges still regularly inhabited those spaces.

But after scanning the globe (in Chapters [illegible] through [illegible]) to find shared premises of commitments to adjudication embodied in major buildings (and the parallel growth in prison construction), we explain in Chapter [illegible] that, while courtrooms are still dedicated to judges, judges are no longer dedicated only to adjudication. Instead they have devolved or outsourced much of the factfinding of adjudication to decisionmakers in administrative agencies and tribunals, to lawyers negotiating settlements, and to private dispute resolution centers. The public processes of courts are fading even as monuments to their role are built. And in the structures created, as one can see from the quieting of the Otterness and Holzer critiques, there is little willingness to engage frankly in the challenges that are entailed were one to recenter conflict resolution in courts. In contrast, as we explore in Chapter [illegible], one can use both buildings and art to bring lessons about law's history and its failures into courthouses and invite questions about how courts can become vibrant centers of democratic debate. Courts could remain important sites within the public sphere(s) to provide opportunities to practice democracy by acknowledging rather than ignoring justice's shortfalls.

Comparative Currents

The judicial building project in the United States has worldwide counterparts, with scale and scope varying by place and resources. Around the globe, government leaders have chosen to house some of their adjudicatory services in buildings designed to be unique, impressive, and secure. This chapter picks up the transnational tour begun in Chapter to provide a comparativist perspective on how, during the second half of the twentieth century, courthouses came to be icons of government. Our national examples are drawn from France, Israel, Finland, and Australia, to be paralleled in Chapters and by an overview of the development of regional and transnational courts.

As the end of the twentieth century approached, many court systems focused on long range planning or futures projects, sparked by anticipation of the new millenium coupled with anxiety about the quiet crisis of aging facilities in poor condition that were required to respond to a growth in caseloads and prison populations. In long-established countries, extant facilities were criticized for providing an insufficient number of courtrooms, inadequate rooms (undersized and windowless) for staff, too few holding cells for detainees, and too limited citizen services, compromised by congested waiting rooms and corridors. In newer nations, pressures for court construction stemmed from interests in marking their sovereign authority.

Four factors influenced their concerns. First, growing numbers of people have gained entitlements to seek redress through courts. The increase in dockets has put pressure on jurisdictions to expand facilities. Second, on the criminal side, courts incarcerate growing numbers of people. As detailed in Chapter , in earlier centuries, city planners put jail cells in or near courts. But with the decline of public punishments and the turn to incarceration for convicted offenders, purpose-built prisons placed away from towns' centers came to the fore. The spurt in courthouse building has thus been accompanied by an expansion in the number and size of prisons. An increase in detention rates and in the length of prison sentences can be found in many countries, albeit most pronounced in the United States where, as of , one in adults was in prison or jail and a stunning in every adults, or . percent, were under some form of correctional control. Third, as the market for building courts and prisons expanded, its participants shaped professional interest groups that crossed borders and formed networks focused on the construction of facilities for justice that came to be defined to encompass both courts and detention centers. Fourth, late twentieth-century governments aspired to distinctive buildings symbolizing the role played by law and hence marking courts' function as the new fulcrum around which the mechanism of self-representation in the various modern states pivoted.

Singularly Impressive, Diverse, and Homogeneous

Governments around the world presumed that ever-larger footprints would be required for courts to continue their historic functions as centers of public proceedings and as warehouses for paper documents. Architects, court professionals, and various national and international bodies developed manuals for the design and image of courts, akin to those detailed in Chapter for the United States federal system. These materials placed judges at the visual center of courtrooms, while setting forth rules on passageways that secluded judges from the public and that separated detainees from everyone. Throughout, builders aspired to create structures recognizable as special sites courthouses.

These projects included a smattering of lay involvement but were run by professionals. The three groups judges, lawyers, and architects that had launched courthouse architecture in the seventeenth and eighteenth centuries continued to dominate the discussions. By the end of the twentieth century, they were joined by another group

court administrators who served either within the judicial branch or under the executive branch. Professional organizations formed to represent various court administrative subgroups such as clerks, public information officers, in-house building managers, and executives.[illegible] Some staff gained sufficient prominence to obtain their own dedicated spaces, as in the Thurgood Marshall Building (fig. [illegible]) in Washington, D.C.

Specifications for courthouses and the rooms therein varied somewhat across jurisdictions. Some embraced historical continuity with Neoclassical designs, while others sought novelty. As for the layouts of courtrooms, the plans for common law countries that, like England and the United States, relied on juries were not identical to those in civil law countries. French courtrooms, for example, often place the prosecution at the level of the judge, whereas common law countries put the litigants (government included) at the same level, typically lower than the judges, who are often seated on a raised bench. Further, French planning guides detailed somewhat different seating arrangements for civil and criminal proceedings, while common law countries generally use the same room for both kinds of cases.[illegible]

Various other distinctions can be drawn.[illegible] Some courthouses in Finland had movable furnishings, readily reconfigurable, while American courtrooms typically provided furniture anchored to the floor. A distinctive pattern was proffered by the Israeli Supreme Court, which denoted the equal status of participants by shaping a two-square courtroom layout, with one square shared by judges and lawyers and the other occupied by the public.[illegible] English courtrooms often isolate a criminal defendant in the [illegible]dock,[illegible] whereas American courtrooms put a defendant, accompanied by a lawyer, behind a table across the central aisle from the prosecution's table. Within the United States itself, the federal system's guidelines called for larger courtrooms than did many other manuals.[illegible] Further, during the [illegible]s and [illegible]s, reconfigurations of the courtroom were imagined, as designers offered courtrooms [illegible]in the round[illegible] or put judges' benches in a corner.[illegible] Yet conventional layouts, often echoing churches, continued to dominate alongside one less uplifting innovation[illegible] the crafting of extraordinarily secure courtrooms for [illegible]terrorists[illegible] and other defendants thought to be especially dangerous.

Overall, the variations are minor compared to the homogenization in construction and interior design driven by architects, artists, judges, and expert consultants who moved from jurisdiction to jurisdiction in the globalizing market for [illegible]justice architecture[illegible] They relied on transnational engineering standards and parallel legislative mandates, such as requiring energy efficiency and access for persons with disabilities.[illegible] Their patterning was also influenced by shared norms (some transmitted through conquest and colonialism) that spoke to the respective roles of judges, lawyers, witnesses, litigants, and spectators.[illegible] Across borders, builders sought to control movement and to isolate one group from another within courthouses.

The Business of Building Courts: The Academy of Architecture for Justice

The business of architecture, like the precepts of accessibility, security, energy conservation, and efficiency, is not geographically bounded. In [illegible] (the year celebrated for the proclamation of the Universal Declaration of Human Rights[illegible]), the International Union of Architects came into being. By [illegible] it counted more than a million architects as members in more than one hundred countries.[illegible] Beginning in the [illegible]s, the American Institute of Architects (AIA) fostered various architectural sub-specialties called [illegible]knowledge communities.[illegible] One[illegible] the Academy of Architecture for Justice[illegible] focused on [illegible]effective project delivery, team building, . . . and cutting-edge design issues for architects providing the diversified services associated with justice architecture.[illegible] Over many years and with various names, the group convened meetings and gave awards for building designs that were featured in its publication, *Justice [illegible]acili[illegible]ties [illegible]eview,* begun in the early [illegible]s.

A review of materials from the Academy of Architecture for Justice makes plain that its reference to [illegible]justice[illegible] encompasses jails and prisons as well as courts. Indeed, the group's roots go back to a [illegible] Task Force on Correctional Architecture that worked in conjunction with lawyers and judges to develop standards for criminal justice facilities.[illegible] The goals of the Academy of Architecture for Justice include [illegible]elevating the stature[illegible] of justice institutions [illegible]within society,[illegible] and much of the business of its members stems from dollars devoted to correctional facilities, as those amounts frequently outstrip the sums budgeted for courts.

Toward the end of the twentieth century, the Academy of Architecture for Justice joined with court administrators to host a series of international conferences. One aim was to help architects and engineers understand how to comply with various government standards so as to bid successfully for commissions. As materials from one conference explained, [illegible]Throughout the world, justice architecture has always been an expression of national pride and responsibility.[illegible] Workshops' titles capture shared concerns transcending national borders: topics ranged from the [illegible]greening of justice[illegible] to [illegible]modern jails make good neighbors[illegible] and the [illegible]customer-friendly courthouse.[illegible] In New York in [illegible], at the [illegible]Sixth International Conference on Courthouse Design[illegible] (subtitled [illegible]Sustainable Excellence[illegible]), the participants shared designs for secure, [illegible]green[illegible] buildings.[illegible] Judges, architects, and academics took traveling tours of courthouses that facilitated the borrowing of ideas and architects.[illegible]

This transnational market has produced pervasive commonalities, from technologies permitting heavy reliance on glass to regular displays of the scales of justice. Further, sev-

eral jurisdictions either have set-asides for art or accept donations of artworks that are proudly displayed.[illegible] Many buildings include eclectic works, and a few of the artists have crossed borders. For example, the work of conceptual artist Jenny Holzer, shown in Chapter [illegible] in a courthouse in Sacramento, California, can also be seen in Nantes, France where a new [illegible]Palais de Justice[illegible] discussed in the next section[illegible] opened in [illegible].

Justice Palaces for France

Legible Architecture for an Evolving Justice

In the late [illegible]s, the French Ministry of Justice reviewed its [illegible] operating sites as it began a series of projects, defined by [illegible]a certain architectural ambition[illegible] to rationalize the services provided by courts through administrative reform and new construction.[illegible] The goals of modernizing justice and affirming the commitment to law and [illegible]the values of democracy[illegible] entailed making more space for judges,[illegible] improving conditions for decisionmaking, reorganizing first-tier tribunals and courts (sometimes through consolidation into a single facility), creating energy-efficient buildings,[illegible] reducing delay, accommodating rising filings, and providing more functional, secure, and welcoming facilities[illegible] that were readily legible to users.[illegible]

The plan was to renovate some facilities and build others anew. Like the leadership of the judiciary in the United States, French officials obtained significant economic support. A budget of about [illegible].[illegible] billion ([illegible] billion francs) supported the projects from [illegible] to [illegible].[illegible] In the early [illegible]s, twenty-seven regions in France were flagged for renovations that would run through [illegible]. By [illegible], fifteen major buildings had been completed, with individual structures costing from about [illegible] million to [illegible] million ([illegible] million to [illegible] million francs); and more were in progress.[illegible]

The courthouse building projects in France and the United States have many parallels, despite differences in the organization and conception of those countries' judiciaries.[illegible] France is a civil law country that deploys an elite corps of specially trained jurists to serve for most of their careers in the structured hierarchy of a unitary national court system.[illegible] The United States, a common law federation, relies on judges who are selected via appointment or election and who come from practice and occasionally the academy. Further, even as some convergence or harmonization of procedures across civil and common law countries may be underway,[illegible] the etiquette of lawyering and the discursive styles of opinion writing in the two countries vary considerably. The procedures for criminal cases and the role of judges also differ, and juries are a feature of justice in the United States but not in France. Yet despite these and other distinctions, the two countries followed similar paths in courthouse construction, as key administrators led self-conscious efforts to create important public buildings,[illegible] employed world-renowned architects, and protected budgetary set-asides for art[illegible] known in the United States as [illegible]Art-in-Architecture[illegible] and in France as the [illegible] d[illegible]coratif.[illegible]

The outcome in France, as in the United States, has been the creation of an impressive array of monumental buildings whose exterior shapes vary dramatically. Their interiors, however (again, paralleling the experiences in the United States), reiterate the theme of shuttling people along their separate and segregated paths toward standardized courtrooms and offices. And while funds were set aside for art in each country, art took second seat to the buildings, styled to be the symbols of justice.

When starting the new construction in the early [illegible]s, French designers self-consciously asked questions about what ought to be built. The goals included shaping new structures and art to capture France's commitments to an evolving justice entailing a multitude of laws and tasks for jurists who worked inside a diversifying culture committed to transnational obligations of fairness. Leaders raised concerns[illegible] akin to those put forth in the United States in the [illegible]s by Senator Daniel Moynihan[illegible] that public construction in France had become banal, producing undistinguished structures that conflated justice with bureaucratic administration.[illegible] To map an agenda for improvements, officials undertook studies, convened conferences, and developed manuals to shape plans for a new set of [illegible]palais de justices[illegible] the French term for courthouses.[illegible]

Such future planning ([illegible]imagining courts for the [illegible]st century[illegible] as Antoine Garapon put it[illegible]) prompted reflections on the history of courthouses. Traditions of courthouses in France, developed out of Medieval culture, had produced three successive eras of courthouse styles, described by one commentator, Vincent Lamanda, as evocations of the Royal Palace, the Temple of Th[illegible]mis, and the more contemporary Hall of the Rights of Man.[illegible] Another commentator, Robert Jacob, detailed the openness of Medieval and Renaissance judicial architecture, which was integrated into cities to facilitate a fluid exchange between commerce and law in an era rich with jurisdictional overlaps.[illegible] Under Louis XII, courthouse space became more luxurious to denote the import and power of the regal system that sought to centralize authority.[illegible] The buildings relied on monumental entryways and dedicated doorways, [illegible]framed by columns[illegible] and long stairways, architectural attributes that all helped to elevate law and put it at a distance from the ordinary person. The setting denoted the seriousness of the [illegible]extraordinary act[illegible] of [illegible]going to law.[illegible]

By the eighteenth and nineteenth centuries, courthouse exteriors relied on Neoclassical architecture to stand out from, rather than blend with, neighboring structures.[illegible] The interiors denoted the hierarchical superiority of some actors over others. Akin to traditions in England and the United States, the progression in France toward modern

courts imposed increasingly segregated spaces for professionals: wooden bars, witness stands, and benches adorned courtrooms to delineate boundaries and specify roles. As Christine Mengin has documented, separate offices for judges and libraries for lawbooks first made their appearances during the nineteenth century; the specific allocation of space reflected organizational hierarchies. But unlike other public buildings in France, whose configurations were dictated by public commissions, Jacob noted that courthouse styles developed through a kind of evolutionary naturalism reflecting changing societal functions of justice.

Antoine Garapon has argued that French courthouses were reconfigured in relationship to the political shift from a sovereignty centered on the nation (and earlier upon the king the emblematic L'État, c'est moi) to a representative democracy committed to individual authority. According to Garapon's schematization of French traditions, under the Ancien Régime, courthouses were basilica-like, with courtrooms akin to chapels. Judges, as if priests with powers implicitly derived from God, sat on high to superintend the confrontation between man and law, and the attachment to the Civil Code had cult-like elements. Garapon further suggested that the subsequent, more democratic vision produced courthouses resembling parliaments. A judge served (as would a speaker of an assembly) to oversee exchanges that, through procedural commitments, acknowledged and valorized the autonomy of individuals in horizontal relationship to each other.

The challenges of designing new public spaces for justice were hence substantial. Marc Moinard, the Director of Legal Services in the Ministry of Justice, underscored that viewers had to be able to identify the building as a place where justice is meted out, a commitment that Jacob ascribed to the universal need . . . for a clearly marked place where good can be distinguished from evil. Yet Garapon worried that courthouses were increasingly becoming indistinguishable from other public buildings and that such architectural silence was dangerous. The erosion of legal symbolism . . . threatened the very foundations of the legal system. Garapon called for architects and lawyers to unite to find new ways to express a democratic legal process that reflected that a court is simultaneously a theatre, a temple and a forum.

While drawing on history, both Jacob and Garapon warned against unreflective recycling of the past. Jacob argued that traditions marking the isolation and grandeur of justice no longer fit contemporary commitments to the shared ownership of law's promulgation and application. Garapon, in turn, thought that historic symbols of authority and majesty failed to capture justice's efforts to be responsive to social conflict. But he was skeptical about the ability to represent either the Anglo-American due process or its parallel in Article of the European Convention on Human Rights. Architecture and art could not readily capture ideas such as protecting individuals' opportunities for public hearings before impartial and independent judges obliged to make decisions based in law. Another difficulty, noted by Jacob, was capturing the decentralization of judicial activities, which included research and discussions (often taking place in offices dans le cabinet where papers were reviewed) and interventions that veered toward the therapeutic in a mode that was decreasingly social.

Other challenges (set forth in commentary from a colloquium on the topic) were about capturing facets of justice that indirectly echoed Thomas Aquinas's conceptual differentiation between retributive and commutaive justice. One aspiration frankly embraced within French discussions was to embody the institutionalized force of law, aiming to impose order on passion, even as law itself did violence through criminal sanctions rendered in the name of the French people. The other aim was to express conciliatory modalities that the judicial system was coming to entail. Discussions focused on how to materialize the new judicial obligation to search for solutions, sometimes through negotiations and mediation, yet create inspirational spaces worthy of bearing the name of the Virtue Justice. Some sought massive designs that denoted the rigor, power, order, and authority of courts, while others wanted to temper those expressions with ways to welcome the vulnerable, to emphasize the values of conciliation, and to maximize flexibility. Rationalization through combining various tribunals in one space had appeal as a way to make those tribunals more visible and accessible.

Adding to the amalgam of aspirations were concerns that justice buildings had to be legible readily understood to be important public spaces reflecting justice's ambitions while serving as functional edifices that housed many offices as well as courtrooms. The need for all those offices, however, was in tension with the goal of marking the buildings as specially and distinctively about justice. Commentators in France, like those across the ocean, worried about how to protect the courtroom (what one United States judge had called the pearl within the shell) from being obscured by the square footage devoted to administrative functions.

Goals for new buildings thus ran from expressing justice's solemnity, transparency, and openness to making plain courts' roles as educators, interpreters, experts, conciliators, mediators, and adjudicators functioning at times on behalf not only of France but also of Europe, of which France is a legal part through both the Council of Europe and the European Union. As the first President of the Appellate Court for Caen explained, new construction had to represent a justice that continued to condemn criminals while taking into account the suffering and difficulties of people as it tried to bring about reconciliation.

In terms of concrete (pun intended) alterations, one plan was reconfiguring a traditional space in a palais de justice

the entry foyer or waiting area adjacent to courtrooms that in French is called la salle des pas perdus (literally the room of lost steps). Commentators noted its historic function as an intermediate space between the street and les salles d'audiences or courtrooms, a term that, like the word for a courthouse (*palais*), reflects French courts' monarchal past. For many, la salle des pas perdus is associated with the anxiety of waiting for verdicts or with wasted time. (The term is also regularly used in reference to railway stations, where people stand to catch trains, and other Romance languages use the same phrase for these various areas.) Commentators urged courthouse designers to reconceive these foyers as places that welcomed and informed litigants and the public as well as to create salles de réunion, conference rooms in which people came together.

In response to this melange of goals, the Justice Ministry acquired more sites and looked to the private market for great architects, who were directed in some respects while invited to invent in others. In the United States, the federal judiciary had drafted a design guide. In France it was the administrative building-arm of the Ministry that developed detailed dossiers that provided precise recommendations for each function within a courthouse, as well as specifications as to the sizes of rooms while leaving limited discretion to architects for designs of entry areas and exterior aesthetics. Flexibility was one goal, and another was to group related uses in modules or pods (one area for offices, another for courtrooms). Builders were asked not to rely on a single template but to capture the government's ambitions in diverse ways. That strategy was later criticized by some as producing undue fragmentation, a concern that one also heard in the United States where the array of styles meant that none served to announce the federal presence.

Working in a fashion parallel to the Design Excellence Program of the General Services Administration (GSA) in the United States, the administrative entity in France charged with overseeing courts and prisons sought outstanding architects for the renovation and expansion of facilities. The architects commissioned through competitions (the customary mode for public building in France) included Henri Ciriani for Le Palais de Justice de Pontoise, Bernard Kohn for Montpellier's facility, Richard Rogers for Bordeaux's courthouse, Henri Gaudin for the Besançon facility, Francoise Jorda and Gilles Perraudin for Melun's Palais de Justice, and Jean Nouvel for the courthouse in Nantes.

In , to manage the projects that were well underway, the country chartered a new entity, L'Agence de Maîtrise d'Ouvrage des Travaux du Ministère de la Justice (AMOTMJ, or the Building Works Agency of the Ministry of Justice); a different group was devoted exclusively to work in Paris. The AMOTMJ provided administrative services for prisons, halfway houses, youth facilities, and courts. By the end of , eighty-nine buildings (forty-seven related to prisons and forty-two for courts) were under construction or had been completed in both France and its territories abroad (Guadeloupe, Martinique, La Réunion, Mayotte, and French Polynesia) at a cost of more than billion euros (about billion). As the pie charts provided (fig.) indicate, prison buildings and operation garnered more euros than did the judiciary. These charts also make plain government commitments to revamping and enlarging both courts and prisons.

Some of the buildings were familiar echoes of eras past, and others were unique architectural objects, built in modules rather than as single unified structures. The designs of several are deliberate departures from the Neoclassical Greek style in an effort to express that the modern courthouse is not only a place of judgment but also a place of welcome, information, and guidance for citizens. Many were located in city centers (justice at the heart of the city) to mark that justice is at the center of citizens' concerns and public life. The facilities ranged from an audacious and novel conception in Bordeaux (fig.) of cone-like modular units (described as looking like wine casks, eggshells, or beehives) by Richard Rogers to a recycled parliament building in Rennes (fig.) and a renovated Justice Palace in Nice.

Some buildings were deemed successful, upsetting habits and symbols . . . and aiding in the emergence of another justice, one that is more open, more democratic, while others were criticized for failing to take those very concerns into account. A few of the new buildings in Bordeaux and in Avignon, for example, segregated spaces so vividly that critics worried about the appearance of a judicial workforce inscribed as autonomous rather than interactive. Further, some deemed much of the interior space banal, reflecting little architectural thought or ingenuity.

To document the work, the Ministry of Justice commissioned studies of both the buildings and their decor. In addition, the Ministry published pamphlets on individual buildings, similar to those produced by the Design Excellence Program in the United States. On both sides of the Atlantic, the architectural choices of each structure were couched in symbolic terms. Some of the courthouses were described as affirming the accessibility and humanity of justice; the new facility in Fort-de-France, Martinique (fig.), was termed a place that inspires confidence and respect. Other buildings were praised for their monumental expressions of justice's authority and dignity. Grenoble's new court, for example, was called a perfect isosceles triangle of blue-gray aluminum. The courthouse in Melun (fig.) is an imposing parallelepiped, by feet (seventy-two by fifty-four meters) with a two-story, glass-cloaked entry fronted by six tree-like pillars supporting an overhang (some eighty feet, or twenty-four meters, from the ground) that echoes the symbolism of trees in French justice iconography and that serves both to shelter pedestrians and to define the building's facade.

In a few instances, historic buildings, seen as classical monuments, were recycled for courthouses. In Aix-en-Provence, for example, the Justice Ministry retrieved part of a centrally located, old, defunct prison (that remained government property). Reference to the prior use came only by preserving a wall for the new structure. The courthouse was said to reflect functionality, legibility, and sobriety and hence, the solemnity necessary for the exercise of modern justice. In Rennes, the building that had housed Brittany's parliament and had been used for coronation rituals since the sixteenth century was reclaimed after a fire in and renovated for the appellate courts. In Besançon, a Renaissance facade from the sixteenth century was integrated into a huge new structure where arches (like those in Henry Cobb's Boston Courthouse) were chosen by architect Henri Gaudin to express the social harmony that modern justice pursues. And, whether describing new or renovated old structures, the brochures and journal articles focused not on the artwork within but on the symbolism of the buildings themselves.

As in courthouses in the United States, certain features criss-cross the diverse structures. Many are clad in glass, explained as one of the most modern materials that served well to symbolize justice. Despite the transparency of the exteriors, the interiors feature only a few discrete areas for shared use because a good deal of space is devoted to protected and separate passageways (trois flux) for judges, the public, and detainees. Several buildings rely on hierarchies; the public enters and remains on the bottom floors, and judges and administrators occupy the higher levels. More of the usable space is devoted to administrative and other offices rather than courtrooms. Airy glass designs may suggest easy accessibility, but rules governing the movement of people wall off space, as video surveillance controls and superintends users.

Furthermore, however varied the exteriors, the interiors are similar and traditional. Most courtrooms are autonomous, isolated, enclosed spaces aiming for solemnity and devoid of iconographical ornamentation. Further, despite discussions questioning the practice of putting the presiding jurist above and at a distance, and even while insisting on new roles for judges as negotiators, many courtrooms remained true to the prior configuration. The judge remains elevated, even if perhaps not quite as high or as far from the participants as had been the practice. One critic surveying various buildings called the courtrooms ordinary and repetitive and almost interchangeable from one facility to the next. Sources of light vary somewhat, as natural light comes either through windows or only through skylights. As for spectators, many courtrooms offer hard wood benches, ramrod straight.

Le décoratif

As of , the French government provided that its décoratif the percent of public building budgets devoted to art applied to the judiciary. Under the Ministry of Justice, efforts were made to avoid art becoming an afterthought. The architect, in conjunction with the Ministry, was to develop an integrative plan early in a building's design that, as in the United States, reflected the central role architects played in selection. In addition, and again paralleling procedures in the United States, the Ministry convened committees comprised of participants from different sectors. As of , committee approval was required for projects costing more than , (, euros). Each committee included three representatives from the Ministries of Justice and of Culture as well as an architect, two artists, the mayor of the relevant locality, a jurist from the designated court, and a Counselor from the regional office of the Ministry of Culture. The charge was twofold: to select art that contributed to the quality of public buildings through the relationship between the art and architecture and to enable the public to have contact with new contemporary art.

In the United States, public support for art began only in the second half of the twentieth century and the federalist political arrangement resulted in eclectic expressions of justice imagery in state and federal courthouses with the female Virtue Justice as a common denominator. In contrast, the French had a specified tradition of court decoration (paralleled in other arenas of government building) that included a larger set of standard symbols. The Ministry of Justice's website provided an account that divided the imagery into categories religious (Christ and the cross), divine (Medieval traditions of trees and other vegetation denoting the relationship between the earth and the sun, life cycles, and immortality), royale (monarchical images of the lion, the color red, and the fleur de lys), laïque (Enlightenment texts or precepts of equality and rights coupled with statues of famous jurists), and attributs de Thémis (Justice, with a book or a balance and the sword symbolizing power). Other commentators detailed the melange that had developed. Court decor frequently relied on wood to invoke both the tree of Justice and Christ's cross while displaying lawgivers and gods (Zeus, Thémis, St. Louis, Solon, Justinian, and Napoleon), symbols of abundance and prosperity (such as the cornucopia), various animals (the serpent representing knowledge, the lion for power), attributes such as a mirror for knowledge and torches for truth, words (*Lex*, *Jus*), and the virtue Justice, with scales, sword, and blindfold.

What was the new production resulting from the décoratif In , the Ministry of Justice commissioned a law professor, Laurence Depambour Tarride, to survey the art commissioned since for French courthouses. Her review began by noting the power of the architecture, which created the context for the artwork and, in many respects, dominated it. As for the art in the new buildings, the selections often departed like the buildings themselves from the older symbolism. She reported a great variety of

imagery and materials, perhaps evocative of law's new diversification of modalities[illegible] or denoting the lack of clarity of vision about contemporary aspirations to do justice.[illegible] Thus, as commentators had forecast, old imagery was thought insufficient to capture new tasks such as conciliation and experimentation.[illegible] As in the United States, various contemporary artists relied on a mix of media for their sculptures, photographs, glassworks, light displays, and gardens, arrayed in configurations that ranged from abstractions to representations of objects such as balls, bells, hands, and human figures.[illegible]

In the Palais de Justice in Melun, for example, a layout of oversized photographs by Maryvonne Arnaud produced an enormous outstretched hand (fig. [illegible], color plate [illegible]) that lines a significant part of the floor of its grand salle des pas perdus. The gesture aims to welcome entrants,[illegible] although some may experience the hand as engulfing rather than a friendly beckoning. In Avignon, Brigitte Nahon created a huge balance titled [illegible]*uilibre* ([illegible]*uilibrium*), formed by enormous round balls made of stainless steel that resemble those used in the French lawn game, [illegible]boules.[illegible] Although many more balls are stacked on one side than the other, the balance beam (sitting on another such ball) appears stable and even. Nahon attributed the equilibrium of her balance beams to [illegible]mysterious energies[illegible] or will power.[illegible]

An immense bronze bell ([illegible]*rosse Cloche,* or [illegible]*reat Bell*), about six and a half feet or two meters in circumference (fig. [illegible]), by Pascal Couvert, sits on a floor in Richard Rogers's Palais de Justice in Bordeaux.[illegible] Couvert explained his effort to create a symbol legible to all, linking the new court with America's Liberty Bell, church bells, and Bordeaux's own Old Town belfry that still hangs in the city and also bears the name [illegible]*rosse Cloche*.[illegible] (Another commentator, Lamanda, thought the bell echoed the Ancien R[illegible]gime.[illegible]) Couvert inscribed words in the style of a Japanese haiku. The lines, by H[illegible]ne Ilkar, said to have been inspired by In[illegible]s de la Cruz and Franz Kafka, read: [illegible]Jour / Vert / Flottant au Poignet / Seul le Bond se Conna[illegible] (Day / Green / Fluttering Cuffs / Only the Bound Knows Itself).[illegible] Tarride remarked that Couvert had deployed a breadth and diversity of references, drawing on Europe, Japan, and the United States as well as the secular and the sacred.

Moreover, bells are usually seen from afar, on high, but this one sits on the ground.[illegible]

For Lyon, G[illegible]rard Garouste created what he called *Les Droits de l[illegible] omme* ([illegible]*ights of Man*)[illegible] (fig. [illegible]) and what the local tourism office has dubbed *Pacte entre Justice et Soci[illegible]* (*Pact [illegible]etween Justice and Societ[illegible]*).[illegible] Displayed in Lyon's salle des pas perdus are thirty-five identically sized ceramic and wrought iron panels. Arrayed are plants, Justice's scales, the God Hermes, and the tree found commonly in classical French judicial imagery.[illegible] The texts include the words Truth (Veritas), Virtue (Vertu), Equality (Égalit[illegible]), Liberty (Libert[illegible]), and Fraternity (Fraternit[illegible]) and the name Louis IX,[illegible] as well as excerpts from various legal documents.[illegible] As one commentator put it, one can find the [illegible]seventeen articles voted in by the Constituent Assembly of [illegible]th August [illegible] escaping from [illegible]the mouths of the figures[illegible] in strips of black writing.[illegible] Garouste also [illegible]added irreverent extracts from the fables of La Fontaine.[illegible] On some panels, the

FIGURE [illegible] *Pacte entre l'homme et la société* (*Pact between Man and Society*), Gérard Garouste, [illegible], Palais de Justice, Lyon, France.

words are partially covered by or mixed with wrought-iron overlays. For example, the sentence from the [illegible] Universal Declaration of Human Rights: "We will not permit torture or the imposition of cruel, inhuman, or degrading punishments[illegible]" can be read above and through the leaves of a winding vine (fig. [illegible]).[illegible]

In an interview on this work, Garouste explained that he had specifically eschewed abstraction in favor of a plenitude of literary, historic, and religious references.[illegible] He credited his meetings with jurists from the Lyon court with influencing his choices. As Garouste explained, he wanted to preserve the memories of the historic symbols but realized that the judges sought symbols not only of authority but also of their commitments to conciliation.[illegible] Garouste added that everyone agreed that references to human rights contributed to images of justice both reassuring and protective.[illegible] Yet he worried about how to shape new imagery to remind judges of the difficulty of their work, of human suffering, and of the tragedies that could result if they erred.[illegible] (Tarride found the work successful: an "uninterrupted renewal of the symbolism of justice.[illegible]")

Amidst the diverse depictions, some thematic repetitions cut across the new courthouses' installations. Many feature imagery of vegetation as well as displays of water; the invocations of nature aim to convey a sense of serenity. Natural light is also regularly engaged. Several pieces make direct reference to the French Declaration of the Rights of Man of [illegible] and to the Universal Declaration of Human Rights of [illegible].[illegible] A few suggest a dialogue between old and new forms. Brigitte Nahon's balance playfully insists that, despite all odds (the huge balls lined up on one side, perhaps a reference to the power differential between some litigants), the balance remains level, rather than tipped. Further, the [illegible] décoratif [illegible] was regularly committed to contemporary artists, who themselves avoid a singular or unified aesthetic.[illegible]

What is absent can also be catalogued. In the United States, the art developed under the GSA's Art-in-Architecture program often invoked local history (for example, in Sacramento's courthouse, migrations from Asia to California play a role in the artistic displays[illegible]). In contrast, Tarride's overview of the new art in French courts noted that the human figure is rarely seen[illegible] perhaps replaced in some

FIGURE [illegible] *Pacte entre l'homme et la soci[illegible]* (panel), G[illegible]rard Garouste.

instances by technologies of motion. Aside from Louis IX, the Revolution, and the Declaration of Human Rights, few references are made to noted judicial personages or to particular moments of history of either France or its regions, nor is the rationality in legal analyses and of law itself much celebrated.[illegible]

Competing interpretations across the set of installations are possible. The variety of materials and imagery, if seen together across buildings, can be understood as embracing the theme that justice is multiply faceted, requiring a diversity of expressions that ought not be dominated by any single representation. One could find that perspective liberating[illegible] that a host of competing points of view are to be taken into account by law. Further, given that some of the art invokes aspects of French history (such as Louis IX and the Revolution), one can see the entirety as showing the movement from, rather than a rupture with, the past. To the degree that some of the art requires explication[illegible] inviting questioning because of a lack of easy legibility[illegible] that quality could appropriately reflect law's openness and indeterminacy.[illegible]

Alternatively, one could pronounce the output an undue rejection of legal traditions that bespeaks a failure of vision, a troubling uncertainty, or an inappropriate unleashing of idiosyncratic artistic preferences over public values.[illegible] Tarride, for example, objected to the impenetrability of various objects, which she deemed poor signification of the obligation of law to speak clearly. Further, she noted that the crucifix that had once hung behind the judge denoted that the judge acted in the name of either God or the monarchy, but the new imagery had not yet found a way to represent that principled judges, bound by law, speak in the name of the people.[illegible] Moreover, as she catalogued the many texts that decorated the walls of new buildings, she regretted that the word *loi* (law) was rarely to be seen.[illegible] Yet, as the discussion below of the Nantes courthouse makes plain, law's power is patent in many of the new buildings.

Jean Nouvel and Jenny Holzer in Nantes

The authority of law (as well as the prosperity of France at the time) is on display in the massive new courthouse constructions, scaled to dominate a vista. Our prime example is the building (fig. [illegible], color plate [illegible]) designed by the architect Jean Nouvel, who in [illegible] received one of architecture's most prestigious awards, the Pritzker Prize.[illegible] His Nantes courthouse shares many features of the Henry Cobb design for Boston. Both are sited near water to anchor the hoped-for development of their respective cities. The Boston Courthouse aimed to attract commerce to an area near that city's waterfront. The Nantes Courthouse sits on the banks of the Loire River on an island, [illegible]le Sainte Anne, accessible by a long footbridge and near a cluster of old warehouses, the [illegible]detritus of a thriving industrial and maritime past[illegible] that once spelled prosperity for the town.[illegible] Further, both Cobb and Nouvel understood themselves as reinterpreting and adhering to traditional forms. Cobb used a one-room courthouse in Virginia as iconic and borrowed details from other historic courts; Nouvel relied on [illegible]the typology of the temple form, [illegible]with[illegible] its ceremonial porch, and symmetrical composition[illegible] aiming to [illegible]recall the steps and portico of the traditional courthouse.[illegible]

The Nantes building is a square rectangle of almost [illegible],[illegible] square feet whose dimensions ([illegible] by [illegible].[illegible] feet or [illegible].[illegible] by [illegible] meters) are apt given the building's title[illegible] palais.[illegible] One enters the pavilion, which faces the city, from a large stone patio into a vast salle des pas perdus (fig. [illegible]) that is also paved in stone, clad in glass, and described as expressing [illegible]the solemnity of justice through its transparent, clear and balanced character.[illegible] One of the jurists who worked there called it a monumental and transparent sym-

bol of authority.⊠⊠ The point, Nouvel explained, was that a ⊠justice center represents the power of justice,⊠⊠⊠ even as he aspired to show that justice occurs in a public environment both democratic and welcoming.⊠⊠ The stone, the metal framing of the glass walls, and the interior walls of the open areas are all charcoal black. The geometry is relentless, with the walls themselves lined in a slightly raised cubic pattern. The ⊠immense lobby running the width of the building⊠ (about ⊠⊠⊠ feet) permits entry into three box-like contained areas housing seven courtrooms and auxiliary offices.⊠⊠

Words on Jenny Holzer's yellow LED screens (fig. ⊠⊠⊠, color plate ⊠⊠) travel along thin columns inside the visually stunning and austere grand entrance hall.⊠⊠ The Ministry's booklet celebrates that Holzer's art is in a ⊠true dialogue⊠ with the architecture; ⊠the texts seem to surge from the floor and traverse the building until they reach the sky, reflected on the floor and the glass panels.⊠⊠⊠

As in the United States, Holzer proposed excerpts from diverse legal writings appropriate to the French context.⊠⊠ In some respects, Holzer offered a twenty-first-century version of the pluralism found on the frieze on the wall of the courtroom in the United States Supreme Court in Washington and in the sculptures on the roof of the New York Appellate Division Courthouse in Manhattan (fig. ⊠/⊠⊠). Those buildings feature a company of great lawgivers from Muhammad and Justinian to Confucius and European and American leaders. Holzer's citations, in turn, range from the Code of Hammurabi (circa ⊠⊠⊠⊠ BCE) to quotes from victims of the Rwandan genocide (⊠⊠⊠⊠). From the interven-

Figure [illegible] *Installation for the Nantes Courthouse,* Jenny Holzer, [illegible].

ing years, Holzer included comments from an array that included Confucius, Plato, Aristotle, Jean Bodin, Michel de Montaigne, Hugo Grotius, Ren[illegible] Descartes, Thomas Hobbes, Baruch Spinoza, Voltaire, Denis Diderot, Montesquieu, Jean-Jacques Rousseau, Cesare Beccarria, Thomas Jefferson, Thomas Paine, Maximilien Robespierre, George Sand, Karl Marx, Victor Hugo, Simone de Beauvoir, and Human Rights Watch. In addition, Holzer provided excerpts from several French legal documents, including the [illegible] Declaration of the Rights of Man and of the Citizen, the [illegible] Constitution, Louis Napoleon's [illegible] Constitution, the [illegible] law on separation of church and state, the [illegible] Constitution, and laws on the environment, crimes, and people with disabilities. Additional lines come from various documents produced by the United Nations, such as the [illegible] United Nations Charter, the [illegible] Abolition of Forced Labor Convention, the [illegible] Declaration on the Elimination of Discrimination against Women, and the [illegible] Anti-Apartheid Convention.[illegible]

Not all the material that Holzer proposed made it into the display, but the range is significantly greater than the phrases inscribed in federal courthouses in California and Pennsylvania. For example, in the LED installation in Nantes are words such as Jules Ferry's [illegible] insistence that in a society founded on liberty, one must suppress class distinctions ([illegible]Enfin, dans une soci[illegible]t[illegible] que s'est donn[illegible] pour t[illegible]che de fonder la libert[illegible], il y a une grande n[illegible]cessit[illegible] de supprimer les distinctions de classes[illegible]); Victor Hugo's nineteenth-century aphorism that, by filling the schools, one would empty the prisons ([illegible]Remplissez les [illegible]coles, vous viderez les prisons[illegible]); and Simone de Beauvoir's [illegible] comment that [illegible]when we abolish the slavery of half of humanity, together with the whole system of hypocrisy it implies, then the

division' of humanity will reveal its genuine significance and the human couple will find its true form. ('C'est au contraire quand sera aboli l'esclavage d'une moitié de l'humanité et tout le système d'hypocrisie qu'il implique que la 'section' de l'humanité révélera son authentique signification et que le couple humain trouvera sa vraie figure.'). Holzer juxtaposed such calls for minimally humane treatment with documents seeking to inscribe such rights and searing details of some of law's failures. The horrors experienced in the testimonies by victims of genocide in Rwanda are included: 'I lost my three children and my husband.' ('J'ai perdu mes trois enfants et mon mari.') as well as Human Rights Watch's descriptions of murder, extermination, slavery, deportation, torture, and inhumane acts.

In its brochure, the Ministry of Justice praised Holzer's choice to present 'texts from philosophers and writers, both male and female, from Antiquity to modern times.' The Ministry spoke of how the assemblage presented contradictory points of view prompting critical reflections on the human condition. The resulting anthology enabled the public, jurists, and litigants to reflect on the 'evolution of the idea of law, of duty, and of . . . the spirit of the law' in relation to different historical eras.' In contrast, Tarride thought the project misguided' and worried that Holzer had been permitted (through too little control by the Ministry of Justice) to present images of justice that were either contradictory or ill-defined and that lacked an organizing principle. Tarride argued that the serenity of justice ought to have been invoked by fixed texts rather than electronically propelled perpetual motion. As for the words chosen, Tarride argued that the full dossier read more like an academic course on justice over the millennia than its distillation. Moreover, she complained that the flashing words were unduly polemical, that religious elements were out of place,' and that the absence of citations presented risks of 'inexactitude.' Tarride also bemoaned the lack of attention paid to lawyers. According to her count, they were mentioned only twice and not enthusiastically, such as the question posed: 'Wouldn't that be a fine thing, the honesty of a lawyer who demanded his client's conviction?' In sum, Tarride objected: 'What justifies seeing this sentiment upon entering a courthouse?'

The courthouse, in turn, provokes other sentiments. The exterior spaces are black stone and metal that reflect light off hard-edged surfaces. The vast salle des pas perdus is ornamented by Holzer's LED text designs, and the courtroom interiors (fig. [illegible], color plate [illegible]) are wood, stained deep red.' The color is reminiscent of French royalty, the

FIGURE [illegible] Salle d'audience (courtroom), Palais de Justice, Nantes, France. Architect: Jean Nouvel, [illegible].

Photographer: Olivier Wogenscky. Copyright: APIJ, April [illegible]. Reproduced with the permission of L'Agence de Maîtrise d'Ouvrage des Travaux du Ministère de la Justice / Ministère de la Justice, the photographer, and APIJ. See color plate [illegible].

paint bathing the walls of the Richelieu wing of the Louvre, and ‘the colour of blood.’ (Nouvel explained the hue and volume of the rooms as providing the requisite noble aesthetic.) The courtrooms have no windows; skylights in the ceilings bring small amounts of natural light into the room. One sits on a hard wooden bench enclosed by tall, dark red walls, perhaps previewing the rigors of an imprisonment to come. One critic added: ‘You must wonder whether Breton crime levels deserve so brooding a vision of Nemesis (locals complain on entering that they are already in prison).’

How is one to understand the building’s import? Ought it to be celebrated for its ‘refusal to deal in euphemisms’ ‘designed without compromise on an ‘×’m grid’ that embodies ‘a severe and powerful judicial presence’ providing a ‘powerful sense of judicial authority’? Or ought it to be criticized for its harsh vision that ignores the aspirations for a symbolism welcoming those in need and sheltering the vulnerable? Our own visceral experience was of entombment, from the claustrophobia of the courtrooms to the prison bar-like motif of the grids in the waiting areas, prompting fantasies of escape and concerns about how dismal it would be to work in the facility.

Moving beyond Nantes to survey the array of new buildings, some French commentators have questioned whether they constitute a category of contemporary judicial architecture or rather should be tallied within an array of monumental buildings constructed for diverse purposes. One might admire the variety as illustrative of the inability to reduce justice to a singular expression or, like Bels, conclude that the ‘extraordinary diversity of the projects’ evidences a ‘fundamental lack of conceptual direction.’ Criticism has also been directed at the dichotomization between ‘public and private spaces’; while the separation and compartmentalization of offices from courtrooms could be read as simple and transparent, it may also mask the complex interaction by which ‘the law court institution really operates.’ Furthermore, aspirations for flexibility have rarely been realized. Instead, as Bels put it, a ‘stratified layout . . . expresses the operation of an institution that superimposes the different and contradictory work methods represented by the . . . ‘business’ side of the legal system and the technical aspects that allow the justice ‘machine’ to function.’

Moreover, the line between public and commercial construction has proven thin. The goal had been to make buildings that were unmistakably courts. But commentators have noted the continuities between various architects’ designs for courts and their commercial work; cited as an example are the resemblances between Nouvel’s work in Nantes and his design for the Cartier Foundation in Paris, a grid-based ‘ethereal glass and steel building.’ Others are concerned that the new courthouses remain symbolically silent, not only because they fail to distinguish themselves from other public buildings, but also because they valorize transparency without distinguishing the facade from the obligations of enabling public accountability. Paralleling architecture critic Paul Byard’s view of monumental late twentieth-century courthouses in the United States, Antoine Garapon viewed the French courthouses as evidence that the means of expressing universal values recognizing individuals’ dignity in courthouse configurations remains elusive.

Creating New Symbols of Nationhood: A Supreme Court Building for Israel

Completed in , the Israeli Supreme Court sits on a ten-acre ‘dramatic hilltop site that is the locus of the government center.’ Akin to the complex designed by Oscar Niemeyer in the late s for Brasilia (fig. /), the location concentrates the branches of the government ‘at a single site in the nation’s capital, Jerusalem.’ The building (fig.), a ,-square-foot ‘poured-in-place reinforced concrete structure’ is in view of the Knesset (the Israeli Parliament), the Prime Minister’s office, the offices of the various ministries, and the Bank of Israel.

The Israeli Supreme Court had been housed at the ‘Russian Compound’ in buildings owned by the Russian Orthodox Church. The cluster included a former monastery that had also served as a hostel for pilgrims visiting the Holy Land. Funding for the new construction came from the Rothschild family’s foundation, Yad Hanadiv (Hand of the Benefactor) that superintended the international competition won by the architects (and siblings) Ada Karmi-Melamede and Ram Karmi. The competition reflected the transnationality of the architecture market. Expert advisors and jurors came from Canada, the United States, England, and Israel. Submissions came from Israeli and international firms, including two American firms (Richard Meier and Partners and I. M. Pei and Partners) that have become well-known courthouse designers in the United States.

A less elaborate set of design guidelines than in France or the United States matched a much smaller country. Israel’s court system then included some judges working on the Supreme, District, Magistrates, and Labour Courts. These jurists served a population of residents, citizens, and aliens (variously delineated given the contested territorial boundaries of the state) of some ten million. The goals for the building were, nonetheless, familiar. The section of the design materials entitled ‘The Nature and Symbolism of the Building’ explained the aspirations. A new structure had to ‘convey a sense of comfort and well-being’ with ‘spaciousness’ in its passages and ‘loftiness’ in the courtrooms and entrance ways. ‘The building should be impressive but not ostentatious, or in the words of the builders of the Supreme Court of the U.S.A.: dignified.’

Accessibility was stressed. The ‘process of administering justice is open to all. . . . Hearings are public and anyone

may observe the proceedings.[illegible] Flexibility was another requirement so as to [illegible]accommodate changes in volume of activity, spheres of responsibility and technology.[illegible] Another concern[illegible] security[illegible] was described as [illegible]in conflict with the principle of exposure of the Supreme Court to the public, and may impair its appearance.[illegible] Nonetheless, plans called for a building to be [illegible]surrounded by a fence, at a minimum distance of [illegible] meters [illegible]about fifty feet[illegible] from the building's walls[illegible] Parking was to be open and unconnected to the building. Both cars and persons had to pass through security gates, and, [illegible]during sensitive trials[illegible] guards might need to be stationed on the roof or in courtyards.[illegible] Further, the building had to house a bomb shelter.[illegible] Designers were told to meet such security requirements [illegible]as inconspicuously as possible, and with a minimum of impact on the appearance and access to the courthouse.[illegible]

[illegible]Circles of Justice[illegible] and Laws That Are [illegible]Straight[illegible]

The winning design was assumed to be modifiable in light of the [illegible]dialogue between client and architect[illegible] to ensue.[illegible] The jury commended them for their [illegible]respect for Jewish justice and tradition[illegible] translated by some to mean an insistent nationalism[illegible] and by others to reflect the building's [illegible]relative modesty.[illegible] Rather than adopt a style that equated monumentality with power (vivid in Nantes), Karmi-Melamede and Karmi relied on a smaller scale to echo vistas in Jersualem, a city filled with tightly packed buildings of varying sizes surrounded by walls, gates, and arches.[illegible] As the architects explained: [illegible]The building should not assume power but deserve it.[illegible]

Reminiscent of Henry Cobbs's interest in historicity for the Boston Courthouse and Jean Nouvel's commitment to classicism in Nantes, the Karmi design relied on motifs familiar to Jerusalem.[illegible] But unlike both the United States and France, the State of Israel, begun in [illegible], did not have an [illegible]accepted paradigm of a courthouse.[illegible] Indeed, architectural critic Paul Goldberger noted the [illegible]paradox, given the Roman presence in the history of this land, that classicism is more legitimately a part of the architectural heritage of America[illegible] than of Israel.[illegible] Alternatively, in light of the Roman conquest and destruction, the rejection of such [illegible]master's tools[illegible] can be appreciated as a sensible distancing from an oppressive past. Nonetheless, aspects of the Israeli Supreme Court's new building have been explained as referring to various of the successive empires that brought a sequence of styles, including arches echoing the Roman deployment of that shape as a triumphal sign.

In Israel, biblical sources are oft-cited. Passages in the Old Testament make mention of [illegible]judgment at the gate[illegible] the [illegible]circles of justice[illegible] and [illegible]laws [illegible]that[illegible] are straight,[illegible] as well as of judgments that [illegible]run down as waters, and righteousness as a mighty stream.[illegible] Such phrases do not provide building blueprints. Indeed, the various biblical references to the act of judgment did not detail the [illegible]architectural components[illegible] of earthly decisionmaking, in part because (as in many societies) those narratives describe many rituals that took place in public areas under the open skies.[illegible]

Were one to look to building traditions of the place (rather than of the Torah[illegible] the [illegible]Book[illegible]), structures in Jerusalem draw on various sources representing eras of rule by the Roman, Byzantine, Ottoman, and British empires. Legal principles from those polities as well as from Jewish and international law are also relevant to Israeli court doctrine. Further, were one to seek guidance from inhabitants, in addition to those born in the country, twentieth-century settlers came from around the world. Thus, unlike some European colonies that had one dominant occupying country (such as France in Martinique and certain parts of Africa) or some countries with a longstanding, relatively stable, and somewhat homogeneous population, Israel has inherited a hodgepodge of legal, political, and architectural regimes.

But diverse layers of history and biblical imagery have left footprints upon which the architects relied, as they have described in essays and interviews.[illegible] Ada Karmi-Melamede identified three factors informing the design: the location with its vistas of the city; the [illegible]unique historical and cultural significance[illegible] of [illegible]the basic values of law, justice,

truth, mercy, and compassion, and biblical images with a theatricality inherent in the tradition of Hebrew law. The architects also identified four specific images to bring into the building: a courtyard akin to that of the Rockefeller Museum of the British Mandate period, thick walls reminiscent of alleys in the Armenian quarter of the Old City, and two biblical sites, Absalom's Monument and Mary's Tomb.

In their work, Karmi-Melamede and Karmi sought to replicate the experience of looking at Jerusalem's edifices, part of which are hidden from view by the city wall, one can see their skyline but not where they touch ground. As Ram Karmi later described, they wanted a building that generated a sense of 'belonging' functioning as a small city,' a Jerusalem in miniature. They planned a cardo, or Roman street, called the Knesset Passage, as its view extends directly to the parliament, built from white stone that both symbolized eternity, and was infused with a softer, more subtle light, one that is tamed and more humane. Further, and unlike the embrace of transparency that surrounds discussions of courthouses in the United States and France, the architects aimed to capture an appreciation for the unknown, and the hidden layers, that could lend an air of mystique (or perhaps spirituality) to the building. Their design offered an introverted walled-in, layered building, related to and integrated into its landscape, which (as the celebratory tome about the building argued) provides a powerful and serene architectural image, unique to Jerusalem.

A different aspect of the effort to be unique comes from the contested sovereignty with which Israel wrestles, in politics and in law. As we discussed in analyzing the construction of town halls in Medieval and Renaissance Europe, in the context of efforts in the United States to display a federal presence, and in France to construct temple-like structures, public buildings are one way to anchor government authority. Court construction in Israel had a comparable goal, affected by ongoing disputes about the authority of Palestinians and Israelis. Thus, building the court elicited criticism that its insistent historicity aimed to legitimate the hegemony of Israel by suppressing competing sovereigntist claims.

Roman Cardos, British Courtyards, Moorish Arches, and Jerusalem Stone

The Roman cardo (the north-south street) that bisected parts of the Old City of Jerusalem is reflected in the four sections of the Israeli Supreme Court, its library, the judges' chambers, the courtrooms, and the parking area. Each of the building's four parts has its own orientation; for example, judges' chambers face an inner courtyard, lined with symmetrical columns sheltering walkways so that users can enjoy quiet contemplation. The four autonomous blocks, are also delineated on the other axis (the decumanus, or east-west street of a Roman city) that leads toward the city. The two axes create one facet of the building's geometry, contrasted with the circular shape of the indoor corridors.

The entrance area is a stone stair . . . more evocative of a walk through a Jerusalem alley than an ascension to the gates of heaven or the front door of the U.S. Supreme Court. Rather than asking individuals to walk up steps so as to ascend to justice (as was the deliberate style in nineteenth-century France), the point was to create an egalitarian sense at the entry. By doing so, the architects reflected concerns of the Israeli Supreme Court's President, Meir Shamgar: 'You could create something Kafkaesque, a court somewhere, high up, distancing itself from people, but we didn't want it. On the other hand, as security now plays out in both the United States and France, the Israeli Supreme Court also puts its judges' chambers on upper floors. Prisoners are in holding cells on the lowest level and hence do have to ascend when they go to courtrooms.

The relatively small entrance (fig.) to the ground-floor foyer does not permit many people to come through the portal at the same time. This feature is one of many quiet security measures, complemented by a long, narrow walk to the entry. Inside, high ceilings create a more monumental space, as do large windows on the first floor providing panoramic views of the city.

Figure shows the outside of a copper-clad pyramid (green-tinted to give the appearance of metal aged from oxidation) that, inside the court, is both an object of art and a functional space: it crowns the ceiling located between the entrance and the foyer areas leading to the courtrooms, to the administrative wing (the Registry) housing offices for the court's three divisions (civil, criminal, and High Court), and to the library. The placement of the library near the entrance, not typical in courthouses in either the United States or France, was explained by the architects as underscoring 'the importance of 'the Book' in the history of the Jewish people. From the inside, the pyramid appears to be a freestanding room with various layers. From the floors above, the pyramid becomes a copper-clad object. The book documenting the Israel Supreme Court building reports that the choice of the pyramid, a shape used in many sites, refers both to law's own transnational relevance and sources ('The law itself has no locality' is the quote proffered) and to a specific biblical site, 'Zacharia's Tomb and Yad Avshalom' (Absalom's Tomb) in the Yehoshafat Valley of Jerusalem.

The organization of the building is 'complex,' with a mix of geometric shapes and areas identified through signage in Hebrew, Arabic, and English. The architects explained: 'Public movement towards the building and within, is a combination of circular and linear patterns.' Thus, the public has ready access to the first floor of the library (its higher floors are exclusively for the court), to the offices of the Registry, and to the five courtrooms.

Figure [illegible] Supreme Court of Israel, entrance. Architects: Ada Karmi-Melamede and Ram Karmi, [illegible].

Photographer: Richard Bryant / arcaid.co.uk. Photograph reproduced with the permission of the photographer and the assistance of the court.

The building is made from materials that are a motif in Jerusalem, where light-colored stone exteriors have been a requirement for much of the city's building since the early part of the twentieth century.[illegible] Moreover, the stone gates and walls that surround the Old City of Jerusalem serve as major landmarks. For the Israeli Supreme Court, the architects eschewed imported stone and instead selected a local limestone roughly chiseled for the exterior walls and more finely hammered for the interior arches and entryways. The result is a variety of textures.[illegible]

The interior corridors (fig. [illegible]) are faced on one side with large, rough blocks; the other side, painted white, offers visitors a place to sit in a sequence of fourteen cylindrical bays that receive natural light from skylights.[illegible] As a practical matter, the niches also provide a modicum of privacy for quiet or confidential discussions. The light stone, white walls, and skylights create serious yet bright spaces said by the architects to symbolize the [illegible]enlightenment of the judge seeking just judgment.[illegible]

The public also has access to the [illegible]Courtyard of the Arches[illegible] (fig. [illegible]), open to the skies as were ancient judgments. Its shape and content are attributed to many sources. One is specific[illegible] the Rockefeller Museum, built while the British controlled the area from [illegible] to [illegible] and housing archaeological artifacts. But multicultural references abound, linking the place with Jewish, Christian, and Muslim traditions. The walkways, under covered, rounded arches, and the southern apse are explained as referencing synagogue construction from the Roman and Byzantine eras, as well as monastic foyers or as a reclamation of a Roman triumphal

arch. The thin center line of flowing water that pools in a circle at one end is ascribed to the wells and cisterns of Jerusalem's Islamic and Christian buildings. The use of water is also, according to the court, a reference to *Psalm* : Truth will spring up from the earth and justice will be reflected from the heavens. Given that the floor stones come from the desert and the arches shelter visitors from the sun, the water may also be seen as critical nourishment in the arid climate. The architects also imagined the area might be used for exhibits. In practice, it has proved useful for television cameras, broadcasting from the courthouse and also in need of shelter from the sun.

Judgment at the Gate

As in courthouses around the world, primacy is given to the courtroom, which Ram Karmi called the most important station, to be quieter than the foyer. In contrast to many supreme courts, the Israeli Supreme Court still hears, as a first-instance High Court of Justice, challenges to legislative and executive acts. Thus, while functioning as the final appellate bench, the court also rules annually on thousands of petitions challenging government actions. In one six-month period, the court rendered more than , rulings. To do so, its fourteen jurists sit in panels generally of three, with larger groups (up to eleven) reserved for especially important cases.

As a consequence, the building has five courtrooms that come in three sizes. The entrance to each is marked by three flat arches carved into the great stone wall, accentuating the transition from an ancient, unhewn element to the courtrooms' static and symmetrical spaces. The carved arches are said to denote gates in the wall to represent where judges actually presided in biblical times. All of the courtrooms are similarly structured, relatively modest in size, white-walled, naturally lit, and appointed with wood tables and leather furniture. Their interiors (fig.) evoke Middle Eastern traditions through vaulted ceilings associated with Romanesque and Moorish architecture. Once again, ancient synagogues during the Talmudic period (–CE) are cited as inspirational.

The layout within each courtroom depends on two equal squares, with one for the judges and lawyers and the public in the other. In the United States, lawyers typically sit at rectangle tables facing the judge; in these courtrooms, lawyers sit at semi-circular tables that offer a more conversational posture. Further, the movement of people departs from a basilica layout. Rather than using a single central aisle, as in most houses of worship, people circulate by way of two side aisles. In addition, unlike the hard church-like wooden pews found in French and many United States courts, warm-hued brown leather upholstered seating is provided. Wood screens, a Moroccan reference, soften the acoustics. Light comes by way of skylights between the outer walls and the columns, enabling a softer and less intense brightness than in other parts of the building.

The Symbols

Reflective of Jewish traditions, allegorical figurative paintings and sculptures are not featured. Indeed, while a few objects are in fact on display, little attention is paid to them in the book devoted to the building or in other commentary. Before entering on the ground floor, visitors are welcomed by a large mosiac, discovered at the ancient synagogue of Hamat Gader and restored by the Israel Antiquities Authority and featuring lions, trees, and inscriptions in Aramaic (fig.). The choice to put this particular mosaic up front came in part from its inscription, which speaks of the righteousness and generosity of the donor who had supported the Byzantine synagogue from which it came before a fire destroyed the building and damaged the mosaic. As Dorothy de Rothschild, whose Yad Hanadiv Foundation funded the Israeli Supreme Court building, did not want her family name on it, the mosaic offers a subtle reference to that form of generosity. Attentive viewers might notice the Rothschilds' own small logo, five crossed arrows (fig.), embossed on a nearby plaque.

Once inside the building, a Samarian mosaic that was found during construction is displayed on a wall near one of the courtrooms. President Shamgar explained that it was reminiscent of mosaics in the Knesset building; the stone design created ⊠some connection between history and this court⊠thereby expressing the ⊠continuity⊠and the ⊠permanence of our people.⊠⊠⊠In addition, another wall hanging called *The S⊠m⊠ols* (fig. ⊠⊠⊠) is near the entrance to the Registry and the arched courtyard.⊠⊠

Nine symbols designed by graphic artist Peter Szmuk are affixed to a large nine-square glass grid. One purpose of the symbols is to reflect the care taken in the building's production. Each symbol is made from a different material, emblematic of a particular area of the building. The hanging grid provides a kind of map of the structure, evident at

Figure ⊠⊠⊠ *The S⊠m⊠ols,* designer, Peter Szmuk, Supreme Court of Israel, ⊠⊠⊠⊠.

least upon reading the webpage, if not leaping to one's awareness at first glance. The wood diamond at the top corner, for example, denotes the justices' chambers on the top floor, while the middle symbol of oxidized copper (fig. ⌧⌧⌧) represents the pyramid that greets visitors. A piece of Jerusalem stone has a three-tiered pattern carved to evoke the courtrooms' opening arches, which in turn were designed to remind viewers of the city's gates.

Just as the names of all those who built the Boston Courthouse, from construction workers to architects, are inscribed on that building, the Szmuk design also denotes a range of actors. One symbol is for the maintenance department of the building, another for the cafeteria and courtyard on the lower level. But unlike in most court displays, the court's role as a temporary jail makes its way into this subtle iconographic display. A symbol made of iron represents the ⌧detention area for prisoners who come to the Supreme Court to hear their appeals.⌧⌧⌧ In addition, *The S⌧m⌧ols* offered a subtle historical reference; the artist cited as inspiration an eighteenth-century engraving of the First Temple from biblical times, described as a ⌧symmetrical structure divided into equal ⌧courts.'⌧⌧⌧ On the wall to the left of the grid is inscribed a verse from *Leviticus*: ⌧Just balance, just weights, just ephah and a just hin shall you have⌧ (ephah and hin were ancient measures).⌧⌧

The court also houses a small museum, near the entry to the first floor. This Jewish Heritage Museum provides a series of display cases filled with various objects from the court's history and its prior building to illustrate ⌧how the judicial system constitutes one of the cornerstones of society at any time or place.⌧⌧⌧ Included are legal documents from the Ottoman period (⌧⌧⌧⌧–⌧⌧⌧⌧) and from the British Mandate (⌧⌧⌧⌧–⌧⌧⌧⌧), as well as post-⌧⌧⌧⌧ photographs of Israeli courts, including ⌧new custom-built court houses⌧ numbering ⌧⌧ in all.⌧⌧⌧ In addition, materials are provided on major Supreme Court decisions; an area with interactive computer materials offers educational programs for school children.

Figure ⌧⌧⌧ *The S⌧m⌧ols* (detail).

Inside each courtroom, the flag of the country (blue and white with a six-sided ⌧Star of David⌧) stands on each side of the judge's bench (fig. ⌧⌧⌧). Israel's official symbol, a seven-branched menorah⌧ historically linked to the reconsecration of the Second Temple during the Roman era⌧ hangs behind the bench. A white plaque provides the backdrop for the golden-hued menorah, flanked on either side by olive branches; the menorah also provides the logo for the court's stationery.⌧⌧ The Israeli Supreme Court's art is thus like that of other countries, a minor footnote, but in this instance, deliberately so.

Reiterating Familiar Motifs

In an effort to make the building a new national symbol, the court disseminates information and welcomes tourists with video descriptions in several languages; estimates were that as of ⌧⌧⌧⌧ more than half a million visitors had seen how ⌧justice, democracy, and openness⌧ are represented throughout the building.⌧⌧ (A tour of the court is typically part of the program for Israeli Army soldiers.) The structure has come to be well known at the national level, in part because of the court's thick docket of deeply controversial issues.⌧⌧ Under the leadership of Aharon Barak, who was appointed to the court in ⌧⌧⌧⌧ and who became President after Shamgar, and served from ⌧⌧⌧⌧ to ⌧⌧⌧⌧, the Israeli Supreme Court's jurisprudence developed a transnational reputation as it issued judgments about security, detention, torture, religious rights and obligations, and equality.⌧⌧ Hence the court has rendered its own building familiar⌧ ⌧at least to all Israeli television viewers⌧⌧ for it provides a backdrop for news reports⌧⌧ either about petitioners filing against the government or about the many complaints leveled at the court's decisions.⌧⌧

Architectural critics who have focused on the court generally bathe the structure in praise. Reviewers lauded it for achieving a ⌧sense of political order and cultural permanence.⌧⌧⌧ *New ⌧ork Times* architecture critic Paul Goldberger concluded that the building set ⌧a standard of its own ⌧by achieving⌧ a remarkable and exhilarating balance between the concerns of daily life and the symbolism of the ages.⌧⌧⌧ Goldberger thought the courtrooms offered a ⌧sense both of crispness and of calmness⌧⌧⌧ as part of an overall structure produced by ⌧a series of wise and knowing gestures pulled off with consummate sensitivity and intelligence.⌧⌧⌧ Barbara Perry admired the ⌧architects' commitments to public comfort and dignity⌧ demonstrated by the provision of more comfortable resting places than those in the Supreme Court of the United States.⌧⌧ And while critical of some workmanship (the use of ⌧cheap-looking spat-

ter paint to hide imperfections), Ziva Frieman extolled the "symphony of spaces" and the "transcendent light" that provides a "renewal of hope."

A few dissents have been registered, including that the "overall style is visually inconsistent and sometimes irritating" with "odd" elements and at times a "mismatched" daintiness of detailing." A critical analysis of the "discourses" about the building argues that it is not visually self-narrating but instead needs to rely on many explanatory texts for a viewer to see its architectural referents." But Goldberger's appraisal "rich both in pure abstract form and in historical allusion" captures much of the applause.

While culturally specific in some respects, the Israeli building also resembles other contemporary courthouses. Some of the references are intentional. For example, the architects cited the idea that in their corridors "footsteps still fade away and vanish, as in the large foyer (salle des pas perdus) of Paris' supreme court building." Other features come from shared symbols and ideologies. As in the Boston Courthouse, the arch is a central architectural element used to mark the entries to the courtrooms. The courtroom interiors, like those in many countries, create a "tangible distance" between ordinary persons (including lawyers) and the judiciary." The judges are given center stage, elevated as "intended by the architects to promote deference toward the jurists." The professional space of lawyers and judges is, in turn, visually delineated from the public space. The rounded benches for lawyers denote an appreciation, shared by many jurisdictions, of a less aggressively adversarial exchange. Further, just as French designers sought to enclose courtrooms, so did the Israeli architects." The courtrooms" relatively dimly lit" were to feel both protected and protective, as if "tucked away, deep in the rocky terrain."

The courthouse layout offers a subtle variation on the familiar separate routes. Its segregated circulation patterns are accomplished through "vertical layering of the building which defined the public, the judges' and the prisoners' levels." Moreover, in contrast to security arrangements in the United States, France, and the international architecture market, the focus on security in the Israeli Supreme Court is notably quieter. Either despite or because of living with a history of acute conflicts and terrorist violence within the city, the structure of the building is secure without advertising itself as such. The court's echoes of the walls and alleys of Jerusalem enable its winding paths and corridors to appear evocative rather than controlling.

Yet the purposes for construction are deeply familiar. The point of a monumental courthouse is to claim the legitimacy of violence undertaken through legal judgments of states. In the seventeenth century, the Amsterdam Town Hall reflected that city's claim to be "the new Jerusalem"; the burgomasters offered displays of Artus Quellinus's "*in*" *Solomon*" *Justice* (fig. /) and of Ferdinand Bols's *Moses Descends from Mount Sinai* (fig. /) alongside classical and Christian imagery. Questing for legitimacy, the Doges of Venice likewise linked themselves with ancient Israel. Modern states" the United States, France, and Israel" similarly ground their powers in history, law, and tradition. Israel's courthouse has drawn criticism for the effort to be hegemonic. But that building's "ideological agenda" aiming to serve as "an . . . instrument for 'taming' time and space" is shared by every polity deploying courthouses to buttress the assertion of authority that imposes violence in the name of law.

To the extent that the Israeli Supreme Court "reproduces the antimonies that frame Israeli space and transform it into "our place,'" it has deliberately done so even as it engages, through its judgments, with heterogeneity and conflicts about borders and powers. The critique of Israel's court for its insistent "nationalism" has been leveled at the concept of nationality more generally. Commitments to equality and to global human rights and needs are genuine challenges to the reliance on borders and on historical narratives of nationhood to justify the exercise of authority over persons. Were Israel part of a multi-national or multicultural state or federation, it might well have structured its courthouse differently so as to represent another kind of polity. (Whether court buildings can capture layers of sovereignty is a question explored in Chapters , , and .)

New and Recycled from Melbourne to Helsinki

Around the world, new and renovated courts aim to combine significant architecture, national symbolism, and functional space. For example, between and , England had the "most ambitious court-building programme ever attempted" supported by more than million pounds (or more than million)." In addition, in the fall of , a newly constituted Supreme Court for the United Kingdom came into being." The former Law Lords became the first Justices of the twelve-person court. Leaving the Parliament, they moved across the street to take up residence in what had been Middlesex Guildhall. The carefully designed renovation is detailed in a volume similar to those documenting the building of Israel's Supreme Court and other courthouses."

Here, however, we highlight only two more buildings, thousands of miles apart, to capture both the breadth of activity and the overlap. These courts, in Australia and in Finland, also make plain a challenge faced by court designers in many countries: the difficulty of making a structure that announces itself to be a courthouse.

"Australian in concept and materials": Melbourne's Commonwealth Law Courts

In the s, the Chief Justice of the Australian Federal Court, Michael Black, explained the goals for the new court-

house in Melbourne.[illegible] He spoke of the need to depart from the colonial traditions of the country, exemplified by the nineteenth-century building (fig. [illegible]) that houses the Supreme Court of Victoria but could be at home on the streets of London as well as in Melbourne. That building was inspired by Dublin's Four Courts,[illegible] and its interior courtroom (fig. [illegible]), detailed lovingly in wood, could readily serve as a film setting for a courtroom drama.

Toward the end of the twentieth century, however, the judiciary sought a [illegible]distinctive Australian element[illegible] for its new courthouse.[illegible] Rejecting a plan for a [illegible]second-rate[illegible] conversion of an office building,[illegible] judges, lawyers, and architects met to shape a new structure that would mark both the [illegible]importance of the law[illegible] and [illegible]the accessibility of the law.[illegible] As the Chief Justice explained, the goals were to be [illegible]dignified but . . . not to be intimidating, and certainly not pretentious.[illegible] As in many jurisdictions, light was to [illegible]play a central conceptual role[illegible] to reveal both the architecture and the visibility and accessibility of justice; as Chief Justice Black put it: [illegible]Light is symbolic of truth.[illegible] By centering the building in the city, the relatedness between law and the world would also be plain. The goal was a structure, energy-efficient and respectful of a limited budget, that provided a [illegible]sense of permanence[illegible] demonstrated through a building that [illegible]was to be Australian in concept and materials.[illegible]

In the late [illegible]s, cooperative planning produced a new building complex, the Commonwealth Law Courts (fig. [illegible]), to house Melbourne's Family and High Courts as well as the Federal Court. The architects, Tim Shannon and Paul Katsieris of HASSELL (a firm committed to [illegible]Modernism in the context of changing societal values[illegible]) saw the commission as [illegible]the opportunity to explore the notion of what a public building should look like at the outset of the [illegible]st Century.[illegible] They produced a brightly colored building. Its [illegible]copper, sea green, and grey[illegible] were said to have been inspired by Giotto, and its entry area aimed to evoke [illegible]Mondrian's palette.[illegible] A lively facade included balconies projected [illegible]in a random fashion[illegible] from several floors.[illegible]

[illegible]Australia's most important legal building outside the national capital[illegible] is the description proffered by a book about HASSELL that also admired the [illegible]witty and intelligent complexity behind a syncopated fa[illegible]ade.[illegible] The imposing size (occupying a city block measuring [illegible] by [illegible] meters or [illegible] by [illegible] feet) resembles a large apartment building but provides space for forty-three courtrooms and hearing rooms. The patio open to the street features stone columns

inscribed to proclaim the building's purpose as a court. The stones also display Australia's distinctive Coat of Arms, a shield with six segments representing the six states, a seven-pointed star (including a reference to the Territories), and standard bearers in this case an emu on the right and a kangaroo on the left.

One enters the courthouse through a transparent box beneath a solid steel clad portal to be greeted by a chapter of the Constitution engraved on the wall (casting its shadow like a light veil over the judiciary and public alike). As in the federal courthouse (fig.) built in in St. Louis, Missouri, the central atrium (fig.) of Melbourne's Commonwealth Law Court relies on several stories (six in this case) to make its statement of authority. The lower floors house courtrooms, the higher floors judges' chambers. The judicial hierarchies are marked: Most senior judges are afforded a symbol of their status with an individual balcony. As in courts in France that are set up in modular fashion, Melbourne's has two building blocks, one for the courtrooms and the other for offices and public areas.

The book featuring the Melbourne architects' work lauds the building for capturing the character and dignity of the law and for projecting optimism about the future. Chief Justice Black pronounced the space a great new federal courthouse. On the other hand, the architectural critic Hamash Lyon questioned the institutional symbolism produced through the anonymous outcome of market economics; the major infrastructure in Victoria is now built, owned and operated through private sector financing, with

the government as nothing more than an end user.⊠⊠⊠ Indeed, Lyon noted the resemblance between other law building and corporate towers.

From a Liquor Factory to a District Court in Helsinki

If Melbourne's building looks something like an apartment house, the resemblance of the Helsinki District Court (fig.)353251 to a factory is not happenstance. While the judiciary in Melbourne rejected the idea of converting an old building for the Commonwealth Law Courts, Helsinki's leadership recycled a0491 factory owned by ⊠the Finnish alcohol monopoly, Alko⊠ and designed by architect V⊠in⊠ V⊠h⊠kallio.⊠⊠⊠ That ⊠Modern Movement behemoth⊠ looked like the power station nearby, and during its0-05" dd years of spirited life, the Alko plant probably generated enough booze to fill Finland's000,881 lakes.⊠⊠⊠ The switch from alcohol plant to courthouse cost about06$ million.⊠⊠⊠

The new judiciary facilities occupy a seafront brick landmark⊠ a ⊠building that was once the biggest in Finland.⊠⊠⊠ Opened in its new capacity in,4002 the structure was renovated by a Finnish architect, Tuomo Siitonen, who treated the building's pedigree with respect. For example, ⊠cut surfaces were left unpainted⊠ to reveal the ⊠building's historical levels.⊠⊠⊠ Provided are easy working areas for some eighty professional judges, often joined by lay judges and supported by more than two hundred personnel.⊠⊠ Space is also available for artworks from the Museum of Contemporary Art Kiasma,⊠⊠ and some of the building is rented for commercial uses.⊠⊠

The new court was part of a more general program of legal reforms in the s0991 that unified various lower courts and created geographically organized district courts.⊠⊠ The Helsinki facility serves a busy trial court with a docket that bridges civil and criminal matters and ranges from family to maritime conflicts. The district court receives some000,06 cases annually and disposes of about a fifth of the filings in the country.⊠⊠ As one can see from the stairway corridors (fig. ⊠⊠⊠), the Helsinki District Court shares with Melbourne's Law Courts an embrace of glass; the material dominates the interiors of both.⊠⊠ The openness creates a lively space, as people on one floor can see the coming and goings of others. Architectural critic Jonathan Glancey pronounced the result to be a ⊠transparent, truly public feel, . . . uncluttered . . . ⊠without⊠ even a hint of the kind of wilfully banal, bureaucratic d⊠cor.⊠⊠⊠ As illustrated by the new courts in Melbourne and Helsinki, glass walls can be found in many new buildings, offering (as analyzed in Chapter ⊠⊠) opportunities for surveillance as well as for transparency.

In times past, court days were sometimes held in inns. One of the trial courts in Sydney uses a converted department store whose facade still advertises ⊠corsets⊠ and ⊠gloves⊠ Still, the Helsinki court's liquor factory heritage is unusual. Yet the siting of the building and its courtroom layout are familiar in many respects. The renovation, like the projects in Nantes and in Boston, aimed to turn an industrial area of the city into an ⊠extension of the existing city centre.⊠⊠⊠

Further, as the courtroom view (fig. ⊠⊠⊠) suggests, the rooms inside conform to arrangements found elsewhere. Judges sit at the front on a bench long enough to accommodate lay members joining professional judges. As in other courtrooms, their bench is elevated, but here only modestly so. The courtrooms are graced by columns, albeit reinterpreted in asymmetrical shapes (⊠a magnificent forest of concrete columns with mushroom-like capitals⊠⊠⊠) seeming to lift ceilings that needed additional support to provide light through canti-levered edges of the light well. The furnishings, by Studio Yrjo Wiherheimo, however, depart from conventions elsewhere. The chairs and tables are movable rather than fixed and hence reconfigurable⊠ thereby making good on the promise of flexibility touted by many countries but rarely realized.

This survey of courts in various countries raises questions about a claim well put by American architect Robert Stern: ⊠A courthouse should look like a courthouse. . . . It's not a drive-in bank.⊠⊠⊠ While the translation in Stern's context proved to be ⊠Neoclassical ⊠⊠th and ⊠⊠th century buildings,⊠⊠⊠ his statement encapsulates a widely shared view. Around the world, the professionals we identified at this chapter's outset⊠ judges, lawyers, architects, and court administrators⊠ aim to design structures that are distinctive and legible spaces dedicated to particular ideals that they understand courts of law to entail. From the United States through France, Israel, Australia, and Finland, the results are often buildings that are striking⊠ but not in ways that render them self-identifying.

⊠Justice Facilities⊠: Jails, Prisons, and Courts

This book is not the occasion to trace the creation and growth of prisons over the millennia from Egypt and Greece through Medieval Europe to the present day.⊠⊠ But one cannot account for courts without commenting on the interdependencies between courthouse building booms and prison expansion. Both kinds of purpose-built structures emerged from a common core of the multi-function civic building, and their spin-offs reflect changing ideas about the functions of each.

The purposes of punishment and the expansion of the practice of incarceration have been well theorized, with writers exploring the ideas and political economies of deterrence, education, rehabilitation, retribution, and incapacitation.⊠⊠ Further, historians have mapped the shift in modes of punishment from public shaming to private incarceration, often in large, isolating, and isolated prisons, some of which are run by private entities. One of the purposes of this book, in turn, is to redress the relative lack of a similar overview of the shifts in the size, scale, ideologies, and functions of courts. In addition, in Chapter ⊠⊠, we will draw analogies between the privatization of punishment over the last four centuries and contemporary trends privatizating adjudication. Given the parallels between and interdependencies of courts and prisons, a brief comment is in order on the development of buildings that are so unselfconsciously⊠ today⊠ called prisons.

Before the nineteenth century, long-term incarceration was less common than it became thereafter. Historians of Medieval England describe ⊠some kind of prison⊠ as a ⊠natural part of the equipment of every town⊠ with such facilities often ⊠tucked away in the cellar or attic of every fifteenth century guildhall.⊠⊠⊠ But risks to health and noxious smells, as well as aspirations that town halls not be too closely associated with such detention (with its literal and metaphysical contamination), prompted a turn to discrete structures for incarceration.⊠⊠

From the Renaissance through the mid-nineteenth century, jails were generally built as ⊠short-term accommodations⊠ to house a variety of marginal people, including both criminal defendants and debtors.⊠⊠ Even those staying in ⊠correctional facilities⊠ for longer terms and seen as requiring discipline were not necessarily conceived to be ⊠criminals.⊠⊠⊠ Variations existed by jurisdictions, however, and England relied more on incarceration than did some of its European counterparts. In the sixteenth century the English Parliament required houses of corrections for every shire, and many were too large to be proximate to town halls.⊠⊠ Facilities that served as jails or prisons were (like those used for courts) sometimes extant buildings leased and recycled for the purpose of detention.⊠⊠ Indeed, crossing the Atlantic, just as United States federal judges once decamped in state facilities, so federal prisoners were once housed in state prisons. Not until ⊠⊠⊠ did the United States Congress fund the construction of federal penitentiaries, starting with one at Leavenworth, Kansas.⊠⊠

Form follows not only function but also funds, and economic prosperity created opportunities to do more. When communities could afford to finance the building of multiple-cell prisons and pay for prison keepers and guards, wooden structures gave way (literally in some cases) to brick, stone, and metal.⊠⊠ Design came to the fore as eighteenth- and nineteenth-century English reformers⊠ including Jonas Hanway, John Howard, and Jeremy Bentham ⊠ advocated that convicted criminal defendants needed solitude and hard work to enable redemption. Their work intersected with new ambitions for the state, dealing with growing classes of laborers and urbanization. An amalgam of concerns contributed to proposals for new buildings to provide private confinement in cells.

During the nineteenth century, the term ⊠penitentiary⊠ came into use,⊠⊠ with variations in terms of the kind of long-term confinement imposed. In the United States, two dominant models went under the names of the Pennsylvania and the Auburn systems. The buildings fit the theories, for these institutions relied either on complete isolation, work, and enforced silence (Pennsylvania) or included a modicum of collective activity (Auburn).⊠⊠ The word ⊠correction⊠ was deployed to capture goals of confinement that included preparing inmates for useful work upon their release.⊠⊠ In France, Claude Nicolas Ledoux is credited with the ⊠original idea⊠ of building a prison ⊠totally independent of the courthouse.⊠⊠⊠ Construction, begun in the late eighteenth century, produced a prison that opened in ⊠⊠⊠⊠. The prison, in use for almost ⊠⊠⊠ years, provided the setting for Émile Zola's *Les M⊠st⊠res de Marseille*.⊠⊠ As detailed earlier, one of its walls has been recycled to serve as a part of a new courthouse in Aix-en-Provence.

In England, Jeremy Bentham proposed the ⊠Panopticon⊠ (a circular structure with a control module in the middle), designed so that inmates could be observed, night and day,

from the center. Those subject to observation would never know whether or when they were seen, and the uncertainty about when surveillance would take place was thought to be a useful prompt to developing self-discipline. (In Chapter [illegible], we return to Bentham, who also advocated that legislators and judges be in full view and that such [illegible]publicity[illegible] would serve to discipline them as well.) Bentham's Panopticon was never built. Some nineteenth-century facilities reflected the idea through designs with tiers of open cells emanating from a control center like spokes of a wheel,[illegible] and late twentieth-century prisons[illegible] relying on new technologies[illegible] have gone much further in putting the principle of continual observation into practice.

The development of styles of architecture to meet various punitive rationales and the growing demands for beds criss-crossed national boundaries. For example, English prisons not only influenced the building of those in the United States but the Eastern Penitentiary in Philadelphia, designed by John Haviland, provided a model for an English prison, Pentonville, an (in)famous facility designed by Joshua Jebb.[illegible] These large institutions (housing hundreds of prisoners) relied on various configurations, such as central spines and radials. Over the decades, whatever the design that had been conceived, reconfiguration was commonplace as new wings were built, sometimes in response to demands for classifications that separated prisoners by sex or age and other times simply to add more room for a growing number of detainees.[illegible] During the twentieth century, as [illegible]new generation designs[illegible] emerged, some jurisdictions replaced the large warehouses with configurations offering prisoners smaller cell blocks, access to outdoor space, and more communal places.[illegible] In some countries, rehabilitative goals reshaped prisons to move them closer to hospitals, farms, residential centers, and the like. Further, [illegible]half-way houses[illegible] offered lesser forms of confinement, moderated through daytime activities (work included) in the community. But one can still regularly find a [illegible]- or [illegible]-place monster . . . that occupies a huge site and is surrounded by a super-secure perimeter wall or walls.[illegible]

Overcrowding has become a problem of critical proportions, causing a cascade of issues from violence and disease to lack of programs and fresh air. In the twenty-first century, the prison construction business is [illegible]booming,[illegible] fueled by the incarceration of record numbers of individuals and the funding of facilities, some of which are part of [illegible]law enforcement centers[illegible] sprawling over a larger area, often removed from town centers, to house detention as well as other government functions. The United States offers a disturbing example, even as it is distinctively punitive rather than typical.[illegible] Between the [illegible]s and the [illegible]s, prison populations had stayed relatively stable and then soared thereafter. In [illegible] some half million prisoners were incarcerated in the United States.[illegible] By [illegible], the population of prisoners had risen to [illegible].[illegible] million,[illegible] and by [illegible], the country housed more than [illegible] million prisoners.[illegible] As of [illegible], the country devoted more than [illegible] billion per year to the jails and prisons of the states and the federal government,[illegible] with estimates that each prisoner cost on average [illegible] per day or about [illegible],[illegible] per year.[illegible] California spent about a tenth of its operating budget on prisons, which consumed more of its resources than did higher education.[illegible]

Most detainees were state prisoners, yet even the (relatively) small federal prison system had, according to its chief of design and construction, experienced a fourfold increase in population. In the years between [illegible] and [illegible], the population went from [illegible],[illegible] to [illegible],[illegible].[illegible] By then, the federal system had completed thirty-eight new institutions that represented [illegible]a planned capacity of over [illegible],[illegible] bed spaces at a cost of over [illegible] billion,[illegible] with a similar additional expansion in sight.[illegible] In addition to federal prisoners, another set of detainees[illegible] immigrants[illegible] were either housed in specially dedicated detention facilities or outsourced to state and private providers. In [illegible], daily population counts averaged about [illegible],[illegible], children included, and over the course of a year, some [illegible],[illegible] persons had been through detention facilities for immigrants.[illegible]

As is the case for court construction, multiple circulation routes are expensive. The most expensive prisons focused on isolation, and twentieth-century prisons far outstripped the aspirations of nineteenth-century penitentiaries in imposing extreme isolation. Moreover, these new versions no longer confine inmates with the hope of reforming them. Incapacitation and retribution, rather than rehabilitation, are more often invoked as the goals. Punitive control is the point of [illegible]supermax[illegible] prisons, whose layers of restrictive environments employ technologies that permit unremittent surveillance from central locations.[illegible] As of [illegible], more than [illegible],[illegible] people were housed in the United States in supermax facilities. The description provided by the United States Supreme Court of one[illegible] the Ohio Supermax [illegible] captured the dimensions, [illegible]more restrictive than any other form of incarceration[illegible] in the state.[illegible] Inmates must remain in their cells, which measure [illegible] by [illegible] feet, for [illegible] hours per day[illegible] with a light on continually. Further, the cells [illegible]have solid metal doors with metal strips along their sides and bottoms which prevent conversation or communication with other inmates. . . . It is fair to say [illegible]supermax[illegible] inmates are deprived of almost any environmental or sensory stimuli and of almost all human contact.[illegible]

Cost containment (in addition to personal containment) remains a concern. For some, deincarceration is an answer, while others focus on what are called [illegible]private prisons.[illegible] The idea is not novel: one might imagine privatization as a return to the smaller scale of pre-nineteenth-century local jails, when private jailers made their living supplying detention facilities on an as-needed basis and convict labor was sometimes leased to private enterprises.[illegible] The more recent

version, however, takes form through businesses such as the Corrections Corporation of America or the Wackenhut Corrections Corporation, itself a part of a transnational ⊠security⊠ company.⊠⊠ The owners and staff of such facilities are private contractors, while the prisoners, detained at the behest of the state, are supported by the public fisc. Whether turning to the private sector is useful depends on one's metric. The arguments for privatization of prisons rely on comparative efficiencies. The debate is about whether dollar reductions in costs per prisoner derive from better operations or from compromises on safety and the quality of conditions. Critics also argue that delegation to the private sector undermines the legitimacy of state sanctions.⊠⊠

Although the United States has outstripped most countries in incarceration rates, it is not unique in expanding its capacity to house prisoners. New construction of prisons is, like that of courts, transnational.⊠⊠ At this chapter's outset, we focused on courts in France. The specialized entity (AMOTMJ) charged with construction also had prisons in its bailiwick. In ⊠⊠⊠ France had planned to create six new institutions with ⊠⊠ prison beds apiece and, by ⊠⊠⊠, it had provided ⊠⊠,⊠⊠ new spaces for inmates.⊠⊠ A ⊠⊠⊠ law called for the construction of twenty-seven new prisons.⊠⊠ Increased penalties for various offenses and overcrowded facilities drive calls (and sometimes judicial mandates) for yet more buildings⊠⊠ as, around the world, countries presume that the number of detainees will expand rather than contract.

How those buildings will be designed reflects ideas about the functions of punishment and the forms of suffering appropriate to inflict on human beings. Analyses of the various approaches historically have looked at the political economy of institutions of punishment. One critic modeled early prisons to have functioned as ⊠pseudohouseholds⊠ and later ones as ⊠capitalist manufactories.⊠⊠⊠ By the late twentieth century, the massive economic commitment to prisons yielded descriptions of the ⊠prison-industrial complex⊠ with communities relying on nearby correctional facilities as major sources of employment, with manufacturers seeking markets for their wares, and with private providers selling the ability to house inmates at prices that permit them to make a profit.

Variations exist across jurisdictions, in that some countries still rely on a template closer to the household while others use much larger institutions. All of these projects for prisons are gathered under the rubric of the architecture of ⊠justice facilities⊠ and serviced by groups of professionals with expertise and experience in building such institutions. But funds are not distributed evenly across the set of ⊠justice facilities⊠ making for intriguing thought experiments that imagine an investment in courts and in rehabilatative support equal to the funds spent on prisons.

Judging Across Borders

By considering courts within municipal or national regimes, we have thus far worked under a rubric that lawyers call "comparative law," focused on legal regimes in different countries and attending to inter-country variations and convergences in court structures and processes.[illegible] Subsumed within are discussions of federated nations such as the United States. Federations accord a degree of autonomy to subparts (such as provinces, states, cantons, or lands) rather than concentrating all legal authority in the center. Federated systems often, but not invariably, have separate courts for their subparts.[illegible] For example, the Supreme Court of Victoria (fig. [illegible]/[illegible]) in Australia and the courts of New York (fig. [illegible]/[illegible]) function as distinct legal entities, subject to some oversight but not complete control by the national system.

This chapter explores the role played by courts in other political configurations and thereby engages directly in questions that can be conceptualized as either layered sovereignty or the transformation of sovereignty's meaning. Our examples are drawn from regional courts in Europe and the Americas. In Chapter [illegible] we turn to various international courts, ranging from the generalist (and relatively old) International Court of Justice to specialty courts formed in the [illegible]s, such as the International Tribunal for the Law of the Sea and the International Criminal Court. Just as national courts have a long history, transnational adjudication also has deep roots, and both had parallel growth spurts during the twentieth century.

Tracing the origins of border-spanning courts depends on definitions. One could style the Roman ecclesiastical law in Medieval and Renaissance Europe or the common law of the British Empire within the genre, just as one can identify courts based on Jewish and Muslim traditions as parts of transnational legal regimes. Commercial tribunals created through guilds offer other parallels.[illegible] Systems of ad hoc rules assigning foreigners to the discrete legal authority of "consular courts" could be included, such as a [illegible] example from the Middle East that if "a Sarrazin (Egyptian) or a Christian of a foreign state, has a litigation with a Genoise, the consul shall decide the case."[illegible]

"Mixed Courts," the Slave Trade, and Special Venues for Foreigners

Our focus is on government-created courts that cross borders. Nineteenth-century antecedents to twentieth-century multi-national courts often bore the name "mixed courts" (or "mixed commissions"),[illegible] in reference to the fact that the presiding jurists came from different countries to constitute freestanding tribunals created through inter-sovereign agreements. For example, the Jay Treaty between Britain and the United States authorized an arbitral commission to deal with claims arising out of the American Revolution.[illegible]

The clearest precedents for contemporary transnational human rights courts are nineteenth-century anti-slavery courts "that dealt with the legality of the peacetime seizures of ships trafficking in slaves."[illegible] Great Britain entered into a series of multilateral and bilateral treaties authorizing such seizures and providing methods of inquiry into the legality of those captured under international law. Different treaties specified legal predicates of where ships could be seized, and the proof requisite for release, as well as created mixed courts to decide disputes. The term "mixed" referred to provisions for contracting nation-states to contribute judges, for example, through calling for service by "an equal number of Individuals of the [illegible] nations, named for this purpose by their respective Sovereigns."[illegible]

Such courts, sited in various locales (such as Sierra Leone, Havana, Brazil, and Suriname), took evidence to determine the lawfulness of searches and seizures and the nature of the persons or objects transported and applied legal precepts either to condemn or to release ships and their cargo.[illegible] As legal scholar Jenny Martinez has detailed, between [illegible] and [illegible] such courts dealt with "more than [illegible] cases and freed almost [illegible],[illegible] slaves found aboard."[illegible]

These courts, like their contemporary counterparts, had a deeply normative agenda— to treat as unlawful inhuman practices that had not before been subjected to international legal sanctions. As is the case today, these courts were dependent on participation by nation-states, and some countries were more reluctant than others to sign accords.— Then, as now, questions of participation relied on the language of sovereignty. The issue was whether joining undermined national control.— Further, some such courts were, and are, specialized tribunals focused on a particular kind of problem or arena of activity, while others have had a broader reach. The heirs of the Slave Trade Tribunals include the European Court of Human Rights and the Inter-American Court of Human Rights, discussed in this chapter, as well as the International Tribunal for the Law of the Sea, addressed in Chapter —.

Other transnational courts have a more general jurisdiction, as diplomatic agreements of the nineteenth century generated tribunals prompted by another —mix— that of colonialism and trade.— One such institution, the —Mixed Courts of Egypt— began in —— and disbanded in ——.— Chartered by an agreement of fourteen countries (including France, Germany, Greece, Russia, Spain, and the United States),— its judges were nominated by the —foreign powers— and named and commissioned by the Egyptian Government.— The Mixed Courts of Egypt operated (as international courts continue to do) through —chambers— of judges working at trial and appellate levels. The court had four official languages— French, English, Italian, and Arabic— and worked in French.—

In terms of reach, the jurisdictional predicates of the Mixed Courts of Egypt paralleled what is known as —diversity jurisdiction— dependent on the citizenship status of the parties— in the United States.— The Mixed Courts had authority over controversies between —Egyptians and foreigners and between foreigners of different nationalities.— As for its law, jurists applied their own law, influenced by a range of sources,— again presaging contemporary international courts. And while that court is no longer extant, parallels in the twenty-first century can be found in bilateral investment treaties (—BITs—) carving out legal enclaves in an effort to attract foreign capital,— as well as in private contractual agreements that designate laws or jurisdictions to govern disputes arising elsewhere.— A global version is the Dispute Settlement Understanding of the World Trade Organization (WTO), in which parties agree to a range of dispute resolution mechanisms, including binding judgments, through the WTO panel and an appellate body that has functioned, as of ——, to produce thousands of pages of decisions.—

Just as municipal and national courts borrowed quarters in their early days, some mixed courts did so as well. Yet the Mixed Courts of Egypt had its own impressive building befitting its status as —the most cosmopolitan legal forum in the world.— Above the —columned portals— of the —— edifice (fig. —), the words —Palace of Justice— were inscribed in French, Arabic, English, and Italian.— Many of today's —mixed courts— follow that path, occupying purpose-built structures to express their aspirations, embellished by ornamentation reflecting the multiple nationalities they serve.

These late twentieth-century buildings— analyzed in Chapter — follow a pattern made familiar in Chapters —, —, and — as we charted the expansion of courts in the United States. Construction tracks political hopes or political confidence intersecting with economic capacity. The buildings provide an interface between the nation-states and transnational entities and reveal, even as they seek to mask, the complex relationships entailed.— For example, the European Court of Justice, established in the early ——s, camped out for some twenty years before moving in —— to its own building, modeled in the tradition of Greek temples. That once modest housing hinted at Member States' reluctance to cede space for monumental structures that could compete with national edifices. About twenty-five years later, in ——, that court's site took on sweeping proportions. Its gold-sheathed buildings both reflected and shored up a growing sense of the —European— as a legal-political identity (a *demos*) formed as a union not only of states but also of individuals, each of whom was —a citizen of the Union— under the —— Maastricht Treaty if —holding the nationality of a Member State.—

Court buildings make plain the resources devoted to transnational institutions; the designer buildings made for the European Court of Justice and the European Court of Human Rights in Strasbourg reflect the economic wherewithal of Europe. The modest headquarters for the Inter-American Court of Human Rights in Costa Rica (renovated in —— without high-end architectural design) serves as a reminder that when the Organization of American States established the court in —— but gave it no budget, Costa Rica generously provided a recycled home. The small site for the Inter-American Court denotes its fragile status, even as it produces innovative law across countries allied through a regional organization but lacks shared legal —pillars— akin to those of the European Union (EU). The buildings thus tell stories of political regimes either ambivalent about transnational legal commitments or eager to display their hopes for participation and adherence.

The insistence on establishing permanent buildings for both the regional courts discussed here and the international tribunals of the next chapter represents efforts to anchor the norms that the authorizing conventions and treaties seek to promote and enforce. Big footprints express the hope of enduring over time. This brief survey of the transnational project of court-building teaches that large, imposing facilities aim to buffer against the historically transient nature of multi-national institutions, courts included.

Nation-States Allied through Courts

Luxembourg and the European Court of Justice

Europe has its own Court of Justice, colloquially referred to as the ECJ (the European Court of Justice). The ECJ is authorized to interpret treaties, conventions, and other measures of the European Union at the behest of national courts and to hear certain disputes between Member States and against Member States and the European Commission. Begun in the early [illegible]s by the founding six members (Belgium, France, Germany, Italy, the Grand Duchy of Luxembourg, and the Netherlands) of the European Coal and Steel Community (ECSC), the court's initial charter was to adjudicate disputes arising within that association. Since then, the ECJ has grown in jurisdictional authority with the expansion and transition of the ECSC into the European Community (EC) and then the EU.

Over the decades, the ECJ also elaborated its own substructure as statutory enactments allowed it to devolve some of its work to lower tier tribunals. Its law has had an ever-widening impact, prompting a great deal of debate about the appropriate role of the ECJ as a source of authority in Europe. Akin to discussion about the authority of the federal courts in the United States, arguments about the reach of the ECJ's judgments decry or celebrate judicialization, the desirability of judicial review of legislative acts, and the import of constitutionalism.

Celebration was the response of the leaders of the European Commission which, in [illegible], published a book about the architecture and the art of the ECJ in honor of its fiftieth anniversary. As that volume chronicles, at its inception in the [illegible]s the ECJ sat in a villa that had belonged to the diocese of Luxembourg. At the time, the choice of that city, with its population of about [illegible], appeared both

safe and potentially temporary; it was assumed that Luxembourg would never be recognized as a "real" capital of Europe. By ____, however, the ECJ had put an end to its "somewhat nomadic life" when it occupied its own purpose-built permanent home there.

Luxembourg has since evolved into the "Judicial Capital of Europe," providing a site for other institutions, including the European Investment Bank. The ECJ's ____ building proved, however, temporary in another sense in that it was soon too small, given the growth of the EU and the expansion of the ECJ's mission and staff. The ECJ's facilities grew, even as they continued to reflect ambivalence about the potential that European identities could eclipse national sovereignties. The architecture and art of the first buildings of the ECJ were more focused on marking individual states' contributions, while the newer architecture aims to embody a collective persona.

"Enduring" and "Expanding" Authority: Le Palais Plus

In ____, as Denmark, Ireland, and the United Kingdom joined the six original members of the EC, the ECJ moved into its first major building, called Le Palais (fig. ___, color plate ___), located some distance from the City of Luxembourg on the Kirchberg Plateau, where it joined other EU buildings. The book documenting the court's architecture and art describes it as an "imposing skeleton of steel, copper, chromium, and nickel alloy . . . "that" stands as a symbol of enduring authority, serenity and harmony."

In ____ architects had been invited to participate in a design competition" a first "for a united Europe" ____ that was won by Jean-Paul Conzemius of Luxembourg in affiliation with François Jamagne and Michel Vander Elst of Belgium. They are credited with providing a "rare exception to the nondescript architecture" of the buildings of Europe that were in Luxembourg. The result was "an isolated horizontal building reminiscent of a Greek temple at the top of a slope." The symmetrical building" has a "dark bronze appearance" from the coat of rust that forms on the metal alloy to produce a maintenance-free veneer."

To understand why, within a decade, that building no longer sufficed, one needs to know something about the expansion of the EC and the structure and jurisdiction of the ECJ. In ____, when Le Palais opened, the EC had nine members. By ____ Greece, Portugal, and Spain had joined, and by ____ the membership had expanded to fifteen through the addition of Austria, Finland, and Sweden. In ____, several years after the fall of the Berlin Wall, Cyprus, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovenia, and Slovakia were added, for a total of twenty-five. Bulgaria and Romania joined in ____, bringing the complement to twenty-seven Member States.

The Member States were ambivalent about materializing European identity through "the creation of monumental buildings" that could comprise a permanent new center overshadowing their own national capitals." Yet another question was which country would be the site of such a European center. (Other federations have had the same problem, sometimes resolved through moving capitals or by picking a place to develop into a city so as to avoid choosing among competitive locations.) Rather than centralizing European institutions in one place, dispersion was Europe's solution, with the Commission of the European Economic Community in Brussels, the Court of Justice in Luxembourg, and the Human Rights Court in Strasbourg. That arrangement remained technically "provisional" until the ____ Treaty of Maastricht gave the three cities official status as capitals. Through this polycentric arrangement, no one country is symbolically dominant. And, in terms of construction, national and local levels retained substantial control over decisions.

Le Palais was one of several buildings on the Kirchberg Plateau that European organizations found too small for their needs. The number of judges and the size of the ECJ

Figure ___ Le Palais, Court of Justice of the European Communities, City of Luxembourg, Luxembourg, ____. Architects: Jean-Paul Conzemius, François Jamagne, and Michel Vander Elst.

docket grew substantially over the later part of the twentieth century. Because each Member State is entitled to have a jurist on the ECJ, the court needed more chambers. As of [illegible], twenty-seven judges served for six-year renewable terms and worked in groups (chambers) of three or five. When deciding cases involving Member States as parties, the court sits as a "Grand Chamber" of thirteen; in rare instances involving certain provisions of EC law, the entire cadre of judges participates. In addition, eight Advocates General, a specialized set of expert lawyers, serve as part of the court, providing published independent opinions that often include scholarly overviews of areas of law that the ECJ can adopt or not, and their decisions are published alongside the obligatorily unanimous judgments of the ECJ.

The procedure for obtaining the European Court of Justice's consideration is complex; many cases come to the ECJ through references from national courts that are required to apply EC law if relevant. Other cases are brought directly, challenging Community institutions' actions. Between [illegible] and [illegible], the ECJ received about five hundred or more new filings and rendered a similar number of decisions each year. Pressure for additional judicial capacity came from distress about case-processing time, slowed by the growing volume of filings invoking European law. In [illegible] a new body, the Court of First Instance, was established. Operational in [illegible], it took over certain kinds of cases, including actions by individuals against Community institutions, actions by Member States against the European Commission, and certain breach-of-contract and trade cases. As its name suggests, its judgments can be appealed to the ECJ, which also retained exclusive jurisdiction over references from national courts.

Each Member State also sends to the Court of First Instance a judge who serves renewable six-year terms. About [illegible] percent of the completed cases are heard by three-judge benches; on rare occasions, a single judge makes a decision, and equally unusual are the occasions when a Grand Chamber of thirteen jurists sits. The Court's docket grew from about [illegible] pending cases in [illegible] to more than [illegible],[illegible] in [illegible]. That volume, in turn, prompted the creation in [illegible] of yet another body, the Civil Service Tribunal that, as of [illegible], took over cases involving EC employees who, previously, had sought relief in the ECJ and then the Court of First Instance. From its inception through [illegible], the Civil Service Tribunal's docket averaged about [illegible] filings, and most of the cases are heard by three judges. Decisions of that tribunal can be appealed to the Court of First Instance, rendering that name no longer completely descriptive.

Litigants of each state can file papers in the official language(s) of their country. The working language for jurists is French, but the growth in the number of Member States has produced an intensified need for translators to make information accessible in more than twenty languages. Indeed, about [illegible] percent of the institution's workforce (over eight hundred people) is devoted to translation, and housing the staff for that function was a major impetus for new construction.

Dominique Perrault's Golden Morphological development

The EC's expansion and its evolution into the EU can be tracked through the ECJ's buildings. In [illegible], the Erasmus Building (fig. [illegible]) went into service to supplement the [illegible] Palais and to house the ECJ's then-fledgling Court of First Instance. Clad in pink granite, and linked to Le Palais by a [illegible]-foot (fifty-meter) tunnel that was appointed with art, Erasmus added [illegible] cellular offices, a restaurant, two small ([illegible] seat) court rooms, a print shop, bank branch and parking. The courtroom layouts were dominated, in familiar fashion, by the judges' bench, and its courtrooms were distinguished by furnishings that varied in color (pink or blue tones). The two courtrooms were denoted by the art within (the "Pessoa courtroom" and the "Dalsgaard courtroom").

Figure [illegible] The Erasmus Building, Court of Justice of the European Communities, [illegible]. Architects: Bohdan Paczowski, Paul Fritsch, Jean Herr, and Gilbert Huyberechts.

Photograph reproduced courtesy of the Court of Justice of the European Communities.

The ⊠character⊠ of Erasmus came, according to the courthouse book, from its ⊠internal courtyards and its bridges and corridors of steel and glass.⊠⊠

A third building, also linked by corridors to Le Palais, is named after Thomas More and featured courtrooms (blue and green) as well as office spaces.⊠⊠ Opened in ⊠⊠⊠⊠, Thomas More was followed in ⊠⊠⊠⊠ by Annex C, again a composite of courtrooms and offices.⊠⊠Thus by ⊠⊠⊠⊠, facilities once sufficient for two hundred people had grown to accommodate the more than one thousand people working there. The court's book pronounced the arrangement a ⊠coherent and harmonious range of buildings⊠ that gave a ⊠concrete reality⊠ to the influence and role of the court.⊠⊠ Architectural critics praised the building's legibility; the ⊠linear sequences of courtrooms and meeting places⊠ were ⊠good for orientation and ease of circulation⊠ while much of the interior was ⊠predictably corporate in character⊠ not unlike Luxembourg's numerous banks.⊠⊠

By ⊠⊠⊠⊠ the existing space was seen to be insufficient.⊠⊠As the construction site photograph (fig. ⊠⊠⊠) depicts, a major new edifice⊠ designed by the French architect Dominique Perrault⊠ was underway in ⊠⊠⊠⊠; it opened toward the end of ⊠⊠⊠⊠,⊠⊠ eclipsing the older buildings by wrapping ⊠a new building around the existing complex⊠ and thereby putting the staff (by then numbering close to two thousand) ⊠under one roof.⊠⊠⊠The goals, according to the architect, included creating a ⊠large public square⊠ through cultivating a sense of urbanity across a set of buildings.⊠⊠What was added to the ⊠⊠,⊠⊠⊠ square meters was another ⊠⊠⊠,⊠⊠⊠ sqm of occupied space in the covered areas, ⊠⊠,⊠⊠⊠ sqm office space for the President, court members and court clerks, ⊠,⊠⊠⊠ sqm auditorium space, a ⊠,⊠⊠⊠ sqm gallery⊠ which acts to link surrounding zones, a ⊠⊠,⊠⊠⊠ sqm public esplanade, ⊠⊠⊠ parking spaces, and most significantly, two ⊠⊠,⊠⊠⊠ sqm towers to house the translators.⊠⊠⊠In other words, more than a million square feet have become available⊠ including ⊠⊠ stories that stretch ⊠⊠⊠ feet (⊠⊠⊠ meters) towards the sky⊠ for use by the court and its entourage (fig. ⊠⊠⊠, color plate ⊠⊠).⊠⊠That new space entailed a major commitment of funds (about ⊠⊠⊠ million Euros or some ⊠⊠⊠ million dollars) – constituting about half of the court's annual budget in ⊠⊠⊠⊠.⊠⊠

Perrault demurred from calling his design a fourth extension; he described it instead as a ⊠progression⊠ in that it represented the ⊠sedimentation⊠ of the role that the ECJ played in Europe.⊠⊠ The court's deepening import, he argued, could been seen through the repeated reconstructions of its buildings. His layering on top of Le Palais intentionally provided historical evidence of its ⊠morphological development.⊠⊠⊠ Perrault was also responding to the demands of the users, who had a strong connection with the building. As the ECJ President Vassilios Skouris explained at the new building's inauguration in December of ⊠⊠⊠⊠, ⊠⊠⊠although the Court as a whole met there for only ten years or so, the institution's attachment to that building, with its steel feet and glass covering hoisted onto its base, was such that . . . the Court expressed its wish that the old courthouse retain its emblematic jurisdictional function. . . . The old, restructured courthouse, whose exterior and original structure have been preserved . . . is entirely dedicated to the public face of justice. Here is where we will hold hearings that the public can attend; here justice will be seen, read, and rendered.⊠⊠⊠

Photograph: G. Fessy, [illegible] Court of Justice of the European Communities. See color plate [illegible].

Perrault's work has been greeted in many quarters with rave reviews. At its opening President Skouris saw it as the embodiment of the court's commitment to transparency, access, and restraint: [illegible]May this beautiful edifice, with its pure lines and its harmonious spaces, be for the Court an inspiration in rendering a justice that is solid and consistent, yet nevertheless measured in full respect for the competences accorded it by the treaty.[illegible] The President of the European Commission spoke of the new Palace (as well as the buildings it encircled) as [illegible]the very symbol of a Europe based on the guarantees of impartial justice[illegible]; the new structures represented both the [illegible]evolution of the work[illegible] of the court and Europe's [illegible]political progress . . . modernized and enlarged.[illegible] The Prime Minister of the Grand Duchy of Luxembourg picked up on the theme of the [illegible]vastness of the premises[illegible] as he noted its size was that of [illegible] soccer fields.[illegible]

An architectural critic from *The* [illegible]*uardian* in London called it a [illegible]shining beacon[illegible] as he praised its [illegible]shimmering palace[illegible] and its [illegible]pencil-thin[illegible] golden towers that [illegible]light up like a pair of giant candles.[illegible] Another commentator pronounced the gold sheathing an [illegible]evening gown[illegible] and praised the [illegible]translucent softness[illegible] of the new buildings.[illegible] The building has been heralded as [illegible]not just a new addition . . . but an

injection' that proclaims the primacy of linking over juxtaposition and of unification over densification.

The new main courtroom is a timber-lined chamber (fig. , color plate) whose ceiling is adorned by a glass screen with a giant gold flower (fig.) of woven steel that swoops down, umbrella-like, in a dramatic flourish. Other courtrooms were also added, encircled by a new two-story corridor or internal street with cafes, libraries, and judges' chambers. The four buildings that predate the addition had departed from the modularity found in many new French courthouses that isolate courtrooms from administrative offices by mixing these functions within the same buildings. In contrast, the new ECJ configuration puts the legal writers from across the EU into their own separate office space, the twin high-rise towers clad, like the new courthouse, in gold.

Scholars of the court described its movement from being for many years the least known institution in Europe to becoming the chief architect of the Community's legal order. By the late s, survey data reported that the ECJ had become one of the EU's better recognized institutions. Recall that the Supreme Courts of both the United States and Israel are major tourist destinations. Before its new building opened, the ECJ made its mark primarily through its legal output. The setting is hard to visit and not by happenstance, in that the choice of Luxembourg aimed to avoid eclipsing national capitals. To gain direct access to the EU enclave on the Kirchberg Plateau, outside

the city proper, requires a special trip. In [illegible] some [illegible], [illegible] visitors made that journey, [illegible] directed (depending on capacity and the language of proceedings) by the court's [illegible]Visits Service[illegible] to hearings. Some commentators had argued that the ECJ ought to put itself more in the public eye. [illegible] Its gold splash is surely aiming to catch attention. [illegible]

What Perrault's new structures thus represent is the ECJ's success in responding across diverse legal traditions to generate an institution that is comprehensible as a [illegible]court[illegible] distinct from other branches of government. On behalf of the Union, the ECJ renders judgments that bridge a vast set of differences, even as (not surprisingly) they are met with varying degrees of implementation at national levels. [illegible] The ECJ has become one of the dominant institutions of the European Union, aiming to be understood in political and sociological terms as a *demos*[illegible] a polity encompassing and representing a citizenry. [illegible]

[illegible]*ma*[illegible]*ined Communities* is the title of Benedict Anderson's book about the idea of nation-states [illegible] weaving together diverse individuals by building a sense of connection out of shared histories, languages, cultures, and/or ethno-religious identities, sometimes translated through emblems[illegible] including, as we have shown, the transnational iconography of justice. New amalgams like the EU have used legal, administrative, and executive regimes to bring into being a political imaginary that entails [illegible]a matrix of values [illegible] representing aspects of their identity. European law speaks of the [illegible]pillars[illegible] of the Union, of which the Community is one, and its law is the particular competence of the ECJ. The metaphysical pillars have become literal through the two towers for translators designed by Perrault, and his gold mesh that wraps the court and high-rise columns may well become the icon of the EU. The ECJ's new golden [illegible]ring, which extends the suspended, noble floors of the heart of the pre-existing building, [illegible] could well be understood as aspiring to encircle the Member States.

[illegible]*nder the watchful e*[illegible]*e of paintin*[illegible]*s and sculptures*[illegible]

True to European town hall traditions, the ECJ brimmed with art. As the commemorative book that documented the art as of [illegible] explains: [illegible]Justice is not dispensed in a vacuum and the Court's judgments are handed down under the watchful eye of paintings and sculptures which speak of their origins and symbolize the importance each Member State attaches to the preservation of its identity and history. [illegible] Some of the objects were loaned, [illegible] some were gifts, [illegible] and some resulted from invitations to artists or from purchases by the Luxembourg Government. As in courthouses elsewhere, materials ranged from bronze, marble, aluminum, iron, stainless steel, sheet metal, and wood to oil paintings and cloth tapestries, with both representational and abstract styles in view. When Le Palais opened in [illegible], artists from the original six EC states were asked to [illegible]embellish the interior and exterior. [illegible] Since then, many new Member States have added to the ECJ's displays.

Renaissance Virtues[illegible] with twentieth-century glosses[illegible] were to be found in several places. Like the models provided from the fourteenth century in Siena to the seventeenth in Amsterdam, Justice is a common component, often shown with Peace. A first such example was displayed in Le Palais; a bronze relief, *Justice and Peace,* completed in [illegible] by Italian artist Giacomo Manz[illegible], has these two figures [illegible]drawn on the same scale[illegible] and similarly attired in drapery, echoing figures from antiquity. [illegible] Both have outstretched arms[illegible] Justice holds scales and Peace a child. Justice also takes center stage on the landing of the main staircase in Le Palais as part of a series of larger-than-life wood carvings, four on each of her sides. [illegible] These black-ink figures[illegible] xylographs[illegible] by HAP Grieshaber of Germany are set against a red background evocative of Greek urns. [illegible] Holding scales and a sword (and not blindfolded), a large Justice is central, accompanied by eight [illegible]enigmatic and exuberant figures with hats, musical instruments and foliage[illegible] perhaps forming part of a [illegible]Dionysian procession. [illegible]

Another kind of representation of law was provided by the Greek government, which donated three replicas of parts of the Gortyn Code, large stone-cast steles inscribed with some of the fifth-century BCE laws of the city of Gortyn in Crete. [illegible] Words also come into play in a layered oil calligraphy by Danish artist (and poet) Sven Dalsgaard that graces one of the courtrooms. The phrases [illegible]With Love / and Justice / A United Europe[illegible] in a variety of bright colors, are [illegible]spread across three large triptych-like canvasses[illegible] in various languages of the community. [illegible] The overlaying makes them [illegible]indecipherable[illegible] as they are [illegible]so entangled that they cannot be read. [illegible] The President of the ECJ's Court of First Instance explained that, [illegible]by giving first place to love, Sven Dalsgaard tells us that justice without human warmth and understanding cannot be the right basis for a European Community.' [illegible]

Some of the pieces not obviously [illegible]about[illegible] justice are explained as such. For example, the tapestry *Mi*[illegible]*ration* by Mary Dambiermont (a Belgian artist) is populated by a flock of birds in close formation, [illegible]representing the first six countries to join the Community[illegible] as they carry an [illegible]injured bird on their wings. [illegible] The theme is Europe-focused rather than obviously judicially centered, yet the imagery is said[illegible] by its [illegible]unity, balance, and solidarity[illegible] to illustrate justice. [illegible]

The layout within the courtrooms also reflects the breadth of the community. An ultra-long bench is provided in the main courtroom to accommodate judges coming from all of the Member States. [illegible] The new central courtroom, opened in [illegible], measures [illegible], [illegible] square meters, or more than [illegible], [illegible] square feet; its bench has room to seat forty-one judges, with three hundred seats available to the public. (The courtroom could thus be viewed as predicting the expansion of the EU beyond the twenty-seven Member

FIGURE ⍰⍰⍰ Main courtroom with panels from Andr⍰ Hambourg's ⍰⍰⍰⍰ painting *Justice and Peace,* Le Palais, Court of Justice of the European Communities.

States; even when joined by all eight Advocates General, the current complement does not fill all the chairs.) In addition, twenty-three booths house translators who provide simultaneous translations⍰ making headphones appropriate gear for jurists.⍰⍰⍰

Depicted in figure ⍰⍰⍰ (color plate ⍰⍰) is the main courtroom of Le Palais in its incarnation before the ⍰⍰⍰⍰ renovation; shown are some fourteen jurists seated below three of six allegorical panels created in ⍰⍰⍰⍰ by the French artist Andr⍰ Hambourg and bearing the familiar title *Justice and Peace*⍰⍰⍰ Both the layout of the courtroom and its iconography were familiar, didactic in the traditions of Lorenzetti in Siena (fig. ⍰/⍰⍰) and Quellinus in Amsterdam (fig. ⍰/⍰⍰).

At the center of the Hambourg murals is a large, draped, clear-sighted Justice, seemingly floating in space (or the heavens) and holding evenly balanced scales in one hand. Her hair is red, and she is garbed in white. The background of clouds and blue sky coupled with various figures and objects in the visual array provides plentiful references to virtuous acts and to godly justice. Near Justice's scales are two men who could be Moses and Aaron, holding tablets unmistakably evocative of the Ten Commandments. Rays of light emanate from Justice's right hand, pointing toward a woman and child who appear as supplicants. Law books are below, while another woman wearing white and holding a dove (evoking Peace) can be seen in the background. On both sides at the bottom, beneath Justice's feet, are men ⍰ one face down and one face up⍰ reminiscent of the vanquished in the Siena murals, in which Lorenzetti's enthroned, vindictive Justice (fig. ⍰/⍰⍰) has prisoners tied below her. Yet other supplicants reach toward the Hambourg Justice from each of the corners of the panel.

The central mural of Justice hangs between two side panels that also provide a backdrop for the judges' bench. Both include views of open skies and cities of Europe. At the far left corner of the left panel, a male sculptor chisels rock, while at the far right of the other a male artist paints. Peace gets her own set of three panels, all of similar size to those of Justice. Like Justice, Peace is at the center. Smaller in size, she holds a sheaf of corn as two men (larger than she) shake hands. To her right, a woman pours wine from a pitcher (as Temperance does in many images), while another woman is shown as Charity would be, holding a child and near fruits and foodstuffs. The panels also include buildings known to European spectators, such as France's Notre-Dame Cathedral and St. Mark's Cathederal in Venice. More specific homage is paid to one of the

founders of the EC, Robert Schumann, by putting his house in the landscape.[illegible] The imagery, in bluish tones with light rays glowing yellow and rainbows, celebrates Europe through a painterly style that recalls a mix of Marc Chagall and of Picasso in his blue period.

Not all the art displayed was unremittingly cheerful. A [illegible] tapestry by Jean Lurcat of France titled *The Little [illegible]ear* adorned the Grieshaber courtroom in Le Palais. The large tapestry, depicting the Apocalypse, is filled with flora and oversized fauna fleeing the end of time; they appear on a black background that, with a densely patterned red foreground, creates a Medieval aura. Discussion of the piece attributes its mix of references to the New Testament coupled with the artist's personal references. One sees [illegible]cosmic plagues: the scorpion, the eagle, the locusts with [illegible]women's hair' and [illegible]ion's teeth,'[illegible] joined by a cockerel, explained by the artist as an emblem for those for [illegible]whom hope is not simply a word shunted into a vague future.' [illegible]

While the art strives to be didactic as it evokes its European iconographical roots, none of the images became a signature of the building. At the renovations' end (around [illegible]), the new building became the emblem. One should thus understand the [illegible] volume about the ECJ buildings of [illegible] through [illegible] and their artwork as commemorative in the sense that it documented structures on the cusp of their eclipse. Only one page of that book quietly adverts to the future, by providing a model of the Perrault building as it was then forecast.[illegible]

Tourists in Europe have long been able to purchase trinkets, such as tiny Eiffel Towers and small Leaning Towers of Pisa. Competition has just emerged from the glimmering gold mesh towers of the ECJ. Recall the decision in [illegible] to create a polycentric set of capitals for Europe, the earlier reticence to build impressive structures that could shift attention away from national landmarks, and the discretion of the [illegible] Le Palais, with its practical rusted hues of brown quietly repeating the symmetry of an ancestral past in Greece and Rome. Whatever Member States' ambivalence[illegible] expressed as the proposed constitution for Europe went down to defeat in [illegible] Europe gained its own monument in [illegible]: a court.

The ECJ has been the source of implementing and expanding the law of Europe to make a constitution, whether or not a document so named is officially adopted. (As of [illegible], proposals for such a constitution had failed to gather sufficient support to be enacted.) In that respect, the ECJ well merits the light shone on it through its new buildings. Yet, while efforts have been made to draw attention to its central courtroom by planting a floating gold flower in its ceiling, the towers and rings are aptly emblematic of twenty-first-century judging. The administrative apparatus overshadows judges around the world, just as the two towers for translators and other staff stand above the structures encapsulating the courtrooms.

Strasbourg and the European Court of Human Rights

One can think of Richard Rogers's [illegible] design for the European Court of Human Rights (ECtHR) for a site provided by Strasbourg, France, as an appropriate bookend to the [illegible] Perrault configuration, as both are deliberately adventuresome and admired. The ECtHR (fig. [illegible]) was the [illegible]first building for a united Europe to receive architectural attention.[illegible] Perrault and Rogers had competed for the commission in a process prompted in part by dislike for the [illegible]lumpen administrative buildings[illegible] then housing the Council of Europe.[illegible] Rogers's design gained praise for its [illegible]explicit transparency and populism[illegible] that contrasted with the design for the [illegible] Le Palais, which had (at the time) taken a more [illegible]conservative view[illegible] aiming for a [illegible]gravitas befitting[illegible] the court's function.[illegible]

Further, akin to the experience in the United States when the Boston Courthouse made a splash that shaped subsequent selection procedures, the competitive process producing Rogers's ECtHR building paved the way for others ([illegible]path dependency[illegible] is the political theory term). Within a year of the opening of the ECtHR structure, Strasbourg shaped a competition for what became Europe's new parliament buildings, put into use in [illegible].[illegible] Rogers, in turn, went on to win architecture's sought-after Pritzker Prize[illegible] after designing dramatic courthouses in France (fig. [illegible]/[illegible]) and in Belgium.[illegible]

As of [illegible], Europe had thus gained two major architectural statements named [illegible]courts[illegible] albeit in buildings that look neither like courthouses of eras past nor sufficiently like each other so as to generate a prototype for other buildings bearing that name.[illegible] Instead, the designs by Perrault and Rogers could each be read as grand sculptural architecture providing space for what viewers should divine to be an important, yet unspecified, purpose.

Le Palais des Droits de l[illegible]omme

The two courts with overlapping names could well be confused with each other.[illegible] Strasbourg's ECtHR is older and, despite its specialty designation denoting a jurisdiction keyed to human rights, has a broader reach than the ECJ on another dimension. The ECtHR serves as the principal juridical organ for the Council of Europe, with its forty-seven members[illegible] to be distinguished from what was called the European Community (EC) and, as of [illegible], is known as the European Union (EU) with (as of [illegible]) twenty-seven Member States. In practice, the law of the two courts interacts in some areas, and efforts have been made to convince the EU to join the Council of Europe.[illegible]

The Council of Europe dates from the mid-[illegible]s. In September of [illegible], in a speech at the University of Zurich,

Winston Churchill spoke of "the tragedy of Europe," describing it as "once united" but then fraught with "nationalistic quarrels" that "wreck the peace and mar the prospects of all mankind. . . . We must build a kind of United States of Europe," he concluded, calling for the formation of a "Council of Europe" to unite the "European family." In May of [illegible], Churchill presided over a gathering of eight hundred delegates from around Europe at the Hague Congress, or the "Congress of Europe," where plans for a council—including a parliament, a court, and a human rights convention—were laid. A year later, in May of [illegible], a group of states (Belgium, Denmark, France, Ireland, Italy, Luxembourg, the Netherlands, Norway, Sweden, and the United Kingdom) signed the Treaty of London, and the Council of Europe came into being.

The human rights focus had both longer-term and immediate predicates. The Slave Trade Tribunals, described at the outset of this chapter, are exemplary of three centuries of transnational efforts pressing for abolition of slavery and for women's equality. Both social movements were predicated on arguments about essential rights that belonged to all human beings. The tragedies of World Wars I and II inspired a new "age of rights," to borrow words from the title of Louis Henkin's book. In [illegible] the United Nations (U.N.) was created; in [illegible] the U.N. issued its Universal Declaration of Human Rights with its preamble that "reaffirmed" the "fundamental" precepts predicated on "recognition of the inherent dignity" of all persons. Moral and political philosophers debate the foundations and reach of human rights, some reading these events as remarkably innovative and others understanding the efforts as reviving a conservative humanism rooted in European history. Post–World War II human rights proponents had the goal of making the idea of human rights universal through internationalism, so that countries would both agree to and apply these precepts. To do so, human rights advocates relied on various techniques aiming to build institutions such as treaty bodies, expert committees, monitors, study commissions, rapporteurs, and courts.

In [illegible], the European group committed its members to its own European Declaration on the Rights of Man and Fundamental Freedoms (which has come to be called the European Convention on Human Rights, or ECHR) that outlined protections for human dignity, the privacy of family life, the freedoms of the press and of association, and safeguards for detainees, including rights of access to public trials and prohibitions on discrimination, torture, and inhumane or degrading treatment. How to organize the Council and implement these provisions proved contentious, and the mechanisms have changed over time. Where to do the work was yet another question, and the choice of Strasbourg came in part from its symbolic freight. The city dates from Roman times, and the Latin origin

of its name. Strateburgum means "fortified place of roads." Fortification was indeed needed; between [illegible] and [illegible], the city's nationality changed four times, moving back and forth from France to Germany. The Council's pick of Strasbourg as its center was both a proclamation of victory over Nazi Germany and a recognition of the need to reintegrate the new Germany into a unified Europe. Strasbourg also became one of the headquarters for both the Council of Europe and the Parliament of the EU.

Building in Expansion for Space and Rights

While the commitment to human dignity was one response to World War II, the shape of mechanisms for enforcement of human rights was not easily agreed upon. States did not want to subject themselves to suits either by each other or by individuals alleging violations of the ECHR. Instead, the chartering parties initially provided for a voluntary system through an optional protocol that provided for both a European Commission on Human Rights, which began its work in [illegible], and a European Court of Human Rights, begun in [illegible].

For several decades the Commission functioned as the path to the court, an "intermediary organ of a semi-judicial nature," which meant that petitions were filed there first and could not proceed to the ECtHR without a finding of admissibility. But by the early [illegible]s, after the fall of the Berlin Wall, the expansion of the Council of Europe, and domestic elaboration of human rights in many countries, the Commission was seen less as an effective tool than as an institution overwhelmed by complaints. Its abolition was the response and, in [illegible], the Commission formally ceased to be, giving individuals rights of direct access to the ECtHR for claims that states parties had failed to "secure to everyone in their jurisdiction" the rights enumerated under the ECHR.

Each state party is entitled to have a judge serve on the ECtHR and does so by nominating a slate of three individuals from whom the Council of Europe's parliamentary assembly makes the selection. Judges serve renewable six-year terms until the mandatory retirement age of seventy. (In [illegible] the Council of Europe passed Protocol [illegible] to revise the system and provide for nine-year nonrenewable terms. The last country to ratify was Russia, which gave its consent in [illegible], bringing Protocol [illegible] into force later that year.)

With forty-seven Council of Europe members as of [illegible], the forty-seven-judge court serves as a supra-national juridical body with final authority over "all matters concerning the interpretation and application of the Convention." Council members agree to comply, and the result is a rich and complex set of judicial doctrines seeking to enforce the Convention, albeit with a "margin of appreciation" tolerant of some differences in application. The ECtHR has used that approach to accord some latitude in ECHR precepts in recognition of the challenges of implementation in the diverse contexts of the various nations formally agreeing to adhere to the Convention.

Richard Rogers's "monumental cylinders"

Richard Rogers is a global player, with many public buildings to his credit. He gained transnational fame in the early [illegible]s when he joined Renzo Piano in designing Paris's Pompidou Centre, pronounced an "entirely new building" credited with revolutionizing architecture during the later part of the twentieth century. Rogers also described his proposal for the Strasbourg court as seeking novelty. Even as he wanted to provide an "architectural image for the 'new' Europe," he also "wanted the building to break from the traditional monumentalism associated with Palaces de Justices by placing emphasis on accessibility with a central, transparent assembly hall and by boldly expressing the functions of the Institution." Moreover, Rogers aimed to create a "futuristic image not limited by the national styles" of the member States. Further, Rogers anticipated that he would need a building that could be expanded, if politics permitted, and hence he had to conceive of a design (with foundations that could bear the extra weight) that could grow when nation-states joined the Council of Europe. All told, he sought to shape a "welcoming and humane" space.

The result is a biomorphic asymmetrical form, in part shaped to follow the curve of the River Ille beside which the court sits. As Rogers put it, he had made "two great salles" "rooms" acting as "head," the chambers as "neck," and administration as "tail." The smaller of the "two large drums," for the Commission, was to capture its role as monitor of the ECHR, while the larger module, for the court, was to signify its distinct function of rendering judgments.

Construction of the new building began in [illegible] but, in short order, the design was obsolete on one dimension and inadequate on another. The decision to abolish the Commission left one of the two great drum-shaped rooms unnecessary, and the growth in the number of members from twenty-five to more than thirty in the early [illegible]s (and to forty-seven as of [illegible]) made the provisions for judges and staff insufficient. "Everything had to change: the chambers had to be larger, the tails had to be extended and a storey added." The result, when completed in [illegible] at a cost of [illegible] million French francs ([illegible] million in [illegible] dollars), was an increase of office space by [illegible] percent and in other areas by [illegible] percent.

The building may be unusual within the canon of courthouse construction but, as commentators have noted, it is familiar within Rogers's oeuvre, resembling other designs made "from strongly articulated concrete, tubular steel, stainless steel panels and suspended glass." The main materials were not "opulent" but "basically cheap." The steel girders of blue, red, and white could be read as a ref-

erence to the lineal primary colors of Russian Constructivism of the [illegible]s. [illegible] For its time, the building was notably [illegible]green[illegible] eschewing air conditioning for natural ventilation and using blinds to protect the interior from the sun. The building lagged, however, in terms of easy access for people with disabilities. [illegible]

While innovative in shape and in the mix of industrial and nautical motifs, the interior is familiarly court-like. The spaces are deeply segregated, with security measures made apparent in part by virtue of the many glass windows, explained (as always) to denote transparency[illegible] albeit with a [illegible]bullet-proof glass screen inside the suspended glass envelope. [illegible] One commentator described passing through [illegible]a battery of security guards in a glass box[illegible] that served as a [illegible]rather formidable obstruction, [illegible] attributed in part to one instance in which a distressed litigant came to the court armed with a gun. [illegible]

After screening, one comes into an open area with glass permitting views of trees, the river, and the spiral staircase and elevator shafts that mark the vertical lines of interior passageways that bridge the modules of the building. The courtroom, with places for some three hundred people including the judges, is a [illegible]closed volume, with a great undulating fibrous plaster acoustically-reflective ceiling. [illegible] The room measures about [illegible],[illegible] square feet ([illegible] square meters); it is conventionally arranged, albeit with a bench shaped like a large [illegible]horseshoe[illegible] to accommodate a judge from each of the many member States. Only the entrance, the courtroom, and the library are accessible to the public, and a good deal of the building's square footage is devoted to offices.

Art is not part of the design, and those entering the building to go to the courtroom would not necessarily encounter allegorical images. If one walks the grounds or is shown which window to look at, a few sculptural objects can be seen, including a moving, graffitied fragment from the Berlin Wall. [illegible] Another sign of the conflicts that produced the court is a large bronze sculpture of a group of prisoners, titled *Les* [illegible] *Petrifi*[illegible]*s,* that stands in the garden area outside the court's library. The artist, the Swiss sculptor Carl Bucher, [illegible] created a similar sculpture that can be found in the International Red Cross and Red Crescent Museum in Geneva. Bucher has explained both of these works as depicting prisoners who have [illegible]lost their dignity: their hands have been cut off, their shoes have been removed to humiliate them. They are covered by a sheet to prevent them from seeing and speaking, and thus from testifying, and bound so that they do not escape. [illegible]

Little mention has been made of the artwork, but the building itself has provoked mixed reviews. Its admirers praise Rogers as [illegible]a defender of the modernist tradition[illegible] who has embraced [illegible]ecological harmony[illegible] ([illegible]Long life, Loose fit, Low energy[illegible]). [illegible] Some like the building, [illegible]encased in glass . . . designed as an antithesis to the claustrophobic nature of major legal institutions. [illegible] Others are skeptical: [illegible]What has architectronic gymnastics got to do with an institution whose function is to protect the human rights of Europeans[illegible] What petitioner, approaching this cluster of interlocking, monumental cylinders, does not have a sense of foreboding that he is about to become enmeshed in the clogs of a huge machine[illegible] What does it tell him about such an institution when, through its mullionless glass facade, he sees bullet-proof screens and a dense web of colored metal[illegible]

In fact, this court was not designed to provide much by way of public space. Unlike many courthouses that offer waiting and gathering places, the ECtHR does not. Rather, its [illegible],[illegible] square feet ([illegible],[illegible] square meters) are devoted to the two chambers, a series of smaller conference rooms (holding not more than fifty people each), and [illegible] offices. [illegible] And unlike the Perrault building for the ECJ, Rogers's design did not include auxiliary services beyond a cafeteria. In some sense, the lack of areas for the public reflects that the public[illegible] [illegible] million Europeans[illegible] is an abstraction, residing across forty-seven states and unlikely to come in person to this court.

[illegible]*asier to see [illegible]our nei[illegible]h[illegible]or[illegible] human ri[illegible]hts violations than [illegible]our own[illegible]*

As explained by Luzius Wildhaber, President of the ECtHR during its first decade without the Commission, the goals have been pragmatic and aspirational. [illegible] The hope was to create a [illegible]European Human Rights Space[illegible] in which member States protected dignity and equality in a manner respectful of their [illegible]different cultures and traditions. [illegible] How to do so has been an ongoing challenge.

What constitutes a violation of human rights requires interpretation, spawning debates familiar in the literature on constitutional courts about the relationship between methodologies of interpretation and the nature of judicial discretion and authority. [illegible] Some commentators advocate a focus on a constitution or convention when it was originally crafted and agreed upon, while others speak of the evolution of rights. Wildhaber described the ECtHR as committed to the latter view ([illegible]a living instrument[illegible]), [illegible] recognizing the possibility of applications not necessarily anticipated in [illegible]. One ready example is that the concept of equality has come to embrace protections for persons regardless of sexual orientation. [illegible] Of course evolutionary interpretations need not only be expansive but may also narrow rights.

Problems of decisionmaking come not only from methodological questions of interpretation but also from the challenges of identifying which cases to consider. In [illegible], when the ECtHR took on the task of determining the [illegible]admissibility[illegible] of petitions, [illegible] it [illegible]inherited[illegible] [illegible],[illegible] applications from the Commission, which were added to the [illegible] pending before the reforms took effect. [illegible] Major contributors to the heavy docket were, ironically in light of the ECtHR's own backlog, complaints that at the national level, countries were failing to live up to what are called [illegible]Article

obligations relating to individuals' rights to go to court and obtain fair trials in a reasonable time.

Docket growth is one measure of success. While in the s the European Commission on Human Rights received applications, by more than individual applicants claimed violations of the ECHR. By then, pursuant to Protocol No. , access was eased for individuals to seek damages for state violations of the Convention. Given structural problems in some states, often hundreds of virtually identical complaints have been filed. The pace of rendering judgments, not surprisingly, struggled to keep up with filings; for example, in the court issued decisions, and by it had made some , rulings in that calendar year. Between and , violations of the Convention were found in more than percent of the court's judgments, and its decisions came disproportionately from a subset of States Parties. More than half related to four countries, with about percent coming from Italy and from Turkey, percent from France, and percent from Poland.

Many filings do not meet the criteria for consideration, but sorting requests takes time. The ECtHR has lacked sufficient means to identify which filings are proper. Decisionmaking has relied on chambers, typically of seven judges and, in cases of great import, grand chambers of seventeen. The court has sought to find new ways to process cases, including dealing with similarly situated claims as a set, and hence has shaped new provisions (as part of Protocol No.) that devolve decisionmaking to smaller numbers of judges. The goals include permitting an individual judge to decide if a claim is clearly inadmissible and to increase the authority of three-judge panels. Another option is the development of a system of appeal by permission (akin to certiorari in the United States context) and varying the extent and nature of review depending on the claim. The debate about reforms as well as the challenges are captured in a volume: *The uropean Court of uman ights verwhelmed pplications Problems and Possible Solutions*.

In addition to attracting litigants, the ECtHR has (like the ECJ) spawned a substantial literature analyzing its decisions and its relationship with national courts. Evaluations report more compliance in terms of payments to individuals (often in relatively small amounts) than in prophylactic action. The ECtHR is dependent on the Committee of Ministers and Parliamentary Assembly for the implementation and enforcement of its orders, and problems of compliance for example, that a country does not revamp its procedures on access to court to mitigate violations are commonplace.

Nonetheless, one empirical assessment of the effects of Europe's Convention on Human Rights, as interpreted by the court, concluded that the provisions functioned as a shadow constitution, with substantial uptake in several national systems. Moreover, as states adopt laws parallel to Europe's Convention (such as the United Kingdom's Human Rights Act of , and Ireland's European Convention Human Rights Act of), these norms are filtered through domestic regimes, generating dialogues about their application in a fashion that two American legal scholars called dialectical federalism. As early as , the ECtHR's President Rolv Ryssdal proclaimed the Convention the single most important legal and political common denominator of the States of the continent of Europe.

The Ct and the CJ The orm of esources

Importance, the demand for services, and the resources to support institutions are not always in sync. Both of the European courts are dependent on their respective legislatures for budgets, and both worry about resources. The Council of Europe has a smaller economic base than the European Union, and the Council is a less cohesive political unit. Further, the ECtHR's specialized mandate does not bring it deeply into the commercial transactions with which other kinds of courts engage in thriving economies.

The respective structures of the two European courts, in both legal and architectural terms, reflect those differentials. As its filings expanded, the ECJ sprouted additional courts its Court of First Instance and its Civil Service Tribunal as well as new buildings to house them and then a golden ring encircling them, complemented by two shimmering towers for staff. That the ECtHR remains a poor relative can be seen not only in the contrast between the steel girders of the ECtHR and the glittering gold of the ECJ building. The ECJ has a budget of about million euros annually, while the ECtHR (with its larger caseload) relies on about million euros annually.

How that money is allocated is yet another distinction. Until , the Council of Europe provided no pensions for the judges of the Strasbourg Court. This lack of security in retirement, as President Wildhaber explained, rendered judges who left the bench wholly dependent on the very Government, in respect of whom he or she must be perceived to be independent during his or her term of office. More generally, this problem of resources haunts the project of adjudication. That point is made again by crossing the Atlantic Ocean to consider the Inter-American Court for Human Rights, which ambitiously aspires to enforce another convention on human rights across nation-states.

Regional Law: The Organization of American States and the Inter-American Court of Human Rights

Both the ECtHR and the Inter-American Court of Human Rights, shown in figure , are the outgrowths of post–World War II agreements among countries in regions com-

FIGURE [illegible] Inter-American Court of Human Rights, San Jos[illegible], Costa Rica, circa [illegible]; expanded in [illegible].

mitting themselves to common legal precepts.[illegible] Dr. Gerard Wiarda, the Vice President of the ECtHR, speaking in [illegible] at the opening of the Inter-American Court of Human Rights in Costa Rica, described both institutions as the [illegible]children of the United Nations Declaration of Human Rights.[illegible] Yet the Member States of the Organization of American States are less connected with each other than many of those participating in the Council of Europe, which overlaps with the European Union. The twenty-seven European countries that are also part of the EU share common legal rules governing the movement of labor, goods, and persons.

Consider a continuum of courts that runs from national institutions, such as in the United States, France, and elsewhere to institutions such as the International Criminal Court exercising global jurisdiction. The Inter-American Court is a step away from confederations such as Europe and closer to what has become more common in the late twentieth century: international courts. Indeed, the Inter-American Court's [illegible] predecessor, the Central American Court of Justice, has been celebrated by some commentators as the [illegible]first permanent international court ever known,[illegible] especially to be appreciated because it was founded in the [illegible]New World[illegible] as a [illegible]Latin-American institution.[illegible] The region has also produced one of the fledgling transnational courts of the twenty-first century[illegible] the [illegible] Caribbean Court of Justice,[illegible] as well as conferences bringing together members of the supreme courts of the countries of the Americas.[illegible]

The [illegible] Central [illegible]merican Court of Justice[illegible] [illegible]permanent court of [illegible]ustice[illegible]

By hosting the Inter-American Court of Human Rights, Costa Rica committed itself to providing an annual budgetary supplement as well as the building, which had once been a private home.[illegible] This welcome was the second time in the twentieth century that the country had offered its resources to a transnational court. Costa Rica had also housed the Central American Court of Justice from its inception in [illegible] until its dissolution in [illegible].[illegible] That body first sat in Cartago, in a [illegible]palace built for its seat[illegible] that was funded by Andrew Carnegie, who donated [illegible],[illegible].[illegible] Carnegie also supported the [illegible]Peace Palace[illegible] in The Hague, where the Permanent Court of Arbitration and the International Court of Justice operate, as discussed in Chapter [illegible].

The Central American Court received a share of Carnegie's funds because, like the Peace Palace, it aimed to use law to resolve conflicts between countries as a [illegible]permanent court of justice.[illegible] The Central American Court was a byproduct of a series of meetings convened in Washington, D.C. in [illegible] that produced several treaties.[illegible] Costa Rica, Guatemala, Honduras, Nicaragua, and El Salvador entered into a ten-year convention (Convenci[illegible]n para el Establecimiento de una Corte de Justicia Centroamericana)[illegible] establishing the Central American Court of Justice (Corte de Justicia Centroamericana) (CACJ). That group of coun-

tries authorized the CACJ to decide controversies among them[illegible] [illegible]all controversies or questions which may arise among them, of whatsoever nature and no matter what their origin may be, in case the respective Departments of Foreign Affairs should not have been able to reach an understanding.[illegible]

To do so, five judges (one from each of the five countries) constituted a new court.[illegible] Its jurists were not to hold other public offices during their five-year renewable terms, for which they were annually paid [illegible],[illegible] pesos a year, in American gold.[illegible] Because the [illegible]Central American Court of Justice represent[illegible]ed[illegible] the national conscience of Central America[illegible] its judges were authorized to sit in judgment of their own republics, even though they owed their appointment to them.[illegible] The five countries also committed to support the CACJ with yearly contributions of [illegible],[illegible] pesos and to accord the judges immunity equal to that of members of their domestic supreme courts.[illegible]

The CACJ's jurisdictional grants were impressive compared to those provided to other transnational courts and some domestic courts, then and now. Recall that complainants did not gain direct access to the ECtHR until [illegible], some forty years after it was established. In contrast, at the CACJ, individuals who had exhausted domestic remedies or could show a [illegible]denial of justice[illegible] could bring claims of treaty violations or other [illegible]cases of an international character[illegible] against [illegible]contracting Governments.[illegible] In addition, states could sue each other, to be judged through fact-finding and relevant international legal principles. Further, as a commentator of that era put it, there was [illegible]no reservation of [illegible]questions of national honor or vital interests,' as is the vogue in so many treaties of arbitration[illegible] and, moreover, provisional remedies were also made available.[illegible]

But the CACJ had a rocky time, literally and legally. Its first building, in Cartago, was destroyed (figs. [illegible] and [illegible]) in [illegible] by an earthquake that toppled both the building and its statuary. Thereafter the court was relocated to San Jos[illegible] [illegible] Despite its ample jurisdictional mandate, its docket was small[illegible] albeit no smaller (as discussed in the next chapter) than that of the International Court of Justice in its early years or of the International Tribunal for the Law of the Sea in its first decade. The CACJ heard a total of ten cases in ten years before it went out of existence.

Early reports on the CACJ were enthusiastic. Its first case in [illegible] addressed a conflict between Honduras and Nicaragua on one side and Guatemala and El Salvador on the other.[illegible] The complainants alleged that the two defendant countries had contributed to a revolution on Honduran soil. The CACJ required a response and then issued a unanimous interlocutory order enjoining the defendant countries from engaging in military efforts that [illegible]might directly or indirectly imply interference in the Republic of Honduras.[illegible] One commentator reported that a final judgment found defendants [illegible]guiltless of the offenses charged[illegible] and [illegible]friendly relations were reestablished between the contracting parties.[illegible] Another described the outcome as producing the end of the revolution, proving that law could [illegible]triumph over arms.[illegible]

Individual petitions met with no success; four such attempts to gain the court's help (such as for wrongfully expelling a national of another country) were declared inadmissible[illegible] on various grounds.[illegible] In [illegible], as the CACJ

was coming to the end of its tenure, it decided that Nicaragua had violated the rights of El Salvador by conceding a naval base to the United States in the treaty of Bryan–Chamorro, but Nicaragua asserted a lack of jurisdiction and refused to comply. Thus the court's broad mandate was not matched with broad support. And despite recommendations and a "vote of sympathy" proffered by the American Institute of International Law at a [illegible] meeting in Havana, World War I was then underway; the Convention that had produced the CACJ was not renewed.

Within a decade, promoters of a "world" court identified defects in the CACJ that would inform the structure of the transnational courts that followed. The right of private individuals to bring suit was seen as a mistake, as were the short (five-year) terms for judges and the limited tenure of the court itself. In [illegible] another proposal was put forth for the group to form a court again. But by then the Peace Palace in The Hague had opened, and concerns arose that a regional court could undercut efforts in Europe for a "world court."

Shaping a Pan-American Convention on Human Rights

The CACJ proved not to be permanent, but successor institutions have followed in its wake. In the Mexico City Conference of [illegible], the Inter-American Juridical Committee proposed a constitution with a Declaration of the Rights and Duties of Man, thus recognizing that "essential rights of man are not derived from the fact that he is a national of a certain state, but are based upon attributes of his human personality." In [illegible] the Ninth Conference of American States, which also established the Organization of American States (OAS), adopted the American Declaration of the Rights and Duties of Man. Its preamble reads: "All men are born free and equal, in dignity and in rights, and, being endowed by nature with reason and conscience, they should conduct themselves as brothers one to another."

The questions" akin to those raised in Europe" were what kind of legal effects such commitments could have. The [illegible] Pan-American Conference also resolved that American freedom rested on "two undeniable postulates: the dignity of man as an individual and the sovereignty of the nation as a state." Therein lies the conflict. Then as now, sovereign states worried about submitting to binding authority; they preferred "declarations" that were hortatory rather than obligatory. The subsequent elaboration of a regional commitment to human rights accompanied the movement toward the establishment of an Inter-American system to strengthen cooperation more generally. Despite various calls to action, few states were in favor of incorporating the American Declaration of the Rights and Duties of Man into the pan-American organizational charter (what would later become the OAS Charter). A proposal for a new treaty on human rights was rejected, twelve to eight. Three years later, the Charter affirmed the importance of social justice and the existence of "fundamental rights of the individual without distinction as to race, nationality, creed or sex."

In the late ⍰⍰⍰⍰s, a successor OAS agreement approved an Inter-American Commission on Human Rights,⍰⍰ just as the Council of Europe had chartered the European Commission on Human Rights in ⍰⍰⍰⍰. While the purpose of the Inter-American Commission was clear⍰ ⍰to promote the observance and protection of human rights⍰⍰ its methods and status were not. According to one scholar, the accord was predicated on the understanding that an Inter-American Commission might do studies or convene symposia but would be ⍰remaining always in the safe realm of generalities, without descending to the particulars of specific countries and their observance of human rights. The OAS made it clear that it had no desire to create a body that would interfere in any way with the ⍰domestic affairs of the member states.'⍰⍰⍰

The Inter-American Commission was (and is) based in Washington, D.C., where it began to function in ⍰⍰⍰⍰.⍰⍰ Comprised of seven commissioners from member states serving for four years, with one renewable term permitted,⍰⍰ at its inception the Commission faced enormous challenges and had few resources to confront ⍰gross, systematic violations of human rights.⍰⍰⍰ In ⍰⍰⍰⍰ the Commission gained more status when, through the Protocol of Buenos Aires, the Commission became an ⍰organ⍰ of the OAS.⍰⍰ Two years later, in ⍰⍰⍰⍰, the OAS convened an Inter-American Specialized Conference on Human Rights in San Jos⍰, Costa Rica, at which a ⍰juridical instrument⍰⍰ The American Declaration of the Rights and Duties of Man⍰ became a ⍰convention on human rights⍰ to wit an effort to enumerate ⍰the obligations of the States as well as the individual rights which fall under its protection.⍰⍰⍰ Articulated in this American Convention on Human Rights (ACHR) were obligations to respect persons, all of whom were entitled to civil and political juridical status; to humane treatment; a fair trial; freedom of conscience, religion, and association; equal protection; and to much more.⍰⍰

Also authorized were two implementation mechanisms, the continuation of the extant Inter-American Commission, and the addition of a court in a system modeled after that of Europe.⍰⍰ In the late ⍰⍰⍰⍰s, the ACHR entered into force when a sufficient number of states had ratified it.⍰⍰ In ⍰⍰⍰⍰ the Inter-American Court of Human Rights, as distinguished from the Commission, came into being when the states parties elected the first group of judges. The Inter-American Court began to hear cases soon thereafter, initially at the OAS's headquarters in Washington, D.C. and later moved to Costa Rica. Like the D.C.-based Commission, the Inter-American Court is comprised of seven members; its judges serve for six-year terms, again renewable only once.⍰⍰ Ad hoc judges are added when no sitting judge is a national of a state that is a party to a dispute.⍰⍰

The United States, which hosts the Commission in D.C., is often credited as a moving force behind the Convention but was not, as of ⍰⍰⍰⍰, among the ratifiers. President Jimmy Carter signed the ACHR on behalf of the United States but ratification never followed, in part because the drafting conference did not, as the United States had wanted, remove the prohibition of capital punishment for certain age groups.⍰⍰ Ambivalence about the document by those who did ratify it can be gleaned from the fact that the General Assembly of the OAS did not provide a budget for its new court; Costa Rica lent both a building and funds to support it.⍰⍰

Economic support was not the only challenge; at the time these provisions took effect, ⍰much of Central America and South America was ruled by dictatorships either of the right or the left.⍰⍰⍰ Those regimes were rife with forms of ⍰injustice and exploitation⍰ that produced gross human rights violations,⍰⍰⍰ extremes of poverty and wealth,⍰ and a caseload struggling with government-sponsored disappearances of people.⍰⍰ Some commentators raised concern that the OAS tolerated noncompliance with court judgments, citing the lack of criticism in OAS reports on countries' failures to adhere to directives.⍰⍰

Parallels and Distinctions⍰⍰ uman ⍰ i⍰ hts ⍰ d⍰ udication in ⍰ urope and the ⍰ mericas

The Inter-American system has a structure similar to that adopted in the ⍰⍰⍰⍰s by the Council of Europe for its human rights convention. Drafters of the Inter-American system used Europe as their example, and the Inter-American Court has evoked the law of Europe (as well as other sources) when interpreting provisions of the ACHR, which is similar but not identical to the ECHR.⍰⍰ Further, both transnational systems have evolved in relation to the legal systems of the states that are parties to their agreements, as some domestic courts have become involved in elaborating human rights under national constitutions. In addition, the ECtHR and the Inter-American Court share a jurisprudential point of view that the documents they interpret are ⍰living⍰ and subject to understandings that evolve over time.⍰⍰ Judges of both institutions aspire for their work to be understood and read as part of transnational networks in which doctrinal approaches and principles are imported and exported. Their output, in turn, has spawned a critical literature analyzing its impact.

The Inter-American system is understood, from within and without, to be more fragile than that of Europe. ⍰Within the Council of Europe, military and other authoritarian governments have been rare and short-lived, while in Latin American they were close to being the norm until the changes that started in the ⍰⍰⍰⍰s.⍰⍰⍰ Concerns have been voiced about the lack of jurisdiction over many OAS members and the slow procedures of the Commission, a body that is not our focus here but whose role is pivotal. Critics commented that, while the court's work was symbolically important, the challenges were too great, given ⍰gross, systematic violations.⍰⍰⍰

By the early twenty-first century, prospects were brighter, as the OAS had adopted other conventions⍰ to prevent and

punish torture, to redress disappearances, to respond to violence against women, to abolish the death penalty, and to combat discrimination against persons with disabilities.[illegible] The Latin American governments, save those of Belize and Cuba, had ratified the Convention on Human Rights, although the United States, Canada, and the Commonwealth Caribbean countries also remained nonparticipants. Many of the ratifying States Parties have undergone political transformations, making them more welcoming of domestic as well as transnational rights regimes. Further, the Commission, which had been seen as loath to send cases on to the court, developed a procedural presumption that, if it found that a State Party had not complied with its recommendation, the Commission would refer the case to the court[illegible] in part to respond to problems of [illegible]timeliness and victim representation[illegible] before that court.[illegible]

A more optimistic view of the jurisprudence of the Inter-American Court of Human Rights emerged, seeing the American court as at times in dialogue with and sometimes offering more expansive remedies than its European counterpart.[illegible] But by [illegible], the Inter-American Commission sounded a note of concern, as it warned of the [illegible]public insecurity and fragility of the judicial power in the majority of the countries in the region[illegible] as well as what it termed [illegible]attacks[illegible] against judicial independence.[illegible] Problems of [illegible]unequal justice, slow legal procedures, impunity in serious cases of violations of fundamental rights and of violations of due process[illegible] remained acute.[illegible]

The European and Inter-American models diverge in several dimensions. First, as mentioned at the outset, the European system overlaps with the EU, and thus some of its States Parties are tied to each other through economic and social policies as well as human rights. Legal agendas are coupled with political and cultural efforts to weave an identity for Europe in which human rights are part of its persona. Furthermore, to be in the Council of Europe is to be a party to the European Convention on Human Rights. In contrast, not only are the members of the OAS structurally more separate but, as of [illegible], only twenty-five of the thirty-five members of the OAS had ratified the Convention on Human Rights,[illegible] and just twenty-two recognized the jurisdiction of the Inter-American Court of Human Rights.[illegible]

Further, reflective of the commitment to human rights, the European system relies on a court staffed by full-time judges, with one from each member State. A jurisprudential embodiment of these relationships is, as noted, the [illegible]margin of appreciation[illegible] permitting member States some divergence in the enforcement of European Convention precepts, relaxed (for better or worse) in light of the context and the absence of a regional consensus on a particular problem. That approach is not one generally shared by the Inter-American Court, committed to reading the ACHR as setting standards less readily modified.[illegible]

A second distinction is that the Council of Europe abandoned the Commission model in the late [illegible]s and consolidated the functions in the European Court of Human Rights. In contrast, the Inter-American system continues to rely on a two-step process; the Commission is the requisite route to the Inter-American Court for what are termed contentious cases, brought by individuals against States Parties.[illegible] That route can be slow; in [illegible] the Inter-American Commission forwarded a first case seven years after the Inter-American Court came into being.[illegible] Individuals have no recourse when the Commission is slow or does not issue a final decision.[illegible] States Parties may go directly to the court for advisory opinions,[illegible] and in the rare instances when states bring contentious cases against other states to the Commission, either the Commission or the states can refer a contentious case directly to the Inter-American Court.[illegible] Commission staff investigates facts, and the commissioners decide the admissibility of petitions. As is the case in Europe (with and then without the European Commission on Human Rights), admissibility criteria include exhaustion of domestic remedies unless adequate or effective remedies at the state level are unavailable. But even when cases are deemed admissible because of a preliminary ruling by the Commission that the state was at fault, the Commission generally seeks to have the state respond to a list of recommended actions so as to make amends.[illegible] The Commission then assesses compliance or refers cases of noncompliance or of particular importance to the Inter-American Court.

Third, unlike the European system, which brings States Parties under the jurisdiction of the ECtHR as a consequence of joining the Council of Europe, the Inter-American model resembles some of the international courts discussed in Chapter [illegible] in that it requires agreement to jurisdiction when disputes are brought by states against each other.[illegible] The Commission can send a complaint to the Inter-American Court of Human Rights only [illegible]if the State has accepted the Court's jurisdiction.[illegible] The Inter-American Court, again like some international courts, has authority to issue opinions in contentious cases as well as advisory opinions requested by party states.[illegible] The court's advisory function enables it to respond to consultations submitted by OAS agencies and member states, including those that have not ratified the ACHR or generally accepted the court's jurisdiction. Its power includes interpretation not only of the Convention but also of other instruments governing human rights in the Americas. The Inter-American Court can give advice on domestic laws and proposed legislation as to their compatibility with human rights provisions.[illegible]

Not only does the advisory jurisdiction of the Inter-American Commission and court have a different reach than the largely retrospective efforts of the ECtHR, the American system also had authority from the outset to hear complaints from individuals or family members of victims against member states as well as disputes among member states.[illegible] While it had awarded damages before the late [illegible]s, the ECtHR then began to receive complaints directly from individuals; compensation ordered remains modest

in scale. The European system also has a narrower remedial range, whereas the Inter-American Court has developed a broad set of structural injunctions and remedies (one commentator described ⊠its enthusiastic exercise⊠ of such powers⊠⊠) that include ⊠reform of legal structures, promotional activities such as human rights training, development projects for massacred villages, public apologies, and commemoration of victims,⊠⊠⊠as well as reparations.⊠⊠

Compliance is a problem for both systems, as is measuring effectiveness.⊠⊠ A comparison of methods of enforcement, however, permits analysis of a fourth distinction. The Inter-American Court has only itself to oversee enforcement, whereas in Europe forms of structural relief, if ordered by the ECtHR, come under the authority of the Council of Ministers, authorized to monitor compliance. In this respect, even though the European system collapsed the Commission in ⊠⊠⊠ into its Human Rights Court, Europe continued to diffuse obligations for human rights enforcement across different institutional actors given distinct roles.

The Commission and the Court in the Inter-Americas have a complex relationship, stemming in part from the broad mandate of the Inter-American Commission, which had functioned for almost two decades before the Court began to work. The Commission continues some of its own independent monitoring work, including considering human rights in countries that are OAS members but have not ratified the ACHR.⊠⊠Moreover, both the Inter-American Court and the Commission have interpreted each other's powers and have disagreed with each other over fact and law.⊠⊠

The much weaker set of political alignments that forge the OAS have produced a court less well supported, structurally and economically, than its European counterpart. The composition of the ECtHR puts a judge from every one of the member States on the bench, thereby giving each country a voice through having ⊠its⊠ person on the court. In contrast, the Inter-American Court is comprised of seven judges who, while nationals of OAS states, need not be nationals of OAS states that have ratified the Convention.⊠⊠

Moreover, while the courtroom (fig. ⊠⊠⊠⊠) appears familiar, albeit simpler than many, the working conditions of the Inter-American Court's judges are not. In ⊠⊠⊠ the President of the ECtHR complained that his court's judges lacked pensions,⊠⊠ but the Inter-American Court judges lack even salaries. They are paid honoraria of ⊠⊠⊠ for each of their trips four times a year to sit in the court's headquarters in Costa Rica.⊠⊠Those provisions make the court ⊠the only such international body that still uses that system.⊠⊠

The effects of resources and political fragility can be seen by contrasting the work of the two courts as measured by filings, judgments, and staff. In ⊠⊠⊠, after the ECtHR requested an additional seventy-five staff positions, the Council of Europe provided funding for only forty-six new positions, resulting in about ⊠⊠ jobs.⊠⊠In contrast, in that year the Inter-American Secretariat was comprised of fifty-six permanent staff.⊠⊠ Further, while Article ⊠⊠ of the

American Convention provides that ⊠the Court shall draw up its own budget and submit it for approval to the General Assembly,⊠⊠⊠the OAS provision of under ⊠⊠ million a year is not sufficient to support the system.⊠⊠ As the Inter-American Court noted in its ⊠⊠⊠ annual report, its budget is augmented by financial support from ⊠Permanent Observers⊠ including Denmark, the European Union, Finland, France, Ireland, Italy, Korea, and Spain.⊠⊠Funds have also been provided by the Open Society Institute and the Inter-American Development Bank.⊠⊠ In addition, Costa Rica makes an annual donation of ⊠⊠⊠,⊠⊠⊠, as provided in the Headquarters Agreement in ⊠⊠⊠.⊠⊠

Resources, as well as legal rules and political realities, affect output. In terms of the volume of filings and decisions, many new courts have low caseloads and issue relatively few rulings. Further, the Inter-American Commission is a first step in referring cases. In the first decade of the Inter-American Court, it rendered fifteen judgments, of which twelve were advisory opinions,⊠⊠a track record not dissimilar from the early years of the European Commission on Human Rights or the International Court of Justice and the International Tribunal for the Law of the Sea, discussed in Chapter ⊠⊠. After an initial period, many courts pick up speed (so to speak), and their caseloads bloom. By the late ⊠⊠⊠s, when the ECtHR took over from the Commission, tens of thousands of petitions were pending. As detailed earlier, as of ⊠⊠⊠, the ECtHR had some ⊠⊠,⊠⊠⊠ individual applications and issued some ⊠,⊠⊠⊠ rulings that calendar year. Yet the volume in the Americas has remained lower. Between ⊠⊠⊠, when it began to function, and ⊠⊠⊠, the Inter-American Court rendered ⊠⊠⊠ judgments in contentious cases and ⊠⊠ advisory opinions.⊠⊠

Given that human rights rulings come from the Commission as well, its volume of activity⊠ ranging from reports

to decisions also needs to be considered. While the ECtHR had more than , applicants seeking attention in , the Inter-American Commission received , complaints, which was a higher number than in any of the prior ten years. Its four sessions included hearings and working meetings, and the Commission issued reports or final decisions. As the Commission also noted, such reports can include decisions on several individual cases. The Commission then presented cases to the Court, as well as participating in court hearings about both contested cases and compliance with prior orders. The Inter-American Court's docket of new cases was close to what it had averaged over the decade, albeit with a low in of cases and a high of submissions in . In , those cases involved eight countries; an additional cases were underway, involving ten countries, while were in the compliance stage, with cases having provisional measures in force.

The combination of efforts to get more cases to the Inter-American Court and its minimal resources for dealing with them regularly prompts concern. In , with some pending contentious cases and new rules that were likely to produce more cases, the Commission's President Antonio A. Cançado Trindade noted the shortage of professionals to respond, as he warned about a looming paralysis of the Inter-American system without a substantial increase in the Court's budget to permit it to sit for longer periods of time.

Costa Rica and the Inter-American Court: Linked not only by conviction, but by action

Compliance is one problem, and a place in which to do the work another. In the OAS General Assembly approved a court without providing a budget to support its workplace or staff. But Costa Rica offered a building, thereby making plain that, in the words of that country's President, Rodrigo Carazo Odio, it was linked . . . not only by conviction, but by action to the Convention on Human Rights. In November of , the member states agreed. The Court has resided in Costa Rica since then, and in the Government of Costa Rica officially donated the building. Its setting is modest, and neither the building nor its art is documented in the kinds of books produced by similar courts.

The speeches that celebrated the court's opening in Costa Rica in are replete with reminders of the challenges. The Deputy Secretary General of the OAS reflected not only on the long fight for justice on our Continent but also on recent upheavals suffered by human rights that made for a future as full of problems and difficulties as it is of faith in what the common will of the American family can achieve. Urgency was the tone of President Carazo Odio, who called for the development of a progressive jurisprudence of human rights that dealt with the notorious procedural deficiencies in the Convention's statutes.

Rodolfo Piza Escalante, a Costa Rican who served as the Inter-American Court's first leader, delivered another sobering speech. Calling the court's inauguration the historical culmination of an important phase in the long battle fought by the American community for the fundamental rights and liberties of man, President Piza Escalante spoke of our disturbed continent filled with very disparate political regimes, diverse socio-economic structures, complex geographical, geological and even climatic contrasts. Only fourteen of the twenty-eight OAS states had ratified the court's creation by , and only one Costa Rica has formally recognized the jurisdiction of the Court in general.

Another jurist, Thomas Buergenthal, emphasized the limits of the court's powers and its dependency on the member states. A survivor of Nazi Germany, Buergenthal was elected to serve despite the fact that his country, the United States, had not ratified the Convention on Human Rights. Buergenthal reminded his audience that the Court has no army; it has no police; it has no prisons; and even when it enters a judgment decreeing that an individual is entitled to a specific sum of money as compensation for violations of his human rights, that judgment is not *ipso facto* enforceable on the domestic plane of the country against which it was decreed. Besides, the Court does not have the power to punish the individual wrongdoers or to hold specific government officials in contempt.

Engineering a , Renovation

Another way to understand the differences between the Inter-American Court of Human Rights and the European Court is to compare where they work. Like its counterparts in Europe, the Inter-American Court of Human Rights outgrew its original space. Unlike its European counterparts, the Inter-American Court is permitted to sit elsewhere and occasionally has done so, for example, if witnesses are unable to travel to the court's seat in Costa Rica.

In , the OAS agreed to renovate its three-story building from the s. But that project bears little resemblance to the work of either Dominique Perrault or Richard Rogers. The resolution committed , from the OAS. Details of the construction do not suggest that architects were asked to compete by designing models of various options. Rather, one learns of the architectural and engineering firm employed, Construction Company Navarro y Avilés S.A., only through a mention in a quarterly report that the building was progressing on time and in compliance with the allotted budget. The resulting renovation and a three-story annex provided an additional hearing room, more courtrooms for judges, and office spaces. The project took a year and came in on budget.

Modeling the Future: Epic Architecture and Lonely Buildings

The short-lived Central American Court of Justice (fig. ⍰/⍰) called itself the first ⍰permanent⍰ international court. In existence from ⍰ to ⍰, it proved transient but the idea that it represented produced another institution, also supported by Andrew Carnegie and also aspiring to longevity, the Permanent Court of Arbitration (PCA). Extant now for more than a century, the PCA is housed at The Hague in an amazing building, the Peace Palace (fig. ⍰, color plate ⍰) that has helped to make the Netherlands a home for international justice. The PCA has shared space with two other institutions bearing the title ⍰court⍰: the Permanent Court for International Justice (the PCIJ, or ⍰World Court⍰), begun under the League of Nations in ⍰, and the United Nations' International Court of Justice (ICJ), which superseded the PCIJ in ⍰ and took up residence at the Peace Palace soon thereafter.

This chapter moves along the continuum that began with city, national, and regional courts to international institutions. These entities, which represent themselves through epic architecture, call themselves ⍰courts⍰ or ⍰tribunals⍰ as they assert forms of jurisdiction that span the globe. During the course of the twentieth century, the authority asserted by such ⍰world courts⍰ expanded. Initially such institutions heard only civil disputes between nation-states but, by century's end, some entertained petitions from non-state entities, and others exercised criminal jurisdiction.

These transnational courts hearken back to the grand town halls of Siena and Amsterdam, using spacious structures to proclaim and produce authority. The new institutions also forecast the twenty-first-century confusion about what the mandates and powers of courts might be. The titles Peace Palace and Permanent Court of Arbitration are exemplary, for ⍰peace⍰ and ⍰arbitration⍰ rely on the consent of disputants, whereas ⍰court⍰ implies the compulsion of the state, forcing attendance and compliance. Moreover, ⍰palace⍰ well captures the majesty of the building but also the autocratic history of adjudication rather than its democratic future.

Dozens of institutions spawned during the twentieth century adopted variations on these terms; the Olympic Committee's Court of Arbitration and the dispute panels and Appellate Body of the World Trade Organization are illustrative.⍰ To simplify rather than be comprehensive, this chapter begins with a sketch of the development of the three institutions that were resident at The Hague⍰ the PCA, the PCIJ (that existed from the ⍰s through the ⍰s), and its successor institution, the ICJ⍰ each competent to hear an array of subject matters if brought by consenting nation-states. We then turn to five specialized tribunals, one devoted to the Law of the Sea and four asserting jurisdiction to prosecute criminals accused of gross violations of human rights.

We provide some details about the internal operations and physical settings of each in order to probe how the term ⍰court⍰ has been deployed and what it might mean. As will become plain, some of these institutions are either not ⍰courts⍰ in various respects or, as we examine in Chapter ⍰, they alter the connotations of the term by shifting the judicial role into conciliator and manager operating outside the public purview. Moreover, the proliferation of these various institutions signals the development of intense competition for business among various dispute-resolution providers. In some of these courts, the grandeur of the buildings and the hopes there expressed outstrip current dockets.

The chapter's sweep of twentieth-century institutions ends with the creation of several criminal courts, and hence with a disheartening epilogue to the exuberance that crafted the Peace Palace. The arc of the twentieth century moved from tribunals aiming to quiet conflict to those seeking to bring to account persons committing atrocities. As we forecast in the opening chapter, this multi-century review aims to put the question of adjudication's longevity on the table. This chapter can be read as continuing to catalogue the triumphs of the model, but the discussion of each such court also entails questions about costs, delays,

Figure ⌧⌧⌧ The Peace Palace, International Court of Justice, The Hague, the Netherlands.

and, more profoundly, the desirability of the mode of decisionmaking proffered. The name of one of the institutions discussed⌧ the Permanent Court of Arbitration⌧ makes the point by demonstrating the utility of deploying the symbolism of the word ⌧court⌧ even as the PCA's mission divested that term of its attributes of obligation, compulsion, and publicity and replaced them with voluntarism, negotiation, and privacy.

The Peace Palace and the International Court of Justice

From the Renaissance until relatively recently, town halls and court buildings took their names from their functions and the places where they were located. During the second half of the twentieth century, federal courthouses in the United States gained new appellations, named after government officials such as judges who worked within or legislators who had helped to secure construction funds. Moreover, courthouses in various parts of the world came to be associated with the architects who designed them, so that one speaks about Henry Cobb's Boston Courthouse and the Palais de Justice by Richard Rogers in Bordeaux and by Jean Nouvel in Nantes.

In contrast, the building known as the Peace Palace (fig. ⌧⌧⌧) and housing the PCA and the ICJ is linked to the name of its central sponsor and funder, Andrew Carnegie. Committed from the ⌧⌧⌧⌧s to the peace movement, Carnegie became an ⌧enthusiastic and outspoken advocate⌧ for an international court of arbitration.⌧ Another person central to the formation of the PCA was Czar Nicholas II of Russia, who championed conciliation for various reasons, includ-

ing concern about losing the arms race. His foreign minister extended a request in the name of the Czar to Queen Wilhelmina of the Netherlands to host the Disarmament Conference that, in turn, produced the Peace Palace. Nicholas's full-size portrait remains in the room dedicated to the Permanent Court of Arbitration, but the Russian Revolution of relegated its placement to an entry corner and, at times, it has been shrouded in drapes.

Convening for Peace

The Hague Conference was the outgrowth of a half-century of work by what are now called NGOs (non-governmental organizations) in shaping a social movement. A General Peace Convention held in in London was followed in by a second Congress in Paris, with Victor Hugo as its chair, which culminated in resolutions calling for the peaceful settlement of disputes. Across the Atlantic Ocean, state legislators took up the issue, with proposals for an international court of justice coming in from the Massachusetts Legislature as well as from other states, to be paralleled in by the International League of Peace and Freedom, founded in Geneva. The Bar Association of the State of New York formally supported the idea a few decades later when, in , it proposed an international body with nine judges from nine nations. Support over several decades also came from various lawyer-based entities, such as the International Law Association, the American Society for the Judicial Settlement of International Disputes, and the American Society of International Law.

Efforts to generate means to settle disputes were not only on paper. In practice, many countries had turned to arbitration, especially when arguing about territory. One account identified more than international arbitrations that had, by the late s, taken place either through ad hoc arrangements or under treaties. For example, in a conflict between Argentina and Chile over the Andean border was formally submitted for resolution to the English Queen Victoria, succeeded after her death by Edward VII who then took over her role as arbitrator of that dispute.

The Conference began that July when the Dutch government welcomed one-hundred diplomats, military men, jurists and politicians from all over the world who met at the Royal Palace of Huis ten Bosch in The Hague. The media and various activists were excluded when representatives from twenty-six countries assembled. All came from European countries except three from Asia (Japan, China, and what was then called Siam), two from the Americas (the United States and Mexico), and one from the Middle East (the country then called Persia). As various discussions note, the only woman to be invited was Bertha von Suttner, an undisputed leader of the Peace Apostles who was an Austrian suffragette and author of the book *La Down our rms*. This Convention for the Pacific Settlement of International Disputes produced articles for curbing the arms race, the humanisation of the conduct of war and the founding of the Permanent Court of Arbitration.

A second conference, held eight years later in , had a broader array of participating nations and a good deal of support from Elihu Root, then the United States Secretary of State. Forty-four states sent representatives; and eighteen came from Latin America. That same year, the Central American Court of Justice (discussed in Chapter) was founded as the first permanent international court. It survived for a decade and was, more briefly, housed in another palace funded by Carnegie until that building (fig. /) was destroyed by an earthquake. Hopes for peace were similarly upended by World War I in . Nicholas II was forced to abdicate and died in the Russian Revolution of that followed.

The Amsterdam Town Hall Redux: Dutch High-Renaissance Architecture for the World's Library and Court

In the United States, Andrew Carnegie is identified with education. Consistent with that persona, he was initially focused on building an open library dedicated to international law but was persuaded to provide funds for housing both a library and the newly crafted Permanent Court of Arbitration. Carnegie created a Dutch foundation (*stichtin*) to which he gave . million (about million in dollars). The donative transfer document of June , , explained that the establishment of a Permanent Court of Arbitration by the Treaty of th of July, , is the most important step forward of a worldwide humanitarian character which has ever been taken by the joint Powers, as it must ultimately banish war, and further . . . that the cause of the Peace Conference will greatly benefit by the erection of a Court-House and Library for the Permanent Court of Arbitration. That text is reflected in the drawings on the certificate (fig.) awarding Carnegie an honorary membership in the Dutch Society called Vrede door Recht (Peace through Law). The certificate is adorned with a dove of peace, who flies about a Justice (her eyes obscured by the scales she holds high), below whom sits Peace, crowned with a laurel wreath and holding a palm branch, a quill, and a book. No swords are in sight.

Competin and Liti atin for Buildin Commissions

The building of the Peace Palace proved to be the paradigm for what developed thereafter in twentieth-century national and regional court construction. And, like the Amsterdam Town Hall, the Peace Palace has been richly documented, in large part through the scholarship of Arthur

Eyffinger.[illegible] As described in prior chapters, architectural competitions for courthouse designs embodied both the founders' economic capacities and their political and legal aspirations for quieting conflicts through third-party interventions. Further, as became the pattern for transnational courts, the host country played a major role in planning and in providing substantial funding. In [illegible], the Dutch Parliament voted to spend [illegible],[illegible] guilders (or what would have been more than [illegible] million in [illegible] dollars) to purchase the land.[illegible] Carnegie's Dutch foundation (which included the Dutch Minister of Foreign Affairs and some members of the Dutch royalty) and a Dutch committee oversaw the public competition, inviting architects to propose designs.[illegible]

The [illegible]Conditions of Competition[illegible] sought submissions, due by March of [illegible], for the court and the library. The competition was formally [illegible]open to architects of all nations[illegible] but several individuals were specifically invited to compete.[illegible] The six best were to receive monetary prizes on a sliding scale.[illegible] The rules called for anonymous submissions of scaled drawings, with the front [illegible]in colours[illegible] and explanations in French.[illegible] Proposals were to detail a [illegible]Great hall with main staircase[illegible] a [illegible]Large Court of Justice with or without an anteroom, with a removable podium, and a gallery either along a side wall or at the end[illegible] a [illegible]Small Court of Justice[illegible] a council room adjoining each,[illegible] and rooms for disputants to meet.[illegible] An upper story was to have spaces for the [illegible]Administrative Council of the Permanent Court of Arbi-

tration to accommodate more than thirty people around a table. The library was to be a separate building accessible from the park but connected through the interior to the courthouse. Requirements included , meters (more than , feet) of bookshelves and two reading rooms, as well as dedicated rooms for maps, a catalogue of materials, and for foundation staff. Failure to comply with one or more of the provisions of the present programme was to result in being excluded from the competition.

Again setting the pattern for the late twentieth-century competitions, the jury was comprised of architectural experts drawn from various countries Great Britain, the Netherlands, Germany, Austria, France, and the United States. Led by the Dutch Piet Cuypers, who had designed both the Rijksmuseum in Amsterdam and that city's Central Station, the jury also included the chair of the Carnegie Foundation Board. The decisions were published in a volume on the designs chosen that explained the winnowing down of thousands of submissions to six finalists. At the time, commentators wondered whether the aesthetic for an international building should rely on European or classical references. Some thought that, as a political matter, the building should not remind viewers of a particular country. Eighty years later, when Richard Rogers designed the biomorphoic European Court of Human Rights (fig. /), he too spoke of efforts to move beyond any one national style. (After the fact, his building was described as reminiscent of Russian Constructivism.)

More than two hundred contributors submitted some , designs, numbered to provide anonymity. All the winners, however, came from the group invited to participate, and the first prize went to Louis M. Cordonnier, an architect who had also won an international competition for the New Exchange at Amsterdam. The jury provided details of the best, with brief comments on the pros and cons of the various designs. For example, the jury objected that one design departed noticeably . . . from the noble simplicity that should characterise a building devoted to the serious and dignified purposes of the Peace Palace. Among the top forty-four designs were submissions from some of the luminaries of twentieth-century architecture, such as the innovative Eliel Saarinen from Finland, but the two that the jury preferred were by French architects tending toward the more traditional, and neither was simple. The jury forwarded its conclusions to the building committee to use as a basis from which to proceed in finally obtaining from the architect, whom they would employ, a design for execution. This phrasing was a polite way of explaining that no design, as submitted, could actually function as a definite plan for the building.

A major debate then ensued about whether to follow the jury recommendation or choose another design, but the building committee confirmed Cordonnier as its choice. Far from the jury's embrace of noble simplicity, Cordonnier proposed an extravagant amalgam of various European traditions. With tall, castle-like towers at its front and two smaller ones at the back corners, Cordonnier's design bore a family resemblance to the Amsterdam Town Hall of and to various French chateaux. The jury commended it for doing so This design is an attractive one and of a style following the local traditions of XVI century architecture even as the jury criticized the proposal's failure to provide sufficient unity of character to the portions of the structure devoted to the court and to the library. Other commentators of the era agreed that the drawings evoked the High Renaissance Dutch architectural style as well as that of a northern French medieval town hall. Heavily detailed and decorated, admirers thought it captured much of the vivacity and prettiness of the Low Countries.

Critics, however, saw the Cordonnier design as parochial and backward-looking rather than an epoch-making building . . . international in character and free as far as possible from local influence. A *New ork Times* review called it wholly imitative of the architecture of another era, without the slightest effort at large symbolism of modern life. Some thought the Cordonnier building looked like an overwrought French chateau, crowded with picturesque towers, gables, and roofs, most of which were quite unnecessary. Others thought it a pale imitation of the Hôtel de Ville (Town Hall) of Ypres, albeit with a facade the color of much-visited Flemish town halls. Later commentators would call the style Flemish Gothic or a blend of the Romanesque and Byzantine styles, and describe the structure as rather excessive, if not to say baroque. Thomas Edward Collcutt, who then chaired the Royal Institute of British Architects and had served on the jury (evidently unhappily), pronounced the decision-making a disastrous failure.

The design was also unbuildable, as well as too expensive for the sum provided by Carnegie. Had the proposal gone forward, funds might have covered the courthouse but not Carnegie's treasured library. One of the six finalists, the renowned Otto Wagner from Austria, volunteered to retool his proposal, and others had come in less expensively, albeit not truly within budget. Cordonnier then agreed to revisions, supervised by Dutch architect J. A. G. van der Steur of Haarlem, who sobered down the building both in terms of aesthetics and in terms of finance. The four large towers were reduced to one great spire, shown in figure , that looms over the other roof turrets and spikes. The great tower, , feet or meters, is graced by a clock (with a face that spans eleven by seven feet) donated by Switzerland. Those reductions, however, did not abate the construction challenges; shortage of finances was a perennial problem and shortcuts to economize were sought everywhere, including in the gardens designed by Thomas Mawson.

Aesthetics and finances were not the only sources of the [illegible]storm of indignation amongst both the participants and the general public[illegible] that ensued. Critics sought to enjoin construction based on the claim that jurors had violated the rules when making the selection.[illegible] An essay on the litigation noted the irony of ending up in the courts: [illegible]Not even the foundation of a monument for Peace had been able to avoid squabbles, strife and controversy.[illegible] Eight architects served a [illegible]bailiff's writ[illegible] on the Carnegie Foundation and argued that the winners had [illegible]departed from the stipulations of the Programme for participation[illegible] by not providing designs appropriate for the site and by exceeding the building budget that had been advertised.[illegible] They sought to dissolve the competition, disqualify some submissions, and receive costs and damages.[illegible] In [illegible] a Dutch court concluded that a legal relationship did exist between the foundation sponsoring the competition and the participants, but that the duty owed to entrants entailed only announcing results. Various parameters, such as the statement of a budget, were guidelines rather than [illegible]a condition for participation.[illegible]

The court's decision came two years after the first stone of the Peace Palace had been laid, in [illegible].[illegible] The building was completed in [illegible]. A brochure documenting its opening praised the [illegible]slender towers rising up to its canopied dome[illegible] and noted that [illegible]the rows of sturdy pillars that line its arches . . . combine to give this creation an air of spirit and strength.[illegible] The original competition plan had called for a

separate library, connected to but distinct from the Peace Palace. But in the end, the Carnegie Library stood at the rear of the Palace, with its own entrance from the back. Within a decade, pressure to expand the office spaces for the court-oriented side of the building required the library to yield space. As one account detailed, the following decades were a continuous struggle by librarians desperately trying to adjust the lofty ideals of the founding fathers to the modest means provided to the World Library of International Law.

National Artifacts for the World Court

The Peace Palace shares with the Amsterdam Town Hall a remarkably large footprint; by Dutch standards, both are buildings of uncommon grandeur. The Peace Palace's quadrilateral seventy-eight square meters (or about , square feet), has an inner courtyard (fig.) of forty-four square meters (or more than , square feet). Yet unlike the burgomasters of Amsterdam and the builders of other national courts insistent on controlling interior as well as exterior designs, the planners of the Peace Palace wanted to inspire joint ventures. All Contracting Powers to the and Hague Conventions were invited to send materials for construction and ornamentation as expressions of good will and as representations of the enterprise's diversity.

Any current visitor to the building will be struck by the result, a dazzling (and motley) array of various world arts. What meaning to take depends upon one's vantage point. The Carnegie Foundation posits that what the Court lacked in authority as an international judicial institution in the early years, was more than compensated by the formidable character, the artistic furnishings and exuberant symbolism of its housing. Other commentators have been less sanguine, opining that the lack of world harmony is reflected in the architecture of the building, whose interior has amassed splendiferous clutter.

The Netherlands provided the site as well as some of the windows and steps, and has also loaned major works of art. Floor mosaics on the entry level were laid by young French girls (today likely understood as too young to work) crawling on hands and knees. France also supplied paintings. Twenty-three kinds of marble came from Italy; wooden railings and gates from Germany; a polar bear porcelain fountain from Denmark (seen from above in figure); teak from Indonesia; cloisonné vases from China; and rugs from Turkey. Fabulous silks provide a -foot wall tapestry for what is called, in honor of the donor, the Japanese Room. The efforts of , dyers and weavers produced the work over some five years. An acknowledged pièce de résistance is the contribution from Russia, a massive gold-trimmed jasper vase, adorned with the Romanov two-headed eagle. At two-and-a-half tons, it by far outweighed the floor capacity where it was to have rested; the vase was relocated to an area with a reinforced floor.

As its national gift, Argentina provided a massive statue of Christ that is one of several references to the Old and New Testaments and the classical age, akin to those in Amsterdam's Town Hall. The Amsterdam Town Hall displayed a Ferdinand Bol painting, *Moses Descends from Mount Sinai* (fig. /). The Hague Peace Palace has three Bol paintings hanging in a space that has been variously used and now serves as a conference room. His grand Renaissance renditions, on canvasses some thirteen by thirteen feet, show two Old Testament scenes, *The Finding of Moses* and *The Presentation of Gifts in Solomon's Temple,* alongside a Greek myth, *Æneas Receiving His Armour from Venus in Vulcan's Forge.* The ceiling continues the Renaissance iconography through a triptych by Gerard de Lairesse. The panels *Concordia Tramples on a Chained Mars, Minerva Conquers the Harpies Violence, Envy and Deception,* and the *Maiden of Amsterdam* denote the virtues of urban free trade.

Other Renaissance Virtues are scattered about. One can find Hope, Faith, and Love in stained-glass panels along with many a Peace and a Justice, such as the terra cotta ceiling ornament by Herman Rosse shown in figure (color plate). Another Justice, joined by Amity, Peace, and Concordia, adorns the monumental cast-iron gates that guard the entrance. In addition, a large female personification of *Peace Through Justice* (fig.), by the American sculptor Andrew O'Connor, provides a ,-pound match for the monumentally proportioned central staircase. The building is also appointed with attributes of Virtues, carved in wood and stone (such as Justice's scales or Peace's olive and laurel leaves) and Latin texts (such as "Pax Belli Extinguit Flammas" or "Peace Extinguished the Flames of War").

Outside, the Mawson gardens offer yet other images of peace, and over the years the Carnegie Foundation which continues to own and operate the Peace Palace has received many gifts. In , South Africa donated a bust of President Nelson Mandela that has been placed close to one of Mahatma Gandhi, near busts of other historical figures, Andrew Carnegie included.

How might one read this interior By the end of the twentieth century, the building's excesses had garnered affectionate tolerance; observers commented that the vast Neo-Gothic or Disney gothic structure had fulfilled the Victorian era's canon that it is always a good idea to decorate the decoration Books by the Carnegie Foundation celebrate the Peace Palace for telling the stories of peace, faith and justice. While that narrative encompasses diversity in some respects, Arthur Eyffinger described the Peace Palace's iconographical compendium as loyal to the pillars of the Dutch Golden Age: Christian faith, the wealth of the merchant class, and classical learning.

Tribunals to Which No Country Can Be ⍰Bidden⍰

Even more monumental than the building is the question it provokes: What combination of practices permits one to use the appellation ⍰international court⍰⍰⍰⍰ By delving into the details of the institutions that have lived inside the Peace Palace, we explore debates about that issue as well as how the creation of new institutions called ⍰courts⍰ has begun to change what that term means.

A recap of the institutions that have used the Peace Palace is in order. Since its opening in ⍰⍰⍰⍰, the Peace Palace has continued to house one entity⍰ the Permanent Court of Arbitration⍰ and hosted two other ⍰courts⍰ A first, called the ⍰Permanent Court of International Justice⍰ (PCIJ) of the League of Nations, proved (despite its name) to be transient, extant from ⍰⍰⍰⍰ until its formal dissolution in ⍰⍰⍰⍰. The other, which followed within a week of the demise of the PCIJ, is the United Nations' International Court of Justice (ICJ) that remains in operation. Given the hopes that all represent for ⍰peace through law⍰ and the enormous political freight, the scale of the Peace Palace fits its courts.

But institutional dockets and the structure make interpretations more complex. Over its hundred years, the PCA publicly reported fifty-four ⍰cases conducted⍰ under its auspices.⍰⍰⍰ The PCIJ's output from ⍰⍰⍰⍰ to ⍰⍰⍰⍰ (when, upon the occupation of The Hague in World War II, it effectively went out of business) numbered about fifty-five judgments. From ⍰⍰⍰⍰ until ⍰⍰⍰⍰, the ICJ received some ⍰⍰⍰ cases or, on average, under three a year. Each of these institutions relies on parties' consent to their jurisdiction, and none has coercive authority to enforce decisions.

Despite the relatively small number of disputes addressed, these courts have prompted discussion and debate worldwide on what courts can (and cannot) do. Moreover, as we argue in Chapter ⍰⍰, the international courts analyzed here have a good deal in common with various national courts that are also dependent on litigants to seek them out and largely reliant on acceptance of their orders to obtain compliance. Further, the methodology embodied in the PCA⍰ seeking conciliation⍰ has been embraced by domestic courts around the world. Thus, while the PCA and ICJ share the Peace Palace, whose nineteenth-century architecture looks back to the Renaissance, their workings forecast twenty-first-century debates about how to select judges and what judges should be asked to do.

The Misnomer of the Permanent Court of ⍰rbitration and the Pu⍰⍰les of ⍰nternational ⍰d⍰udication

The phenomenon of international courts has generated a large literature addressing a range of concerns about the coherence and reach of such entities. Courts are typically defined as coercive institutions imposing judgments in the name of the law, even if implementation belongs to the executive branch. Arbitration⍰ in twentieth-century terminology ⍰ denotes a voluntary process aiming to compromise disputes. Nineteenth-century usage sometimes referred to judges as arbitrators, for example in common law jurisdictions when judges sat without juries to decide legal claims. Calling an institution a ⍰Permanent Court of Arbitration⍰ is, thus, ambiguous at best.

So was the status of the the PCA at its inception. Those who served were to be called ⍰Members of the Court⍰ not ⍰judges.⍰⍰⍰ Membership, in turn, simply put them on a long list as individuals who were nominated by states and available to mediate disputes⍰ upon request⍰ through international legal precepts to open up the ⍰possibility of substituting law for war.⍰⍰⍰ As one scholar of the institution during its early years explained, the ⍰Permanent Court of Arbitration is not in any sense a tribunal⍰ and hence its name was a ⍰misnomer.⍰⍰⍰

In addition to the puzzle about the term ⍰court of arbitration⍰ other questions came then (as now) from speaking about courts as ⍰international⍰ Reformers of the nineteenth and twentieth centuries were ambitious in crafting a new international law regime and their output has been applauded by some for reaching across a world rich with differences and criticized by others for its colonial past and its undemocratic or non-representative present.⍰⍰⍰ Identifying international precepts that ought to be called ⍰law⍰ adds another level of complexity. The previous chapters described courts in national and regional regimes that, whether founded by aristocratic, republican, or democratic polities, had mechanisms⍰ from fiats to legislation⍰ for generating and enforcing norms of primary conduct. What makes a rule that spans governments ⍰law⍰⍰ Is it plausible, as some international law proponents suggest, to share a ⍰legal conscience⍰ across boundaries⍰⍰⍰

One response is that some customs and usages are so widely entrenched that they should be accorded the status of law, known as ⍰*us co⍰ens*⍰ Proponents cite deeply shared practices as evidence. As governments affirmatively conduct themselves in accordance with such precepts, they do so with an understanding that their conduct is obligatory. The prohibition on piracy is an oft-cited example of such a worldwide legal norm. In addition, treaties⍰ contracts among governments⍰ set forth some provisions as positive precepts to which states affirmatively consent. Hundreds of disparate nations adhere to various of the United Nations' conventions and treaties. Yet to the extent that those commitments are operationalized, they are expressed in radically diverse ways. Thus, international law critics argue, to speak of authoritative obligations and shared practices may ascend to levels of generality that drain out real rules. Moreover, compulsion ⍰ presumed to be a facet of ⍰law⍰⍰ is absent, in that legal remedies for violations are sparse.

Another puzzle is the relationship of ⍰world courts⍰ to politics. One stated aspiration is that international judicial institutions come ⍰with no political entanglements.⍰⍰⍰ That

referent aims both to protect judicial independence and to insulate such entities from the dominance of some nation-states at the expense of others. But courts actually need "political entanglements" of some kinds. As our account of the last many centuries has made plain, judicial institutions are anchored in political commitments forming particular social orders. Something called a "court" has to be moored in government regimes, for its legitimacy to render judgments requires support fairly termed "political."

One response is to conceive of international courts as located in a distinct form of politics reflective of their unusual composition and objectives. For example, legitimacy could be gained by providing a venue for strategic interaction among nation-states to demonstrate that mutually enforcing legal and moral precepts are beneficial.[illegible] Further, testimonies to the political import of international courts come from a comparison between their saliency and their use. As noted, their dockets are relatively small. According to public records, fewer than [illegible] proceedings over the course of a century have come before the three dispute resolution courts at The Hague. Nonetheless, discussions and political actions either supporting or opposing these institutions— as well as the next generation (such as the International Criminal Court and the International Tribunal for the Law of the Sea)— have an intensity evidencing the substantiality of symbolic and practical stakes.

Yet another preliminary framing issue is about whether to aspire to singularity (the "World Court") or seek to develop a series of complementary and competing institutions. In practice, even as early twentieth-century efforts focused on a World Court, the Peace Palace itself housed two institutions for dispute resolution. Since then, several other international courts have been forged. In addition, competition comes from the domestic level; the highest-level courts in domestic settings are hegemonic, claiming for themselves not only final but also exclusive authority to render certain kinds of decisions.[illegible] How does overlapping and incomplete authority square with the concept of a court and the finality of its judgments?

Responses to this array of questions can be found in various theoretical accounts as well as in the workings of courts styled "international" as they reflect a mix of shared aspirational norms, political alliances, and economic self-interest.[illegible] One response to questions of legitimacy comes from the establishment of the PCA. Its arbitrators derive their authority from the consent of those participating, who pick that venue, select their decisionmakers, generally pay for them, and often choose the rules that govern.

The Small "Hall of Justice and the PCA"

The PCA came into being in [illegible] and expanded through the [illegible] Convention for the Pacific Settlement of International Disputes. The PCA has three parts: a panel of arbitrators (in "no sense judges"), an "International Bureau" with a small staff akin to a court's registry or clerk's office, and an "Administrative Council" that includes diplomatic representatives from member states charged with adopting rules and organizing the financial support for the PCA.[illegible] Nation-states nominate no more than four persons willing to serve as arbitrators; they may choose individuals from anywhere. (For example, as of the [illegible]s, some [illegible] individuals were listed; of the twenty from the United States, five had been selected by the King of Siam.[illegible]) The number of potential arbitrators outstripped the number of arbitrations. During the PCA's first thirty-three years of operation, some [illegible] individuals were listed and twenty-nine served.[illegible] Before [illegible], the PCA had heard seventeen disputes.[illegible]

The PCA operates episodically, when disputants bring conflicts to it. The initial spurt of activity ended with World War I, with a resurgence in the [illegible]s. One of the explanations for the limited demand is that, from its inception, the PCA has functioned alongside other institutions that also offer arbitration. Even signatories to the Hague Conventions of [illegible] and [illegible] could go "wholly outside" those frameworks to use other arbitrators.[illegible] The PCA, in turn, has also accepted disputes that involved non-signatories.[illegible] Further, after the League of Nations created a Permanent Court of International Justice at the Peace Palace, that entity extended its offices in the [illegible]s to "mixed arbitrations." That mix was not of judges from different countries (as the Mixed Courts of Egypt had done) but rather a mix of parties— state and non-state parties including private corporations.[illegible]

All told, by [illegible], forty-seven state parties had used the PCA[illegible] for some twenty-plus publicly reported arbitrations.[illegible] Then (as described by a member of the PCA in [illegible] at the celebration of the court's hundredth anniversary), the PCA "fell into a state of lethargy,"[illegible] listing only six cases in which awards were made between [illegible] and [illegible].[illegible] But during the later part of the twentieth century, the PCA entered into a series of "cooperation agreements" with other transnational arbitral organizations, such as the International Centre for Settlement of Investment Disputes (ICSID), the Multilateral Investment Guarantee Agency, and the International Council for Commercial Arbitration.[illegible] Further, in the [illegible]s, the PCA gained greater currency, in part when it played a role in dealing with claims arising out of the taking of American hostages by Iran and the seizure of Iranian assets by the United States.[illegible]

Looking at the span thereafter from [illegible] to [illegible], the PCA listed almost thirty cases involving disputes between Eritrea and Ethiopia; Ireland and the United Kingdom; Belgium and the Netherlands; Guyana and Suriname, and many more, and may have been involved with others not disclosed.[illegible] By [illegible], the PCA reported it had had a "dynamic year" as it functioned as a "registry" for thirty-four cases, as well as was requested to become involved in several others.[illegible] (As of [illegible], more than forty-five matters

were pending.) Commentators thus speak of the two eras of the PCA and describe the post-[illegible] era as [illegible]unparalleled[illegible] in the expansion of membership (to [illegible] states) and in the volume of filings.[illegible] Taking a longer view, over the first hundred years of its existence, the PCA lists more than fifty matters, some related to contracts between nations, some involving treaties and boundary disputes, and many about investment disputes. (As noted, the PCA only publishes information with parties' consent; further it does not provide full information on interim decisions, and hence may have a larger volume of work than its lists indicate.)

The PCA now uses the Small Hall of Justice (fig. [illegible]) at the Peace Palace. The top panel shows the room configured court-style and permits a glimpse at the portrait of Nicolas II. The second scene is a [illegible] meeting of the Iran–United States Claims Tribunal, which rented the space for some of its proceedings.[illegible] As that view makes plain, the Small Hall is dominated by [illegible] *lorification of Peace,* a cartoon for what was to have been a tapestry from France.[illegible]

Sources for new business for the PCA include a growing number of non-state entities. International organizations, regional confederations such as the European Union, and a host of commercial entities are active participants in transnational transactions, interfacing with nation-states and looking for legal frameworks beyond national borders. In [illegible] the United Nations' Commission for International Trade Law (known to many as UNCITRAL) provided rules for arbitration that have been used by the PCA,[illegible] which also gained a boost as colleagues and competitors developed an active market for dispute resolution services. As we noted, the PCA has agreements with other organizations that are both competitors and tributes to its model. The ICSID, under the World Bank, and the arbitral panels created through the United Nations Convention on the Law of the Sea, detailed later, proffer similar to services to the PCA as it rejuvenated during the first decade of the twenty-first century.[illegible] These various arbitration centers not only compete with each other but also with court-based adjudication.

Delineating the processes of arbitration sharply from, rather than overlapping with, adjudication would be misleading. Commentators speak of the PCA's [illegible]substantive law[illegible] and that its principles, put forth in various disputes, remain [illegible]good law.[illegible] Further, its practice resembles that of international courts, which do not issue decisions that bind their successors as would courts that use the system of precedent (such as in the United States). Nonetheless, international courts build bodies of legal principles. Moreover, some arbitrations can involve large numbers of lawyers and take a considerable amount of time, thus sharing features[illegible] expense and delay[illegible] of litigation that many bemoan.

In some respects, however, the PCA offers disputants specific qualities that are different from those traditionally associated with courts: the opportunity to choose their own decisionmakers and, if they desire, to conduct proceedings in private and obtain results that are private.[illegible] Those consumers able to shop and to pay for services may obtain more flexible remedies than they would from courts and can keep those resolutions confidential. But these distinctions may also not endure for, as we argue in Chapter [illegible], domestic courts are reconfiguring to look more like the PCA.

The Lea[illegible]ue of Nations[illegible] Permanent Court of [illegible]nternational Justice

Even as internationalists built the PCA during the early part of the twentieth century, they thought reliance on arbitration insufficient, for they wanted an institution that was more like a court. Some criticized the PCA for being too willing to render decisions based on [illegible]compromise[illegible] rather than insisting on adherence to international precepts.[illegible] What was needed was [illegible]justice under accepted law[illegible] through the [illegible]appointment of a permanent salaried international judiciary . . . [illegible]to[illegible] add immensely to the importance, dignity and labors[illegible] of the occasionally deployed and otherwise employed members of the PCA.[illegible] In [illegible] The Hague Conference had considered a Court of Arbitral Justice with these features but could not garner enough support for it. Instead, what was produced in [illegible] through the League of Nations was another voluntary court, the Permanent Court of International Justice. Unlike the PCA, however, this court did have full-time judges who were neither paid by nor selected by the parties.[illegible]

The League of Nations took up the question of a court in [illegible], shortly after it was formed. The League established an Advisory Committee of Jurists to shape proposals to be [illegible]submitted to the world for its approval.[illegible] Several proponents wanted a court with [illegible]compulsory jurisdiction from the very start, at least in certain cases,[illegible] but their view did not prevail. The final version of the PCIJ created an opt-in institution, competent to hear disputes only between sovereign states[illegible] and then only if those states agreed, and only if their disputes implicated treaties or other principles or breaches of international law.[illegible] On the other hand, a few treaties did [illegible]confer obligatory jurisdiction on the court[illegible] (including the Arms Convention of [illegible] and another on Navigable Waterways[illegible]) and states could also bind themselves, in general, to consent to jurisdiction.[illegible]

The PCIJ not only lacked compulsion over disputants; it also lacked another feature thought intrinsic in courts[illegible] powers of enforcement. Litigants at The Hague [illegible]promised[illegible] in advance to abide by the judgment when rendered,[illegible] but broken promises incurred no sanctions [illegible]unless other nations use[illegible] their combined force to coerce or crush the offender.[illegible] In short, this new court was plainly much [illegible]less than a supreme court[illegible] of the world.[illegible]

Nationality and Judicial Selection

A major issue[illegible] one that [illegible]threatened to prove insuperable[illegible] was what judges from which countries would sit on the court. The [illegible]great powers[illegible] wanted permanent seats,

FIGURE ⊠⊠⊠ Top panel: The Small Hall of Justice in the Peace Palace used by the Permanent Court of Arbitration.
Bottom panel: A ⊠⊠⊠⊠ meeting of the Iran–United States Claims Tribunal in that Hall.

Photographs reproduced courtesy of the Carnegie Foundation and the Iran–United States Claims Tribunal.

while the ⊠small powers⊡ objected.⊠⊠ The conceptual question underlying this debate is an important one faced by international bodies, then and now. A new court could be another version of the ⊠mixed courts⊡ of the past, with national judges bringing their identities to form a coalition court that gains legitimacy from being a collage of various countries' officials.⊠⊠ In addition to garnering political support, this model also enables national judges to bring country-specific knowledge about relevant domestic norms and practices. Alternatively, an international court could be conceived to be a supranational body that transcends nation-states, making irrelevant individual judges' countries of origin, just as the applicable transnational legal principles would similarly be denuded of their heritage.⊠⊠ Legitimacy under this configuration flows from the very lack of affiliation. As was argued in the ⊠⊠⊠⊠s, for judges to be seen as unbiased required that they be selected in a manner that did not privilege their status as citizens of particular nations.⊠⊠ One could take this proposition further and disqualify any jurist whose nationality was the same as a disputant from sitting on a particular case.⊠⊠

In ⊠⊠⊠⊠ the Central American Court of Justice (fig. ⊠⊠/⊠⊠⊠) took one judge from each of the seven countries that formed the court. The two European courts of the second half of the twentieth century have done the same. The European Court of Justice (fig. ⊠⊠/⊠⊠⊠) and the European Court of Human Rights (fig. ⊠⊠/⊠⊠⊠) have chosen the route of representation, akin to the mixed courts of the nineteenth century.⊠⊠ Both the ⊠⊠⊠⊠ PCA and the ⊠⊠⊠⊠ PCIJ adopted some version of the second, transnational position, seeking to lessen the relevance of nationality in various respects. Their model, in turn, has been followed by the Inter-American Court of Human Rights (fig. ⊠⊠/⊠⊠⊠) and other U.N. courts, discussed later. The decision to avoid the national route has been seen by some commentators as explaining why some of these courts lack support and use. When countries do not put ⊠their⊡ judges on the courts, they have a smaller stake in and less affiliation with them.

The decisionmaking process that was used to lessen the relevance of nationality in the PCIJ is credited to Elihu Root, who worked on drafting the statute for the PCIJ on behalf of the United States. He brokered a compromise by spreading powers of selection across large and small states.⊠⊠ Under the agreement negotiated, both the Council (the smaller chamber of ten states, of which the ⊠great Powers⊡ Great Britain, France, Italy, and Japan⊠⊠ were permanent members)⊠⊠ and the Assembly (the larger chamber, then with some fifty members) of the League of Nations played a role in choosing individuals from lists of nominees proposed by states.⊠⊠ Election was to be ⊠regardless of their nationality from among persons of high moral character, who possess the qualifications required in their respective countries for appointment to the highest judicial offices or are jurisconsults of recognized competence in international law.⊠⊠⊠ Moreover, even if a state were not then a party to the League of Nations, it could (as the United States did⊠⊠) have a jurist on the bench, for the judges were ⊠not chosen as official representatives of nations, but on their merits as jurists and public men.⊠⊠⊠

One should not, however, overread the ⊠regardless of nationality⊡ clause, for no two judges could come from the same country. Moreover, if a dispute involved a country that had no national on the bench, a judge from that country would be appointed ⊠ad litem⊡ for the litigation, a practice used in various other regional and international courts.⊠⊠ The result for the PCIJ was a fifteen-person bench of eleven full-time judges and four deputy judges serving nine-year renewable terms.⊠⊠

Inaugurating the ⊠World Court⊡ and the Hague Academy for International Law

The judges first met to organize themselves in ⊠⊠⊠⊠ at the inauguration ceremonies of the PCIJ (dubbed the ⊠World Court⊡), which formally became an ⊠organ⊡ of the League of Nations and took up residence in the Peace Palace.⊠⊠ Wearing ⊠black robes relieved with velvet, but without ermine,⊠⊠ the judges took their seats to hear Sir Eric Drummond, Secretary-General of the League, praise their participation in ⊠an international judicial organ . . . entirely free of political influence and absolutely independent of any political assembly in its deliberations.⊠⊠ Part of that independence came from fixed salaries (of about ⊠⊠,⊠⊠ per year, or ⊠⊠⊠,⊠⊠ in ⊠⊠⊠⊠ dollars),⊠⊠ pensions, and stipends for travel and living. Despite the ⊠insecurity and the precarious financial situation⊡ of the time, the PCIJ's overall budget was about ⊠⊠⊠,⊠⊠ florins in ⊠⊠⊠⊠, or about ⊠⊠ million in ⊠⊠⊠⊠ dollars.⊠⊠

A year later, The Hague Academy of International Law was established to shape a community of persons knowledgeable in international law.⊠⊠ As a brochure⊡ issued in six languages⊡ explained in ⊠⊠⊠⊠, in light of the ⊠immense bouleversement⊡ that the world had experienced, ⊠unbiased research to help lift standards of law and international relations⊡ was especially needed.⊠⊠ The Academy sponsored publications, courses, and conferences. As one scholar of the Peace Palace concluded in the ⊠⊠⊠⊠s, of ⊠all the institutions . . . on the premises, the Academy has . . . been the most successful⊡ in providing a center for advanced international studies.⊠⊠

Lawmaking through Advisory Opinions and Contentious Cases

The PCIJ was an add-on, joining the PCA at the Peace Palace; the new court was expressly crafted to operate ⊠in addition to the Court of Arbitration⊡ rather than in lieu of it.⊠⊠ But unlike the PCA, the PCIJ would meet at least once

a year, for its judges formally held office and were to sit on all the cases to come before the court.

What were they to do? Like the PCA (as it understood the boundaries of its role at the time), the PCIJ's jurisdiction extended only to cases brought by states. But, unlike the PCA, the PCIJ was to render public decisions explained by references to law. Its sources for decisionmaking were statutorily specified. Read through the lens of debates in the twenty-first century about the power of judicial review, the [illegible] charter to the PCIJ is an impressive commitment of authority. Under Article [illegible] of the statute, judges were to apply "international conventions, . . . international custom, as evidence of a general practice accepted as law, the general principles of law recognized by civilized nations," and, when appropriate, "judicial decisions and the teaching of the most highly qualified publicists of the various nations, as subsidiary means for the determination of rules of law."[illegible]

Moreover, judges could also, if the parties agreed, decide "*ex aequo et bono*" as equity and goodness required. These parameters gave generous interpretative space for judges to identify precepts as legally obligatory and to borrow from others' worldwide' to shape legal rules. Judges were thus to be active participants in developing a body of law that had grown "very rapidly" since the end of World War I.[illegible] Moreover, judges sitting together on a court dealing with different cases could render decisions that, while not formally binding precedents, would be foundational.[illegible]

Meeting at least once yearly, the PCIJ also had the power to give advisory opinions in addition to ruling on "contentious" cases, a term of art used in international courts to delineate that genre from requests for advisory decisions.[illegible] The court was to sit as a whole,[illegible] to work in its official languages of French and English unless a party requested another,[illegible] to hear witnesses (presumptively in public, subject to requests for privacy), to provide provisional remedies, and to render written decisions, including dissents.[illegible] What the court lacked, as noted earlier, was both compulsion to participate and any means of enforcement aside from whatever proposals to do so might come from the Council of the League of Nations.[illegible]

As has been common in United States history in relation to participation in international organizations, the question of joining the PCIJ (and whether doing so would lead to joining the League of Nations) sparked heated debate.[illegible] One question was whether a country could impose "reservations," a term denoting that a treaty is signed with caveats that limit a country's obligations. Many groups within the United States were actively part of social movements of the time that had varying degrees of commitment to joining the League of Nations, to the PCIJ, to international law, to feminism, and to peace. The American Bar Association undertook "consistent and persistent" efforts to have the United States participate in the PCIJ;[illegible] support also came from the Chamber of Commerce of the United States, several labor unions, various religious groups that had been part of peace movements, and women's groups.[illegible] Making arguments for joining, proponents assured listeners that the court was "an independent judicial body" that was not controlled by the League of Nations.[illegible]

Presidents Woodrow Wilson, Warren G. Harding, Calvin Coolidge, and Herbert Hoover all urged ratification' albeit with some reservations and differing levels of enthusiasm.[illegible] But Charles E. Coughlin, a Catholic priest from Michigan, was one of many who raised the flag of United States sovereignty (a gesture that has been repeated many times since). In [illegible] the Senate rejected the proposal to join. Fifty-two senators had voted for it, but that number fell seven votes short of the supermajority constitutionally required for ratification of treaties.[illegible] Thus the United States did not add its name to the roster of the sixty-one nations then members.[illegible] The debate about the PCIJ was a forerunner of later conflicts about the participation of the United States in the United Nations and its various Conventions. As was the case with the PCIJ, representatives of the United States have been actively involved in drafting many agreements that the Senate has declined to ratify, including (as of this writing) the Convention of the Law of the Sea and the International Criminal Court.

The PCIJ had a broad legal mandate to apply and to interpret international law, but to do so it needed cases. The court's lack of obligatory jurisdiction was a factor in the dearth of filings, for countries desiring international dispute resolution "had no difficulty" creating ad hoc mechanisms to do so.[illegible] Even as supporters of the PCIJ at the time reminded colleagues that new courts' including the Supreme Court of the United States' were slow to start up,[illegible] the PCIJ never gained a large docket. Rather, although imagined to be wholly independent, the PCIJ proved to be like every other court' dependent on litigants to seek it out and then conform to its judgments. As one commentator put it at the time, in the "last analysis" the PCIJ had to rely on the "political bodies with which it is affiliated."[illegible]

Between [illegible] and [illegible], the court sat for thirty-six sessions, and although nominally permanent, it met only when it had business to do.[illegible] All told, from [illegible] until the late [illegible]s, it heard twenty-nine contentious cases and delivered twenty-seven advisory opinions.[illegible] Its work has been compiled in some two hundred volumes, making it "one of the best-documented public institutions in the world."[illegible] The PCIJ's last public sitting was in December of [illegible], but it "did not in fact deal with any judicial business."[illegible] After Nazi Germany occupied The Hague in May of [illegible], the court moved to Geneva, with "a single judge remaining at The Hague."[illegible] The PCIJ was officially disbanded in [illegible]; its judges resigned on January [illegible], [illegible]. On February [illegible], [illegible], the first members of the International Court of Justice' our next topic' were elected.[illegible]

How might one assess the PCIJ? Some have dismissed it as "pseudo-constitutionalism,"[illegible] rendering little important law. Others see it as the foundational juridical institu-

tion on which contemporary international courts have been built.[illegible] On this account, the PCIJ [illegible]put international law into practice[illegible] as lawyers and judges sought to apply treaties and argued over international legal precepts. When measured against the docket of its successors rather than of national courts, the PCIJ's caseload is unexceptional. Moreover, the PCIJ has been credited with shaping modes of thinking about international law and forming a conception of the international lawyer and the international judge as persons in special relationships with international law. In turn, the PCIJ was a contributor to a growing body of material distinct from the national frameworks that had preceded and remained concurrent with it.[illegible]

The PCIJ should also be understood in its context as representing remarkable aspirations, given what many of its supporters had just experienced. During World War I, more than fifteen million people died. As one proponent commented in [illegible], peace was slowly returning to the [illegible]disorganized and disintegrated world[illegible], with the new court [illegible]machinery[illegible] in place, he hoped that the [illegible]tradition of international judicial decision should . . . at last take root and begin to grow.[illegible]

The Great Hall of Justice and the United Nations' International Court of Justice

The court that replaced the PCIJ was, as Philip Jessup put it, [illegible]in a very real sense the continuation[illegible] of the PCIJ.[illegible] In [illegible], the United Nations chartered the International Court of Justice (ICJ)[illegible] as a body of that organization.[illegible] The charter required that parties to disputes that are [illegible]likely to endanger the maintenance of international peace and security, shall, first of all, seek a solution by negotiation, enquiry, mediation, conciliation, arbitration, judicial settlement[illegible] and other [illegible]peaceful means of their own choice.[illegible] Like the PCIJ, the ICJ is a court whose jurisdiction is limited to nation-states, both as applicants and as respondents.[illegible] International and private organizations or individuals cannot bring claims directly to it. Further, and in the PCIJ tradition, the ICJ is an optional court,[illegible] again with the authority to issue advisory opinions[illegible] and provisional remedies,[illegible] and again with fifteen justices serving nine-year terms.

The charge to jurists is similarly broad, providing what in the United States are called common law powers to develop legal rules. Specifically, the ICJ Statute authorizes judges to derive principles from U.N. treaties and conventions, from [illegible]international custom, as evidence of a general practice accepted as law; the general principles of law recognized by civilized nations[illegible] and (with some caveats) from [illegible]judicial decisions and the teachings of the most highly qualified publicists of the various nations.[illegible] Further, like the PCIJ, the ICJ has authority to decide matters *e*[illegible] *ae*[illegible]*uo et* [illegible]*ono*[illegible] by equity and goodness.[illegible]

In contrast to the provisions of the PCIJ, a country does not join the court separately through a treaty but rather becomes subject to its jurisdiction by becoming a member of the United Nations.[illegible] Further, under the U.N. Charter, each Member State [illegible]undertakes to comply with the decision of the International Court of Justice in any case to which it is a party.[illegible] But like the PCIJ, the ICJ is dependent on parties' choosing to use it and then complying with its judgments. Failure to do so is not a direct issue for the court. Parties frustrated by opponents that have not discharged obligations imposed by a judgment [illegible]have recourse to the Security Council[illegible] which, in turn, can [illegible]make recommendations or decide upon measures to be taken to give effect to the judgment.[illegible] As of [illegible], the Security Council had not undertaken any enforcement actions.[illegible]

Thus, by virtue of being a U.N. Member State, the United States is within the orbit of the ICJ. The United States has qualified its participation with a [illegible]reservation[illegible] to decline jurisdiction for legal disputes arising out of multilateral conventions unless [illegible]all parties to the convention affected by the Court's decision were also parties to the case before the Court.[illegible] Moreover, the United States famously withdrew from ICJ's jurisdiction in a case involving its shipment of arms to Nicaragua.[illegible] Further, while the United States Supreme Court has described ICJ rulings to be deserving of [illegible]respectful consideration[illegible] in [illegible] the court expressly declined to find them binding on courts in the United States.[illegible]

Nationalit[illegible] *Continuin*[illegible] *mport*

As had been the practice for the PCIJ, ICJ judges are elected through a process aiming to dim the relevance of nationality while preserving more authority for some states than others[illegible] in this case, the states that make up the Security Council.[illegible] The voting rules have generally enabled the five permanent members of the Security Council to have judges on the court. Nationals from the United States and the Soviet Union/Russia have always served.[illegible] Continuous with what was the PCIJ practice, if a case involves a nation that has no judge on the ICJ, an ad hoc judge from that nation is appointed to join the bench.[illegible] One study of the voting behavior of judges argued that ICJ decisionmaking showed the footprints of nationality. A review of [illegible]every vote in every case[illegible] (excluding advisory opinions) in a total of seventy-six cases decided by early [illegible] concluded that, when a judge's nation appeared before the court as a party, the judge voted in favor of that party more than [illegible] percent of the time.[illegible] Ad hoc judges voted in favor of their appointing nations some [illegible] percent of the time.[illegible]

States can influence the composition of the ICJ in another manner. When parties assent to the court's sitting in chambers,[illegible] they can also condition resort to the ICJ on having [illegible]a five member-chamber, made up solely of judges mutually acceptable[illegible] to both sides of the dispute[illegible] thereby blur-

ring the line between arbitration and adjudication. Yet other concerns about the ICJ's party-dependency have been voiced in relationship to how judgments were made in a case in which the ICJ appeared to be seeking to broker agreements in a diplomatic mode.

One aspect of the ICJ bench bears special mention. The Peace Palace has a rich decorative assemblage, full of Virtues personified as women. But until the end of the twentieth century, its jurists were all men. In , Dame Rosalyn Higgins was the first woman elected to serve on that court and, in , she became the first to chair it making the ICJ the first organ of the General Assembly of the United Nations to have a woman at its head. She served as President from to . Her work, and that of the court, was supported by a staff of about one hundred.

Celebrator Icono graph

The ICJ sits, as did the PCIJ, in the Peace Palace. While the PCA uses the Small Hall of Justice, the ICJ occupies the aptly named Great Hall of Justice. As figure (color plate) reveals, the room is enormous, as are its appointments. Six Bohemian crystal chandeliers illuminate the room, and the long bench accommodates the fifteen judges, with additional room for ad hoc judges. As in Siena's Palazzo Pubblico (figs. /, /), Latin maxims are strewn throughout, and large pictorial allegories aim to edify the viewers.

Recall that in Siena, spectators saw both tyranny and good government and, in the Amsterdam Town Hall, they were invited to witness the challenges and pain of judgment by looking at Brutus ordering his sons to their death (fig. /) and Zaleucus gouging out one of his eyes (fig. /). In contrast, the audience at the Peace Palace views the triumph of Peace and Justice over evil, portrayed in both stained glass and in paint.

Monumental glass windows (figure) by Scottish designer Douglas Strachan run feet by feet, detailing the *Development of the Peace Ideal,* in which Peace is Realised after wars and other evils. Four stages the Primitive Age, the Age of Conquest, the Present Age, and the Achievement of Peace are shown in successive windows, with highly colored depictions set against a white

Figure A Sitting of the International Court of Justice in the Great Hall, the Peace Palace, March , .

Photograph by D-VORM.NL, Leidschendam, the Netherlands. Photograph reproduced courtesy of the Carnegie Foundation. See color plate .

backdrop. One can also contemplate a huge painting, twenty-three by fifteen feet, *La Paix par La Justice* (*Peace through Justice*) that adorns another wall. There three wise men are ousting combating parties, with a triumphant female Peace in the foreground. (The picture is explained as a reference to arbitration as the room was to be used by the PCA.) Peace holds a child in one arm and an olive branch in the other, providing what one writer at the time called symbols that are by no means cryptic.

This is the room not only for taking evidence but also where the court renders its decisions, from which no judicial appeals can be taken. Under the rules of the ICJ, its judgments shall be read at a public sitting of the Court and shall become binding on the parties on the day of the reading. The information can then be transmitted in a press room equipped with a live feed for verbatim recordings in French and English to the world.

Renovations, Modernization, and Expansion: Carnegie's Library at Last

By the s, the Peace Palace was less palatial; the aging building had rust-eaten gates as well as outdated elevators and insufficient heating. During the same decade, the European Community was in formation, and some thought the ICJ should move to Geneva, while others wanted what was to become the European Court of Justice to join the ICJ at The Hague. Finances remained a perennial problem, and the Dutch government responded with support. Repair rather than relocation was the response along with a new, but far more modest, building.

The result (fig.) was a new wing, designed by Arnhem Architects Bureau Brouwer and Deurvorst and funded by the State of the Netherlands, which gave the building to the Carnegie Foundation in . With none of the drama that had produced the Peace Palace, the committee directing its building reviewed three models and selected one in , with work beginning soon thereafter.

The building, measuring , square meters (, square feet), looks like those of its generation. Its exterior three stories, slightly curved to nestle in the gardens, are adorned with glass picture windows surrounded by brown Brazilian marble; the roof is mostly flat, with an occasional sloped angle. The white walls and recessed lighting of the interior provide a marked contrast to its neighboring Palace. The facility provides chambers for judges, conference space, and a dining room. Compared to the space available in the s, the facilities available to the ICJ in the s were triple the size.

The space at the Peace Palace expanded again in , when a new building opened to allow the Library to provide conference facilities for shared use by the Hague Academy of International Law. The Carnegie Library describes itself as the first (from) to house a collection of international, comparative and foreign national law. Replacing a demolished building, the the new structure, by architect Michael Wilfold, has received praise for its functionality and frank insistence on new architectural forms reinforced by the bright yellow pilotis stilts or columns that raise a building off the ground, arranged in two Vs, that support the reading room, and the no-nonsense purple rendering that picks out the upper galleries. As one commentator put it, the new building combines very precise rational planning with expressive elements that stand out for their chutzpah. The reading room has a stainless-steel skin set off through an aggressive use of sharp

Figure Annex to the Peace Palace, International Court of Justice, The Hague, the Netherlands, . Architects: Brouwer and Deurvorst.

Photograph reproduced courtesy of the Carnegie Foundation.

angles. The lecture hall, with a vertical wall of glass, seats more than three hundred, and a bas-relief designed by Irene Fortuyn, provides maps randomly arranged of the world's countries. Remembrances of times past can be found in the building's connection, through a renovated reading room, to the Peace Palace, thereby fulfilling what the [illegible] competition had sought: access internally between the Library and the World Court.

Sorting out the economic support of the various parts of the Peace Palace is in order. The Dutch Carnegie Foundation, founded in [illegible], continues to own and administer the Peace Palace, its Library, and the grounds. The Foundation's seven-person board includes a representative of the PCA. In [illegible] that foundation's budget was roughly six million euros (about [illegible] million). The United Nations pays rent for the use of the facilities by the ICJ and more generally supports the ICJ from the U.N. annual budget. For example, two years of operation ([illegible] and [illegible]) were supported at about [illegible] million; rent and maintenance accounted for [illegible] million. The PCA also makes financial contributions to the Foundation. The Hague Academy for International Law, while housed alongside the Peace Palace and governed by an administrative council comprised of some of the Carnegie Foundation's board members, is funded by international institutions and private individuals. Its [illegible] budget was [illegible] million euros or [illegible] million.

[illegible] *ome for Livin[illegible] Law or a Museum*[illegible]

Commentators and jurists have evaluated the work that has been generated through the hearings in the Great Hall of Justice, and a vast body of material is devoted to the ICJ. Some of the analyses are delineated by periods or legal arguments and others by topic, some by quantitative descriptions and others based on qualitative impact studies. All debate the import and nature of decisions that range from the law of laying mines in the waters near Corfu and in the harbors of Nicaragua to the legality of building walls in disputed territories in Palestine and Israel and of threatening to use nuclear weapons.

As is true for courts in many countries, evaluations of the decisions of the ICJ run the gamut from praise for their quality to dismay that the court's doctrines are [illegible]arbitrary and incoherent. In addition to the kinds of criticism domestic courts face, the ICJ has special challenges as [illegible]the world's court[illegible] Thus, it has been cited for being too attentive to some of the world's legal regimes and insufficiently embracing others. For example, one analysis found that, while some mention was made of considering Islamic norms to assess the existence of international norms, the ICJ had not engaged deeply in those bodies of law. Others have admired the ICJ for helping to change the [illegible]fabric of the international community [illegible] through its quiet yet persistent voice.

The context in which the ICJ operates has also changed over time, as the ICJ has been joined by several other courts, including a few (discussed later) created by the United Nations. Given legal precepts that decisions of one such court do not bind another (or indeed subsequent rulings of its own court), differing interpretations of international law have on occasion emerged. One can understand this development as contributing to an appropriate debate about the meaning of international obligations or as producing a disquieting cacophony.

Compliance is another way to assess a court's impact, albeit one that entails nuanced evaluations. One study of fourteen ICJ judgments in contentious cases, for example, concluded that no state had been openly defiant, and that a good deal of deference had been accorded to ICJ judgments. On the other hand, in about a third of the cases considered, states had not complied with various decisions, such as following orders related to disputed territorial boundaries or providing consular notifications when the death penalty was charged.

A few infamous cases are regularly cited as showing the ICJ's vulnerability. One often-cited example is the [illegible] Nicaragua case assessing whether the United States had violated international law by playing a role in supplying arms and laying mines in a harbor to destabilize the Nicaraguan government. After losing at the jurisdictional phase, the United States responded with [illegible]open defiance. Further, problems of compliance stem from other jurisdictions. Various countries, from the Americas, Africa, and Eastern and Western Europe, have declined to follow aspects of ICJ rulings. Yet one scholar also noted that as of [illegible], the focus on noncompliance had not diminished the docket of the court, and hence concluded that its credibility remained intact as it continued to try to win [illegible]over its state clientele through the quality and legitimacy of its work.

Usage is another metric, but also one that is hard to assess. We opened our discussion of the PCA, the PCIJ, and the ICJ with some numbers on filings; here we return to the specifics coming from various sources. The ICJ reports on the number of states that have appeared before it; from [illegible] to [illegible], seventy-four states came before the court in contentious cases. One analysis noted that, while the number of states that were members of the United Nations grew from [illegible] in [illegible] to more than [illegible] in [illegible], filings and decisions have not kept pace. On the other hand, a larger membership would not necessarily produce more conflicts; indeed, membership could be evidence of conciliative approaches that would avoid disputes.

As for the number of decisions, between its opening in [illegible] and July [illegible], the ICJ issued a total of eighty judgments and [illegible] orders in [illegible] contentious cases and twenty-five advisory opinions. Looking to the more recent past, from August [illegible] to July [illegible], the court disposed of twenty-four contentious cases (counting various forms of disposition) and rendered one advisory opinion. Disaggregated

by year, in the twelve months beginning in August [illegible], the ICJ received three filings and made two dispositions. [illegible] The numbers for the following year were similar, with one filing and one disposition. [illegible] If [illegible] is the baseline, in [illegible] filings tripled (to three), as did dispositions. [illegible]

What ought one make of these numbers? What sets of disputes could come before the ICJ, and when do disputants seek the ICJ as contrasted with other courts or arbitral fora that also are competent to hear cases? [illegible] What variables such as an increase in the number of states, in the number of non-state transnational actors, and in the development of domestic courts as well as other dispute resolution providers could affect the docket? Should the work of the ICJ be compared to that of its predecessor the PCIJ, that, over an eighteen-year period, heard thirty-eight contentious cases and rendered twenty-seven advisory decisions? [illegible] Should usage data be mapped in intervals to look at trends? [illegible]

Commentators are deeply divided on these issues. Some argue that a focus on decisions rendered is too narrow because it is an institution nested in a political framework of alternatives. One such study, reviewing twenty-four PCIJ cases and thirty-one ICJ cases, also looked at dispute settlement at the League of Nations (thirty-five instances) and at the United Nations (thirty-one instances) to try to understand what variables prompted selection of which path to take for resolution. [illegible] Another way to frame the case count is by a focus on disputes that could have culminated in armed conflict but were quieted and on disputes that were avoided because of either the legal principles developed or practical political accommodations. [illegible] Yet another metric is reliance by other legal systems and international courts on ICJ judgments.

Given these interpretative variables, the data on the court's caseload have produced very different appraisals. In [illegible], citing the figure of twenty-one "contentious cases" involving countries on four continents, one commentator concluded: "Business is booming." [illegible] In the late [illegible]s, another had dubbed the ICJ "a court without cases," as he argued that its docket was virtually empty. [illegible] A more recent analysis posits that the court has "unmistakably declined," lacking trust from states to apply law impartially and lacking the ability to please the major powers whose support it requires. [illegible] For others, such overall assessments are themselves questionable, for the "most striking feature of the pattern of use of the International Court of Justice . . . "has been" its irregularity. [illegible] Not surprisingly, the host organization for the ICJ" the Carnegie Foundation" is insistent that the Peace Palace, which "looks like a museum, lavishly devoted to the theme of peace, is in reality the housing of living institutions engaged in the area of international law. [illegible] Further, as the chair of that foundation noted, the Peace Palace provides an "unmistakeable icon of the will to grant international law the authority that so many people deem necessary." [illegible]

Our questions are broader than an internal assessment of the ICJ. We are interested in how the emergence and practices of the ICJ inform an understanding of the changing roles and functions of courts in general. Before sorting out the import of the transnational judicial project of which the ICJ is a part, however, more about the development of the ICJ's younger, sibling institutions is in order.

Transnational Courts with Specialized Jurisdictions

The ICJ offers itself up as a court of general jurisdiction, meaning that a variety of kinds of cases can come before it. As noted, it once functioned as the exclusive entity that the United Nations created as a court. But through transnational agreements or at the direction of the United Nations Security Council beginning in the [illegible]s, a series of specialty courts now focus on particular kinds of problems. We consider five such courts, one with civil jurisdiction related to the Law of the Sea and four addressing the horrors of genocide and crimes against humanity.

An International Tribunal for the Sea, Seated in Hamburg

In some instances, the ambivalence about cross-border adjudication is reflected in the fact that the construction of buildings to house that work lags, coming many years after the decision to create an adjudicatory body. The European Court of Justice (ECJ) provides an example; its first permanent residence opened in [illegible] (fig. [illegible]/[illegible]), about two decades after the ECJ began its work. In contrast, ambitions for a joint venture at times simultaneously sustain both an agreement for a juridical institution and a plan to memorialize the accord through the construction of a new building. Within a few years of the Hague Convention of [illegible], the elaborate Peace Palace and Library welcomed visitors to The Hague.

The building for the International Tribunal for the Law of the Sea (ITLOS), shown from the air in figure [illegible] but dedicated to the ocean, offers a variation. [illegible] ITLOS was sited in the port city of Hamburg, Germany in [illegible], [illegible] more than a decade before a forty-year debate produced sufficient agreement among major maritime nations to shape a legal regime that would include a court as one of various implementation and dispute resolution mechanisms. [illegible] Indeed, the "Free and Hanseatic City of Hamburg" [illegible] had campaigned to provide a home to ITLOS before Germany became a member of the [illegible] Convention on the Law of the Sea. Hamburg had, of course, the "expectation that the Federal Republic of Germany" would ratify the Convention [illegible] as it did in [illegible]. [illegible]

In the early [illegible]s, when eager to be the tribunal's site, Hamburg distributed a brochure, "Introducing Hamburg," [illegible] to all delegates to explain why it was the appropriate city to host ITLOS. One was history: Hamburg's "maritime tradition" included its [illegible] "right to free access to the sea,"

Figure [illegible] International Tribunal for the Law of the Sea, aerial view, Hamburg, Germany. Architects: Baron Alexander Freiherr von Branca and Baroness Emanuela Freiin von Branca, [illegible].

granted by the [illegible]legendary Emperor Barbarossa.[illegible] Moreover, [illegible]names such as . . . Georg Phillipp Telemann and Johannes Brahms[illegible] were part of the city's culture.[illegible]

Moving to modern times, Hamburg described itself as [illegible]one of the first cities to establish close relations with the young states in Asia and Latin America[illegible] through concluding trade treaties [illegible]independently[illegible] with them.[illegible] Hamburg also invoked its contemporary function as a commercial center,[illegible] providing excellent hotels, regular train service to cities across Europe and north to Scandinavia, and an [illegible]all-weather[illegible] airport.[illegible] Hamburg described its history and laws, its [illegible]open door for the persecuted[illegible] and its research institutes and legal rules for shipping and the seas.[illegible] Further, the city argued that because Germany had a [illegible]short coast-line[illegible] the country had few stakes in the merits of underlying conflicts about the law of the sea, for it could not [illegible]derive any benefit from the enlargement and readjustment of sea areas.[illegible]

Those efforts, enhanced by pledges from both Hamburg and Germany to provide the site (followed by a formal commitment of full funding in [illegible]) prevailed.[illegible] The decision in [illegible] was followed in [illegible] by the formation of a commission to deal with the [illegible]practical arrangements necessary for the establishment of the Tribunal.[illegible] By the time the International Convention on the Law of the Sea entered into force in [illegible] through the ratification of a sufficient number of states, more than a dozen architects had imagined what its building could look like.[illegible] Two[illegible] Alexander Freiherr von Branca and Emanuela Freiin von Branca, both of Munich[illegible] had been selected, funds had been guaranteed, and construction was underway.

Just as European institutions are dispersed to more than one site, Hamburg is not the exclusive center of activity related to the Sea Convention. The Commission on the Limits of the Continental Shelf convenes twice yearly at the U.N. Headquarters in New York. The International Seabed Authority, also coming into existence officially as of [illegible], is based in Jamaica, which was the site where the [illegible] Convention on the Law of the Sea [illegible]opened for signature[illegible] The Seabed Authority has administrative oversight of the mining of the ocean floor. It holds its meetings at the Jamaica Conference Center.[illegible]

In many respects, Hamburg's push to be the seat of the court is reminiscent of the cities and counties in the United

States and Europe that sought to become venues for courts as a means of promoting the economy and visibility of their localities.[illegible] Hamburg's effort had a special subtext. As the jury that chose the architects noted in the September [illegible] session, its deliberations took place fifty years after the start of World War II; the [illegible]foundation of the United Nations was as an answer to the horrors of war and the millions of dead.[illegible] Thus, special note is made by Germany's Foreign Office, as well as various ITLOS documents, that the selection of Hamburg resulted in [illegible]the first significant legal institution from the broader UN sphere[illegible] to be headquartered [illegible]on German territory.[illegible]

When Germany sought to be the site of the court, some of the parties negotiating the Sea Convention had hoped that use of the planned court would be mandatory. But the agreement that emerged made much of ITLOS's jurisdiction optional for the parties, and even with some mandatory jurisdiction, it ruled on fewer than fifteen cases during its first decade of operation. The building plans and court procedures enable us to probe the puzzles generated by the distance between court construction (literal and legal) and practices.

[illegible] [illegible]*Constitution for the* [illegible] *ceans*[illegible]

International customary law has long recognized the illegality of piracy. Further, the Slave Trade Courts of the nineteenth century represent multi-national adjudication of another kind of illegality[illegible] making plain the interrelationship between human rights and economies. ITLOS should thus be understood as one of the heirs to those mixed courts, alongside the transnational human rights courts of Europe and the Inter-Americas (discussed in Chapter [illegible]) and the criminal courts such as the International Criminal Court (discussed later in this chapter).

Problems such as seizure by one nation of a ship owned by another, staffed by a crew from a third, and carrying cargo from a fourth, were also not novel.[illegible] Yet the varying interests of maritime and land-locked states, of industrialized and less industrialized countries, of archipelagos and countries bordering straits, and of private commercial entities and public governance proved hard for twentieth-century nation-states to negotiate. The stakes rose with the growing awareness of the limits of resources, the risk from pollutants, and the potential wealth of deep-seabed mining[illegible] given [illegible]more dormant nickel and cobalt . . . on the bed of the Pacific Ocean than in all terrestrial deposits currently being exploited.[illegible] The eventual agreements came with many caveats and narrow provisions for enforcement through a range of dispute resolution systems, of which ITLOS is but one.

In [illegible], when the United Nations convened its first Conference on the Law of the Sea, the focus was on [illegible]zones[illegible] rather than on [illegible]uses[illegible] of the seas.[illegible] As scholars explain, when European countries dominated the seas in the late Renaissance, ships were few in number and fish were thought to be inexhaustible in quantity.[illegible] Twentieth-century shifts in power, accompanied by increased demands for resources and scientific appreciation of the fragility of the sea, produced conflicts about what (if any) rules to adopt. Mid-century, the central topics were the rights of states in relationship to the continental shelf, the high seas, and their own territorial reach. By century's end, the dominant concerns had shifted to pollution, deep-seabed mining, and protection of fishing stock.[illegible] Pollution and depleting stocks have become vivid problems, while the prospect of mining the seas remains alluring but technology has yet to make it economically feasible.

Transnational efforts to develop a legal regime governing the seas[illegible] a [illegible]Constitution for the Oceans[illegible] date back to [illegible], when the League of Nations appointed a [illegible]Committee of Experts[illegible] to set forth proposals for codification that produced a [illegible] conference but not an agreement on territorial waters.[illegible] The [illegible] discussions were, in turn, used by other international law experts, appointed in [illegible] by the United Nations to serve on its International Law Commission (ILC). They shaped a [illegible] United Nations Conference on the Law of the Seas, known as UNCLOS I. For that meeting, more than eighty states came together and generated four conventions[illegible] the Convention on the Territorial Sea and the Contiguous Zone, on the High Seas, on the Continental Shelf, and on Fishing and the Conservation of the Living Resources of the High Seas.[illegible]

Successive meetings (UNCLOS II, in [illegible], and UNCLOS III, beginning in [illegible]) addressed the control states were to have over waters and fish in their proximity, loosely defined.[illegible] Resources, political power, degrees of industrialization, and the diverse physical settings of states prompted significant disagreements about regulations on both zones and uses. Some degree of agreement was represented in the [illegible] United Nations Convention on the Law of the Sea (UNCLOS), joined by more than [illegible] countries as well as what was then the European Community (EC).[illegible] But major maritime states[illegible] such as Australia, China, Germany, and the United States[illegible] stood apart from the accord, which set up a system for twelve-mile territorial sea zones and a [illegible]-mile fishing jurisdiction.[illegible]

UNCLOS described itself as not permitting adherence with reservations; it insisted that States Parties agree to all the provisions rather than condition their ratification on limits. But the [illegible] [illegible]Implementation Agreement[illegible] (focused on seabed minerals) could be understood as permitting reservations.[illegible] The Agreement's provisions enabled states ratifying UNCLOS after [illegible] to avoid certain aspects of the Convention, thereby posing puzzles for international lawyers on how to construe thetreaty provisions and their caveats.[illegible] In addition to rules for [illegible]the management of mineral resources beyond the limits of national jurisdiction[illegible] the [illegible] accord created a multiple-step implementation mechanism, in which ITLOS is one

of several endpoints that winnows out many possible disputes.

The Agreement creating ITLOS has been heralded as the most important development in the settlement of disputes since the creation of the ICJ. Countries such as Australia, China, Finland, Germany, India, and the United Kingdom joined; among the major maritime States, only the United States continued to refuse to ratify. As of , it remained outside the formal structure, with domestic opponents arguing that participation in the Sea Convention would threaten the sovereign authority of the United States. (Similar concerns are the basis for opposition to the International Criminal Court, discussed later.)

Alternatives for International Disputes about the Sea

Whether ITLOS was either necessary or desirable was debated during the course of negotiations. Maritime disputes between nation-states had been brought to the ICJ as well as to ad hoc tribunals convened to resolve particular disputes between countries. Proponents insisted on the need for specialization, while others worried about the splintering of international authority through competition or conflicts. Negotiators had hoped to entrench compulsory judicial settlement of ocean disputes, but that precept was unacceptable. The denouement was a compromise that has produced yet another puzzle: how to describe what ITLOS is, for it combines features of courts, administrative agencies, and private arbitration.

Disputes related to the sea could be: and were: settled bilaterally through special ad hoc investigations, in domestic courts, and through the PCA or the ICJ at The Hague. What the Law of the Sea Convention produced between and was an additional range of specialized dispute resolution mechanisms aiming to attract participants by offering disputants a good deal of control. Some speak of the "compulsory procedures" of the U.N. Convention on the Law of the Sea. What is compulsory is the agreement to resolve disputes peacefully. The means, however, are optional; disputants can pick among the ICJ, two kinds of arbitral tribunals (domestic courts willing to take jurisdiction included), and ITLOS. In short, ex ante or ex post, disputants were authorized to deploy arbitration, extant courts, or the new ITLOS, and parties can make forum selections "at the time they sign, ratify, or accede to the Convention, or any time thereafter."

When the parties cannot settle by "means of their own choice," then "compulsory procedures entailing binding decisions" follow, albeit with a host of important issues (boundaries, security, resources) excluded from the mandatory regime. Yet even when a conflict resolution system is "compulsory" the use of ITLOS is generally not, except when seeking to obtain "prompt release" of seized vessels and crews and when making requests for provisional measures, such as efforts to halt environmental hazards or overfishing. On those issues, as ITLOS's President P. Chandreskhara Rao explained, the tribunal was given "a prominent position" through its "special competence." The two areas for which ITLOS is obligatory have provided the only cases decided by the tribunal, and the numbers are small. From the Tribunal's inception in through the end of , fifteen cases came before it. Nine related to prompt release of vessels, and five sought provisional measures (none fully granted). One involved swordfish stocks; the case was listed on the docket while the parties negotiated.

Given the entrenched interests of the ICJ and the jurisdictional overlap, the creators of ITLOS did not strip that court of its authority. Indeed, as President Rao of ITLOS carefully explained at the building's opening in , the Convention had given the Tribunal a "prominent position" but it had not created "any hierarchical relationship" among the various international bodies. He also noted his hopes that "harmonious development of the law of the sea" would come from the "mutual respect" to be accorded among international courts with overlapping jurisdictions. The lack of clarity on the relationship among tribunals reflected both preexisting interests in the authority of the ICJ and uncertainty about what ITLOS would become.

While not displacing the ICJ, ITLOS competes in some instances with the ICJ as well as with other courts. Given its specialization, ITLOS has a narrower reach than various courts, yet its openness to conflicts with non-state parties gives it a broader scope on other dimensions. For example, unlike the ICJ, whose jurisdiction is generally limited to state-to-state conflicts, ITLOS has authority over various entities (international organizations, natural and legal persons) when such entities explore or exploit the International Seabed Area. That facet of ITLOS's jurisdiction has been applauded as reflecting an appropriate pluralist development; "many international disputes are no longer between states alone, but may involve international organizations, NGOs, corporations and individuals." Moreover, ITLOS can gain jurisdiction not only from the Law of the Sea Convention but also from "any international agreement related to the purposes of the Convention" that specifies use of ITLOS, including by non-parties. (As of , nine multilateral agreements had done so; the Straddling Fish Stocks Agreement, for example, also enlarged the authority of ITLOS to impose provisional remedies to protect fish.) Further, like other transnational courts, ITLOS can author advisory opinions as well as render judgments. And like the ICJ, ITLOS renders judgments that do not generate law with "binding force beyond" the dispute, although both international tribunals draw on their prior judgments, and commentators speak about the growth of their jurisprudence.

Another aspect of the comparison between the ICJ and ITLOS relates to their judges. The fifteen ICJ judges are

selected by the U.N. General Assembly and Security Council. As noted, jurists who are nationals of the five permanent members (China, France, the Russian Federation, the United Kingdom, and the United States) generally secure seats. ITLOS, an artifact of a free-standing treaty, has twenty-one judges selected by State Parties for nine-year terms. Those jurists must be "persons enjoying the highest reputation for fairness and integrity and of recognized competence in the field of the law of the sea" and must represent "the principal legal systems of the world" so as to ensure "an equitable geographic distribution."

To implement this provision (as well as to attract business and legitimacy), the States Parties agreed to "elect five judges each from Africa and Asia, four each from Latin American and Caribbean States, as well as Western European and Other States, and three from the Group of Eastern European States." Hence, the group is more diverse and representative than that assembled at the ICJ. The ITLOS bench is also specialized; several jurists were former delegates to the U.N. conferences that produced that court, and some are "renowned authors in the field of the law of the sea." That very specialization makes ITLOS also resemble an administrative agency that advises as well as adjudicates in a particular field. Further, inside this specialty court are yet other subspecialty courts, including the Seabed Disputes Chamber. As of [illegible], that potential had not been realized because the Chamber had not heard any cases.

In various ways, however, ITLOS is closer to a private provider of dispute resolution services than it is to a court. Under the Sea Convention, disputants can opt for arbitral panels, with each side designating one arbitrator and then together selecting the remaining three "by agreement." The arbitral panel then determines the details of its own procedure. If disputants are also members of the European Union (EU), they can (and may have to, under EU law) turn to the European Court of Justice (ECJ) as an arbitral body or use it as a court. Moreover, a state can opt to go to the ICJ or choose what are known under the Convention as "Annex VII arbitral tribunals" or "Annex VIII "special arbitral tribunals'" for claims related to fisheries, environmental protection, marine research, and ship-created pollution. Because the use of these provisions need not occur at ITLOS, tracking their numbers is more difficult; as of [illegible], several such proceedings had taken place.

The Sea Convention also provided that, under certain provisions, parties can pick the judges to sit on their dispute, and one party can obtain an "ad hoc" judge if none of the ITLOS judges are members of the nationality of that party. (The presumption was that ITLOS would sit in chambers; the practice has been for it to sit as a whole.) The Tribunal can also form "special chambers" to handle "particular categories of disputes" and disputants can tailor the rules and specify the questions to be answered. Further, if they agree, parties in any of the Convention's fora can "instruct courts and tribunals to ignore international law" and decide cases *ex aequo et bono*" as can other international tribunals, including the ICJ.

In some respects, ITLOS thus resembles what Californians call "rent-a-judge" a system by which litigants can hire a private judge of their choosing to make a decision in their case that then operates as a legal judgment. As in the California system, ITLOS permits state-party disputants to pick their judges, but unlike in California, ITLOS provides them "rent-free": parties can use the Tribunal's facilities and its judges without bearing case-specific expenses. (Non–state parties using ITLOS services have to contribute to the "expenses of the Tribunal," whereas members make regular prorated contributions.) Indeed, if States Parties have not specified a dispute resolution mechanism, arbitration" not adjudication" is the default specified under the Convention.

ITLOS is thus a court (of sorts) that rarely must be used and to which few have turned. This review of the complex procedural structure of ITLOS underscores that the framers built in many alternatives to adjudication. Thus, the outline of ITLOS provisions undercuts an assumption (easily made, given our survey thus far of the many courts created) that twentieth-century authorities embraced adjudication as the decisionmaking model par excellence. ITLOS forecasts the themes of Chapter [illegible], where we map the many efforts to curtail adjudication through outsourcing, devolution, and "alternative dispute resolution" producing the kind of jurisdictional competition for cases that ITLOS exemplifies.

Form Before Function

What might a building for such a hybrid as ITLOS provide? The courthouse was planned in the [illegible]s and a design selected in [illegible], before all the caveats on jurisdiction and ways to resolve disputes outside of ITLOS were finalized in the [illegible] Agreement. As the aerial photograph (fig. [illegible]) suggests, ITLOS is sited in a state-owned park, rich with foliage and already housing an [illegible] villa listed as a historic site that required the architects to design around it. The park abuts a residential area (accessible by public transportation) on the banks of the River Elbe. Germany paid [illegible] percent of the [illegible] million building costs, with the city contributing the rest.

Decisionmaking on how to construct the building came through a design competition reminiscent of the one in [illegible] for the Peace Palace. By the [illegible]s the protocol was "carried out according to the UNESCO recommendations for international architectural and urban planning competitions." In lieu of thousands of potential submissions, ten German architects and ten "foreign architects" (including Jean Nouvel from France and Richard Rogers from England, whose national courthouses can be seen in Chapter [illegible]) were invited in [illegible] to submit designs,

anonymously and, in compliance with prospectus requirements, to a jury composed mainly of German specialists in architecture and planning and of U.N. officials.

In terms of what was wanted, the construction documents that detailed parameters for the building required a mixture of uses, recalling the multiple functions of town halls of earlier eras. ITLOS's main chamber was to be able to flip from courtroom to session room, should State Parties want to use it for meetings. For a courthouse, the office spaces were relatively small: architects were to create a building to house under people. While about a fifth of those were judges, only the tribunal's president was to take up permanent residence at the building.

The architects were told to assume that ITLOS would generally operate in chambers, with one devoted to seabed disputes. In addition, the building needed to accommodate provisions for parties to designate their own choice of ad hoc judges for certain conflicts, as well as space for technical experts who could be asked to join on special issues. Because the Law of the Sea Convention provided that arbitral tribunals would be free to decide where they wanted to sit (they would have neither seat nor site), space was to be provided in case they wanted to use the facilities.

The main courtroom thus was to accommodate the tribunal as a whole twenty-one judges plus four ad hoc judges and experts. In addition, chamber courtrooms were needed, with benches for nine (five judges plus four ad hoc judges and experts), as well as areas for disputants, the public and the press, and interpretation and technical assistance booths. Each courtroom needed adjacent space for private meeting rooms for deliberation. The architects were to propose various possible layouts, as well as how to devise an appropriate arena for translators at a time when debate was ongoing about what scope of translation would be provided. The presumption was that only a limited number of working and official languages would be used to wit, the two (English and French) also used by the ICJ, which later became the official languages of ITLOS as well.

In addition to specifying court structure and translation space, the Design Brief called for the creation of a practical and efficient structure that would provide a representational and unique character, suitable for a place of international litigation to implement the rule of law in the oceans which cover of the earth's surfaces. Given the objective of peaceful settlement, the building should radiate calm and composure, sovereignty and dignity. To do so, the building needed to be open (communicative) and to provide space equally suitable and attractive to the public and to the judges of the tribunal, its officers and staff.

The design brief envisioned various uses for the spaces. The entrance hall was to accommodate receptions, visitors coming for meetings, and disputants waiting for tribunal proceedings. The public was to be welcomed as well as screened by security officers. Accommodations were also needed to enable film and electronic media coverage. A library was an important part of the design. It was a mainstay and custodian of interests concerning the law of the sea, and hence was to serve (as the architects later put it) as one of the principal representative functional banners in addition to the actual courtrooms. Aside from the import of the open reception hall, the hearing rooms, and library, the only decorations detailed were the requirements for flagpoles and a suitable place for the Emblem of the court. Other specifications for the building were the familiar aims of security and sociability. Designs were to include secure spaces as well as restaurants, fitness centers, banks, and service facilities. Further, expansion space for unspecified purposes was to be built into the plan.

In September , the Mayor of Hamburg welcomed the architectural jury even as he noted that the Federal Republic of Germany had not yet signed the Sea Convention because of certain reservations concerning the deep sea-bed mining part. (Germany ratified, as noted, in .) After reviewing the fifteen proposals before them, the jury selected two German architects, Alexander Freiherr von Branca and Emanuela Freiin von Branca. Their design was admired for integrating the villa on the site with the new building, in part through English-style gardens, and for underscoring the significance of the tribunal through a three-story entry atrium.

As required, the proposal was then submitted to the United Nations, and in the fall of the foundation stone was laid. The court began functioning before it had its own building; in it sat in the Great Salon of the Hamburg Town Hall. A ceremonial opening of the building (fig.) took place in July of , and a few months later ITLOS took up residence in the facility, provided rent-free and supported by a budget of about (million euros (million) for the – biennium contributed by States Parties and the EC.

As the architects explained in their submissions, they put courtrooms in the center to make them the focal point of the complex. The main courtroom (fig.), shown with arguments underway during a dispute, has a large semicircular bench that can accommodate the entire tribunal; its movable walls permit it to host delegates to Sea Convention conferences. The two chamber courtrooms and the main courtroom can be transformed into one large auditorium for meetings.

The exterior, offering views of the River Elbe, is adorned with pivoting glass slats for circulation. The layout has segregated the functions in a manner similar to that found in courthouses elsewhere. Administrative offices were placed in separate pavilion-type buildings connected to the

Figure [illegible] International Tribunal for the Law of the Sea, exterior, Hamburg, Germany. Architects: Baron Alexander Freiherr von Branca and Baroness Emanuela Freiin von Branca, [illegible].

Photographer: Hans Georg Esch, Bad Hennef, [illegible]. Photograph reproduced courtesy of the International Tribunal for the Law of the Sea.

main complex with bridges. Public functions are also accommodated in the three-story [illegible] villa, dedicated for use by the tribunal's president and for receptions.

As the final design brief explained, the architects mixed [illegible]strictly linear and freely expansive components[illegible] and various colors to invoke the sea.[illegible] Stone came from [illegible]all five continents . . . to symbolize the worldwide significance of this international institution.[illegible] As for the art, a few items were built in[illegible] a floor mosaic and a coral sculpture[illegible] and several are on loan, including a mosaic from Tunisia, a silk embroidery from China, a Kente cloth from Ghana, and paintings from Belize and Singapore. The architects explained their commitment to [illegible]visual access[illegible] and [illegible]sweeping lines[illegible] through the use of features that lent a [illegible]bright and accessible character[illegible] and colors that [illegible]introduce softness and fluidity.[illegible]

While open in design, spirit, the law to be developed, and opportunities for users, ITLOS is often empty. As one journalist described the building on its eighth [illegible]birthday[illegible] the courtroom's [illegible]seating, capable of holding an audience of [illegible], is unoccupied. The state of the art communications technology lies mute. The glass-fronted galleries, equipped for banks of translators, stare blankly down on the empty chamber.[illegible] Despite the elaboration of many procedural options and dozens of volumes and articles analyzing the tribunal and its procedures, very few disputants have come to ITLOS. Thus the impressive and large building functions as a lonely monument to the potential for agreement. A single jurist[illegible] the president[illegible] is resident there, working alongside a registrar and thirty-seven permanent staff.[illegible]

Assessing ITLOS's impact is difficult. Some of its jurists have noted that [illegible]new[illegible] courts start slowly, with few cases.[illegible] Moreover, ITLOS's task is to enable settlements, so one would need to consider various of its dispute mechanisms to think through its effects. A few numbers are available: as of [illegible], twenty-three States Parties (of more than [illegible] Convention signatories)[illegible] had [illegible]accepted the Tribunal's compulsory jurisdiction.[illegible] Some disputes (exact numbers are not available) had gone to arbitral panels.[illegible] But the specialized system of ITLOS Chambers had not [illegible]proven particularly successful,[illegible] in that they had not been used. The tribunal generally sat as a whole. As noted, during its first decade of work it decided fewer than fifteen cases,[illegible] and the ECJ had rejected its competency over one of them.[illegible]

As was the case in thinking about the ICJ, whether size of caseload is a metric of success is another question. For cases involving [illegible]prompt release[illegible] of seized ships, ITLOS operated quickly, rendering several orders within thirty days.[illegible] Commentators have credited the tribunal with discouraging [illegible]unilateral actions[illegible] and with upholding [illegible]the human rights of crews[illegible] as well as affecting how countries handle questions of the ownership of foreign fishing vessels.[illegible] One could thus understand ITLOS as a court of last resort whose rare use bespeaks its success. Alternatively, one can focus on the decision by at least some disputants to turn to other tribunals. In ITLOS's first several years, maritime boundary conflicts continued to go to the ICJ and elsewhere.[illegible]

Rosemary Rafuse offered a different assessment[illegible] that ITLOS's [illegible]most significant contribution[illegible] has been to provide a [illegible]*modus operandi* for institutionalized compulsion and

Figure [illegible] Oral proceedings in the *Mo[illegible] Plant* case (*[illegible]reland v[illegible] nited [illegible]in[illegible]dom*), Provisional Measures, International Tribunal for the Law of the Sea.

Photographer: Stephan Wallocha, Hamburg, [illegible]. Photograph reproduced courtesy of the International Tribunal for the Law of the Sea.

supervision of political negotiations, rather than a judicial . . . mechanism[illegible] for deciding [illegible]disputes in accordance with international law.[illegible] In her view, ITLOS was used as part of a strategic interaction in which litigation was begun to prompt negotiation. Thus ITLOS had not done much to contribute to the [illegible]development of the law of the sea and international law in general.[illegible]

That assessment may not, however, make ITLOS idiosyncratic for current [illegible]courts[illegible] In Chapter [illegible], we explore the declining rate of trials in the United States and elsewhere and the embrace of alternative dispute resolution, including pressing parties to settle, and outsourcing disputes to private providers. ITLOS is the transnational counterpart, exemplifying why one could read some of the courthouse construction at the end of the twentieth century[illegible] in various parts of the world[illegible] as the erection of monuments to the past.

International Human Atrocities

The [illegible]nternational Tri[illegible]unals for the [illegible]ormer [illegible]u[illegible]oslavia, [illegible]wanda, and Sierra Leone

During the same decade that brought ITLOS into being, the United Nations supported the creation of a series of specialized criminal courts to deal with ethnic and national conflicts that resulted in tragedies of horrific proportions. Illustrative[illegible] but sadly not exhaustive of the set[illegible] are four tribunals. Three were created by the U.N. Security Council to be time-limited and focused by geography (with jurisdiction over events in the former Yugoslavia, Rwanda, and Sierra Leone). One[illegible] the International Criminal Court (ICC)[illegible] is to be a permanent institution in which states join to authorize global jurisdiction over crimes against humanity. Just as ITLOS reveals aspects of both the triumph and diffusion of adjudication, these specialized transnational criminal courts need to be brought into view to reveal another facet of courts[illegible] the degree to which they remain deeply enmeshed in the enterprise of discipline and control.

Like the international courts discussed thus far, the late twentieth-century specialized criminal courts are also the outgrowths of earlier efforts, in this context not to avoid armed conflict but rather to prohibit certain forms of behavior even when countries are at war. *The Law of War and Peace* (*De Jure Belli ac Pacis*), a [illegible] volume by the Dutch lawyer Hugo Grotius (whose bust is displayed in the Peace Palace) made the link between state sovereignty and legality[illegible] two factors used to justify war as a right of states.[illegible] As the Slave Trade Tribunals detailed in Chapter [illegible] suggested, seventeenth-century practices also shaped precepts that came to be called the [illegible]law of nations[illegible] protecting free passage on the seas by imposing prohibitions on piracy and eventually on slavery. [illegible]Modern[illegible] military codes are often dated in reference to Francis Lieber, an American who wrote a set of rules for war in [illegible].[illegible] The next year brought another benchmark, the Geneva Convention of [illegible], focused on protecting victims and wounded soldiers.[illegible]

Atrocities of the early part of the twentieth century produced the concept of [illegible]crimes against humanity[illegible] used as a basis for proposals for prosecuting Turks for the Armenian massacres of [illegible].[illegible] In [illegible] when, as discussed earlier, the League of Nations convened an advisory body of jurists to craft a statute for what became the Permanent Court of International Justice, that group also recommended the creation of a High Court of International Justice [illegible]competent to try crimes constituting a breach of international public order or against the universal law of nations.[illegible] Discussions and drafts followed during the [illegible]s, along with some support from various institutions, such as the Inter-

national Law Association. In , the League of Nations adopted a Convention for the Creation of an International Criminal Court, but an insufficient number of states were willing to ratify it, and it never came into force.

In a Polish prosecutor, Raphael Lemkin, invoked the term "genocide" to describe "the destruction of a nation or of an ethnic group," and a *Draft Convention for the "stablishment of a "nited Nations War Crimes Court* based in some measure on the League of Nations draft" was put into circulation. Rather than a comprehensive court, however, at the end of World War II two specialized courts were set up that, as commentators have noted, were institutions created by victorious nations to prosecute those they had defeated.

In , Britain, France, the United States, and Russia authorized an International Military Tribunal that presided over the Nuremberg Trials, held in that German city. Prosecutors there charged four crimes" "conspiracy to commit crimes against peace; planning, initiating and waging wars of aggression; war crimes; and crimes against humanity. On the Pacific front, the International Military Tribunal for the Far East (the Tokyo Tribunal) operated under a charter promulgated by United States General Douglas MacArthur as an agent of the Allied Forces. The eleven judges of that court came from Australia, Canada, China, France, India, the Netherlands, New Zealand, the Philippines, the USSR, the United Kingdom, and the United States. Prosecutions there included crimes against peace, war crimes, and crimes against humanity.

The post–World War II era saw development of substantive international law, some focused specifically on crimes against humanity. In the U.N. General Assembly created an International Law Commission (ILC) consisting of thirty-four learned persons serving five-year terms to develop and codify legal precepts. In , over the course of two days, the U.N. General Assembly adopted the Convention on the Prevention and Punishment of the Crime of Genocide (Genocide Convention) and the Universal Declaration of Human Rights (UDHR). Although an early draft of the Genocide Convention had proposed a criminal court; as enacted the Genocide Convention called for prosecution at either the national or international level, before "a competent tribunal of the State in the territory of which the act was committed, or by such international penal tribunal as may have jurisdiction with respect to those Contracting Parties which shall have accepted its jurisdiction." The following year, four Geneva Conventions developed more parameters for war to make plain that certain "grave breaches" of conduct were subject to prosecution.

Efforts in the s and thereafter to shape an international criminal court met with the complexities of negotiating the Cold War. A similar response greeted efforts to create "world habeas corpus" to enable individuals to seek redress from unlawful confinement. After the fall of the Berlin Wall, renewed interest in determining how to deal with massive injustices prompted intense debates about how law could be in any way responsive to the horrors that had been inflicted or plausibly fair to those accused. Some debates focused on criminal justice models that would document atrocities, identify culpable actors, and impose punishments. Others favored "truth commissions" that could provide a record and accountability through an array of narratives but that might seek "reconciliation" rather than punishment and vengeance. South Africa famously relied on "truth and reconciliation" while critics worried about an exchange of "amnesty for peace." In the s, sufficient support existed for using international criminal law, such that the United Nations authorized the three geographically focused institutions detailed below (we do not address the special court in Cambodia) and, eventually, helped to shape one permanent court.

One other prefatory note about the criminal courts is in order. Each of these new institutions comes with an extrajudicial staff of investigators and prosecutors specially designated to bring cases. Each must also have arrangements for detaining defendants awaiting trial, as well as places for imprisonment of those convicted. Although international civil courts have some mechanisms to help states needing funds to pursue their claims, to date these institutions have not encompassed ancillary bodies, such as free legal and investigative staffs to support litigants. In contrast, the design of international criminal courts include infrastructure systems that propel their work.

The International Criminal Tribunal for the former Yugoslavia (ICTY), chartered in , was the first criminal tribunal spawned as a "subsidiary body" of the United Nations. Located in The Hague not far from the Peace Palace, its surroundings are much more austere. The ICTY works in a recycled building that had been the "headquarters of an insurance concern." Built in the s, the ironwork of its spiral staircase lends an art deco flavor to the interior of the otherwise "anonymous three-story, rough white-brick building." While the ICJ and ITLOS rely on disputants to seek them out, their criminal court counterparts have their own prosecutorial and investigatory branches, charged in the case of the ICTY to initiate proceedings against persons "responsible for serious violations of international humanitarian law" committed after in the territories of the former Yugoslavia. The ICTY" joined by domestic courts and now by other transnational criminal courts" must determine which acts are so horrific as to warrant transnational prosecutions that cross the boundaries of nation-states.

As with the other specialized U.N. tribunals, the ICTY draws judges from different countries, and it also looks to a range of legal traditions for legal rules. Diversity is required by the ICTY statute, which specifies that the sixteen permanent judges must all be of different nationalities. Staffed by personnel representing twenty-seven

nationalities in June [illegible] (two years after its inception), [illegible] by [illegible] the ICTY had expanded to a staff of more than [illegible], [illegible] from some eighty nations. [illegible] The ICTY is organized in a pattern common to international courts [illegible] in this case, with four sets of chambers, three devoted to trials and the fourth to appeals. The appeals chamber, which also has authority over appeals from Rwanda, consists of seven permanent judges, including two from the International Criminal Tribunal for Rwanda, discussed later. [illegible]

As is familiar from other international courts, start-up takes time. The gathering and assessing of information before indicting individuals meant that during its first six years of operation the ICTY tried only six offenders. [illegible] But since then, the building's three courtrooms have been regular venues for trials. The courtrooms are also familiar in some respects. The bench for judges dominates the center, lawyers' tables are arrayed before them, and translator booths (a common feature of transnational courts) line one wall. What is unusual is that the area for observers is separated from the rest of the room by a floor-to-ceiling bulletproof glass pane, which can be shuttered closed when witnesses need to be protected or their information kept confidential. [illegible] Further, defendants are surrounded by a cadre of blue-shirted guards who change shifts at short intervals during the proceedings.

Members of the public can observe the proceedings and listen through headphones offering French, English, and Bosnian/Croatian/Serbian. Witnesses' voices are scrambled when their identities need to be protected for their safety. [illegible] Throughout the former Yugoslavia, one can watch proceedings from closed-circuit television via web links in French, English, and Bosnian/Croatian/Serbian. [illegible] The high profiles of some defendants have brought a great deal of attention to the proceedings. In [illegible], Slobodan Milo[illegible]evi[illegible], who had been both the former president and commander of the army of the Federal Republic of Yugoslavia, went on trial. He faced charges of genocide for [illegible]ethnic cleansing[illegible] in Kosovo, as well as for other crimes in Croatia, and Bosnia and Herzegovina. [illegible] Milo[illegible]evi[illegible] died of a heart attack on March [illegible], [illegible], four years into his trial, [illegible] and the proceedings were terminated three days later. [illegible]

The task for the ICTY (and the other international criminal courts) is to delineate boundaries of unlawful behavior during war and other forms of conflict; to police the prohibitions on torture and inhumane treatment, targeted attacks against civilians, and to define a small subset of acts as [illegible]crimes against humanity[illegible] When creating the ICTY, the United Nations specified its jurisdiction to reach [illegible]grave breaches[illegible] of the [illegible] Geneva Conventions (including torture, inhuman treatment, and extensive destruction of property [illegible]), violations of the laws of war, genocide, and crimes against humanity. [illegible] The definitions of what constitutes such acts are not static. For example, it was the ICTY that first recognized that deployment of mass rapes and sexualized violence constituted crimes against humanity. [illegible]

The United Nations made the ICTY [illegible] and then the other courts that followed it [illegible] optional in the sense that its jurisdiction is concurrent with, though primary to, that of national courts. [illegible] But it is not the parties who control access. Rather, ICTY prosecutors determine whether to proceed or defer to nationally based remedies. [illegible] Echoing the pattern established by the Mixed Courts of Egypt (fig. [illegible]/[illegible]), the rules for pre-trial and trial proceedings reflect a mix of national legal traditions in which the civil and common law systems of Europe dominate.

In our discussion of the ICJ and ITLOS, we considered [illegible] as have others [illegible] the size of their caseloads. Some level complaints against the ICTY as too expensive, [illegible] even though its volume looks relatively large when compared to that of ITLOS, whose lifespan coincides with that of the ICTY. From the founding in [illegible] through [illegible], the ICTY had concluded proceedings against [illegible] of a total of [illegible] individuals. [illegible] Trials or appeals were underway for about forty-five more, with two fugitives at large. [illegible] Another assessment points to the [illegible]thousands of pre-trial, trial, and post-trial decisions [illegible] that have developed a significant jurisprudence on international criminal law, including distinguishing levels of culpability and the requisite proofs. [illegible] Yet others note the general creation of a body of lawyers and judges committed to operationalizing international precepts [illegible]to make some coherent legal sense of the worst humanitarian disasters and help create incentives to prevent them. [illegible]

The ICTY [illegible] like other criminal courts focused on specific conflicts [illegible] is designed to close. Its target is to complete all proceedings, including appeals, by the end of [illegible]. [illegible] To facilitate that [illegible]completion strategy[illegible] at the end of [illegible] the U.N. Security Council unanimously extended the terms of several judges. [illegible] The United Nations has supported the costs of the court, estimated to be more than [illegible]. [illegible] billion during its first fifteen years of operation, [illegible] with a biannual budget of some [illegible] million. [illegible] Another way to look at the numbers is to add the funds supporting the ICTY to those for the Rwanda tribunal (detailed later). Together the two comprise some [illegible] million annually, or [illegible]one-seventh of the regular UN budgets for a comparable period. [illegible] Thus, while some complain that the ICTY has done too little ([illegible]relatively few trials despite substantial annual budgets [illegible]), others have countered that to create a court with a new agenda and to charge it with transnational cases involving victims, defendants, and lawyers from around the world made the initially high costs understandable. [illegible]

A substantial literature questions the enterprise more broadly, asking whether prosecution is wise given the need to reconstitute polities. [illegible] Some commend [illegible]truth and reconciliation[illegible] commissions, with South Africa as the model. [illegible] Others have praised the ICTY for putting its proceedings before a remarkably wide audience. One commentator, Samual Totten, reported: [illegible]Viewing the trial of Slobodan Milo[illegible]evi[illegible] . . . [illegible]enabled[illegible] me to observe the procedural oper-

ations of a remarkable judicial process . . . that can serve as a major brake on those who might consider genocide in the future because they will know full well that . . . they are no longer likely to walk away . . . with impunity.

But ethnic cleansing did not stop in , when the ICTY was charted, nor has it been limited to the former Yugoslavia. The optimism of the observer of the Milosevic trial that prosecution would be a major brake on genocide has not come to fruition. Crimes against humanity are unabated, and violations have brought forth other specially chartered courts. In , about a year after establishing the ICTY, the U.N. Security Council created the International Criminal Tribunal for Rwanda (ICTR). It is the first U.N. court to sit in Africa specifically in Arusha, Tanzania. Like the ICTY, the court is to be limited by time and place. Like the ICTY, the court is physically distant from the conflict that brought it into being. And like the ICTY, the ICTR uses facilities built for others in its case, the Arusha International Conference Centre.

The ICTR's charter also parallels that of the ICTY: to adjudicate cases involving persons responsible for serious violations of international humanitarian law committed in the territory of Rwanda and Rwandan citizens responsible for such violations committed in the territory of neighbouring States, between January and December . The structure of the two tribunals is similar, with chambers for trials and appeals, a prosecutor, and a registry. The court also works in three languages, in this instance French, English, and Swahili. The ICTR has sixteen permanent and nine ad litem judges, with two appellate judges based at The Hague. The initial group came from around the world. And, like the ICTY, the ICTR struggled to secure the cooperation of officials in the country where the atrocities had taken place.

During the ICTR's first fourteen years, its administrative and attorney staff grew to number almost . To support their work, the budget of the ICTR paralleled the upward slope and size of the ICTY's budget. The ICTR's budget in – was almost million. The docket, though, has been smaller. The court reported that it had secured the arrest of more than seventy people and laid down legal principles that have provided precedents for other tribunals. As of November , the ICTR had nine cases awaiting trial; twenty-nine pending, including on appeal; and thirty-four completed, with five detainees acquitted. Some of the judgments have come through guilty pleas rather than trials. The ICTR was initially projected to work for about ten years. In , the U.N. Security Council expressed its intent to extend the tenure of some of the Rwanda judges' tenures (as it had for ICTY judges) in this instance to December .

Our next example, the Special Court for Sierra Leone (SCSL), varies on three dimensions. First, it is both a national and an international court: national judges sit alongside international ones and deliberate on cases arising under both kinds of law. Second (and relatedly), the SCSL has come to operate in two locations. The primary base was, as of , in Freetown, Sierra Leone, but one of its cases, the prosecution of former Liberian president Charles Taylor, is underway at The Hague. Third, the ICTY and the ICTR are financed by dues of U.N. Member States. The SCSL is funded by volunteers, including some thirty countries and three foundations.

In the SCSL was chartered jointly by the Government of Sierra Leone and the United Nations. Its docket is to deal with persons who bear the greatest responsibility for serious violations of international humanitarian law and Sierra Leonean law committed in the territory of Sierra Leone since November of , including those leaders who, in committing such crimes, have threatened the establishment of and implementation of the peace process in Sierra Leone. Once again, the court relies on trial chambers and an appeals chamber, as well as a registry and prosecutor. The international-national structure is played out in the selection of judges. Three judges sit on each of the two trial chambers; the U.N. Secretary-General appoints two, and the Sierra Leonean government selects a third. The five jurists sitting on appeal are likewise appointed three by the Secretary-General and two by Sierra Leone.

Within a year of the court's existence, the prosecutor brought charges against thirteen individuals, and those cases were organized into four trials based on the offenses involved. By the end of , the SCSL had completed proceedings against eight out of a total of thirteen indictees. The court has done this work with a smaller budget and staff than those of either the ICTY or the ICTR. Over four hundred staff posts are supported for the year ending in with funds of about million.

Designing for a Future of Crimes: The International Criminal Court

In introducing the specialized criminal courts of the s, we sketched a history that should also serve as the preface to the Rome Statute of the International Criminal Court, described by one commentator as the culmination of a fifty-year struggle to establish a permanent body capable of prosecuting international crimes. As we noted, in the General Assembly created the International Law Commission to make recommendations for developing and codifying international law. In the early s, the ILC submitted a draft code of offenses against mankind and accompanied it with a proposal for an international criminal court. But little progress toward enactment of a code or a court occurred until the s, when discussion resumed, in part through the efforts of non-governmental organizations such as Amnesty International and Human Rights Watch. In , at the direction of the General Assembly, the ILC returned to the drafting of a criminal code.

By ⍰⍰⍰⍰, the ILC forwarded a proposal for a permanent international criminal court. The recommendation was recommitted for further study⍰⍰⍰ so as to be considered at a conference to be held in Rome in ⍰⍰⍰⍰. Many commentators note the interaction between the creation of the ICTY and the ICTR and the development of a political context able to establish an international criminal court and, perhaps, rendering it somewhat anticlimactic. Yet those tribunals could⍰ from the perspective of states not directly involved in either conflict⍰ appear relatively safe, in that their own nationals would not be implicated as they might were a court to have a less bounded mandate. In contrast, a permanent standing court could subject any national to the possibility of prosecution. Yet to ⍰the surprise of many participants and observers,⍰⍰⍰ the negotiations with more than ⍰⍰⍰ states represented reached an agreement (the Rome Statute) that creates a world court for ⍰the most serious crimes of concern to the international community as a whole.⍰⍰⍰ Opened for signatures on July ⍰⍰, ⍰⍰⍰⍰, the requisite sixty signatures were obtained by ⍰⍰⍰⍰ to establish the court. Before turning to its operations and its quarters, several features of the court and its jurisdiction bear mention.

First, the International Criminal Court (ICC) is a ⍰treaty court⍰ akin to ITLOS and functioning as a body independent of the United Nations, with which it has an agreement formalizing a relationship.⍰⍰ Second, unlike the PCIJ, the ICJ, and ITLOS, the ICC has distinct kinds of authority not derived from participants' consent. A degree of compulsion has been accorded the ICC for it has jurisdiction over a defendant if (a) that person is a resident in a territorial state that has become a member; (b) the person is a national of a State Party; (c) the conduct occurred in the territory of a State Party (or on board a vessel or aircraft); or (d) that state has agreed on an ad hoc basis to jurisdiction.⍰⍰ As critics have pointed out, these provisions could also be seen as ⍰loopholes⍰ in that ⍰traveling tyrants⍰ can avoid prosecution if they stay at home in a country that has not ratified the ICC. Another caveat to the ICC's jurisdiction is a principle known as ⍰complementarity⍰ which cedes the ICC's jurisdiction to national criminal justice systems if they are able and willing to prosecute.⍰⍰ Thus, the ICC is to defer when possible.

The question of the scope of authority bears further discussion. The prefatory comment that is in order is that the ICC was to have no jurisdiction to prosecute crimes committed before its enabling statute entered into force, which occurred in July of ⍰⍰⍰⍰.⍰⍰ While the ICC lacks the retroactive authority of the ICTY and the ICTR, the ICC has broader jurisdiction over four categories of crimes⍰ genocide, crimes against humanity, war crimes, and aggression.⍰⍰ For example, rather than requiring as a predicate that all crimes take place during war, the linkage is somewhat broader. Further, ⍰crimes against humanity⍰ are defined as acts that are part of ⍰a widespread or systematic attack directed against any civilian population, with knowledge of the attack.⍰⍰⍰ Eleven acts are listed as falling within the frame of crimes against humanity; included are murder, extermination, enslavement, deportation, imprisonment, torture, rape, persecutions on political, racial, and religious grounds, apartheid, and enforced disappearances.⍰⍰ These details circumscribe the authority of the ICC to some extent.

The Rome Statute is also noteworthy for making gender plainly relevant, in that sexualized violence is understood to fall within the set of both war crimes and crimes against humanity.⍰⍰ Rules of evidence also take the genders and ages of victims into account.⍰⍰ Further, women do not appear only as victims. Rather, the Rome Statute is the first international treaty of this kind to put ⍰principles of female participation⍰ explicitly into the governance structure.⍰⍰ The statute calls on countries, when nominating judges and prosecutors, to seek a ⍰fair representation⍰ of both women and men knowledgeable in international criminal law, including violence against women and children.⍰⍰ Geographical distribution is also called for, as well as knowledge of different legal systems.⍰⍰

Problems of definitions of crimes haunt all statutory prohibitions,⍰⍰ but one of the ICC's crimes remains without detail. As Benjamin Schiff explained, the ⍰overwhelming sentiment at the Rome Conference ⍰was⍰ to include aggression in the Statute, but there was also adamant opposition to it, particularly from the United States and other Security Council permanent members.⍰⍰⍰ The compromise was to include aggression but not permit the ICC to exercise jurisdiction over such a crime until at least seven years after the ICC existed and then upon a two-thirds vote of the Assembly of States Parties agreeing on the definition and conditions for its use.⍰⍰

The question of the power of initiation, and hence the role of the prosecutor, is at the heart of international criminal courts. Debated was whether the prosecutor had to await references or would be free to pursue crimes independently; at issue in part was whether to rely on or to meld continental or common law traditions. The denouement, over objections from the United States,⍰⍰ was to authorize the prosecutor to investigate preliminarily and, upon finding a reasonable basis to proceed, to obtain authorization from a group of ICC judges called the ⍰Pre-Trial Chambers⍰ to investigate further.⍰⍰ Some tensions can thus exist between the ⍰OTP⍰⍰ Office of the Prosecutor⍰ and the ⍰PTC⍰⍰ the Pre-Trial Chambers. Further, the Registry retained significant control over personnel hiring, budgets, and translation capacity.⍰⍰ In addition, a State Party or the U.N. Security Council can refer alleged crimes falling under the jurisdiction of the ICC to be investigated.⍰⍰ But the Security Council can also put a stop to ICC investigations and trials. Under Article ⍰⍰ of the Statute, the Security Council, with a resolution adopted under Chapter VII of the U.N. Charter, can suspend ongoing investigations or

prosecutions for twelve months if the court's involvement is believed to threaten efforts to create peace.

The reach of the ICC and specifically its authority to prosecute crimes while conflicts are underway complicates its work. Like all courts, the ICC needs cooperation from witnesses to prosecute. Unlike domestic courts that are arms of the state, keeping its peace and security the ICC needs to have States Parties cooperate with it. When the leaders of a nation-state may themselves be implicated in investigations or hope to maintain neutrality among insurgent groups, working with the ICC could be difficult. In addition to challenges of initiation, the ICC can face interruption or abortion of prosecutions underway if, for example, domestic movements press for alternative responses, such as truth and reconciliation commissions.

The ICC treaty crafted remedies in addition to imprisonment; the Rome Statute created a Trust Fund for Victims and gave victims (including institutions dedicated to religion, education, charity, and humanitarian purposes) standing. As in some domestic criminal justice systems, the ICC's provisions can order forfeiture of property to be used for victims and (more expansively) for their families. The ICC can acquire such funds not only from perpetrators but also from unspecified other sources. Unlike the detail provided for the ICC's criminal prosecution and judicial functions, the content of the remedial system was left to future elaboration by the States Parties.

Operationalizing a Criminal Court System

For the Rome Treaty to become effective (enter into force), sixty states had to ratify it. That number was reached in April of . As it had in the s when asked to join the PCIJ, the United States, which had been instrumental in the negotiations leading up to the ICC, stood outside the body. President William Clinton signed, but then his successor, President George W. Bush unsigned as the United States began its campaign against the ICC by seeking to persuade other countries to decline to participate. In addition, the United States government interpreted a provision of the ICC statute, Article , providing that countries need not surrender individuals to the court if to do so would be inconsistent with other international obligations, as permitting bilateral agreements not to transfer United States citizens to the ICC. The United States then persuaded in part through the threat of loss of economic or military aid some one hundred states to sign these agreements. On the domestic front, the United States enacted laws to prevent funding efforts to assist the ICC, to prevent ready transfer of information, and to permit the United States President to use appropriate means to free American soldiers if they were arrested by the ICC.

Nonetheless, the ICC has been up and running since , housed temporarily in a fifteen-story office building (fig.) in The Hague, which was the only State to offer its services. The Netherlands gave the ICC the use, for ten years, of a former building of a Dutch telecom company that, like the ICTY, is not secluded from the neighborhood in which it is sited. The ICC also rents cell space from the Dutch government for a jail. As figure details, the interior has been reconfigured to create a courtroom of about square meters (square feet). The various cameras denote the ability to broadcast proceedings; the high walls indicate that spectators do not share space with the participants but, along with the press, can sit in a glass-enclosed arena above.

To do its work, the ICC has four offices the Presidency, the Divisions (a term chosen in lieu of chambers but one that is sometimes used interchangeably with it), the Office of the Prosecutor, and the Registry. Its governing body is the Assembly of States Parties (ASP), which consists of one representative from each state that has ratified the Rome Statute. Like ITLOS, the ICC gains its judges through elections by its States Parties. Like the ad hoc tribunals, the ICC is constituted by separate groups of judges denoted by the stage of proceedings to wit, Pre-Trial, Trial, and Appeals Divisions and the presidents of the three together are the presidency of the ICC.

Nationality and power remain relevant for judgeships and for the prosecutor. As in the other U.N. courts, no two judges can come from the same country, and all must be of high moral character qualified domestically for high office, diverse in terms of geography and gender, and knowledgeable in either criminal law or international humanitarian law. Voting rules operationalize the requirements through separating candidates by lists. For example, to achieve a fair representation of female and male judges each State Party shall vote for a minimum number of candidates of each gender resulting in a bench that, as of the end of , included women and men in close to equal numbers.

On the various international courts, an insistence on regional, national, legal, and gender diversity could be understood in different ways. One might take a requirement of judges from various sectors to be a recognition of difference that universalism has limits and that judges are situated, with points of view that alter judgments. Thus, one could aspire to culturally diverse deliberations an idea to which we return in Chapter . Alternatively, one might think that universalism runs deep; that jurists identified by region, gender, legal systems, and expertise are united by shared legal precepts; and that their diversity enhances legitimacy (as well as national and regional support) but does not result in substantively different reasoning, processes, or results.

Judges need to work in the languages of the ICC, English and French, but additional official languages include Arabic, Chinese, Russian, and Spanish. Judges are to hold their positions full-time and to be paid (when the court is

Figure ⊠⊠⊠ International Criminal Court, interim premises, The Hague, the Netherlands, circa ⊠⊠⊠⊠ (using the former offices of the Dutch telecom company KPN).

fully operational) around ⊠⊠⊠⊠,⊠⊠⊠ (⊠⊠⊠,⊠⊠⊠ euros).⊠⊠ To get the right mix of jurists requires a complex voting system with lists,⊠⊠and to select the first set of eighteen judges for the ICC, the ASP went through more than two dozen ballots before settling on a full slate of judges.⊠⊠ Terms are to be nine years, nonrenewable, but were staggered somewhat and, in addition, the presidency has the authority to increase the number of judges.⊠⊠

The ASP also has the power to select the chief prosecutor, who serves a nine-year nonrenewable term.⊠⊠ Concerns about the overbearing role of the Security Council and the prevalence of prosecutors from the Anglo-American heritage at the ICTY and the ICTR prompted interest in looking broadly for a person who would be expert in criminal international law, an able spokesperson and manager and, if possible, a person who would not elicit the ire of the government of the United States.⊠⊠ In the spring of ⊠⊠⊠⊠, Luis Moreno Ocampo of Argentina, who had been involved in the prosecutions there of crimes of the former military junta, was elected to serve as the first Chief Prosecutor of the ICC. He did not want for work, for as soon as the ICC began to function, complaints of alleged crimes⊠ many not within its jurisdiction⊠ were presented. Within the first year, the prosecutor reported more than ⊠⊠⊠ communications.⊠⊠ The court lacked authority to investigate, for example, alleged crimes by the United States in Iraq because neither the United States nor Iraq was a party to the Rome Statute. The first investigation, begun in July ⊠⊠⊠⊠, focused

on reports of crimes taking place in Ituri, Democratic Republic of the Congo.[illegible] The Congo is a party to the statute and referred the issue to the ICC. Two other states, Uganda and the Central African Republic, also sent references of events in their territories to the ICC, and the U.N. Security Council referred a conflict in Darfur while excluding crimes committed elsewhere in the territory of the Sudan.

[illegible]Situations[illegible] is the term of art that developed for such inquiries, aimed at not prejudging the outcomes. In July [illegible], the ICC issued its first arrest warrants with regard to the situation in Uganda.[illegible] As of [illegible], cases were moving toward the trial stage and hence requiring elaboration of the legal rules and judicial roles in the new court.[illegible] By then, [illegible] states had ratified the Rome Statute, and an additional forty states had signed but not ratified.[illegible] Aside from the judicial chambers, more than [illegible] women and men from eighty states[illegible] staffed the ICC. While in [illegible]–[illegible], the ASP had pegged the initial budget at some thirty million euros ([illegible] million), by [illegible] the ASP had authorized eighty-nine million euros ([illegible] million) for support.[illegible]

The institutional authority that the ICC hopes to create is complicated by its dependence on the prosecution, whose jurisdiction, in turn, has mixed political and practical limitations. It can pursue specified crimes committed in states that are parties or by their nationals, but its principle of complementarity means that it will not do so if the crime is pursued in the courts of a State Party having jurisdiction. Whether a State Party is pursuing a prosecution in good faith or is just going through the motions can be a ticklish problem. The need to answer this kind of question could be understood as putting the ICC in a quasi-supervisory position vis-[illegible]-vis a State Party and its courts, with all the potential for generativity or conflict that such a relationship implies. (Putting the point in a favorable light, some refer to this facet as [illegible]positive complementarity[illegible] to embody the potential that the ICC will serve as a catalyst for domestic prosecutions.) One could measure the ICC's success, for example, through its ability to prompt domestic prosecutions rather than move cases rapidly into its own court.

Moreover, although ICC is independent of the United Nations, the looming presence of the U.N. Security Council, which has the power to suspend investigations and trials, is a factor that induces a cautionary approach to prosecution. On the other hand, unlike some of the other international courts discussed, the ICC is distinct from an arbitration body in its exercise of coercive power, with its authority supported by the Security Council. But that independence from the United Nations extends to funding in some respects. The ICC relies on assessments of States Parties based on the scale in use by the United Nations, as well as on voluntary contributions from organizations (the United Nations included) and from private individuals and corporations.[illegible]

In other words, the ICC needs to raise money as well as legitimacy for its existence as a judicial body. Conscious of its many audiences, ranging from states to the NGOs that were instrumental in bringing it into being, as well as the hostility of the United States and the complexity and tensions of its own multi-part structure, the ICC has developed its own strategic plan.[illegible] Its goals are familiar within the lexicon of courts, albeit also showing how dependent the ICC judges are on the ICC prosecutor. The aims are to undertake investigations, prosecutions, and trials [illegible]fairly, effectively, and impartially[illegible]; to act [illegible]transparently and efficiently[illegible] to contribute to the enforcement of international criminal justice; and to remain attentive to the [illegible]rights of participants[illegible] As an early twenty-first-century court, the ICC also demonstrates its need for popular support through gaining attention; its officialdom hopes it will be seen as a [illegible]model of public administration[illegible] providing an accountable yet non-bureaucratic working culture.[illegible]

Occupying Permanent Quarters Rather Than Riding Circuit

Article [illegible] of the Rome Statute provides that the ICC has its [illegible]seat[illegible] at The Hague, but can, [illegible]whenever it considers it desirable[illegible] sit elsewhere.[illegible] Thus the Netherlands could serve a limited purpose as headquarters for a court that nimbly decamps to various parts of the world, riding circuit to at least the region if not the state in which various events took place. One can make an argument for this approach on symbolic grounds, that to do so would diminish the sense of international criminal law as Euro-centric. Further, on practical grounds, it could be sensible for judges to travel to witnesses and victims rather than the other way around.

While the possibility of holding hearings and trials at diverse sites remains an option, the decision was made for a permanent and impressive site. In [illegible] the ICC briefly established its own [illegible]Inter-Organ Committee on the Permanent Premises,[illegible] which in [illegible] reported[illegible] in conjunction with the Netherlands[illegible] that the ICC should be [illegible]housed with the [illegible]*est possi*[illegible]*le workin*[illegible] *conditions* over an extended period of time.[illegible] Hence the options of staying in its borrowed office building (which had come to be nicknamed [illegible]the Arc[illegible]) or of using the premises of the ICTY were rejected.[illegible] Further, new purpose-built permanent premises would [illegible]fully reflect the unique character and identity of the International Criminal Court and symbolize in a dignified way the eminence and authority of the Court for the international community as a whole.[illegible] Because the ICC was to be a [illegible]prestigious institution on the world stage[illegible] it needed a building to enable it to serve as an [illegible]enduring symbol of international criminal justice. . . . [illegible]P[illegible]ermanent premises will . . . become the public face of the institution[illegible] an emblem of fairness and dignity and a symbol of justice and hope.[illegible]

The ICC's building group detailed the need for a facility to house staff ranging from [illegible] to [illegible],[illegible] people and the desirability of housing various organs of the ICC at a single

site proxmate to the Scheveningen Prison□ some □□□ meters (□,□□□ feet) away□ for detaining individuals. Moreover, the premises needed to be □completely secure but at the same time remain open and welcoming.□□□ The point was to be □perceived as secure (but not as a fortress), people-friendly, comfortable and accessible to all.□□□ In □□□□, the plan was confirmed through a call for architects to design a space of no more than □□,□□□ square meters □with □,□□□ workstations□,□□□ the projected budget in □□□□ euros was just over □□□ million for materials, labor, and construction, including □specialized representational features□ such as □large sculptures, mosaics, or other large pieces integrated into the architecture.□□□

□One site forever□ A Timeless Image and Four Security Zones

Like the drafters of design guides in the United States, the briefs in France, and the competition program for the Peace Palace, the ICC building group specified its objectives for a building that was adaptable, with a □high-quality design□ that was low in maintenance costs and □environmentally friendly.□□□ The premises□ □one site forever□□□□ were to be □unobtrusive and on a human scale, while at the same time symbolizing the eminence and authority of the Court□ through a facade that □served□ as a timeless image symbolizing its principal mission□ of bringing perpetrators to justice.□□□ The design was to provide a □well-balanced representation of the entire international community□□ □a place at the heart of that community.□□□

To accomplish these goals, the new building's entrance needed to be □open and spacious□ so as to make visitors □feel welcome, despite the security checks□ and public galleries were to be □comfortable and spacious□ with room for the press, observers from either governments or NGOs, and others. Moreover, the press was to be given special accommodations as a □prime witness for the wider world□ Students and scholars were also to be welcome so as to establish □an intellectual link between the Court and the outside world.□□□

Further, the building was to provide clear distinctions between and separations of the chambers of the ICC and the Office of the Prosecutor (□clearly and visibly separated from each other□□□) and to offer dedicated spaces for defense counsel, victims, and witnesses, again to be separated from the court and its prosecutor.□□□ The need for □distinct identities□ for the various divisions suggested a □campus-like arrangement.□□□ The presumption was that when operating at full capacity, the ICC would handle six hearings a day, and hence should be built to accommodate space for those activities. Dedicated rooms needed to be provided for judges, staff, the press and conferences, prosecutor, registry, a secretariat for the ASP, and holding cells for detainees. The protocol called for two □normal□ courtrooms and one larger one, and areas allocated for more if needed. Thus, about □,□□□ square meters or about □□,□□□ square feet would be required for both the courtrooms and its □supporting functions.□□□ In lieu of the □trois flux□ or three zones of courthouses in France and in the United States, courthouses, four were needed: a □public zone□ to which general screening would apply, a □semi-public zone□ that required identification and encompassed □public galleries of the courtrooms□ and conference areas, a □restricted zone□ for staff, and a □high security zone□□ including the courtrooms themselves as well as holding areas□ for specially authorized persons.□□□ All of the various needs resulted in a building projected to measure about □□,□□□ square meters (□□□,□□□ square feet).□□□

These requirements were, of course, costly□ prompting exploration of tradeoffs between moving or remodeling. The ICC building group did comparative calculations of the yearly costs for the use of its current space, occupation of the ICTY building, and construction of a new one and then concluded that new construction would be more expensive but only marginally so, given the limitations of the other sites.□□□ The ASP agreed to support a new permanent and purpose-built structure, were funds and land to become available.□□□

As it had a century earlier (we have come full circle, albeit for war atrocities rather than for peaceful resolutions), the Dutch government again proved to be a welcoming host, offering some □□,□□□ square meters (□□.□ acres) of land on the site of the Alexanderkazerne in The Hague.□□□ After many exchanges, funding for the competition and loans for construction came from the Dutch government.□□□ In the tradition of the ICJ, a competition was launched in □□□□, with cash prizes proffered on a sliding scale.□□□ Organized by the Chief Architect of the Netherlands, an international jury was convened that culled twenty submissions from a group of □□□.

As the glossy brochure on the competition reported, those selected came from □five different continents and twelve different countries.□□□ The third prize went to Weil Arets Architects □ Associates of the Netherlands for a building that was evocative of a series of angled pyramids (the architects termed them □four vertically extruded, lit cones□).□□□ The second prize went to Schmidt Hammer Lassen / Bosch □ Fjord of Denmark, which had proposed several boxed towers (a □sculptural composition of square towers□□□) in the International style. The first prize went to Ingenhoven Architects of Düsseldorf, Germany, for a grouping of buildings, circular and square, embraced by latticework that linked them□□□ in a fashion akin to the golden mesh ring provided by Dominique Perrault for the ECJ. As the architects explained, they had separated the ICC organs in discrete structures inside an □open house□ that was □light, careful, elegant and at the same time transparent□ Further, it was □detached from any specific cultural context□ and not too □defensive□ and hence expressive of the □fairness□ of a court of law.□□□ The jury returned its verdict with an odd description given the context□ that the winner had provided a □happy building.□□□

In [illegible], the ICC chose instead the second-prize winner [illegible] Schmidt Hammer Lassen. That design is described as providing [illegible]a safe place that captures the ICC's core values of justice, independence, universality, diversity, and transparency[illegible] while also [illegible]melting into the natural environment[illegible] and, thereby, transmitting [illegible]the feeling of harmony and peace[illegible] Further, rather than be [illegible]anonymous[illegible] the building had the [illegible]courage to express the values and the credibility of the ICC.[illegible] When making the announcement, the Registrar reported that the ICC hoped that by [illegible] it would be in its own building. The effort to obtain a [illegible]site forever[illegible] sadly symbolized the presumption of human atrocity ad infinitum.

The Logos of Justice: Budgets, Caseloads, Scales, and Buildings

One measure of the investments in worldwide support for transnational courts can be seen from a snapshot of budgets in [illegible] that compiles information from the three regional courts discussed in Chapter [illegible] and the six international courts addressed here.[illegible] Figure [illegible], [illegible]*e[illegible]ional and [illegible]nternational Courts[illegible]Bud[illegible]ets in* [illegible], captures the spread, with the European Court of Justice supported by more than [illegible] million,[illegible] as contrasted with the budget of the European Court of Human Rights that was less than a sixth of that amount.[illegible] Far below both were the funds of the Inter-American Court of Human Rights and the Inter-American Commission on Human Rights that, together, worked with just over [illegible] million.[illegible]

Looking across the international courts, the oldest court in this group, the ICJ, had a budget of some [illegible] million in [illegible].[illegible] The two treaty bodies[illegible] the ICC and ITLOS[illegible] had vastly different economic bases that echoed their differential volumes and that criminal court budgets include prosecutorial offices with investigative staff. The ICC was allotted just over [illegible] million in [illegible],[illegible] and ITLOS's budget was around [illegible] million.[illegible] Turning to the criminal courts under the United Nations' umbrella, the ICTY and the ICTR had somewhat similar funding. The ICTY received over [illegible] million[illegible] and the ICTR about [illegible] million.[illegible] The hybrid court, the SCSL, was funded at [illegible] million, coming from voluntary contributions.[illegible] These figures reflect that the SCSL and the ICC had just begun their work in the first years of the twenty-first century.

Caseloads offer another measure of investment. We provide one snapshot in figure [illegible], [illegible]*e[illegible]ional and [illegible]nternational Courts[illegible]Pendin[illegible] Caseloads in* [illegible], to compare dockets for just one year.[illegible] (Of course, snapshots are just that. For example, while the PCA had nineteen pending cases in [illegible], it had about forty-eight in [illegible].[illegible]) In [illegible], the two caseload peaks come from Europe where the European Court of Human Rights[illegible] which in the late [illegible]s took over the task of sorting cases for admissibility from the European Commission on Human Rights[illegible] had a backlog that gave it almost [illegible],[illegible] pending cases, including some [illegible],[illegible] new applications lodged in [illegible].[illegible] The European Court of Justice, functioning as the judicial voice of the European Union, represents the next in volume, as it listed almost [illegible],[illegible] cases including those pending at its three levels[illegible] the Civil Service Tribunal, the Court of First Instance, and the Court of Justice.[illegible]

The third peak comes from the Americas, where, in [illegible], the Inter-American Court of Human Rights had [illegible] contentious cases in monitoring phases and another [illegible] without judgment, for a total of [illegible] pending cases (including, as noted, enforcement proceedings).[illegible] Because the Inter-American Commission on Human Rights continued to sort the eligibility of certain matters for filing, we counted (as noted on the chart) the Commission's then pending [illegible],[illegible] cases.[illegible] As is illustrated, the other courts had a much smaller number of pending cases. The International Court of Justice had [illegible] pending contentious cases in [illegible] and the Permanent Court of Arbitration had [illegible] matters before it.[illegible] One case was pending at International Tribunal for the Law of the Sea.[illegible] No new cases were filed that year; at

the time, ITLOS had then heard thirteen matters since its [illegible] inception.[illegible]

Turning to the international criminal courts, the oldest, the International Criminal Tribunal for the former Yugoslavia, dating from [illegible], reported that, as of [illegible], [illegible] persons had been charged; proceedings had concluded against [illegible], and [illegible] cases were in progress.[illegible] As of [illegible], the International Criminal Tribunal for Rwanda, chartered in [illegible], was dealing with twenty-seven defendants whose cases were then in progress.[illegible] In [illegible] four cases were underway at the Special Court for Sierra Leone, involving a total of ten defendants.[illegible] In that year, the International Criminal Court reported three [illegible]situations[illegible] in judicial proceedings, involving a total of eight accused.[illegible] This chart reflects that, in the first years of the twenty-first century, the SCSL and the ICC had just begun their work.

The charts provide a window into the interaction among funding, buildings, other activities, and cases in transnational courts. Given the tens of thousands of cases in national courts, one is thus able to understand the dual narrative presented by these courts. On one dimension[illegible] size of docket[illegible] the courts are relatively marginal as compared to national courts. On another, political and symbolic import, the creation of these institutions (admidst controversies about whether to do so) and the size of the buildings bespeak a commitment to courts as special institutions designed to engage with the public. Further, one can see that the heaviest volume does not always correspond to the resources provided[illegible] forecasting the problems we address in Chapters [illegible] and [illegible] about the challenges of supporting courts at the domestic as well as the transnational levels.

The effort to weave a transnational commitment to justice through practices and symbolism and the difficulties of giving expression to the depth of the problems these courts address can be seen from a collection of the various courts' logos. The international courts have embraced the historic traditions we mapped at the outset, put most plainly on display by the choices made in the oldest logo in the set, that of the Permanent Court of Arbitration (fig. [illegible]).[illegible] Its design is modeled after the frontispiece (fig. [illegible]) of a [illegible] book titled *Corps universel diplomati[illegible]ue du droit des [illegible]ens* by Jean Dumont.[illegible]

That volume is a compilation with commentary of European treaties related to political alliances, commercial trans-

actions, and agreements of [illegible]peace[illegible] and [illegible]neutrality[illegible] entered into from the time of Charlemagne (around the tenth century) through the eighteenth century.[illegible] The engraving is by Bernard Picart, who was born in Paris in [illegible], also lived in Antwerp, The Hague, and Amsterdam, and died in [illegible]. Considered a [illegible]magnificant engraver,[illegible] Picart was known for his depictions of [illegible]religious ceremonies and customs of diverse peoples.[illegible] He created the print the *Traite[illegible] de Pai[illegible]* (*Peace Treaties*) in [illegible]. In addition to being found in many treaty compilations, a variation was also used in seventeenth-century wedding poems, with husband and wife clasping hands to symbolize their pact.[illegible]

In the background of figure [illegible], the Virtues Justice and Peace embrace. They are seated on a pedestal and surrounded by other labeled Virtues (including Fortitude, Wisdom, Natural Law, and Truth). The French text below

(too small to reproduce) explains that the two male figures at the center are two kings ⊠swearing an alliance⊠ confirmed through a handshake above a chalice-shaped urn within which a fire burns. Each of the men bears a palm, symbolizing peace, and each is surrounded by ministers and counselors. At the bottom, enchained, are War, Ambition, Discord, Fraud, and Impiety. At the top of the frame, the eye of Providence looks down from thundering clouds from which harpies emerge. The scene recalls the battles between Virtues and Vices of the Medieval Psychomachia (detailed in Chapters ⊠ and ⊠) and the frescoes in Siena by Lorenzetti extolling Good Government in which Justice also sits on a throne with prisoners below her (fig. ⊠/⊠⊠).

The PCA's renditions are much more subdued. The first version, in use during the PCA's first hundred years (fig. ⊠⊠⊠), provides clouds and a halo surrounding the eye of Providence, looming behind a drawing of the Peace Palace and its gardens. Thus the PCA version dropped Virtues and Vices and substituted its building. The male figures in the foreground adopt the positions in the Picart engraving, albeit without a retinue of advisors. Text has been added to help onlookers glean the intended message: the French name (⊠Cour Permanente d'Arbitrage⊠) as well as the PCA's founding date in Roman numerals (⊠⊠⊠⊠) encircle the scene as a border. The ⊠⊠⊠⊠ revision (fig. ⊠⊠⊠) is less cluttered.⊠⊠ The sky is empty (and thus without religious connotations); the grounds are no longer delineated with a grid, and the typeface of the name (again in French) is simpler.

One logo of the courts discussed in this chapter features Justice, thereby giving evidence of the trans-temporal and transnational travel of the iconography. The ICJ's Justice is marked by her scales that hearken back to Babylonia and Egypt (figs. ⊠/⊠⊠, ⊠/⊠⊠ and color plates ⊠ and ⊠), and were then taken up by St. Michael (fig. ⊠/⊠⊠, color plate ⊠) and then affixed to the Renaissance Justice. The Justice logo was first created for the Permanent Court of Justice at the Peace Palace⊠⊠⊠and has since been used (as has the courtroom) by the International Court of Justice. Appearing blindfolded when on the PCIJ logo and clearsighted for the ICJ rendition displayed here (fig. ⊠⊠⊠, color plate ⊠⊠), Justice is at the center.⊠⊠⊠ A book about the Peace Palace explains that the background is a ⊠rising sun, casting its rays onto the Symbol of Justice⊠ who sits on a pedestal above two hemispheres denoting the world, with the continents outlined.⊠⊠⊠ One side shows the Americas and the other Europe, Africa, Asia, and Australia.

The female at the center of the ICJ logo could be seen as a fusion figure; she holds Justice's familiar scales as well as a palm frond, an attribute often held by the personification of Peace. The leafy branches growing to encircle the scene from below are laurel, also associated with Peace. The rays emanating from the sun to touch the bordering circles of the logo echo those around the words ⊠sol justitia⊠ (the light of justice) inscribed on the floor of the Peace Palace. The pointed rays can also be found in various depictions of Jesus, memorably in Albrecht Dürer's print. The sun's rays⊠

Figure ⊠⊠⊠ Logo of the Permanent Court of Arbitration (PCA) after October ⊠⊠, ⊠⊠⊠⊠.

along with an eye⊠ are depicted atop a pyramid on the back of a United States dollar bill. Like the scales, the sun has a link to Justice that is ancient, traced back (as detailed in Chapter ⊠) to the Zodiac and to the Egyptian and Babylonian gods Re and Shamash.

In contrast to these complex depictions, the logos from the more recent courts, created in the ⊠⊠⊠s and presented in sequence, show the markings of graphic designers aiming for clear messaging. As such, these logos are akin to an emblem once shown by the League of Nations and another regularly used by the United Nations. Flat backgrounds and basic colors do the work. From ⊠⊠⊠ to ⊠⊠⊠, a flag containing a pentagram pointing to the five continents and enclosing two five-pointed stars, alternating in blue and white, with the words League of Nations at the top and Soci⊠t⊠ des Nations at the bottom, marked the pavilion of the League at the New York World Exposition.⊠⊠ The United Nations relies on a flattened gridded globe, again with continents outlined and encircled by olive branches.⊠⊠

The emblem for ITLOS (fig. ⊠⊠) keeps the U.N. branches and the scales of Justice but adds four rows of waves below the scales that support the balance rather than tilting it.⊠⊠In contrast, the logos for the criminal courts of the ⊠⊠⊠s for the former Yugoslavia, Rwanda, and Sierra Leone are mute on their specialized subject matter. They use scales to denote that they are dealing with justice, but the legal questions at issue⊠ crimes against humanity⊠ remain opaque.

The logo of the ICTY (fig. ⊠⊠) eschews the two hemispheres of the ICJ logo and replaces them with a blue-and-white geometric globe, with latitude and longitude evoked by the lines drawn. The blue, white, and black diamond-shaped logo is composed of a square, five triangles, a circle, and straight lines and is to be shown (as we do here) in conjunction with the U.N. logo.⊠⊠ The logo of the ICTR (fig. ⊠⊠) brings back an evocation of peace; the black scales are set against a backdrop of a white dove of peace, all wrapped in the U.N. leaves, with the tribunal's initials in English and French at the top.⊠⊠The SCSL's logo (fig. ⊠⊠) denotes that court's hybridity: the U.N. peace branches frame two proud, silhouetted lions⊠ outlined upright, with tails pointing to the sky⊠ facing each other across scales.⊠⊠ The lions and the text below⊠ ⊠Unity, Freedom, Justice⊠⊠ are taken from the official coat of arms of Sierra Leone. The logo for the ICC (fig. ⊠⊠) is a simple iteration, in blue against a white background, of the now familiar scales encircled by leafy branches.⊠⊠

Scales are the leitmotif at a transnational level, and hence we add to this collage the logo of the ECJ (fig. ⍰⍰⍰), which has scales held together by a sword pointing down toward a book below.⍰⍰ Branches of leaves (sometimes described as olive and other times as oak) cluster at the bottom, along with the text ⍰cvria⍰ (court). An earlier version (used in the ⍰⍰⍰⍰s) wrapped the display in the words ⍰Europea Carbonis Ferriqve Communitas⍰⍰ or Court of the European Coal and Steel Community⍰ the first incarnation of what is now the EU. Some attribute the design to the first President of the tribunal, Massimo Pilotti of Italy, who served from ⍰⍰⍰⍰ to ⍰⍰⍰⍰ and was described as ⍰attached to the Roman tradition⍰⍰⍰, the emblem therefore appropriates a sword, scales, and an oak-leaf garland. The use of the Latin word ⍰curia⍰ for court evokes the once common reliance on Latin as the official language of law in parts of Europe. The word is also part of the ECJ's other ⍰logo⍰⍰ its website address, http://curia.europa.eu.

A final example returns us to the national level and serves as a reminder that courts search for legitimacy by linking themselves to historic legal systems. Thus, akin to the Justice figure found in the Supreme Court of Japan (fig. ⍰/⍰⍰), a country occupied after World War II by the United States, the Provisional Seal of the Iraqi Special Tribunal (fig. ⍰⍰⍰)

Figure ⍰⍰⍰ Provisional Seal of the Iraqi Special Tribunal.

Image reproduced, in accordance with an order of July ⍰⍰, ⍰⍰⍰⍰, courtesy of the Iraqi High Tribunal, the legal owner of the seal of its predecessor court, the Iraqi Special Tribunal.

also echoes cross-cultural traditions.⍰⍰ The Iraqi Special Tribunal was short-lived; it was established by the Coalition Provisional Authority in December of ⍰⍰⍰⍰ and then replaced after the Coalition Provisional Authority ceded power to an Iraqi interim government in June ⍰⍰⍰⍰.⍰⍰ That government created the Iraqi High Criminal Court (often referred to as the Iraqi High Tribunal) in response to the sense that the Special Tribunal belonged to the occupying authority.⍰⍰ The stele of the Code of Hammurabi, with the Shamash outlined at its top, forms a pedestal to support the scales of Justice, standing in front of the country's map. Across the top of the emblem, above the name ⍰Special Criminal Court⍰ and the date, are the words ⍰If you rule among the people, then rule fairly.⍰⍰⍰

This sequence of logos shows the retreat from Renaissance iconography and allegories. Justice and her sword are rarely evoked in the twenty-first century. The universalism of scales⍰ from the Libra of the Zodiac to the logo of the ICC⍰ captures a set of concerns about judgment across time and place, and the balance lends itself to abstraction and simplification. Yet one knows little about the particular jurisdictional grants a court might have⍰ such as crimes against humanity⍰ from the balance encircled in leaves that wistfully evoke peace.

The Triumph of Courts

One way to summarize the narrative thus far is that we have mapped adjudication's "triumph" as a marker of governance. The details of the expansion of the court system in the United States, coupled with sketches of other countries and transnational courts, illustrate the embrace of judging by political leaders of various stripes. Of course states have turned to courts to enforce their own rules of law, protect property interests, and maintain the security of their residents. But self-aggrandizement does not explain the configuration of adjudication that developed. Beginning before the Enlightenment, political theories came to comprehend a unique character for judging and a distinctive role for adjudication.

In this chapter, we trace the migration of legal precepts that made judges specially situated employees, given protection against retribution for their judgments and obliged to listen to both sides in a dispute. As judges performed various of their functions in view *of* the public, they came to be subjected to judgments "by" the public about whether they, as embodiments (and in that sense representatives) of the governing powers, were living up to the ideals of the non-arbitrary imposition of authority.

Indeed, even when judges are not independent, public instances of judgment are occasions for critical evaluation. As Hannah Arendt observed about twentieth-century Stalinist Russia, show-trials were a crack in totalitarianism. They demonstrated a need to provide explication, however contrived, rather than impose government power without a facade of justification. "The very fact that members of the intellectual opposition can have a trial (though not an open one), can make themselves heard in the courtroom and count upon support outside it, do not confess to anything but plead not guilty, demonstrates that we deal here no longer with total domination."

Thus, interactions among judges, litigants, and their audiences of citizens contributed over centuries to democratic ideas that sovereigns ought to be affected and constrained in some respects by popular will. Adjudication is a particular form of constraint, and this chapter examines some of its qualities that structure the exercise of power. We sketch the inter-relationships among deepening norms of fair treatment, new ideas about judicial independence, and the conception that judicial processes had to be put before the public. Over the course of a few centuries, the pageantry and spectacle ("rites") entailed in Renaissance adjudication became entitlements ("rights") to processes of certain kinds that entailed making courts open to anyone who wanted to watch.

We also explore the normative implications of these new rights and some of the complexity of judicial interaction with popular will. Political theorists from Jeremy Bentham and Immanuel Kant to Jürgen Habermas and Nancy Fraser have underscored the importance of what Bentham termed "publicity" to government's legitimacy. More recent commentary underscores the challenges entailed in constituting "a public" able to form opinions and influence democratic decisionmaking." Bentham offered a detailed reform program for courts that, he thought, should be one of several institutions disseminating knowledge about government functions. Joining James Madison and other theorists of his era, Bentham also promoted an uncensored press and subsidized postal systems as additional mechanisms to enable a citizenry to understand, support, or constrain its leadership.

Our argument is that public litigation is one of many practices contributing to the public sphere*s* (appropriately pluralized, as Nancy Fraser has advised"). Public litigation provides one venue where information shapes societal norms. Through open processes, courts divest the litigants and the government of exclusive control over conflicts and their resolution. Empowered audiences can see and then debate what legal parameters do and should govern. Further, the obligations of litigants (the government included) to treat their opponents as equals, and of judges to accord equal treatment to all, are themselves democratic practices of reciprocal respect. The concept of judicial independence

offers another wrinkle, for judges are simultaneously obliged to perform before and to account to the public, while also structurally insulated from certain forms of public control. With such nuances, adjudication also models the complexity of relationships between governing authorities and those governed in democratic social orders.

The Democracy in Adjudication

When considering the role of judges in pre-Enlightenment Europe, we argued that the norms surrounding adjudication had elements that can fairly be described as proto-democratic, serving as vectors toward popular constraints on political power. As detailed in Chapters [illegible]–[illegible], dispute resolution was an early function of city-states as they developed methods to deal with conflicts and to centralize power. Within the various oligarchies, judges were regularly and publicly admonished to deal appropriately with those who stood before them: to judge "as ye shall be judged," to treat the poor as one would the rich, and to refuse bribes.

Here we examine the development of other precepts: the deepening obligation that judges hear both sides of a dispute, legal requirements that judicial independence be protected, and rules insistent that courts be open to the public. These constraints regulated judges and therefore governments, compelled to legitimate their actions by more than divine injunction. Because the public processes of adjudication undermined status hierarchies (both among disputants and between disputants and ruling authorities), adjudication served as one paradigm for responsible, popularly responsive, and hence democratic governance. The more people were understood as entitled to equal treatment and fair procedures, the more plausible became the shift in the sources of sovereignty from authority predicated on power to authority founded in public participation.

"Hear the Other Side"

In discussing the [illegible]s Amsterdam Town Hall, we described a maxim, "*Audi* [illegible] *alteram partem* (Hear the Other Side), that was inscribed in gold lettering on the wall above the entrance to a room used for the magistrates' court." Some sources ascribe the concept to biblical narratives and Greek and Roman law," with specific attributions to St. Augustine of Hippo, a Roman Christian theologian of the fifth century." The maxim, found with slight variations on civic buildings in Germany" and various parts of the Netherlands," is shown here on an entryway of the Gouda Town Hall (fig. [illegible]) built in the decade from [illegible] to [illegible]; this text was likely added in a late-seventeenth century renovation."

What does "hear the other side" signify" Its import has changed over time. Analyses of its origins in classical texts connect the notion to wisdom and perhaps to prudence, in that a decision based on one-sided information could be erroneous." With accuracy as its justification, "unwisdom rather than injustice" may have been the "uppermost idea." Solon of Greece has been credited with the view that humans were more interested in accusations than in defenses; to ward off that tendency, judges needed reminders to show "an equal degree of attention to both parties." Embodied in the precept was a concern for procedural regularity and some form of respectful treatment that could be grounded in civility rather than in various analytic premises associated with modernity. "Hear the other side" may not, then,

Figure [illegible] Arch above the entrance to the Gouda Town Hall (Staudhius), Gouda, the Netherlands, [illegible]. Architect: Jan Keldermans. Inscription circa [illegible].

have entailed either skepticism about the ultimate truth of a judgment or the distinct idea that disputants were themselves equals.

The obligation to listen to both sides came to be associated with the scales of Justice, typically depicted not as a steelyard but as evenly balanced pans. Of course, two-sided exchanges and scales were not unique to law courts. Dueling and certain sports included organized adversarialism, and commercial transactions often relied on weights and measures. Yet adjudication became a special site in which the judge, as the state's umpire, was subjected to detailed regulation, including the injunction to hear both sides.

Iconic imagery was one vehicle for the transmission of these ideas, and legal texts were another. Jurists regularly invoked the phrase *audi alteram partem,* which was implied by natural justice, along with the precept that no person should be a judge in his own cause (*nemo iude in causa sua*). A English decision explained that *audi alteram partem* was one of the first principles of justice that had particular relevance to the criminal law: every man ought to have an opportunity of being heard before he is condemned. By the mid-twentieth century, hear the other side was a feature of English administrative decision-making that was proud of its lineage: That no man is to be judged unheard was a precept known to the Greeks, inscribed in ancient times upon images in places where justice was administered, proclaimed in Seneca's *Medea,* enshrined in the Scriptures, embodied in Germanic proverbs, ascribed in the Year Books to the law of nature, asserted by Coke to be a principle of divine justice, and traced by an eighteenth-century judge to the events in the Garden of Eden.

In the United States, the mandate to hear both sides moved into textual mandates by way of judicial interpretations of the Constitution. The Fifth Amendment of the eighteenth-century Bill of Rights specified that criminal defendants were not to be deprived of life, liberty, or property, without due process of law. The Sixth Amendment offered content for due process guarantees for criminal defendants by detailing rights to a speedy and public trial, by an impartial jury to be informed of the nature and cause of the accusation, to be confronted with accusing witnesses, and to have the Assistance of Counsel.

The term fairness used primarily in English-speaking countries, was not much in focus in United States Supreme Court decisions before the Civil War. Similarly, the term fair trial was not common in England until the nineteenth century, and then it was used to denote the provision of procedures prescribed by law. Fair trial was not at that time an independent metric to evaluate whether the state had properly discharged its obligations to accord disputants equal and dignified treatment. In the United States, the law of fair procedures began to take shape after the Civil War. The courts began to interpret the protections set forth in the Bill of Rights against takings of property and in the newly enacted Fourteenth Amendment, which prohibited states from violating personal rights to due process and equal protection (nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws). For example, in an decision about the legality of a state tax assessment, the Supreme Court concluded that a claimed deprivation of property could be lawful if a person had been provided with a fair trial in a court of justice, according to the modes of proceeding applicable to such a case. What was meant by fair was as then in England that the procedures provided comported with those prescribed.

During the twentieth century, the opportunity to be heard gained new prominence as United States Supreme Court justices debated the kinds of government decisions that required due process and the quantum of process due. The doctrine shifted to encompass a role for the court to assess the quality and kind of procedural opportunities prescribed. *udi alteram partem* was the *cri de coeur* of Justice Felix Frankfurter who, in a mid-twentieth-century opinion, dissented when the majority upheld a California statute permitting a prison warden to rely solely on reports from prison psychiatrists when deciding the mental capacity of a prisoner sentenced to death. Justice Frankfurter argued that such a procedure was essentially flawed: *udi alteram partem* hear the other side a demand made insistently through the centuries, is now a command, spoken with the voice of the Due Process Clause of the Fourteenth Amendment, against state governments even when claims may turn out not to be meritorious.

By the s, a version of Frankfurter's concerns had become law, as the Supreme Court concluded that the state could not deprive individuals of various kinds of property, including statutory entitlements to government benefits, jobs, or licenses, without fair hearings. Phrases such as an opportunity to be heard and fundamental fairness as well as the term fairness became fixtures of the jurisprudence, appearing in hundreds of decisions rendered after the s. The maxim *audi alteram partem* also became a component of rules governing judges, who were prohibited from ex parte (or one-sided) contacts with disputants. Statutes and ethical rules disqualified judges who gained information outside the hearing (via papers or orally) of an opponent. More generally, the precept of fairness reached beyond courtrooms. Democratic discourse regularly and variously subjects government to criticism for policies argued to be unfair. For example, pressures to provide equal opportunity for access to education and employment stem in part from commitments to fairness, and the ideas encompassed by the word equality interact with ideas about fairness that are elaborated in courts and in other sites.

One other aspect of due process theory in the United States bears noting. A distinction exists between what is

called ⊠procedural due process⊠ and ⊠substantive due process⊠ Procedural due process acts as a constraint on arbitrary judgments; a government cannot take one's person or property without a certain form of decisionmaking to legitimate that outcome. What in American constitutional law is known as ⊠substantive due process⊠ imposes a deeper constraint⊠ that the government simply cannot undertake a certain action. In part because the United States Constitution's text does not include terms that can be found in more recent constitutions (such as rights to dignity and certain kinds of welfare rights), proponents of certain kinds of rights have looked to the ⊠due process⊠ clauses as sources of constraints on government action. Thus, questions like whether the United States Constitution protects a ⊠right to life⊠ or a ⊠right to die⊠ turn in part on analyses of substantive due process⊠ that the government can (or cannot) control an individual in that respect. The issue is not whether a hearing or other mechanism for making the decision was provided and was fair but whether, instead, the government can act at all.

As for operationalizing procedural fairness, the Renaissance tradition of affixing the mandate to hear both sides to walls of town halls carried forward, as can be seen from a richly adorned courthouse in Springfield, Illinois, where that state's Supreme Court sits in a ⊠⊠⊠⊠ building. ⊠*udi* ⊠*lteram Partem* is inscribed at the rear of a courtroom below a mural called *Precedent, Justice, and* ⊠*ecord* (fig. ⊠⊠⊠) that portrays three classically draped women.⊠⊠ At the center, a woman is shown holding two equally balanced candle flames, invoking or conflating the scales of Justice and the light of Wisdom. She is flanked by one woman shown with book and quill and another with an oil lamp giving off an arc of light.⊠⊠ The mural faces that court's justices, who have on occasion referred to looking at those words when debating what it means to ⊠abide by⊠ the phrase's injunction.⊠⊠

The precept *audi alteram partem* has been credited as a source of, and justification for, the adversarial system in the United States and in Great Britain,⊠⊠ but the concept is a facet of other legal systems as well. Several of the transnational courts discussed in Chapter ⊠⊠ invoke the phrase in their judgments. For example, the International Court of Justice did so when puzzling about what to do when one side to a dispute does not appear and participate.⊠⊠ Likewise, the Inter-American Court of Human Rights considered the principle when assessing whether a party's failure to appear was prejudicial.⊠⊠ The Court of First Instance of the European Communities voided a decision of the European Commission for its failure as a public authority to enable those ⊠whose interests are perceptibly affected⊠ to have an opportunity to ⊠express their views effectively.⊠⊠⊠ The European Court of Human Rights also cited *audi alteram partem* when explaining that, under Article ⊠ of the European Convention on Human Rights, criminal defendants are entitled to a fair hearing on bail.⊠⊠

In short, contemporary case law emanating from diverse courts continues, in the tradition of the Greeks and Romans, to locate the mandate to ⊠hear the other side⊠ in concerns about accuracy and wisdom. Yet the modern translation contemplates a broader principle of a personal right to fair treatment and the correlative obligation of the government to provide it as a matter of procedural and substantive justice. The ancient formulations produced wall inscriptions,

FIGURE ⊠⊠⊠ *Precedent, Justice, and* ⊠*ecord,* Albert H. Krehbiel, ⊠⊠⊠⊠, Courtroom mural, Supreme Court Building, Springfield, Illinois.

displays of balanced scales, and judgments of courts that, over time, shaped the conviction that governments were to ground their judgments in knowledge predicated on listening to disputants who gained equal status and the entitlement to be heard.

"Judges as free, impartial, and independent as the lot of humanity will admit"

In contrast to the continuity and deepening of the precept *audi alteram partem,* some of the iconographic lessons proffered during centuries of pre-democratic adjudication are useful reminders of the *disjuncture* between current practices and those of earlier eras. Recall the histories (detailed in Chapters [illegible], [illegible], and [illegible]) of public judgments serving the didactic purposes of rulers eager to demonstrate their capacity to enforce their own edicts. Town halls provided communal gathering spots to tell stories (*exempla iustitiae*) of judges' proving their loyalty to the state at great personal expense. Amsterdam's Town Hall (like many others) featured both the story of the Greek Zaleucus (fig. [illegible]), who mitigated the penalty of blindness that was to be imposed on his son by gouging out one of his own eyes as well as one of his son's, and the narrative of the Roman envoy Brutus (fig. [illegible]), who sent his sons to death because they had joined a conspiracy against that city.

In addition, executive control of judges was the point of the frequently displayed scene of the *Judgment of Cambyses* (figs. [illegible], [illegible]). According to Renaissance lore, the "wise" or "prudent" king ordered a corrupt judge flayed alive, then anointed that judge's son to serve as the new judge, and thereafter forced the son to sit on a seat made from his dead father's skin. Instruction against corruption also came from the stark [illegible] fresco *Les Juges aux mains coupées* (*Judges with Hands Cut* [illegible]) (figs. [illegible], [illegible]) in the Town Hall of Geneva. In case the specter of handless judges did not suffice, the banner at their side inscribed the warning from the Old Testament" that the taking of gifts "blindeth the wise, and perverteth the words of the righteous." These various allegories embodied authoritarian instructions that rulers required obedience even at the price of personal pain, to be paid by judges as well as the accused. The patriarchal and aristocratic offered familial scenes to analogize rulers to parental figures, obliged to impose punishments when violations of the law occurred. The sword held by the ubiquitous Justice reiterated law's power and its violence, turned sometimes against judges who were themselves subjects of executive authority.

Yet within a few hundred years, this vision of the judicial role was replaced by a different understanding of the relationship between the executive and judicial branches, as discussed in Chapter [illegible]. In the list of grievances set forth in the [illegible] Declaration of Independence, the American colonists charged King George III with having "made Judges dependent on his Will alone, for the tenure of their offices, and the amount and payment of their salaries." While judges in the colonies served at the pleasure of the king, by the early eighteenth century, English judges of certain ranks obtained new protections. The [illegible] Act of Settlement provided that English judges held office "during good behavior" subject to discharge only upon a vote of both houses of Parliament."

That sentiment was embraced and fortified across the Atlantic. The [illegible] Constitution of Massachusetts insisted that it was "essential to the preservation of the rights of every individual, his life, liberty, property and character, that there be an impartial interpretation of the laws, and administration of justice. It is the right of every citizen to be tried by judges as free, impartial and independent as the lot of humanity will admit . . . " To implement these rights (as discussed in chapter [illegible]) judges were to be given tenured positions and "honorable salaries." In addition, early constitutions afforded judges another form of protection" separation of powers, often credited to Montesquieu, whose *The Spirit of Laws* was first published in [illegible]."

Illustrative implementation can be found in the [illegible] Constitution of North Carolina, which provided that the "legislative, executive, and supreme judicial powers of government, ought to be forever separate and distinct from each other." Parallel provisions were set forth in the early constitutions of Georgia," Maryland," Massachusetts," New Hampshire," and Virginia." Of course independence was actually inter-dependence, in that judiciaries relied on the executive not only to enforce court orders but also for their budgets, staff, facilities, and, often, their jurisdiction to hear various categories of cases."

The vision of the judicial role became a pillar of the [illegible] United States Constitution; the first articles outline the government's branches (legislative, executive, and judicial, respectively) and accord specific protection to judges. Article III provides that federal judges, commissioned through presidential nomination and Senate confirmation, "shall hold their Offices during good Behavior, and shall, at stated Times, receive for their Services a Compensation which shall not be diminished during their Continuance of Office."

Just as the injunction *audi alteram partem* has been embedded worldwide in norms of procedural fairness, the obligation to ensure judicial independence has also traveled transnationally. The [illegible] Universal Declaration of Human Rights states that, in criminal cases, "everyone is entitled in full equality to a fair and public hearing by an independent and impartial tribunal." The [illegible] European Convention on Human Rights requires that tribunals be "independent and impartial." The point is reiterated in a [illegible] U.N. document titled "Basic Principles on the Independence of the Judiciary" that warns against "any inappropriate or unwarranted interference with the judicial process."

As many commentators (ourselves included) have noted, the resiliency of judicial independence cannot be attributed to texts alone.⁄ Political culture is critical, as illustrated by experiences of the United States. The Constitution requires independent judges and protects salaries once allocated, but imposes no protection for work budgets and facilities. Moreover, one could read the text as leaving to Congress much (if not all) of the authority about what cases federal courts can decide. Yet a robust judicial branch⁄ detailed in Chapters ⁄ and ⁄⁄ came into being through legislative and executive efforts, popularly supported, that have dramatically expanded federal judicial power.

Why politicians offer such support to judges not readily subjected to their control remains a puzzle, addressed by a diverse group of theorists. Some see a transnational morality of fairness at work⁄ requiring impartial actors to legitimate judgments. Others explore the political economy of judicial independence for elected officials, who have a transient grip on power and hence could derive benefits from established mediating institutions capable of resolving conflicts.⁄ And, depending on how judges are selected, politicians can use the longer terms of judicial positions to entrench their partisan views through populating the bench with individuals sharing their attitudes.⁄

⁄That justice may not be done in a corner nor in any covert manner⁄

A third precept⁄ that the public has a ⁄right⁄ to see what happens in courts⁄ can be traced back to the Fundamental Laws of West New Jersey of ⁄⁄⁄⁄, which were enacted about a decade after the Amsterdam Town Hall (fig. ⁄/⁄⁄) had opened. That charter provided: ⁄That in all publick courts of justice for tryals of causes . . . any person or persons, inhabitants of the said Province may freely come into, and attend the said courts, and hear and be present, at all or any such tryals as shall be there had or passed, that justice may not be done in a corner nor in any covert manner . . . ⁄⁄

The custom of open processes is longstanding; Roman law had conceived of criminal proceedings as *res pu⁄licae* ⁄ public events. Further, accounts of civil trials describe the public posture of jurists and *advocati,* garbed in special togas and speaking in distinctive rhetorical modes.⁄ Medieval and Renaissance rulers had sometimes decreed that judgments be pronounced beneath the skies (in part to gain divine blessings).⁄ Even the ⁄law of torture⁄⁄ used as an investigatory tool in England⁄ required oversight by the inclusion of magistrates to superintend.⁄ The Inquisition marked the profound retreat to secrecy in parts of Europe and has become a synonym for unjust procedures.⁄

The excerpt quoted from the Fundamental Laws of West New Jersey located public access as an obligation of the state, which derived legitimacy not from divinity but from relationships with a body politic. That principle, coupled with common law traditions of jury trials and rights to confront adverse witnesses, became engines of open court proceedings in America. A century after the ⁄⁄⁄⁄ Fundamental Laws, state constitutions insisted on such rights. An early example comes from the ⁄⁄⁄⁄ Delaware Constitution, proclaiming that ⁄all courts shall be open.⁄⁄ By the middle of the nineteenth century, many states had followed suit;⁄ as of ⁄⁄⁄⁄, the words ⁄all courts shall be open⁄ could be found in nineteen state constitutions.⁄ Further, jury rights, guaranteed by the original states' constitutions,⁄ worked in concert to open courts to the public.

The ⁄⁄⁄⁄ federal Constitution included no such generic right to ⁄open courts,⁄ a phrase found only in one infrequently read section on treason: ⁄No Person shall be convicted of treason unless on the Testimony of two Witnesses to the same overt Act, or on Confession in open Court.⁄⁄ Regular criminal defendants were protected in the original Constitution by the right to a jury trial.⁄ The Sixth Amendment, added in ⁄⁄⁄⁄, gave additional entitlements to a ⁄speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed . . . ⁄⁄ The Seventh Amendment, likewise part of the Bill of Rights, continued English common law traditions through its preservation of rights to juries in civil cases ⁄where the value in controversy shall exceed twenty dollars.⁄⁄ These guarantees, coupled with First Amendment and Due Process rights, have since been interpreted to ensure public rights of audience for both civil and criminal trials, as well as access to evidentiary pre-trial hearings and to court records.⁄ (Attitudes in the United States diverged somewhat from English procedure which did not, until recently, make available pleadings filed with courts.⁄)

This discussion has focused on the common law, and English traditions of open procedures were intertwined with rights to jury trials. On the ⁄equity⁄ side of the docket, in which English and continental practice both drew on ⁄Roman-canon tradition,⁄⁄ masters or judges took testimony outside the hearing of the parties and kept it ⁄secret until all the witnesses had been examined.⁄⁄ Crossing the Atlantic, the new Americans were distrustful of royal judges and embraced the common law tradition⁄ albeit with some resurgence of ⁄out-of-court, ex parte examination⁄ for a few decades thereafter.⁄

More generally, principles of public access to government decisionmaking encompass more than rights to court-based procedures. Sections of the ⁄⁄⁄⁄ federal Constitution, for example, also imposed public disclosure obligations on Congress. Each House was required to ⁄keep a journal of its Proceedings, and from time to time publish the same, excepting such Parts as may in their Judgment require Secrecy.⁄⁄ Several early state constitutions also proclaimed that legislatures should be ⁄open.⁄⁄ Further, the federal Constitution required that a ⁄regular Statement and Account of the Receipts and Expenditures of all public

Money be published from time to time. The Constitution also keyed states' obligations to give Full Faith and Credit to each others' legal acts; that injunction flowed to the public Acts, Records and judicial Proceedings of every other State. In addition, the First Amendment right of the people to petition the government for a redress created opportunities to forge public spheres of debate.

Civil law jurisdictions working without juries and relying on judges dealing with litigants in stages rather than in a single, concentrated trial developed varying approaches toward the openness of their courts. Further, as they elaborated special constitutional courts during the twentieth century, those bodies also shaped particular rules. Thus, while in some jurisdictions the public has generally been welcome, in others entry is not generally available for civil proceedings, even when courts are in session. For example, the Conseil Constitutionel of France does its work without an audience in a small room in the Palais Royale. Its judgments are public, and transcripts of deliberations are preserved for release after a set period of years. Hearings at the European Court of Human Rights are technically public but, as discussed in Chapter , that court has tens of thousands of pending matters; groups of more than two must contact the court to arrange their attendance. The German Constitutional Court, discussed in Chapter , also has limited public activities, and the Spanish Supreme Court designates special days, advertised at the court's website, for visitors. Returning to common law jurisdictions, as judges move toward managerial, administrative modes (discussed in Chapter), meetings with litigants and lawyers take place in settings (such as chambers) to which the public is not invited.

But like fair hearings and judicial independence, the concept of public access, often translated as rights to attend court proceedings, became embedded in law around the world, as have precepts of freedom of information. By the middle of the twentieth century, Article of the European Convention on Human Rights required that, n the determination of his civil rights and obligations or of any criminal charge against him, everyone is entitled to a fair and public hearing within a reasonable time by an independent and impartial tribunal established by law. Judgment shall be pronounced publicly. Article also made a virtual transplant of the common law right of confrontation, as it guaranteed to criminal defendants a right of examination of witnesses that, implicitly, was to be undertaken in public. A statute of the European Court of Justice similarly provides for hearings to be public, unless the Court of Justice, of its own motion or on application by the parties, decides otherwise for serious reasons. The International Covenant on Civil and Political Rights, promulgated by the United Nations, summarizes the broad principle that everyone shall be entitled to a fair and public hearing by a competent, independent and impartial tribunal established by law. Of course, such provisions also recognize the legitimacy of closures under specified circumstances.

Reflexivity: Transnational Signatures of Justice

The term reflexivity from social theorist Pierre Bourdieu is apt here, in that the practices of open courts have become a signature feature that helps to define an institution *as a court*. While in the seventeenth and eighteenth centuries courts relied on foot traffic and personal visits, new techniques of dissemination developed thereafter. In addition to the open doors and windows of courtrooms, the development of the newspaper business and of commercial publishers for court decisions created paths to knowledge about what took place in courts. Requirements of publication became codified, as did practices that judgments be pronounced in public in courts around the world. One of the newest transnational courts, the International Criminal Court, details the various decisions that must be pronounced in public. Included are rulings on admissibility, jurisdiction, responsibility, sentences, or reparations. Also specified is the makeup of the audience: wherever possible, readings shall be in the presence of the accused, the Prosecutor, the victims . . . and the representatives of the States which have participated in the proceedings.

Today's technologies have amplified the options. In addition to electronic databases available on the internet and public information officers briefing the press, televised court proceedings are, in some jurisdictions, available. Examples include the Supreme Court of Canada, the International Criminal Tribunal for the former Yugoslavia, many state courts in the United States, and an occasional federal appellate court. Transnational courts often provide that judgments be published in more than one language; the European Court of Justice, for example, requires publication in more than twenty languages.

The right of public access to courts is synergistic with the obligations to protect judicial independence and to hear both sides. Open processes can make plain that a government must acknowledge the independent power of the judge or, alternatively, can reveal state efforts to try to impose its will on judges. Further, with the public watching, the promise to hear the other side is subject to oversight. Open processes also complicate the idea of judicial independence by inviting public scrutiny that can impose forms of control over judges. (For example, in the United States, media campaigns have been launched to recall or impeach judges whose decisions on the death penalty or abortion are unpopular.) Yet these interrelated features access, independent judges, and fair hearings have created distinctive institutional arrangements that constitute a court.

A fourth attribute is perhaps the most disjunctive from earlier practices of courts. Seventeenth-century courts did

not operate under mandates that "all persons" could come and be heard, as well as participate as witnesses, lawyers, and judges. But twentieth-century democracies broadened the idea of equality and recognized entitlements to seek legal redress" including, at times, against the government itself. The newness of this precept bears emphasis. Only in the last half century have courts understood themselves to be required to admit women and men of all colors, ethnicities, religions, and other forms of affiliation or identity into their halls with authority to serve in any and all roles, from judges and lawyers to litigants, witnesses, and staff.

Theorizing Openness: From Unruly Crowds to Bentham's "Publicity"

How does one account for the rise of norms that subject judges and disputants to public scrutiny" One catalyst for these changes was the reliance of Medieval and Renaissance European rulers on open spectacles" from public hangings to royal pageants" to reinforce their claims to authority.[illegible] As Michel Foucault has famously observed, those who produce spectacles do not control their meanings or effects.[illegible]

A much-studied illustration of this proposition is the practice of public executions, which would seem to be an excellent vehicle for the display of sovereign authority. In seventeenth-century Amsterdam, the burgomasters positioned onlookers in Dam Square to watch the ceremony of sentencing through windows onto a marbled room on the ground floor of the Town Hall (fig. "/[illegible]) that was dedicated to that activity, and then to view the executions that followed out front.[illegible]

But other authorities achieved less by way of decorum. In England, executions "lurched chaotically between death and laughter" as crowds generated carnivalesque atmospheres that undermined the "script" of a solemn ritual of state authority.[illegible] As Mikhail Bakhtin put it, the large crowds produced "the suspension of all hier-archical rank, privileges, norms, and prohibitions.[illegible] Authority shifted; hangings could take place only "with the tacit consent of the crowd.[illegible] Scholars of the English legal system point out that, while executions have drawn historians' attention, "many more people of all ranks of society . . . came into contact with the legal system through the civil rather than the criminal courts.[illegible] Expansion of the private sector, coupled with that of government's administrative apparatus and the growth in the legal profession,[illegible] brought people into court. As diverse audiences participated and watched, they came to believe that they had a role to play.

To borrow from Jonathan Crary, "spectators" abandoned their passivity and took on a more active posture as "observers," engaging not only in the carnival of the crowd but also in critique, expressive of their developing authority.[illegible] Courts were but one site of changes across a broad spectrum. As we explored in Chapter " when puzzling about the fixation on a blindfold for Justice and the power of the Rawlsian metaphor of a veil of ignorance, the importance of hearing both sides became entangled with changing epistemological claims about the nature of knowledge and human psychology. Technologies such as photography made palpable the existence of competing "truths" depending on one's vantage point. Organizing rules for courts served to cushion and to channel the exercise of power. Resolution" by judges or juries, insulated from the ordinary exercise of state authority, obliged to operate under norms of procedural fairness, and subject to public scrutiny" helped to legitimate law's violence.

The upheavals are marked by the French and American Revolutions, offering an array of ideas about democratic governance. Jeremy Bentham, who was formulating his thoughts on public participation in governance as these revolutions were underway, was one of the few of his generation to provide a sustained examination of openness" or "publicity," as he termed it" in a variety of venues, courts included.[illegible] Because Bentham proposed the Panopticon design for prisons, he is associated with oppressive state surveillance regimes that, as Foucault analyzed,[illegible] subjected individuals to observation without knowing when or by whom.[illegible] Yet Bentham also advocated designs of buildings and rules that would have put judges and legislators themselves before the public eye. Through such openness, the public could maximize self-interest and thwart the "sinister interest" of the political and legal establishments that collaborated to advance their own concerns rather than those of the "community in general.[illegible]

Bentham's trust in the public prompted him to make myriad proposals for parliamentary and legal reforms. His tens of thousands of pages of writings include suggestions for law codification in various countries, as well as aspirations (at least in theory) to universal suffrage.[illegible] The "ultimate end" political salvation," could only be achieved by democratic ascendancy,[illegible] and the goal of his many designs was "dependence of rulers on subjects.[illegible] His centrality for our discussion stems from a considerable set of materials focused on courts, judges, procedure, evidence, and the common law.

Here we trace the development of the political theory of the public sphere, first by way of Bentham and then by crossing the Atlantic to the United States, where James Madison promoted the press and national mail system to foster public exchanges. We then turn to how Bentham's appreciation for subjecting activities to public scrutiny intersected with Immanuel Kant's "publicity principle," and its more recent take-up by Jürgen Habermas, Nancy Fraser, Seyla Benhabib, Robert Post, and others. These theorists bring us to the challenges of communication in a hierarchical social order, even if democratic, in which the manipulation of information by special interests makes less plausible Bentham's optimism about publicity's effects. This

account will serve as a predicate for our argument about the benefits that courts, operating within democratic orders, can provide one of several public spheres committed to debates about legal norms.

Observing and Cabining Authority: The Dissemination of Knowledge through Codification and Publicity

Jeremy Bentham's advocacy of publicity entailed the deployment of various techniques. Famous for his utilitarian calculus,[illegible] Bentham had a passion for codification (a word he is credited with inventing[illegible]) deployed in service of public knowledge.[illegible] Illustrative is Bentham's objection to the common law, never to be [illegible]known or settled.[illegible] The unpredictability and lack of specification meant that by going to court, a man was taking a [illegible]chance . . . although his right be as clear as the sun at noon-day.[illegible] Bentham's proposed cure was statutory law: if all the rules were [illegible]put into one great book,[illegible] knowledge of the rules would be available to all rather than in the [illegible]clutches of the harpies of the law.[illegible] By replacing the common law with codes, legal parameters would be made plain and would truly be derived from the [illegible]consent of the whole.[illegible]

Bentham's zeal for clarity prompted his offers to codify the laws of many countries, including the then-nascent United States. Bentham wrote to President James Madison in [illegible] that he would provide a [illegible]body of statute law[illegible] to liberate the country from [illegible]the yoke[illegible] of English common law's various precedents.[illegible] In [illegible] Madison replied, dryly noting that the War of [illegible] had delayed his response. Declining, he wrote: [illegible]I find myself constrained to decide, that a compliance with your proposals would not be within the scope of my proper functions.[illegible] Bentham made similar offers to write codes for Russia, Poland, Geneva, Spain, Portugal, Greece, and Guatemala.[illegible]

Bentham was particularly attentive to, and appalled by, judicial procedures in English courts. In one essay, he quoted an English judge who had asserted: [illegible]No man is so low as not to be within the law's protection.[illegible] Bentham disagreed; the [illegible]truth[illegible] was that [illegible]n[illegible]nety-nine men out of a hundred [illegible]were[illegible] thus low[illegible] because they could not risk spending so much of their hard-earned wages on the chance of winning under the common law.[illegible] The system crafted by judges formed [illegible]so thick a mist[illegible] that, if [illegible]not in the trade[illegible] negotiating the procedures to get to justice was too difficult.[illegible] Bentham charged judges and lawyers ([illegible]Judge [illegible] Co[illegible]) with creating [illegible]artificial rules[illegible] producing a [illegible]factitious[illegible] system[illegible] full of procedural obfuscation at the expense of their clients and the public.[illegible] Civil courts were thus [illegible]shops[illegible] at which [illegible]delay [illegible]s[illegible] sold by the year as broadcloth is sold by the piece.[illegible]

Bentham sought instead to make procedure as [illegible]natural[illegible] as possible,[illegible] and during the decade from [illegible] to [illegible], he drafted revised rules.[illegible] He also proposed replacing the term [illegible]court[illegible] with the word [illegible]judicatory[illegible] so as to avoid an association of judges with the monarchy.[illegible] In lieu of fragmented rules of evidence, made through common law judges, Bentham turned to his favored technique of codification.[illegible] In lieu of piecemeal adjudication, Bentham wanted judges to preside over a whole case (through what today is called the [illegible]individual[illegible] calendar system, as contrasted with the [illegible]master[illegible] calendar system) so as to dispense justice swiftly. And in lieu of written motions and judgments on the papers, Bentham wanted oral procedures; he proposed that all evidence be taken through [illegible]oral interrogation before the judge in public.[illegible]

Bentham also called for subsidies for those too poor to participate.[illegible] He proposed that an [illegible]Equal Justice Fund[illegible] be established, supported by using the [illegible]fines imposed on wrongdoers,[illegible] government funds, and charitable donations.[illegible] Bentham wanted not only to subsidize the [illegible]costs of legal assistance but also the costs of transporting witnesses[illegible] and of producing other evidence.[illegible] He proposed that judges be available [illegible]every hour on every day of the year[illegible] (today, termed [illegible]/[illegible]). Bentham also suggested that courts be on a [illegible]budget[illegible] for evidence to produce one-day trials and immediate decisions.[illegible] Bentham's advocacy of simplifying procedure[illegible] in part through legislative control[illegible] aimed to enable public opinion to function as a [illegible]direct check[illegible] rather than to be deflected through the technically abstruse system replete with [illegible]jargonization.[illegible] Publicity, [illegible]underwritten by simplicity,[illegible] would be the [illegible]main security against misdecision and non-decision.[illegible]

Bentham's focus was on trials in courts, but he also appreciated aspects of what was then described as [illegible]conciliation[illegible] for its resemblance to the more [illegible]natural[illegible] procedure he favored.[illegible] Examples of [illegible]conciliation courts[illegible] came from several countries, including Denmark and France, but details of their actual practices are somewhat hard to come by. One model, from France, involved witnesses testifying before lay jurists.[illegible] Bentham noted that under the Danish procedures, the conciliation courts efficiently resolved a good many claims, heard together.[illegible] In *Princi*[illegible]*ples of Judicial Procedure,* Bentham called for judges to [illegible]exercise a conciliative function[illegible] to attempt to extinguish [illegible]ill-will.[illegible]

Yet, as William Twining's reading of Bentham's manuscripts identifies, Bentham preferred [illegible]rectitude of decision, that is, a strict adherence to justice under the law[illegible] and thus accorded [illegible]only a grudging place to compromise.[illegible] Amalia Kessler has specified various bases for Bentham's [illegible]anxiety[illegible] about conciliatory approaches. The lack of the formality of oath-taking and the absence of public scrutiny put honesty at risk.[illegible] Moreover, the informality of conciliation courts left decisionmakers free to make personal judgments rather than be constrained by legal rules.[illegible] Thus a judge charged with compromise could permit [illegible]partiality[illegible] for one side to provide that party a [illegible]partial victory . . . under

the pretext of conciliation.□□□ As a consequence, in some instances, settlements could be □repugnant to□ and a □denial of□ justice.□□□

The Architecture of Discipline: From □Judge □ Co□ to the Panopticon

Bentham's commitment to publicity in trials was fierce: □Without publicity all other checks are insufficient: in comparison with publicity, all other checks are of small account.□□□ But more needs to be said about how□ from his vantage point□ □publicity□ did its work. Bentham made various kinds of claims about publicity's utilities as he argued for its application to diverse activities.

One rationale for publicity was truth. Bentham argued that the wider the circle of dissemination of a witness's testimony, the greater the likelihood that a falsehood (□mendacity□) would be ferreted out.□□□ (□Many a known face, and every unknown countenance, presents to him a possible source of detection.□□□) Moreover, through face-to-face examinations in tribunals readily accessible across the countryside,□□□ judges could apply □substantive law to true facts□ adducing more information at lower costs.□□□

A second product of publicity for Bentham was education. He believed that the public features of adjudication would generate a desirable form of communication between the citizen and the state. While not legally obliged to deliver opinions, judges would, Bentham thought, want their audience to understand the reasons behind their actions. Thus it would be □natural□ for judges to gain □the habit of giving reasons from the bench.□□□ Courts provided a stage for such dialogic exchanges and thereby functioned as □schools□ as well □theatres of justice.□□□

A third function was disciplinary; □the more strictly we are watched, the better we behave.□□□ Bentham proposed that ordinary spectators (whom he termed □auditors□□□) be permitted to make notes that could be distributed widely. These □minutes□ could serve as insurance for the good judge and as a corrective against □misrepresentations□ made by □an unrighteous judge.□□□ More generally, □notification□ of the public□□ imposed oversight by opening up the possibility of reform. Once informed, public opinion could exercise its authority to □enforce the will of the people by means of the moral sanction□□ akin to □judges operating under the Common Law.□□□

Bentham's views on the importance of publicity were not limited to courtrooms, for he believed that its benefits□ truth, education, interaction, and superintendence□ were useful in diverse settings across a vast swath of social ordering. The □doors of all public establishments ought to be thrown wide open to the body of the curious at large□ the great *open committee* of the tribunal of the world.□□□ Bentham's invocation of door-opening was more than a metaphor; he literally described in detail how to design structures to ensure that a host of activities took place before the public. These many and varied plans used architecture as □a means of securing publicity, while publicity was a means of securing responsibility.□□□

As mentioned in Chapter □□, Bentham is (in)famous for promoting the □Panopticon□ a prison that was designed to subject incarcerated inmates to continual observation.□□□ Bentham proposed similar configurations for □mental asylums, hospitals, schools, poor-houses, and factories□□□□ subsequently prompting the Foucauldian fear of the power that the state could wield over individuals.□□□ Yet Bentham was not intent on designing buildings facilitating only the observation of persons confined in institutions. He also wanted to put lawmakers before the public eye.

Bentham specified several methods for getting information about government officials to the public. One was direct observation: he called for a debating chamber that was □□nearly circular' with □seats rising amphitheatrically above each other.'□□□ A second was to enlarge the □audience□ by facilitating the flow of public information to persons not physically present. The proposal noted earlier□ that observers be □auditors□ in court, taking notes to be circulated□ was one example. For legislatures, Bentham suggested that buildings include a □separate box for the reporters for the public papers.□□□ Third, Bentham wanted to require a legislature to provide information through an □official report of its proceedings, including verbatim accounts of speeches where the subject was considered to be of sufficient importance.□□□ While creating such information-forcing methods, Bentham did not want government officials to be the sole sources of such accounts. His proposal to build in designated space for newspaper reporters freed them □to produce unofficial records of the proceedings and thereby □prevent negligence and dishonesty on the part of the offi-cial reporters.'□□□ As for the executive branch, Bentham designed a way to link the ministers of government, physically, through □boxes and pulleys□ to permit □instantaneous intercommunication.□□□ He also wanted to have the state administrative apparatus compile records of and statistical information about the government's output.□□□

Bentham's enthusiasm for openness did not render him insensitive to the burdens of public processes and the need for privacy. He advocated closure in various contexts, such as secret ballots for voting, and listed several specific instances that made closure of trials appropriate. His justifications for privacy included protecting participants from □annoyance□ avoiding unnecessary harm to individuals through □disclosure of facts prejudicial to their honour□ or about their □pecuniary circumstances□ and preserving both □public decency□ and state secrets.□□□ Thus, the presumption in favor of public trials should, upon occasion, give way. (Bentham's list of circumstances for closure, like his arguments for openness, parallel those made in contemporary courts.□□□)

Moreover, Bentham thought secrecy occasionally appropriate. Courts were always presumptively open, with clo-

sures only under specified circumstances. The executive (or administrative) sphere was ⊠intermediate⊡ in that secrecy could be appropriate when issues of diplomacy and the military were involved.⊠⊠ In contrast, Bentham advocated an exception to the principle of publicity for voting; the secret ballot was a protection against corruption.⊠⊠ The end state of the various sources of information was to inform Bentham's ⊠Public Opinion Tribunal⊡⊠⊠ a ⊠half real and half imaginary⊡⊠⊠ image of the general public serving as a committee that, when knowing the basis for decisions, the process of decisionmaking, and the outcomes, could assess whether lawmakers' decisions comported with its interests.

Before turning to other theorists of publicity and mechanisms of information dissemination, we should note that Bentham's eagerness to subject judges (and their common law) to particular scrutiny is in some tension with contemporary understandings of judicial independence. Bentham proposed a justice minister, appointed for life but subject to dismissal by the other branches of government, to oversee judges who could, in turn, be suspended, transferred, or dismissed.⊠⊠ Further, in the context of his draft code for France, Bentham posited additional legislative oversight. Were a judge to find strict application deeply wrong, a judge was to ⊠suspend⊡ the case so as to report the problem to the legislature for guidance; judges might also suggest amendments to the law.⊠⊠

Today, some of what Bentham advocated falls within the rubric of ⊠accountability⊡ for judges, seen at times as constraining their independence.⊠⊠ Bentham's insistence on publicity paved a route to what, in the late twentieth century, became systematic evaluations of judges. One example is a ⊠⊠⊠ study that reviewed surveys from several European countries assessing ⊠the quality of court performance⊡ in providing public services. The research relied on measures aiming to capture fairness and efficiency.⊠⊠ The reference to judicial ⊠performance⊡ echoed the Benthamite conception that courts are ⊠theatres of justice⊡ The worry from the perspective of judicial independence is that judges might pander to the crowd, rendering rulings that are less autonomous from politics.⊠⊠ (A good deal of literature on judicial review responds with the argument that judges are more or less in sync with the social orders of which they are a part, as well as deeply in conversation with the other branches, often as joint venturers in elaborating or limiting rights.⊠⊠)

Another facet of Bentham's analysis relevant to our argument about understanding adjudication as a democratic practice is his attitude toward democracy.⊠⊠ Skeptics of Bentham's commitments to democracy point to his distrust of natural rights. Bentham was what today is called a positivist, seeking law from affirmative enactments. As such, he was a vocal opponent of natural rights, which he termed ⊠nonsense upon stilts.⊠⊠⊠ He leveled criticism at the French Declaration of the Rights of Man and the Citizen and argued that people were born not ⊠free and equal⊡ but rather in ⊠absolute subjection⊡; he cited helpless infants, dependent on adults, as a case in point.⊠⊠ As Philip Schofield has explained, natural law or natural rights for Bentham were claims made by proponents that such rights ⊠*ought to* exist⊡ and such a moral claim should be put straightforwardly rather than ⊠ambiguously expressed.⊠⊠⊠

The specter of surveillance through Bentham's proposed Panopticon also lends an air of totalitarianism, underscored by Foucault's focus on constant visibility as a method for the quiet exercise of the disciplinary powers exercised by modern states.⊠⊠ But Bentham's advocacy of similar treatment for legislators⊡ who, like prisoners, he thought ought to be required to sit before the public eye⊡ provides a reciprocity that undermines a view of Bentham as antidemocratic. Bentham's commitment was to the public, for whom publicity was the means to maximize self-interest and escape the ⊠sinister interest⊡ of the political and legal establishments, collaborating to advance their own concerns rather than those of the ⊠community in general.⊠⊠⊠ Indeed, as Bentham scholars have noted, his commitment to ⊠common sense⊡ and reliance on ⊠*observation, experience, and experiment*⊡ have a good deal in common with John Locke's attachment to knowledge based in empiricism.⊠⊠ Both men were optimistic (or naïve) about the complex relationship between knowledge and judgment.

Bentham's trust in the public prompted not only his proposals for parliamentary and legal reforms but also, as noted earlier, a commitment to universal suffrage.⊠⊠ Further, Bentham's advocacy of subsidies for access to courts and roles for the audience opened up institutions to a wider range of persons.⊠⊠ Bentham had a keen appreciation of the multiple venues in which information needed to be produced to enable the citizenry to gain what Robert Post has called ⊠democratic competence⊡ which is one of the rationales underlying commitments to speech uncontrolled by the government.⊠⊠ For Bentham, the ⊠⊠ultimate end⊡ political salvation⊡, could only be achieved by democratic ascendancy⊡⊠⊠ in which the hierarchy shifted, resulting in ⊠dependence of rulers on subjects.⊠⊠⊠ Hence Bentham can be read not only as a proponent of democracy in the sense of endorsing popular electoral sovereignty⊠⊠ but also as aiming to ⊠broaden the scope of democratic theory⊡ by expanding the means of making elites accountable.⊠⊠

Bentham's insights were plainly radical when measured against the baseline of the historical context in which he wrote. In marked contrast to the adjudicatory proceedings of Renaissance Europe, when people watching trials were not seen as having the power to sit in judgment of judges or to assess the decency of the state's procedures, Bentham raised the possibility that the state itself could be subjected *to* judgment. Bentham's widely quoted statements made that point directly: ⊠Publicity is the very soul of justice. . . . It keeps the judge himself, while trying, under trial.⊠⊠⊠ By Bentham's era, the responses of participatory observers were gaining weight and relevance. Popular opinion was

coming to matter through the elaboration of what has come to be called a "public sphere" that could affect political rulers.

Forming Public Opinion through Complementary Institutions: An Uncensored Press and a Subsidized Postal System

While Bentham's attention to courts makes him specially relevant for this discussion, he was not the only political theorist of his century specifically interested in the function of publicity. For political philosophers, Immanuel Kant's "publicity principle" may be the more salient, with his well-known claim that all "actions relating to the right of other human beings are wrong if their maxim is incompatible with publicity." As David Luban has explained, Kant's formulation required policies to be subjected to public debate as a constraint. Both Kant and Bentham wrote in the wake of David Hume, regularly cited for the proposition that it is "on opinion only that government is founded."

Yet "opinion," in Hume's thought, can be read as referring to the need of governments to gain public confidence, to be produced through private exchanges and institutional arrangements balancing or checking different sets of interests so as to maintain an equilibrium. That concept is distinct from the active agency that subsequent writers attributed to public opinion (embodied, for example, in Bentham's Public Opinion Tribunal) and a considerable distance from the "intersubjectivity and mutual understanding" of contemporary theorists such as Jürgen Habermas and Nancy Fraser.

How does the public, in any of these postures, obtain information? Bentham's suggestions, as noted, included permitting note-takers ("auditors") in court and reporters in the legislature so that the public would have sources of knowledge independent of the government. Bentham explained that "the distinction between a government that is despotic, and one that is not so" is that "some eventual faculty of effectual resistance, and consequent change of government, is purposely left, or rather given, to the people." Another was an unfettered press that would help, Bentham thought, promote the requisite "*instruction, excitation, correspondence*." Indeed, Bentham thought the "newspaper was a far more efficient instrument than pamphlets or books" because of the "regularity and constancy of attention" it provided to unfolding events.

Bentham's enthusiasm for an exchange among citizens, via press and post, was shared by others on both sides of the Atlantic. James Madison's short essay, *Public Opinion,* extolled the virtues of the press as "the real sovereign in every free" government. To enhance the "general intercourse of sentiments," Madison wanted the ready "*circulation of newspapers through the entire body of the people*." This exchange could enable the public to monitor their representatives (in a Benthamite fashion) or provide a means for citizens to gain a sense of affiliation with their government (akin to Hume's aspiration of gaining public confidence). Thus scholars of the theories of both Bentham and Madison analyze the degree to which they hoped to inspire participatory debate as contrasted with disciplinary control. Post, press, and courts could be means of engendering cohesion with the "imagined community" of the nation-state, either to debate its norms or to bring into being Madison's "united public reason" with the political force to support the government.

In the United States, these various aspirations made their way into some state constitutions, with commitments to a free press that sometimes sat, as in Georgia's Constitution, next to jury rights ("Freedom of the press and trial by jury to remain inviolate forever"). The Bill of Rights also provided protection for the free press, complementing congressional authority under the Constitution to "establish Post Offices and Post Roads." Pursuant to its constitutional mandates, Congress enacted the Post Office Act of , which expanded the network of communications (mostly via stagecoaches) by giving newspapers "unusually favorable terms, hastening the rapid growth of the press," as the act also prohibited government surveillance of posted exchanges.

As was the case with federal courts, post offices initially camped out in other facilities such as in Baltimore, "in the basement of a popular hotel; in Philadelphia, in a corner of the mercantile exchange; in Boston, on the first floor of a dilapidated colonial state house." One of the early purpose-built post offices was in Washington, D.C. The building was designed, replete with marble, a first among all federal buildings, by architect Robert Mills, who (as discussed in Chapter) served as the nation's first semi-official architect. As the number of newspapers distributed though the mails increased, from . million in to million in post offices gained a place of honor in the pantheon of federal architecture.

In Europe, a "national network of symbolic communication" was put into place in the eighteenth century. By the early s, a "cross-post system" linked cities and, by , most major towns boasted daily mail service. Key to the utility of mail was literacy, evidenced by the fact that in an estimated books were available and, by the s, some , were in print. In the contemporary world, those achievements may be hard to gauge, but in Francis Lieber pronounced the postal system "one of the most effective elements of civilization," along with the printing press and the compass.

Developing Public Sphere(s)

The subsequent transformations in social, political, and technological orders have been enormous, and courts were but one site of change. Technologies (such as the telescope,

the microscope, and the camera) made palpable the existence of competing views depending on one's perspective. Politics (such as the [illegible] England Reform Act) gave [illegible]most of the urban working class the vote,[illegible] and the emergence of women's suffrage admitted more persons, with their varying vantage points, seeking recognition.[illegible]

Bentham's optimism about public knowledge gave way to concerns about the need to revitalize the public sphere, elaborated during the second half of the twentieth century by Jürgen Habermas.[illegible] Habermas credited Bentham with forging [illegible]the connection between public opinion and the principle of publicity.[illegible] Habermas also read Bentham as seeking a transparency in parliamentary debates so that deliberations there would be continuous with those of the [illegible]public in general.[illegible] Habermas likewise credited Kant for identifying publicity as the mechanism for a convergence of politics and morality that could produce rational laws.[illegible] But Habermas argued that, because only property owners were admitted to the public debate, the public sphere had become a vehicle for [illegible]ideology[illegible] and could no longer serve as a means for the [illegible]dissolution of power.[illegible]

Law was central to Habermas, but details of the practices of courts[illegible] in which Bentham was interested[illegible] were not.[illegible] That difference may reflect German traditions of civil inquisitorial law that put the processes of evidence-taking in the hands of judges who can proceed in a series of discrete intervals[illegible] thus making the impressions of the observer, acute for Bentham in the common law, seem remote for Habermas. The absence of attention to lower courts could also stem from a tradition in political theory of treating courts and politics separately. What engaged Habermas was how law bound [illegible]state functions to general norms[illegible]that protected capital markets.[illegible] He cited practices in Austria and Prussia as examples of when [illegible]public scrutiny of private people come together as a public[illegible] had helped to shape civil codes relating to property.[illegible] When [illegible]legislation . . . had recourse to public opinion[illegible] it could not be [illegible]explicitly considered as domination.[illegible] Over time, a variety of [illegible]basic rights[illegible] (such as voting, a free press, and freedom of association) protected access to the public sphere.[illegible] But without [illegible]universal access,[illegible] which nineteenth-century Europe did not provide, the public sphere could not do its work.

Habermas both admired and critiqued [illegible]public opinion[illegible] for he saw it as subject to manufacture through the intertwined forces of the market and the state. Publicity that had once served to enable opposition [illegible]to the secret politics of the monarchs[illegible]came instead to be used to earn [illegible]public prestige[illegible] for specially situated interests.[illegible] The press became entangled with [illegible]public relations[illegible] efforts, as advertisements promoted consumerism.[illegible] The resulting consensus that might exist was superficial, [illegible]confusedly enough . . . subsume[illegible]d[illegible] under the heading [illegible]public sphere.' [illegible] The public sphere thus served as a space for the performance of prestige rather than as a forum for [illegible]critical debate.[illegible]

Habermas could draw on many instances of government deployment of publicity in service of its aims. A self-acknowledged example comes from President Theodore Roosevelt, who, in his first annual congressional message, explained: [illegible]The first essential in determining how to deal with the great industrial combinations is knowledge of the facts[illegible] publicity.[illegible] He established a [illegible]publicity bureau[illegible] as a [illegible]Department of Congress[illegible] to investigate and disseminate data on the administrative work of federal agencies. Soon thereafter, advertising became a favored form of publicity, followed by a [illegible]science[illegible] of publicity, as well as firms marketing themselves as experts in advertising and public relations.[illegible]

Habermas sought to interrupt those developments through prescriptions aiming to facilitate public reasoning as members of pluralist polities communicated discursively so as to reach a genuine consensus. According to Habermas, individual private interests themselves were not capable of being [illegible]adequately formulated, let alone politically implemented, if those affected have not first engaged in public discussions to clarify which features are relevant in treating typical cases as alike or different . . . [illegible] Positive law needed legitimacy derived through a [illegible]procedure of presumptively rational opinion- and will-formation.[illegible] Thus, because such discursive space was essential in the current social order, the public sphere needed to be reconstituted. Without gods and monarchs, one looked to a vibrant public sphere to establish that the relationship between the [illegible]rule of law and democracy[illegible] was more than a [illegible]historically contingent association.[illegible]

The trajectory from Bentham and Kant to Habermas is important for our inquiry into the role of courts in democratic orders. Borrowing from political theorist Nancy Fraser, we have added an [illegible]s[illegible] to the term [illegible]public sphere[illegible] in the subtitle of this section to underscore that no single [illegible]public[illegible] exists. Rather, a pluralistic social order, replete with racial, gender, class, and ethnic hierarchies, is constituted through a series of spheres in which norms are debated.[illegible] Moreover, as Fraser has pointed out, the exchanges in these various and sometimes overlapping spheres are not equally participatory; certain voices dominate in stratified societies.

Fraser also focused on the disparate capacities of those who need to be heard, as she called for [illegible]participatory parity[illegible] and argued for more structures to enable a [illegible]multiplicity of competing publics[illegible] to emerge, rather than aspiring to the formation of a [illegible]single, comprehensive public sphere.[illegible] Courts are one site that is responsive in some measure to the inequities that undermine the [illegible]discourses[illegible] to which Habermas and Fraser aspire. The obligations of equal treatment and open proceedings are expressly designed with participatory parity in mind. Thus, we bring back a Benthamite focus on courts in their educative and legitimating modes, while moving beyond Bentham to make an argument that adjudication *in* democracy can be a source *of* democracy.

In this discussion, we are not speaking of democracy defined only through popular sovereignty principles expressed by electoral processes. Rather, we are interested in a broader conception. Part of what makes a social order democratic is a political framework striving to ensure egalitarian rights, attentive to risks of minority subjugation, and engendering popular debate about governing norms. Deep and genuine disagreements exist about what rules ought to prevail and which forms of behavior ought to be sanctioned. Uncensored exchanges in the press and through the mails have become familiar conditions of democracy; our argument here is that adjudication is likewise a condition of democracy. The normative obligations of judges in both criminal and civil proceedings to hear the other side, to be impartial, and to provide public processes enable two forms of democratic discourse. A first comes from the authority of the audience, empowered to watch the direct participants litigants and judge in an adjudicatory exchange; the second stems from rules that structure the discourse among the disputants and jurists.

Adjudication as a Democratic Practice

Jeremy Bentham claimed that public processes were useful in generating more accurate outcomes, and he also posited that publicity helped produce legitimacy. One could concur or demur on various grounds, both empirical and normative. We take a somewhat different tack. Our argument is focused not on the relationship between openness and truth but instead on how public processes of courts contribute to the functioning of democracies and give meaning to democratic aspirations that locate sovereignty in the people, constrain government actors, develop processes for norm elaboration, and insist on the equality of treatment under law. While Bentham stressed the protective side of adjudication (policing judges as well as witnesses), we are interested in how the public facets of adjudication engender participatory obligations and enact democratic precepts of equality.

One other prefatory comment is in order. A good deal of the literature on trials is focused on the criminal docket, where the encounters between individuals and the state are seen as politically freighted. Governments are understood to have special obligations toward the accused, in addition to victims and the public at large. The question of structuring procedures to legitimate violence against those breaching social norms in the criminal context has sometimes deflected attention from the civil side and from the state power that inheres in judgments requiring the transfer of assets, the reconfiguration of families, the legitimacy of the receipt of government benefits, or the regulation of commercial transactions. Thus our interest is in shaping an understanding of the political import of adjudication whether denoted criminal or civil, public, administrative, or private.

The Power of Participatory Observers to Divest Authority from Judges and Litigants

Consider the interaction between observers and courts. Open courts and published opinions permit individuals who are neither employees of courts nor disputants to learn, first hand, about processes and outcomes. Indeed courts and the discussions that their processes produce are one avenue through which private persons come to-gether to form a public, assuming an identity as participants acting within a political and social order. Courts make a contribution by being what could be called non-denominational or non-partisan, in that they are one of rela-tively few communal spaces not organized by political, religious, or social affiliations. Open court proceedings enable people to watch, debate, develop, contest, and materialize the exercise of both public and private power.

Moreover, courts provide a unique service in that they create distinctive opportunities to gain knowledge. Conflicts have many routes into the public sphere. The media (including bloggers) or members of government may initiate investigations. Courts may help uncover relevant information in these arenas (as we have seen in the litigation related to individuals detained after /, discussed in Chapter). But courts distinguish themselves from either the media or other government-based investigatory mechanisms in an important respect: the attention paid to ordinary disputes. Courts do not rely on national traumas, scandals, or on selling copies of their decisions. Courts do not respond only when something interesting is at issue.

What is the utility of having a window into the mundane That is where people live, and that is where state control can be both useful and yet overreaching. The dense and tedious repetition of ordinary exchanges is where one finds the enormity of the power of both bureaucratic states and private sector actors. That power is at risk of operating unseen. The redundancy of various claims of rights and the processes, allegations, and behaviors that become the predicates to judgments can fuel debate not only about the responses in particular cases but also about what the underlying norms ought to be. The treatment of so-called domestic violence provides one ready example of the role of public processes in reorienting an understanding of what was once cabined as private and tolerated as within the familial realm. Civil and criminal litigation about violence against women has helped to shape an understanding of how gender-based violence is a mechanism of subordination and an abuse of power.

Public knowledge gathered from open dispute resolution ought not, however, to be presumed to be generative of policies running in any particular direction or of attitudes supportive of judicial rulings. Public awareness can generate new rights, such as protection against violence, as well as new limitations, such as caps on monetary awards for torts because of a popular view that courts (and specifically

juries) over-compensate victims.[illegible] Moreover, because even a few cases can make a certain problem vivid, social policies may respond in extravagant ways to harms that are less pervasive than perceived.

Criminal sanctions are exemplary here, as public disclosure of particular crimes produces anger and vengeful consequences. Publicity can be a fuel *for* punishment as well as a mode *of* punishment. In many jurisdictions, press coverage of individuals found to have sexually assaulted children prompted new laws that require individuals convicted of a wide array of offenses to register so that their names and photos can be broadcast and potential neighbors forewarned about their presence.[illegible] Furthermore, some critics of judges have used public procedures to launch attacks on their judgments and, at times, targeted particular judges in an effort to have them removed from office. For example, an anti-immigration prosecutor in Arizona repeatedly accused the local courts and specific judges of failing to enforce laws on unlawful entry into the United States.[illegible]

Thus we cannot conclude, as Bentham appears to have, that expanding the flow of information will enable public opinion to become [illegible]more and more enlightened[illegible] so as to advance society's interests. Public displays do not necessarily trigger reasoned discourses, nor does increased information necessarily [illegible]produce an improvement in the quality of the opinions held by the people.[illegible] Further, the harms of false accusations (vivid during the [illegible]s as individuals were accused of being Communists, to pick but one example) are substantial,[illegible] rendered all the more powerful through the distribution mechanism of the internet.[illegible] Webcasting live testimony (as contrasted with legal arguments) raises yet other problems, for it may leave persons called as witnesses inappropriately vulnerable.

But the need to regulate audienceship is not new, as reflected in legal rules and doctrine insistent on decorum within the courtroom itself. Concerns about trials devolving into political demonstrations engendering sentiment weighted sharply toward one party have generated obligations that observers be silent and, upon rare occasion, have resulted in exclusion of the press.[illegible] An example discussed in Chapter [illegible] was whether observers who wore badges depicting a victim of a crime had prejudiced a jury.[illegible] Others involve courtroom-packing to convey positive impressions that a particular individual is a valued member of a community.[illegible] In short, the development of new methods of producing public events[illegible] through web databases and broadcasts[illegible] requires the elaboration of premises already in place as well as consideration of when audiences may be virtual instead of physically present. Again, that work is underway. For example, because some jurisdictions make electronic filings available on the web, requirements now direct that certain kinds of information (such as social security numbers) be deleted.[illegible]

While the forms of publicity may need to be varied, the practice of publicity needs to be in place so as to enable audiences to undermine, in the Foucauldian sense, the power and prerogatives that closed procedures give to the disputants and the state. Discipline and control may[illegible] not will, but may[illegible] follow, because openness changes the relationships between the participants and their audiences by denying the government and disputants unchecked authority to determine the social meanings of conflicts and their resolutions.

A disquieting example of this shift in power comes from the broadcast of the video of the death of Saddam Hussein. Hussein was hanged on December [illegible], [illegible], five days after he lost an appeal of his sentence.[illegible] At first, the media reported that [illegible] Iraqi officials had attended the hanging[illegible] at an unspecified location and that witnesses said Mr. Hussein [illegible]was dressed entirely in black and carrying a Koran and that he was compliant as the noose was draped around his neck.[illegible] But within a day, a [illegible]video . . . appeared on the Internet . . . apparently made by a witness with a camera cellphone.[illegible] The tape showed the [illegible]mocking atmosphere in the execution chamber[illegible] and recorded the taunts hurled at Hussein at his death.[illegible] The organized media in different countries debated whether to air that video[illegible] but did not control all of the channels of distribution. Dissemination was decided by others, who posted the video on the web. The disclosures resulted in a torrent of reaction about the timing, fact, and process of the execution.

The uncontrollability of the dissemination of that video has its counterpart in thousands of ordinary actions that take place in low-level tribunals. Once events are accessible to an audience of third parties who are [illegible]spectators and auditors[illegible] (to borrow Bentham's categories),[illegible] these observers can put their descriptions and commentary into the public realm. These exchanges are rich, albeit sometimes pain-filled, sources of communicative possibilities. Diverse speakers, some of whom may respond by seeking vengeance and others by offering reasoned discourses, all understand themselves as speaking authoritatively, based on what they have witnessed or read. In contrast, without direct access, nonparties must rely on insiders[illegible] government officials or disputants[illegible] for their information, inevitably filtered through their perspectives. Public procedures teach that conflicts do not belong exclusively to the disputants or to the government; they give the public a place in which to interpret, own, or disown what has occurred.

Public Relations in Courts

We are not na[illegible]ve. Habermas understood efforts to manipulate public opinion,[illegible] and sophisticated users of courts know well the opportunities to use public relations as a tool in litigation. Disputants with the resources regularly hire media consultants to shape popular views of conflicts. Self-interested participants can attempt to exploit the opportunities courts provide to enlist audiences, immediate and more distant, to press judges to be more responsive to pub-

lic perceptions and preferences than to litigants' factual proofs and legal arguments. In this sense, David Luban's reformulation of Kant's publicity principle bears mention: that publicity can be used to undercut the legitimacy of the very institution making the knowledge public.

In short, to appreciate the political and social utilities of the public dimensions of adjudication is neither to ignore the costs and burdens imposed (Bentham listed many) nor to underestimate the potential for the exploitation of courts. The immediate participants in a dispute may find the exposure to the public disquieting. Even the disclosure of accurate information can be uncomfortable. Moreover, the public dimensions of adjudication may inhibit parties' abilities to find common ground, thereby deepening discord. And despite Bentham's confidence that public disclosure reveals falsehoods, many court records are subsequently impeached after lies by witnesses are revealed.

Further, one should not romanticize spectatorship. As we discussed, watching state-authorized processes can prompt celebration, action, or dialectic exchanges that develop new norms of diverse kinds. But it can also result in boredom. Locating judgment in courthouses with windows to the streets and open doors makes publicity possible, but questions remain about how to secure an audience whose members understand themselves as participatory observers, functioning politically as responsible auditors rather than as indifferent viewers or partisans.

Who will volunteer to see full proceedings? What levels of understanding and accuracy will mark knowledge transmitted to the public? The competition for attention is acute in a world rich or overwhelmed with visual materials offering windows into so many dramas that one can lose focus through what Jonathan Crary has called a suspension of perception. Even before technologies that have expanded the visual field, Bentham had identified the problem of gaining an audience for the judicial theatre.' He proffered various options, such as public authorities' requiring attendance as a matter of duty, providing compensation for attendance, or devising some other factitious means to bring people in. Further, Bentham advocated that permission be liberally granted for the publication of information obtained and for its re-publication as well.

New technologies, such as the web, reduce the challenges for those seeking to observe court proceedings. But virtual capacities also permit snippets of information to be consumed in private without the sense of community and of decorum to which the architecture of courtrooms aspires. Thus, if one set of problems stems from getting an audience and sustaining its attention, another relates to eliciting attention of the wrong kind, as high-profile cases create misimpressions about the frequency or depth of particular kinds of harms. Yet litigation develops narratives that have been shown to affect and to generate public agendas addressing the intersections of private interests and public rights. Open processes that welcome audiences mark courts as one of many arenas in which to construct shared and sustained experiences of the interactions between facts and norms (to borrow, again, from Habermas) and hence, as one of many public spheres.

Dignifying Litigants: Information-Forcing through Participatory Parity

Contributions courts to public discourses may not be sufficient to support a commitment *to* courts in the future. Recall the centrality of the Renaissance town hall or the colonial courthouse, where commerce and political life mixed on a small scale, where records were kept, and where communal rituals were shared. Contrast contemporary conditions: an array of specialized public buildings providing different services, the organized press, televised broadcasts of legislative proceedings, reality TV, and diverse online media. Places other than courts can spark debate, even as courts offer a special contribution through responding to a volume of mundane matters along with high-profile disputes.

A distinct facet of what makes courts especially useful in democracies comes from shifting attention from what potential observers may see and do to the interactions among litigants, judges, witnesses, and jurors. This aspect of our argument about the utility of open courts hinges on the view that adjudication is itself a democratic practice: an odd moment in which individuals can oblige others to treat them as equals as they argue in public about their disagreements, misbehavior, wrongdoing, and obligations. Litigation forces dialogue on the unwilling (including the government) and momentarily alters configurations of authority. Social practices, etiquette, and myriad legal rules shape what those who enter courts are empowered to do.

When cases proceed in public, courts institutionalize democracy's claim to impose constraints on state power. More than that: in criminal trials, the theory of trial is that defendants are enabled, by procedures, to *contest the common interpretation* of their actions and to oppose government-imposed meanings. Many commentators note that the jury, as well as lay judges more generally, infuses adjudication with democratic participation by citizens who gain the stature of judges, ad hoc. But consider also the democratic constraints imposed on professional jurists. If working in open courts, the government employees we call judges have to account for their own authority by letting others know how and why power is used. Recall Bentham's admonition: Publicity is the very soul of justice . . . . It keeps the judge himself, while trying, under trial.

Courts can be a great leveler in another respect, in that participatory parity is an express goal of courts, even when not achieved. Hear the other side has been augmented, in many jurisdictions, by obligations to *equip* the other side sometimes by means of appointing free lawyers for criminal defendants or poor civil litigants or targeting

funds for witnesses and transcripts. Moreover, when government officials are parties to litigation, they are forced, as either plaintiffs or defendants, to comply with court rules, to divulge information, and to respond to questions posed by opponents or the court. In countries requiring disclosures of documents through discovery, government litigants must also produce documents, files, emails, and other records.

Courts' processes render instruction on the value accorded to individuals and, on occasion, reveal that courts cannot or do not make good on commitments of equal treatment and respect. For example, as discussed in Chapter 8, during the 1980s and 1990s, as claims of discrimination based on race, ethnicity, and gender were brought to courts, some judges responded as though differential treatment was natural. Lawyers and litigants sometimes found that, because of their gender and race, they were subjected to treatment they found demeaning. In response to such concerns, the chief justices of many state courts convened special projects, denominated "fairness" or "gender bias" and "racial bias" task forces, to inquire into areas of law (such as violence against women or sentencing) and practices (such as modes of address or appointments to court committees) to learn about variations by gender, race, and ethnicity.[illegible] Statutes, rulemaking, and case law resulted because transcripts, judgments, and public exchanges documented behaviors at odds with the provision of "equal justice under law."[illegible]

This function of courts as potentially egalitarian venues can be seen from attempts to avoid them. After 9/11, efforts were made in the United States to enact legislation "stripping" courts of jurisdiction over claims that the government had wrongly detained and tortured individuals.[illegible] The effort to create a separate "tribunal system" for alleged enemy combatants aimed[illegible] as we discuss in Chapter 11[illegible] to control access and information as well as to limit the rights of detainees by augmenting the powers of the state.

Of course, to insist on courts as vital facets of democratic functioning also serves as a reminder that, like the democratic output of the legislative and executive branches, adjudication does not always yield wise or just results. Our argument is that it offers opportunities for democratic norms to be implemented through the millions of exchanges in courts among judges, the audience, and the litigants. And, in addition to undermining the state's monopoly on power, forging community ownership of norms, demonstrating inter-litigant obligations, and equalizing the field of exchange, open courts can express another of democracy's promises[illegible] that rules can change because of popular input. The public and the immediate participants can see that law varies by contexts, decisionmakers, litigants, and facts. They gain a chance to argue that the governing rules or their applications are wrong. Through democratic iterations[illegible] the backs-and-forths of courts, legislatures, and the public [illegible] norms can be reconfigured. As a consequence, courts are an important component of functioning democracies seeking to demonstrate legitimacy through displaying what qualities of governance are valued.[illegible]

The Press, the Post, and Courts: Venerable Eighteenth-Century Institutions Vulnerable in the Twenty-First

We end this chapter with a preview of the next by focusing on the relationship between eighteenth-century inventions and twenty-first-century demands. Bentham, Madison, and their cohort helped to frame three institutions of discourse[illegible] the court system, the postal service, and the uncensored press. Yet, in this century, all three are under stress.

The stability of national, subsidized postal services has become a question. One report characterized the United States Postal Service as in a "death spiral."[illegible] In 1970, some 40,000 fewer post offices existed than had in 1970, with more closings planned.[illegible] As the system continued to lose money (with $20.5 billion cited as the amount lost in 2006[illegible]), some commentators called for the dissolution of the Postal Service as an obsolete institution, to be replaced by the internet and private providers.[illegible] Others worried that the Postal Service had already been transformed, favoring "junk mailers and big media over political opinion journals."[illegible] One might also elaborate patterns of privatization and transformation of other institutions, such as the police, prisons, libraries, and parks.[illegible]

The contemporary defense of the post office as a public institution rests on arguments akin to those made by Madison and Bentham[illegible] that ready communication through public services binds the nation and local communities while servicing the needs of the economy.[illegible] Indeed, in the 1970 Postal Policy Act, the United States Congress made such a claim[illegible] that its establishment of the Postal Service was "to unite more closely the American people, to promote the general welfare, and to advance the national economy."[illegible] Yet by the 1980s Congress had limited the cross-subsidies that made the exchange of newspapers inexpensive,[illegible] lessening the degree to which the public fisc subsidized a universal service that facilitated a wide range of exchanges.[illegible]

A similar narrative of vulnerability envelops the press, with the decline of print media, consolidation of ownership, and diffusion through electronic sources.[illegible] In 1900, when the United States population stood at just over 100 million, some 1,000 daily newspapers were supported through customers, resulting in a circulation of almost 10 million paper copies. By 1990, census data counted a population that had doubled to 200 million, but the number of papers circulated was down: 1,000 daily newspapers delivered 10 million copies.[illegible] In 1990, more than a hundred newspapers closed, including large presses such as the Seattle Post-Intelligencer.[illegible] Well-known and long-solvent publishers of

newspapers filed for bankruptcy, and the revenues of the remaining papers dropped between and .

Perhaps less well appreciated are the many ways in which governments have subsidized the media in part through the mails. In the United States, for example, the federal government has supported the mailing of periodicals. Under provisions in place in , the Postal Service paid about percent of mailing costs, but by the periodical subsidy had declined to percent. Further, governments needed newspapers, which were the avenue by which they posted legal notices and paid for doing so before shifting to other means, including the internet. Tax provisions also sheltered publishers, offering special treatment for certain kinds of income or expenses. Free licenses sometimes accompanied by regulation requiring news services or dissemination of information were another vehicle through which governments supported access to information. Moving outside the United States, some countries have provided free subscriptions for newspapers or direct financing, aiming to sustain what Edwin Baker termed democratic distribution of communicative power.

The question is whether the fragility of the press and the post forecasts what awaits courts. Evidence of deep concern about the solvency of courts can be found throughout the state systems. Indeed, in the fall of , the Chief Justice of Massachusetts warned that state courts were at risk of a slow and painful demise and that one ought not assume that courts were too big to fail. Despite the ancient roots of many practices associated with modern courts, they are as currently understood relatively new institutions.

We have traced the movement from the pageantry and spectacle (the rites) entailed in Renaissance adjudication to the entitlements (rights) of democracies to underscore the dynamic quality of courts. We have also mapped the creation of United States federal courts to capture the rapidity of change. In , fewer than forty federal judges worked at the trial level in the United States, and no building owned by the federal government had the sign U.S. Courthouse on its front door. By , more than , trial-level judges worked in more than federal courthouse facilities. Many of those stone testaments to judicial authority were shared by the Post Office as they were also built in recognition of the importance of that service. Yet many buildings once housing postal services have been torn down or recycled for other uses. Similarly, pressures to shift away from the public processes of courts to alternative forms of dispute resolution abound, which is the topic to which we turn in the next chapter.

Adjudication's Challenges to Democracy

The project of the twentieth century was getting people into courts. The question for the twenty-first century is what to do with all who became eligible to enter. One response is to expand access, and various segments of the legal profession have crafted a host of efforts such as free legal services, simplified procedures for the "self-represented" and lawyers volunteering their time, "pro bono" to assist individual and institutional litigants. But others became skeptical about the utility and desirability of the forms of adjudication that had come into use. Evidencing a failing faith in formal adjudicatory procedure, they advocated alternatives. Three techniques— reorganizing court-based decisionmaking to focus on settlement, delegating adjudication to other government institutions, and outsourcing— represent a movement toward privatization that removes conflict resolution from public purview.

This chapter explores those shifts and hence offers a counter narrative to the story of the "triumph" of adjudication mapped thus far. We begin with a quick review of adjudication's successes, which have produced demands in excess of the resources provided to courts. We then explore different attitudes toward adjudication converging to support "alternative dispute resolution" (ADR) or "dispute resolution" (DR) mechanisms, often turning to venues other than courts. As the Department of Constitutional Affairs of the United Kingdom defined it, ADR is a "collective term for the ways that parties can settle civil disputes, with the help of an independent third party and without the need for a formal hearing."[illegible] One form of ADR reconfigures procedures inside courts; the job of the judge shifts from adjudicator to manager and settler, encouraging litigants to resolve cases without court judgments. That conciliative process, reliant on mediation or negotiation, is complemented by other forms, adjudicative on some dimensions. A second mode of ADR channels cases toward administrative agencies, charged with handling thousands of individuals in low-visibility settings. A third trajectory, in some jurisdictions, comes from court enforcement of consumer and employment contracts requiring the use of private dispute resolution. As a consequence, individuals who might have been eligible to come to court are sent elsewhere.

As forecast by our discussion of the International Tribunal for the Law of the Sea (ITLOS) in Chapter [illegible], the interest in ADR is worldwide. Below we use examples from the United States as well as England, Wales, and the European Union to glimpse the nature of the reforms that move away from adjudication. We close this chapter with a dramatic illustration from the United States where the government proposed closed procedures to classify and try individuals held after the attacks of September [illegible], [illegible], at Guantánamo Bay. Thus, across various contexts and continents, iconic judges are housed in monumental courthouses. But many are relegated to providing their services to a small, elite slice of disputants— nation-states in conflict, some high-end commercial claimants, certain kinds of criminal defendants, and litigants either in large-scale litigations or seeking interpretations of statutory and constitutional rights.

Lower-level courts have millions more cases. The Commonwealth of Massachusetts, for example, estimated that on any day in [illegible], some [illegible],[illegible] people entered its courthouses.[illegible] But that state— like most of its counterparts in the United States— was also struggling with ever more limited budgets and cramped spaces in which to work. As we noted in Chapter [illegible], those problems prompted the Chief Justice of Massachusetts, Margaret Marshall, to warn that, like other institutions scaled so big as to seem invincible, one ought not assume courts were immune from risks of failure.[illegible]

By the beginning of the twenty-first century, fiscal crises joined social and political critiques in prompting changes in court processes. Public and private sectors shaped new rules dismantling the signature features— independent and protected judges welcoming all persons in a public forum— that have come to mark institutions as courts.[illegible] Like the press and the post office, courts may also be vulnerable institutions that blossomed in the nineteenth century, and

could prove to be unsustainable in the twenty-first. The questions are whether courts will remain available to ordinary persons seeking to engage in the democratic practices of adjudication; whether courts will continue to attend to individuals as equal and dignified members of a polity; and whether polities will authorize disputants to contest state authority and to use courts to foster debate about both the content and the application of norms.

Demand and Distress

In prior chapters we mapped how, by the end of the twentieth century, democracies had demonstrated their faith in courts by committing resources for courthouses, authorizing more litigants to file cases, and funding new judgeships. Formal principles of equal treatment required the provision of fair hearings to a host of claimants, regardless of their race, class, ethnicity, and gender. One way to capture this expanded aegis for courts is through figure ⍰⍰⍰, *Criminal and Civil ⍰ilin⍰s in ⍰ nited States District Courts⍰⍰⍰⍰⍰, ⍰⍰⍰⍰, and ⍰⍰⍰⍰*, that charts the growth in filings in the federal courts of the United States over the twentieth century.

Under ⍰⍰,⍰⍰⍰ cases were before the courts in ⍰⍰⍰⍰, some ⍰⍰,⍰⍰⍰ in ⍰⍰⍰⍰, and more than ⍰⍰⍰,⍰⍰⍰ in ⍰⍰⍰⍰.⍰As demographers would quickly point out, filings need to be considered in relation to population. In ⍰⍰⍰⍰, the United States counted some ⍰⍰ million, in ⍰⍰⍰⍰ approximately ⍰⍰⍰ million, and in ⍰⍰⍰⍰ more than ⍰⍰⍰ million.⍰Court filings thus outstripped population growth, increasing during the century from ⍰ to ⍰ to ⍰⍰ federal filings for every ⍰⍰,⍰⍰⍰ people. And the federal data, while easily accessible, reflect but a small percentage of the volume of filings. In ⍰⍰⍰⍰, state courts estimated that they received approximately ⍰⍰ million cases annually.⍰

The demand for decisionmaking has not been limited to the trial level. Again using the United States as an example, in the decade ending in ⍰⍰⍰⍰, federal appellate filings rose more than ⍰⍰ percent, resulting in some ⍰⍰,⍰⍰⍰ cases in ⍰⍰⍰⍰.⍰ Given that the number of authorized appellate judgeships for the thirteen national intermediate appellate courts had remained constant from ⍰⍰⍰⍰ to ⍰⍰⍰⍰ at under ⍰⍰⍰,⍰it is not surprising that the number of pending appeals increased about ⍰⍰ percent during the same decade⍰⍰and that the median time from filing a notice of appeal to disposition was, by ⍰⍰⍰⍰, more than a year.⍰⍰

Another way to capture the role of courts comes from comments made by Stephen Breyer, one of the chief judicial architects of the Boston Courthouse (fig. ⍰/⍰⍰⍰), who later became a member of the United States Supreme Court.

Figure ⍰⍰⍰ Civil and Criminal Filings in United States District Courts: ⍰⍰⍰⍰, ⍰⍰⍰⍰, ⍰⍰⍰⍰

> A court, unlike a government agency, deals not with the public en masse but with the individual citizen who appears before it. It devotes as much time and attention to that individual's specific problem as the problem requires. In this modern age, when people fear government's dehumanizing tendencies, it is particularly important to emphasize that the judicial branch of government treats each citizen before it not as a member of a group but as a separate human being with a right to call upon the court's considerable resources to resolve his or her specific dispute with whatever effort that may take.

In short, commitments to adjudication remain robust.

But a disjuncture exists between the constitutional and political precepts that underlie this aspiration (embodied in the many new buildings and the "pearls" within the courtrooms) and the contemporary adjudicatory processes in the United States and elsewhere. In both public and private sectors, leaders proffer conciliation in lieu of adjudication as the exemplar, and judges and lawyers have been at the forefront of the promotion of mechanisms styled ADR. Under that rubric, as noted, come a range of activities, including court-based efforts to help or rules to insist that litigants try to settle conflicts through mediation, as well as to route some disputes to private arbitration and others to government agencies doing administrative adjudication.

Before detailing these practices, we need to identify what prompts their promotion. One reason for reconfiguration is the very success of courts, attracting large numbers of claimants imposing demands that exceed capacity. Thus, some pressure for diversion comes not from criticism of adjudication but from regret that governments have not allocated adequate funds, either for judges and courthouses or for subsidies to litigants unable to afford court and lawyer fees.

Recognition of the need to support access can be found worldwide. Various projects have been launched to research "paths to justice" so as to understand how individuals come to recognize and to "name" their injuries, and then to make appropriate claims for redress. Empirical work on both sides of the Atlantic has sought to identify baselines for the kinds of injuries that could turn up in courts, and judiciaries regularly produce data on those who end up before them. Concerns about barriers to entry have resulted in interest in lowering the costs and expanding the resources to facilitate access, by either court-based or other mechanisms, so as to achieve "justice for all." "Access to Justice" became a shorthand of global dimensions under the guidance of Mauro Cappelletti and Bryant Garth, who mapped such problems in civil justice systems in countries around the world.

Various metrics document the distance between resources devoted to courts and demands for courts. "Legal needs" studies have sought to evaluate rates at which households have legal problems, and some comparative work addresses the volume of filings. Some commentators bemoan the lack of quality data while concluding the demand is likely higher than supply, in terms of legal aid and access to courts. In the United States, for example, filings in state courts increased between and by more than percent, while the ratio of judges to the population decreased somewhat, from ten to nine judges per , persons. Court budgets provide another barometer; typically, a tiny fraction, under percent, of government spending is devoted to the judiciary. Furthermore, courts are often apportioned a smaller allocation in budgets than are prosecution, defender services, and corrections. Another problem is the source of funding. In many states, revenues come from the county level rather than from a unified stream of statewide funding. As of , about a third of state court administrators reported inadequate budgets, despite repeated calls describing the "crisis" and a need to "save" the system.

These pressures have prompted some courts to find ways to generate their own revenues rather than depend on general appropriations. Beginning in , for example, Florida required its courts to rely on fees for some operating expenses. (During the same decade, user fees also became a major source of revenue for English courts.) Some states sought to tie appropriations to "performance-based budgeting," a measure that relates awkwardly to the outputs of courts, responding to an array of conflicts that produce child custody arrangements, convictions or acquittals, and the transfers of assets. On occasion, judges have argued that linking budgets to output violates separation of powers, and in a few jurisdictions, judges have filed lawsuits against legislatures and argued the constitutional obligation to fund courts. (A Supreme Court decision in Canada concluded that, as a matter of separation of powers, provincial judicial salaries had to be set by an independent panel whose decisions were also subject to judicial review.)

The budget constraints, coupled with legislative authority in many jurisdictions over judicial salaries, have resulted in compensation levels for judges more modest than salaries for comparative cohorts of senior lawyers or of chief operating officials and executives. For example, in the median salary for justices on states' highest courts was , , a figure that was significantly lower than what lawyers in prestigious practices earned. More dramatically, during recessions, states across the country have suspended certain operations. In the late fall of , New Hampshire stopped providing both civil and criminal jury trials, Vermont closed local courthouses for half a day each week, and Maine both shuttered its clerks' offices for some portions of some days and stopped staffing its metal detectors at court-

house doors.□□ Kansas, too, limited operating hours and reduced services, despite its imposition of surcharges on various court fees.□□In Michigan, a judge explained the task as □finding revenue in hard times.□□□

Moving from support for courts to support for litigants, many countries have developed □legal aid□ programs through which governments subsidize access for some litigants. But the limited availability of funds and cut-offs at relatively low-income levels leave tens of thousands of claimants without assistance.□□Moreover, resources devoted to such support have declined over the latter part of the twentieth century. For example, after World War II, the United Kingdom created statutory entitlements for legal aid; private lawyers were paid according to a schedule of fees for specific services. But since the □□□□s, these programs have been reconfigured and reduced in scope.□□Back in the United States, judges have raised concerns about the rising number of □pro se□ or self-represented litigants, appearing without lawyers and struggling to navigate court procedures.□□ Thus, some champion ADR as a □second-best□ response framed in light of inadequate support of adjudication.

Other proponents of ADR, however, focus not on lack of resources for adjudication but instead on adjudication's failings□ that it is too expensive, too cumbersome, and too aggressive. Aspects of this form of critique span the twentieth century. In □□□□, Roscoe Pound sounded a Benthamite objection to procedural designs that imposed delays and expenses when he gave a famous speech to the American Bar Association on the □causes of popular dissatisfaction□ with the courts.□□ Like Jeremy Bentham, Pound distinguished between the external critique of the system and the presumed satisfaction of insiders, the lawyers and judges who had shaped the cumbersome system that they inhabited more comfortably than did outsiders. In contrast, by the late twentieth century, a host of jurists were in the forefront of the attack on the system in which they participated.□□Some of the complaints focused on how lawyers, if paid well by the hour, had incentives to generate unnecessary conflict that wasted the time of courts, clients, and opponents through strategic interactions laden with interpersonally harsh and unpleasant exchanges. Others objected more generally to the dependence of the adversary model on lawyers and to adversarialism itself.

One strand of reformist critique came from those who situated themselves as humanists in search of processes to develop consensus and to solve problems constructively.□□Terms such as □collaborative law□ reflected the goal of reconfiguring institutional regimes to permit a wider range of techniques to ease conflicts.□□ Concepts like □restorative justice□ span criminal and civil litigation,□□ most vividly embodied by □truth and reconciliation□ commissions convened in lieu of prosecutions. The hope is to reshape the culture of conflict so as to engender more □productive relationships□ that provide more □satisfaction□ for both disputants and professionals.□□ Some of the mechanisms (such as truth and reconciliation commissions) typically conduct proceedings in public. Class action or large-scale litigations can also produce settlements that entail disclosure of information to the public.□□ Yet others (like mediation) are private and praised for it. The argument is that confidentiality facilitates more frank exchanges and promotes more desirable outcomes than would public processes.□□

Other commentators register a different kind of objection. They disagree with the premise of ready access to courts and believe that adjudication imposes unpredictable risks of liability that damp down innovation.□□ Moreover, goes the argument, easy paths to courts create cultures of victimhood and accusation.□□ Taking aim at innovations that opened up access to the courts, some commentators (and judges) seek to constrict opportunities, for example, by imposing more demanding standards for filing cases□□or by leveling economic sanctions on those who fail to succeed or win less than was offered in settlement.□□

Interrelated with such efforts to limit litigation is a more pervasive interest in reducing legal regulation. Whether aspiring to expand adjudication's aegis (as detailed in Chapters □–□□) or to limit its function (as discussed here), visions of the role for law extend beyond courts. Proponents and critics of courts have focused not only on procedure but also on revising various bodies of substantive law□ governing fields such as tort, contract, consumer, environmental, and civil rights. Some of that retrenchment comes by amending statutes and by judicial development of new doctrines.□□

One can understand such objections as nested in basic attitudes toward the role of government regulation or, alternatively, as motivated by the self-interest of groups with the political capacity to make change. Amy Cohen posited the tension between advocates of □moral deliberation□ and those committed to □interest satisfaction.□□□Marc Galanter proffered a political critique: ready access to courts required the proverbial □defendants□□ corporate or government entities, which he termed □repeat players□□□ to disgorge information and respond to claims of wrongdoing. In response, they sought to revamp court rules to □come out ahead□ which, from their vantage point, meant decreasing others' ability to haul them into court.□□

In short, distinct kinds of concerns support the efforts to revise court-based procedures so as to route disputes to methods other than adjudication. What various reformers share is a normative premise that parties' consent, developed through negotiation or mediation, is preferable to outcomes from judges rendering public judgments predicated on state-generated regulatory norms.□□ As a consequence, an array of distinct political and social movements have converged in a worldwide movement toward ADR,

itself now a marketplace populated by lawyers and other professionals in competition with courts for ⊠business.⊠⊠

Clarification of the loci of ADR activities is also in order. Some of this work seeks to revamp procedures *inside* courts where, as we saw in the context of discussion of French courthouses in Chapter ⊠⊠ and of the International Tribunal for the Law of the Sea in Chapter ⊠⊠, the judicial role is described as conciliatory as well as adjudicative. The job of judging shifts from deciding competing claims at trial or from documents to multi-tasking. Judges are deployed as managers of lawyers and cases, sometimes acting as super-senior partners to both parties, advising about how to proceed, sometimes functioning as settlement masters or mediators, and at other points serving as referral sources sending disputants either to different personnel within courthouses or to institutions other than courts.

In addition to ADR inside courts, other efforts aim to shift what had been the work of courts to other fora. Some of these alternatives are other public institutions, such as the Permanent Court of Arbitration at The Hague, described in Chapter ⊠⊠, or national administrative agencies (sometimes termed tribunals) that have come to include adjudicatory functions. Other endpoints are private entities such as the American Arbitration Association or ad hoc resolution services provided company by company. The outsourcing of what had been a public function is not a phenomenon unique to courts but rather part of a pervasive pattern in which various kinds of services (police, detention, school, and the military) have been shifted to the private sector.⊠With the United States as our primary example, we sketch the decline of adjudicatory ⊠publicity⊠ to borrow, as we did in Chapter ⊠⊠, that term from Bentham.

The Data on Privatization: The Vanishing Trial

The Boston Federal Courthouse is a proud example of a commitment to the flourishing of courts. Its central icons are its twenty-five courtrooms that look more or less like the one depicted in figure ⊠⊠⊠ (color plate ⊠⊠).⊠⊠ Arches of equal height line the four walls to underscore that litigants, the

Figure [illegible] Civil and Criminal Trial Rates, United States Federal Courts, [illegible]–[illegible]

Copyright: The Honorable Patrick E. Higginbotham, United States Court of Appeals, Fifth Circuit, [illegible], and used with his permission.

public, the jury, and the judge are all equal participants in the process. Objecting to a [illegible]regal procession toward a judicial throne,[illegible] the designers also lowered the bench so that it is [illegible]elevated by only three steps to enable the judge to easily participate in rather than be set apart from the proceedings.[illegible] The stenciling, copied from another courthouse in the region, serves as a reminder of the historic role played by courts in New England.

As one views courtrooms such as those in Boston, one should be reminded of the use of the space. In [illegible], when that courthouse opened, a total of [illegible] civil and [illegible] criminal trials took place in the federal trial courts in Massachusetts.[illegible] The result was that about [illegible] or [illegible] trials were held per courtroom during the new courthouse's inaugural year.[illegible] Comparable data come from St. Louis, Missouri, where the nation's tallest federal courthouse (fig. [illegible]/[illegible]) also has twenty-five courtrooms. In [illegible], trials per district judge in that district numbered [illegible] down from [illegible] in [illegible].[illegible]

One cannot directly extrapolate from a trial rate to a settlement rate, because cases can be disposed of [illegible]on the papers[illegible] by judges rendering decisions on issues such as jurisdiction or ruling that one party prevails as a matter of law. Estimates are that judicial decisionmaking occurs in approximately a third of the docket.[illegible] Moreover, trials are not the only proceeding for which courtrooms are used. Defendants who plead guilty must do so in open court; judges must sentence in public, and oral arguments and other hearings in civil cases take place in courtrooms. Yet, as we discussed in Chapter [illegible], one study in the late [illegible]s found that federal courtrooms have their [illegible]lights on[illegible] defined as in use for part of a day[illegible] about half of the time.[illegible]

The statistics on trial rates in Boston and St. Louis are not anomalous but illustrative of national trends. In [illegible], on average, federal judges presided at thirty-nine trials a year; by [illegible], [illegible]the average federal district judge presided over only about nine trials.[illegible] This downward slope can be clearly seen in a graph (fig. [illegible]), *Civil and Criminal Trial [illegible]ates, [illegible]nited States [illegible]ederal Courts,* which maps the trend in civil and criminal trials between [illegible] and [illegible].[illegible] When the types of cases are disaggregated, minor variations exist. But the slope is the same: even as filings have increased, the percentages of cases going to trial have declined, as well as the absolute number of trials.[illegible] The state courts have a much higher level of filings and of public proceedings, yet data from the states show a comparable pattern of declining numbers of trials.[illegible] Further, the federal trend line continued beyond [illegible]. By [illegible], in fewer than two of one hundred civil cases filed, a trial began. Lawyers have come to call this phenomenon [illegible]the Vanishing Trial.[illegible]

The Methods of Privatization

Mana[illegible]erial Jud[illegible]es Settlin[illegible] Cases

Different modes of ADR limit adjudication's reach. One form is court-based ADR,[illegible] creating a [illegible]new[illegible] civil procedure. Before the [illegible]s, judges in the federal system did not understand themselves to be tasked with settling cases. Rather, their job was to deal with legal questions in advance

of or in lieu of trial and to preside at hearings. Beginning around the middle of the century, however, judges argued the need to ⊠modernize⊠ procedures and chose to emulate businesses as they spoke about the importance of ⊠managing⊠ workloads.⊠⊠

Enthusiastic proponents pushed for judicial education programs to school judges in new techniques for dealing with lawyers and cases. In the late ⊠⊠⊠⊠s through the ⊠⊠⊠⊠s, self-described evangelistic judges urged their colleagues to conduct ⊠pre-trial⊠ meetings by calling lawyers for opponents together in advance of trial to winnow issues. But the name of the meeting reflected the presumption then still in place: a ⊠pre-trial⊠ meeting presumed that a trial could well come thereafter. To the extent that pre-trial decision-making prompted conciliation, such settlements were a ⊠by-product⊠ rather than the aim of judicial oversight.⊠⊠

During the ⊠⊠⊠⊠s and ⊠⊠⊠⊠s, however, attitudes shifted. Judges called on their colleagues to become more active managers. Lecturing on the values of settling cases at judicial education seminars, one judge explained: ⊠One of the fundamental principles of judicial administration is that, in most cases, the absolute result of a trial is not as high a quality of justice as is the freely negotiated, give a little, take a little, settlement.⊠⊠⊠ Rules of court then changed. In the ⊠⊠⊠⊠ revisions to the federal rule governing ⊠pretrials⊠ (with that word's hyphen deleted), language was inserted to recommend that, when meeting with lawyers and litigants, judges raise ⊠the possibility of settlement or the use of extra-judicial procedures to resolve the dispute.⊠⊠⊠By ⊠⊠⊠⊠, what had been termed ⊠extrajudicial⊠ the decade before came to be described as ⊠judicial⊠ Procedural rules listed techniques such as mediation and settlement conferences as part of what judges were to speak about with litigants. Indeed, parties were obliged to discuss settlement,⊠⊠ and some ⊠local rules⊠ (such as those of the District of Massachusetts) insist that every time judges meet with parties, they raise the question of settlement.⊠⊠Similar provisions can be found in federal trial courts around the United States.⊠⊠

Our focus has been on civil procedure, but those enmeshed in criminal law tell a parallel story of a world enveloped by settlement⊠ plea bargaining, as it is called in that context. Some commentators have argued that the criminal system is so reliant on settlement that its bargains are increasingly lawless.⊠⊠Cited are examples of prosecutors who condition plea agreements on agreements by defendants to waive their rights of appeal or claims of ⊠past and future error.⊠⊠⊠Even claims about allegations of cruel and unusual punishment are ⊠subject to barter.⊠⊠⊠ And, n multi-defendant cases, sometimes prosecutors require ⊠package pleas⊠ in which all defendants must acquiesce to get the ⊠deal.⊠⊠⊠

Congress has encouraged ADR through various ⊠civil justice reform⊠ statutes, including one that expressly authorized some federal district courts to adopt ⊠court-annexed arbitration⊠ programs.⊠⊠Under those provisions, certain litigants filing lawsuits were sent to court-appointed lawyers designated to sit as arbitrators and to render decisions that, with parties' consent, became binding. Yet, when compared to mediation, court-annexed arbitration, which is closer to adjudication, was used relatively infrequently. By ⊠⊠⊠⊠, about two-thirds of federal district courts had created programs referring cases to mediation.⊠⊠

Form followed function only briefly. In the late ⊠⊠⊠⊠s, the ⊠⊠⊠*Courts Des⊠n ⊠ uide* mentioned the possibility that new courthouses could include ⊠alternative dispute resolution suites⊠ as well as rooms for conferences and ⊠caucusing⊠⊠ to be ⊠located off the public corridor near a courtroom.⊠⊠⊠ More general courthouse design guides also called for ⊠offices for administrative staff, several conference rooms where mediation sessions or arbitration hearings may take place, and waiting areas for parties and their counsel.⊠⊠⊠

But as budgetary constraints prompted cutbacks in courthouse construction, the ⊠⊠⊠*Courts Des⊠n ⊠ uide* stopped reserving spaces for ADR.⊠⊠Further, as exemplified by the Boston courtroom (fig. ⊠⊠⊠), interiors were carefully appointed with fixed furniture in a layout made familiar over the past century. Spaces were preserved for juries, witnesses, judges, lawyers, court reporters, and the public, as if trials were ongoing daily.⊠⊠While judges were to multi-task, the rooms in their courthouses were not made to flip back and forth from courtroom to meeting room. Recall, in contrast, that the courtroom designed for ITLOS (fig. ⊠⊠/⊠⊠⊠) could be converted into a large meeting hall for delegates to the Sea Convention, and that the Helsinki District Court put movable furniture into its courtrooms (fig. ⊠⊠/⊠⊠⊠).

While courtroom design remained impervious to these changes, the job of the judge underwent renovations. Through statutory and rule changes, coupled with training and educational programs, the definition of a ⊠good judge⊠ came to be one focused on and achieving dispositions. Reflective of that focus, data collected at the trial levels often report the time to disposition but not the numbers of opinions issued or written. What is judicial (and judicious) has been transformed, as the tasks of formal adjudication through public processes and reasoned deliberation recede in favor of managerial judging.

These new regimes both created markets for businesses proffering these services and reflected the efforts of such norm entrepreneurs to shape laws helping to generate demand for their wares. The impact of the ADR focus can be measured by its institutionalization through various legal organizations. In addition to becoming a feature of court-based rules over the last decades of the twentieth century, ADR gained institutional status in the American Bar Association and the American Association of Law Schools, both of which promoted the professional development of ADR providers by creating new subdivisions devoted to dispute resolution.⊠⊠ Electronic and hardcopy news services specialized in the topic, firms (such as Endispute and JAMS⊠ Judicial Arbitration Mediation Services) advertised their expertise,⊠⊠ and various groups convened con-

ferences on topics with titles such as "Court ADR" as they shaped new curricular offerings for law schools and drafted model rules for mediators and other ADR providers.

Measuring the impact of ADR on extant court services has proved complex. One effect—a risk of a "brain drain"—made its way into the press, which compiled information on a few judges who had served in the public sector and then resigned to pursue more lucrative careers in firms offering private judging. Another group affected is lawyers. Some have raised the possibility that pressures toward ADR (including plea bargaining on the criminal side) could alter the pool of individuals interested in becoming lawyers and, eventually, judges. The legal profession prides itself on independence and on the lawyerly role of openly confronting power on behalf of individuals. If such adversarial champions are devalued, persons undaunted by the prospect of conflict may look elsewhere for careers.

As for ADR's effects on the cases in which it is used, assessing the quality of resolutions is notably difficult. The problem, of course, is the lack of baselines for measurement, a problem that also haunts adjudication. ADR enthusiasts, as well as some research, reported that ADR had produced significant cost reductions while not altering outcomes. Other evaluations, however, found that various ADR methods had not fulfilled their promises of reducing costs and time. If cases that would have ended through bilateral negotiations by lawyers were sent to settlement conferences, mandated mediation, or court-annexed arbitrations, outcomes would be delayed as lawyers waited to see how the ADR opportunities affected settlement values. The ADR interventions may have prompted lawyers to prepare more than they might otherwise have done and perhaps thereby to have produced better outcomes but not dispositions that were cheaper or quicker. One response from ADR proponents is that parties' consent is itself the best measure of quality. The presumption is that parties, knowledgeable about their own claims and the underlying facts, are best situated to assess resolutions; when they assent to an agreement, they demonstrate its desirability. ADR skeptics, on the other hand, point to coercive features, such as the high cost of lawyers' fees and the legal promotion of settlement. From this vantage point, in both civil and criminal cases the pressures to form agreements undermine using the fact of agreement as validation of its merits.

The contemporary situation in the federal courts is well described by a distinguished trial-level judge, Brock Hornby, who has played a leadership role in the federal judiciary. Relying, as we have done, on visual terms, he asked how "reality television" ought to portray a federal trial judge. For civil cases, he answered:

> In an office setting without the robe, using a computer and court administrative staff to monitor the entire caseload and individual case progress; conferring with lawyers (often by telephone or videoconference) in individual cases to set dates or limits; in that same office at a computer, poring over a particular lawsuit's facts, submitted electronically as affidavits, documents, depositions, and interrogatory answers; structuring and organizing those facts, rejecting some or many of them; finally, researching the law (at the computer, not a library) and writing (at the computer) explanations of the law for parties and lawyers in light of the sorted facts. For federal civil cases, the black-robed figure up on the bench, presiding publicly over trials and instructing juries, has become an endangered species, replaced by a person in business attire at an office desk surrounded by electronic assistants.

While in his view, judges' "mission to interpret and clarify laws, adjudicate and protect rights, maintain fair processes, and punish" remained the same, "the method of carrying out that mission has changed." Moreover, he urged commentators to "stop bemoaning disappearing trials. Trials have gone the way of landline telephones—useful backups, not the instruments primarily relied upon, if ever they were. Dramatists enjoy trials. District judges enjoy trials. Some lawyers enjoy trials. Except as bystanders, ordinary people and businesses don't enjoy trials, because of the unacceptable risk and expense."

Unheard Arguments and Unpublished Opinions

Before the early part of the twentieth century, many cases were heard, as of right, by the United States Supreme Court. In [illegible], for example, the court had [illegible] cases on its appellate docket and was "obligated to decide them all." Under the leadership of Chief Justice William Howard Taft (discussed in Chapter [illegible]), the justices sought docket relief, and, at their behest, Congress responded in the [illegible]s by authorizing the court to select most of its cases from petitions for certiorari. By century's end, the court had almost complete control over its docket and had reduced its decisions dramatically. In [illegible], the court heard arguments in eighty-eighty cases and issued seventy-six opinions.

When reorganizing the United States Supreme Court's jurisdiction, Congress also added an intermediate federal appellate level to which litigants could appeal if they were "aggrieved" by a final decision of a trial court. By the end of the twentieth century, those intermediate federal appellate courts received some [illegible] filings each year. As filings grew, so did concerns about handling the volume. Consistent with the approach taken at the trial level during the last few decades of the twentieth century, federal appellate courts also emphasized settlement and dispositions that diminished what the public can see or read. About half of the thirteen federal appellate courts developed "civil appeals management

plans requiring disputants to meet with staff lawyers to attempt to settle pending appeals. Further, although as a formal matter aggrieved parties unhappy with final judgments have a statutory appeal as of right, in practice what constitutes such an appeal varies a good deal. Many appellate courts rely on staff to screen cases and send them to various tracks. Discretionary and low-visibility judgments determine which appeals receive more consideration than others. Cases that make it past such screening do not necessarily proceed to oral argument followed by published decisions. Rather, in many federal appellate courts, oral arguments depend upon courts' permission. By the late s, about percent of cases decided on the merits had been orally argued. By , the number was down to percent. Even when litigants were allowed to argue, presentations were sometimes limited to ten minutes per side.

Thereafter, most federal appellate decisions did not result in published opinions. The shift away from publication developed during the late s, when the Judicial Conference of the United States (detailed in Chapter) proposed that not all decisions needed either to be published or to be available for citation as precedent. One study reported that in , some percent of all opinions were published; by , percent were. While the question of whether litigants may invoke unpublished appellate opinions generated constitutional arguments and new rulemaking, as of , the decline in publication continued; only one in five judgments produced an officially published ruling.

Given the internet, what it means for a decision to be published has become complex. When the presumption against publication was first put into place, court decisions were sent either to official reporter services that bound them in books or were placed in file drawers accessible only to those who went to look at them. But in , new federal legislation (the E-Government Act) required all appellate opinions to be made available online in a text searchable format. By , the federal circuits had complied, albeit sometimes denoting opinions as not for publication and/or as not for citation. Entrepreneurial publishers then also created a special bound set of volumes specifically for unpublished decisions.

Many commentators (judges included) have argued that accommodations made to deal with the volume of cases have radically changed what it means to have an appeal. Judges rely heavily on staff, delegating decisionmaking internally to lower-level, anonymous government employees. But one of the obvious solutions a significant increase in the number of judgeships has not garnered the political support to bring it about.

Devolution dministrative encies as Courts

It would be an error to assume that because relatively few trials occurred in the federal courthouses across the United States, evidentiary hearings have vanished. Rather, many such exchanges have migrated from courts into agencies, which are another form of alternative dispute resolution.

The use of Executive Branch officials to do adjudicatory-style work has a long history dating from the country's inception, when Congress authorized certain kinds of private claims to be filed against the United States. If a claimant succeeded, Congress needed to direct payment through private bills. Shortly before the Civil War, Congress shaped an adjudicatory-like process under the Steamboat Safety Act. Inspectors had the power to impose sanctions (including the loss of licenses) upon finding unsafe conditions. That provision was the first statute at the national level to require written reasons for an administrative decision. Three years thereafter, in , Congress created a Court of Claims, a specialized body to deal with a range of monetary claims against the United States.

Details of that court's history provide a glimpse into the expansion of agency adjudication. Given traditions of government immunities, the court represented an acknowledgment that the United States, like private actors, could be subject to suit for failure to perform on contractual or other obligations. Various other measures of the growing entrepreneurial aspirations of the country can be identified. Recall for example that, during the same era, the Treasury Department chartered the Office of Supervising Architect, new federal building projects were launched, and the federal workforce grew in size.

Reflective of its special mission, the Court of Claims departed in many respects from what were then familiar features of regular courts. Although the Claims Court dealt with monetary claims arising under contracts, it had no juries, as a common law court would have convened when private parties sought damages. Rather, Congress dispatched a separate cadre of three judges to sit to rule on claims. Given that juries are one of the engines of public access to court proceedings, that departure emulated widely as various other administrative courts gained the authority to level monetary remedies helped to shape the expectation that administrative proceedings need not always be open. The Court of Claims also moved away from another feature of federal courts, a certain form of judicial independence that gave judicial decisions finality rather than being advisory opinions that did not oblige action. In contrast, the Court of Claims had unusual ties to Congress, from which it could receive cases by reference and on which the court's remedies depended because Congress had to appropriate funds to make payments. In short, the Court of Claims had jurisdiction to provide only a particular remedy (monetary awards) for particular harms (breach of contract) by a particular defendant (the United States).

By the end of the twentieth century, a reorganized and renamed Court of Federal Claims had a broader range of cases (including public contracts, tax matters, Fifth Amendment takings, civilian and military pay claims, and vaccine litigation) and a somewhat wider remedial range.

The court was staffed by two layers of non-life-tenured trial judges, one group denoted Court of Federal Claims judges and another set special masters dedicated to vaccine cases. Appeals went to a specific life-tenured federal bench, the Federal Circuit. By then, however, what had been distinctive about the Court of Federal Claims was less so because, over the intervening decades, Congress had elaborated many other specialized agency-based courts. Jurisdictional peculiarities, congressional directions about permissible remedies, and special kinds of judges for different kinds of cases had all become the ordinary stuff of various adjudicatory sites within the federal system.

Indeed, the regular Article III courts had changed as well. In , those courts were staffed by life-tenured judges. By , Article III courts had become composites in which life-tenured judges were joined by two layers of non-life-tenured judges (magistrate and bankruptcy judges) who, in some districts, outnumbered the life-tenured at the trial level. Congress invented magistrate judges in by upgrading a small system of United States commissioners and turning them into magistrates. The impetus came, in part, from the focus discussed earlier on pretrial processes of civil litigation and docket pressures. Magistrates were given authority over some of the discovery and pre-trial process as well as pre-trial criminal matters.

Initially conceived to be part-time positions, some slots were made available, with relatively few (about) full-time jobs. Within thirty years, however, the numbers had flipped, and the name had changed. As of , more than people served full-time as magistrate judges. The change in title aptly captured the array of tasks that were delegated, as well as signifying that these judges had the power to issue certain kinds of contempt orders and to preside, with parties' consent, at jury trials. In , Congress elaborated on prior practices for another aspect of the docket by creating new authority for bankruptcy judgeships. By the end of the twentieth century, their number had also grown, as some lines were authorized for bankruptcy judges.

Both sets of statutory judges serve for fixed (and renewable) terms. Federal district judges select magistrate judges, and federal appellate judges choose bankruptcy judges. In essence, Congress had devised a way to manufacture significant new judgeships outside the parameters of Article III procedures, in which the President nominated and the Senate confirmed jurists. Instead, statutory judges were selected and reappointed by their life-tenured counterparts. As detailed in Chapter , federal courthouse design guides took the new judgeships into account by calling for dedicated courtrooms for those jurists in the specifications for new buildings. Indeed, these new judgeships were part of the argument that such buildings were needed.

Even as one tells the story of growth in the number of judicial personnel in federal courts, the increase is dwarfed by the expansion of the administrative judiciary. As detailed in figure , *uthori ed Jud eships in ederal Courts and in ederal encies in* , far more federal judges work outside than inside federal courthouses. On one side of the graph is a bar representing the , judges authorized to work in federal courthouses; that number includes the constitutionally appointed, life-tenured judges as well as magistrate and bankruptcy judges. The other column denotes the more than , administrative judges or hearing officers who work in federal agencies deciding specific kinds of claims, such as those brought by social security recipients, veterans, immigrants, or federal employees. And, reiterating the pattern in courts, state-based adjudicators in administrative agencies far outstrip those situated within the federal system. During the same era, more than , administrative law judges were based in state and local agencies.

A good deal of the growth in administrative adjudication dates from the Administrative Procedure Act (APA) creating an infrastructure for agencies both to make rules and to deal with individual claimants. The APA chartered a distinct set of administrative law judges (ALJs) to decide cases. Selected through a civil service merit system, ALJs cannot be dismissed except for cause and hence have a layer of statutory insulation that protects their independence. Yet, unlike generalist judges in courts, in the federal system ALJs are assigned to work in (and in some sense for) a specific agency. (Some states do not follow that pattern and instead have generalist administrative law judges working on central panels.) The largest proportion of federal ALJs staff the Social Security Administration, which, in turn, has also been called the largest court system in the United States. In total, as of , more than , individuals worked as ALJs in various federal agencies. A significantly greater number more than , also decided cases but under the appellation administrative judges (not administrative law judges) or hearing officers The distinction denotes that these individuals are regular agency employees not afforded the specific protections that the APA gives to its ALJs.

What these sets of new judges in and out of federal courthouses made plain was that the life-tenured judiciary was too small even as it expanded to staff the adjudicatory needs of the federal government. Large amounts of what might have been its work were relocated to agencies. As was the case with the promotion of ADR inside courts, some supporters of agency adjudication saw it as a second-best response, a necessary adaptation in the face of demand. Others argued that agency adjudicators provided better dispute resolution either because of their expertise in a particular arena, their greater informality, or the potential for more consistent decisionmaking within bureaucratic structures. Enthusiasm for delegation continued, with new proposals such as the creation of health courts regularly put forth.

Figure [illegible] Authorized Judgeships in Federal Courts and in Federal Agencies as of [illegible]

Copyright: Judith Resnik, [illegible].

Not all litigants were enthusiastic. Some argued that the delegation of adjudicatory authority violated their rights by cutting off ready access to life-tenured judges. Those claims generally lost, as the life-tenured judiciary upheld congressional delegation of their authority. In a series of decisions rendered over several decades, the United States Supreme Court puzzled about how the constitutional grant of [illegible]the judicial power[illegible] to courts staffed by judges with life tenure could be squared with agency adjudication. The court relied on various criteria, such as the narrowness of the grant of authority, the oversight provided through appellate review, and the desirability of the more informal procedures, as it generally upheld congressional decisions to vest judicial power in various bodies.[illegible] When doing so, the court reread the United States eighteenth-century Constitution through a twentieth-century lens to expand the flexibility of national governance.[illegible] Working in concert, Congress and the courts licensed a host of specialized entities, dedicated to particular areas of law and life, to deliver judicial services.

But the changes have not been uni-directional, as courts were also reformatting their processes. On several dimensions, agency-based adjudication and court-based adjudication overlap. For example, one standard distinction had been that courts were generalized, and agency adjudication was specialized and narrowly focused on one statutory regime. But (as discussed earlier), some agency judges do not work within a particular agency but serve instead on [illegible]central panels.[illegible] Furthermore, some courts also specialize [illegible] exemplified in the federal system in areas such as tax or bankruptcy; in state courts in arenas relating to traffic violations, family life, and probate problems; and at the international level in tribunals dedicated to crimes against humanity or to the law of the sea.

Moreover, as courts delegated adjudicatory work to agencies, they also insisted that the procedural opportunities afforded bear some resemblance to those provided in courts. A [illegible]due process revolution[illegible] required agency-based decisionmakers to provide [illegible]fair[illegible] hearings that gave notice to claimants of the basis for proposed decisions and rights to present evidence.[illegible] Thus agency and court procedure overlapped in terms of factfinding, and both venues came, in the [illegible]s, to incorporate settlement and other ADR techniques. Moreover, while another distinction had been between factfinding by agency judges and law review by court-based judges, some statutes authorized agencies to develop tiered systems of appeal in which lower-level hearing officers' decisions were reviewed by panels of superiors, and sometimes by courts as well.[illegible]

The volume of those agency hearings can be glimpsed through another bar graph (fig. [illegible], [illegible]*stimate of* [illegible]*videntiar*[illegible] *Proceedin*[illegible]*s in* [illegible]*ederal Courts and in* [illegible]*our* [illegible]*ederal* [illegible]*encies in* [illegible]), which compares the numbers of [illegible]evidentiary proceedings[illegible] in federal courthouses such as those in St.

Louis (fig. ⬚/⬚⬚⬚) and in Boston (fig. ⬚/⬚⬚⬚) with hearings in a few federal administrative agencies. A generous calculation counted ⬚⬚⬚,⬚⬚⬚ evidentiary hearings over which both life-tenured judges and statutorily chartered magistrate and bankruptcy judges presided in federal courthouses in ⬚⬚⬚⬚. That figure includes any occasion on which a witness testified, and hence includes many hearings in addition to trials. The other bar shows some ⬚⬚⬚,⬚⬚⬚ evidentiary proceedings in the four federal agencies⬚ the Social Security Administration, the Equal Employment Opportunity Commission, the Immigration Service, and the Department of Veterans' Affairs⬚ that had the highest volume of evidentiary proceedings that year.⬚⬚⬚Thus, while trials may be ⬚vanishing⬚ in federal courts, many evidentiary processes have migrated into agencies that have, functionally, become courts.

Administrative adjudication typically takes place in office buildings that have something in common with Renaissance town halls in that they are multi-function spaces. But, unlike town halls, these office buildings are not often gracious statements of public prosperity and good governance. Many are anonymous institutional facilities. Agency administration is impoverished not only visually (in terms of art and architecture) and spatially (in terms of lack of dedicated courtrooms), but also in terms of the salaries paid to the judges, the structural protections to insulate judges from oversight, the even greater lack of lawyers for litigants, and the high volume of the proceedings.

While agencies have become a primary venue for tens of thousands of claimants sent to decisionmakers obliged to hear the other side (*audi alterem partem*), two other pillars of contemporary adjudication⬚ structurally independent judges and the rights of public access⬚ are weak. Federal agency jurists, for example, have neither the life tenure of Article III judges nor the statutorily fixed fourteen- or eight-year terms accorded to bankruptcy and magistrate judges. The subset selected formally through the Administrative Procedure Act gain the status of ⬚Administrative Law Judge⬚ and are protected in that role; they are not to be assigned to other kinds of jobs within an agency. Further, as civil servants, they enjoy the status afforded to other government employees, insulated from discharges without cause. But under current legal rules, other kinds of judges⬚ administrative judges or hearing officers⬚ are line employees. For example, ⬚immigration judges⬚ within the Department of Justice could be⬚ and some were⬚ transferred to other positions at the behest of the Attorney General of the United States.⬚⬚⬚

Not only are agency judges less well insulated and the physical spaces less ample, but the processes are also less

Figure ⬚⬚⬚ Estimate of Evidentiary Proceedings in Federal Courts and in Four Federal Agencies, ⬚⬚⬚⬚

accessible to the general public. No ready way exists to watch the exchanges in which agency hearing officers decide the rights and obligations of hundreds of thousands of persons. In terms of the governing regulatory regime, some administrative hearings are presumptively open and others presumptively closed. For example, special permission is needed to observe hearings by the Equal Employment Opportunity Commission dealing with claims about discrimination in federal employment. Hearings on veterans' claims are generally closed. Immigration hearings may or may not be open, depending on the kind of claim. And, while a subset of Social Security hearings alleging fraud by the recipient are open, the majority of hearings, which involve disability claims, are presumptively closed. In general, the various closures are presumed to be solicitous of the interests of the claimants. As detailed in Chapter , the great advocate of publicity Jeremy Bentham also appreciated privacy concerns but argued for publicity, subject to closure based on specified and narrow grounds in particular instances.

As a practical matter, even when one has the right to attend these various proceedings, it is difficult to find them. Government office buildings, unlike courthouses, are not welcoming of street traffic. One cannot even easily know how many such proceedings occur. We termed the numbers in figure an estimate because, unable to use a compilation from an extant public database, we produced the assessment ourselves. Unlike the federal courts, served by the Administrative Office in the impressive Thurgood Marshall Building (fig. /) and collating data annually, federal administrative agencies had as of no shared research division that supplied the public with annual reports detailing their work.

Nor can one easily read in lieu of seeing the decisions of federal administrative adjudication. No specialized service collects the judgments of all federal agencies and puts them together in published volumes or online, although a few agencies provide some information through their own websites. A small number of institutions outside of government have taken it upon themselves to collect and disseminate some of the output. For example, one law school located and published the judgments of immigration judges ruling on a subset of applications for asylum. Another group, Transactional Records Access Clearinghouse (TRAC) collected data (in part by filing requests under the Freedom of Information Act) on several agencies. Further, some academics, expert in administrative law, have analyzed sets of decisions or the procedures of specific agencies.

Some of the data collected raise questions about whether the justifications for administrative adjudication (easier accessibility coupled with specialization and, therefore, better decisionmaking) are borne out regularly in practice. Survey data on state administrative adjudication when drivers' licenses were suspended reported criticisms from litigants and lawyers about both the quality and the fairness of decisionmaking. Turning to the federal system, a comprehensive review of , decisions by immigration judges rendered from to found amazing disparities in outcomes for similarly situated claimants. Applicants heard in New York had a percent chance of obtaining permission to remain in the United States. Yet similarly situated applicants in Detroit had a percent chance of success. Disparities were not limited to the lower-echelon judges. The researchers examined the reversal rates of decisions coming up to the federal appellate courts. In one federal appellate circuit including states such as Virginia, the reversal rate was percent, in contrast to a rate of percent for a circuit in the Midwest.

In short, and assuming that the snapshot reflects a regular trend, a larger number of evidentiary hearings took place in federal agencies than in federal courts. Those contexts provide few opportunities for public observation and few resources for the dissemination of the judgments rendered. Add those numbers to the pattern of settlement-focused work of judges inside courts and appellate practices of not publishing decisions and consider the overall trend. Despite growing numbers of persons who use the title judge and conflicts called cases many state-empowered actors are no longer required to provide their reasons to the public about decisions to validate one side of a dispute and, in tens of thousands of cases, those conflicts are ones to which government is a party.

utsourcin through Mandator Private rbitration

Yet what occurs within agencies is relatively visible and the judges relatively independent when compared with another form of ADR, exemplified by the excerpt from our own Cellular Service Agreement, pictured in figure . At the time, we had decided to expand phone service. As the text of that document explained, by unwrapping the phone and activating the new service, we waived our rights to go to court and became obligated to arbitrate disputes arising out of or related to this or prior agreements Even when applicable law permitted our joining class actions or class arbitrations, we had also waived our rights to do so. In purported symmetry, this contract also stated that both the provider and the consumer were precluded from pursuing any class action or class arbitration. Instead of whatever public remedies might be available, customers were required to use the dispute resolution service stipulated by the phone provider, albeit with modifications precluding group-based claims, because at the time the American Association of Arbitration, one of the institutions to which disputes could be sent, had rules providing for aggregating arbitrations. Further, the contract did not provide information on what costs might be charged for using the alternative dispute resolution system.

Your Cellular Service Agreement

Please read carefully
before filing in a safe place.

YOUR CELLULAR SERVICE AGREEMENT

This agreement for cellular service between you and [your] wireless [company] sets your and our legal rights concerning payments, credits, changes, starting and ending service, early termination fees, limitations of liability, settlement of disputes by neutral arbitration instead of jury trials and class actions, and other important topics. PLEASE READ THIS AGREEMENT AND YOUR PRICE PLAN. IF YOU DISAGREE WITH THEM, YOU DON'T HAVE TO ACCEPT THIS AGREEMENT.

IF YOU'RE A NEW CUSTOMER, THIS AGREEMENT STARTS WHEN YOU OPEN THE INSIDE PACKAGE OF ANY CELL PHONE YOU RECEIVED WITH THIS AGREEMENT . . . . IF YOU DON'T WANT TO ACCEPT AND BE BOUND BY THIS AGREEMENT, DON'T DO ANY OF THOSE THINGS. INSTEAD, RETURN ANY CELL PHONE YOU RECEIVED WITH THIS AGREEMENT (WITHOUT OPENING THE INSIDE PACKAGE) TO THE PLACE OF PURCHASE WITHIN 15 DAYS.

IF YOU'RE AN EXISTING CUSTOMER UNDER A PRIOR FORM OF AGREEMENT, YOUR ACCEPTING THIS AGREEMENT IS ONE OF THE CONDITIONS FOR OUR GRANTING YOU ANY OF THE FOLLOWING CHANGES IN SERVICE YOU MAY REQUEST: A NEW PRICE PLAN, A NEW PROMOTION, ADDITIONAL LINES IN SERVICE, OR ANY OTHER CHANGE WE MAY DESIGNATE WHEN YOU REQUEST IT (SUCH AS A WAIVER OF CHARGES YOU OWE). . . . YOU CAN GO BACK TO YOUR OLD SERVICE UNDER YOUR PRIOR AGREEMENT AND PRICE PLAN BY CONTACTING US ANY TIME BEFORE PAYING YOUR FIRST BILL AFTER WE MAKE THE CHANGE YOU REQUESTED. OTHERWISE, IF YOU PAY YOUR BILL, YOU'RE CONFIRMING YOUR ACCEPTANCE OF THIS AGREEMENT. IF YOU DON'T WANT TO ACCEPT THIS AGREEMENT, THEN DON'T MAKE SUCH A CHANGE AND WE'LL CONTINUE TO HONOR YOUR OLD FORM OF AGREEMENT UNLESS OR UNTIL YOU MAKE SUCH A CHANGE . . .

INDEPENDENT ARBITRATION

INSTEAD OF SUING IN COURT, YOU'RE AGREEING TO ARBITRATE DISPUTES ARISING OUT OF OR RELATED TO THIS OR PRIOR AGREEMENTS. THIS AGREEMENT INVOLVES COMMERCE AND THE FEDERAL ARBITRATION ACT APPLIES TO IT. ARBITRATION ISN'T THE SAME AS COURT. THE RULES ARE DIFFERENT AND THERE'S NO JUDGE AND JURY. YOU AND WE ARE WAIVING RIGHTS TO PARTICIPATE IN CLASS ACTIONS, INCLUDING PUTATIVE CLASS ACTIONS BEGUN BY OTHERS PRIOR TO THIS AGREEMENT, SO READ THIS CAREFULLY. THIS AGREEMENT AFFECTS RIGHTS YOU MIGHT OTHERWISE HAVE IN SUCH ACTIONS THAT ARE CURRENTLY PENDING AGAINST US OR OUR PREDECESSORS IN WHICH YOU MIGHT BE A POTENTIAL CLASS MEMBER. (We retain our rights to complain to any regulatory agency or commission.) **YOU AND WE EACH AGREE THAT, TO THE FULLEST EXTENT POSSIBLE PROVIDED BY LAW:**

(1) ANY CONTROVERSY OR CLAIM ARISING OUT OF OR RELATING TO THIS AGREEMENT, OR TO ANY PRIOR AGREEMENT FOR CELLULAR SERVICE WITH US . . . WILL BE SETTLED BY INDEPENDENT ARBITRATION INVOLVING A NEUTRAL ARBITRATOR AND ADMINISTERED BY THE AMERICAN ARBITRATION ASSOCIATION ("AAA") UNDER WIRELESS INDUSTRY ARBITRATION ("WIA") RULES, AS MODIFIED BY THIS AGREEMENT. WIA RULES AND FEE INFORMATION ARE AVAILABLE FROM US OR THE AAA;

(2) **EVEN IF APPLICABLE LAW PERMITS CLASS ACTIONS OR CLASS ARBITRATIONS, YOU WAIVE ANY RIGHT TO PURSUE ON A CLASS BASIS ANY SUCH CONTROVERSY OR CLAIM AGAINST US . . . AND WE WAIVE ANY RIGHT TO PURSUE ON A CLASS BASIS ANY SUCH CONTROVERSY OR CLAIM AGAINST YOU. . . .**

(3) No arbitrator has authority to award relief in excess of what this agreement provides, or to order consolidation or class arbitration, except that an arbitrator deciding a claim arising out of or relating to a prior agreement may grant as much substantive relief on a non-class basis as such prior agreement would permit. NO MATTER WHAT ELSE THIS AGREEMENT SAYS, IT DOESN'T AFFECT THE SUBSTANCE OR AMOUNT OF ANY CLAIM YOU MAY ALREADY HAVE AGAINST US OR ANY OF OUR AFFILIATES OR PREDECESSORS IN INTEREST PRIOR TO THIS AGREEMENT. THIS AGREEMENT JUST REQUIRES YOU TO ARBITRATE SUCH CLAIMS ON AN INDIVIDUAL BASIS. In arbitrations, the arbitrator must give effect to applicable statutes of limitations and will decide whether an issue is arbitrable or not. In a Large/Complex Case arbitration, the arbitrators must also apply the Federal Rules of Evidence and the losing party may have the award reviewed by a panel of 3 arbitrators.

(4) **IF FOR SOME REASON THESE ARBITRATION REQUIREMENTS DON'T APPLY, YOU AND WE EACH WAIVE, TO THE FULLEST EXTENT ALLOWED BY LAW, ANY TRIAL BY JURY. A JUDGE WILL DECIDE ANY DISPUTE INSTEAD;**

(5) **NO MATTER WHAT ELSE THIS AGREEMENT SAYS, IT DOESN'T APPLY TO OR AFFECT THE RIGHTS IN A CERTIFIED CLASS ACTION OF A MEMBER OF A CERTIFIED CLASS WHO FIRST RECEIVES THIS AGREEMENT AFTER HIS CLASS HAS BEEN CERTIFIED, OR THE RIGHTS IN AN ACTION OF A NAMED PLAINTIFF, ALTHOUGH IT DOES APPLY TO OTHER ACTIONS, CONTROVERSIES, OR CLAIMS INVOLVING SUCH PERSONS.**

FIGURE ⊠⊠ Example of cellular phone contract, ⊠⊠⊠.

Voluntary arbitration has a long history, some of which we sketched in Chapter ⊠⊠ in relationship to two transnational institutions, the Permanent Court of Arbitration (creating state-to-state dispute resolution mechanisms) and the International Tribunal for the Law of the Sea (configuring a range of procedural options for state and non-state parties). Inside the United States, arbitrators have been a feature of conflict resolution in various settings, including specific industries that developed their own arbitral systems, and in some communities affiliated by religion or ethnicity.⊠⊠ Moreover, labor–management agreements to arbitrate have a special place in American law.⊠⊠

Litigation is also infused with deference to decisions by litigants. Of special reference here are doctrines enforcing contracts that include ⊠forum selection clauses⊠ that send disputants to designated courts.⊠⊠ Mandatory arbitration contracts are a variation in that they provide that⊠ before disputes arise⊠ parties commit to resolutions of whatever conflicts emerge without seeking redress in courts. The issue for courts arises when, after alleged breaches of contracts, one side wants to ignore that contract clause and have the dispute resolved by judges.

What law ought to do when parties renege on such agreements to seek redress outside of courts (rather than specifying in which court to file) has prompted varying responses. Courts and legislatures puzzle about the optimal degree of state control over dispute resolution and what level of coercion to impose. During the nineteenth century and much of the twentieth, courts were reluctant to enforce contracts to arbitrate. Protective of their special mandate, judges frowned on agreements to avoid them and concluded that it was against ⊠public policy⊠ to enforce such contracts over the objection of one side.⊠⊠ But, through a mixture of statutory innovations and judicial interpretations supporting mandatory arbitration clauses, the cell phone contract reproduced in figure ⊠⊠ became enforceable by the ⊠⊠⊠s.

In ⊠⊠⊠, Congress enacted the United States Arbitration Act, which recognized certain kinds of arbitration contracts as enforceable obligations.⊠⊠ That statute (now called the Federal Arbitration Act, or FAA) was focused on commercial contracts rather than on consumer or employee relations; indeed, at the time, congressional power over such intrastate transactions was not obvious. By the ⊠⊠⊠s, some litigants argued to federal judges that they ought to enforce form contracts proffered by institutional players, such as securities brokers, in which purchasers of stocks agreed that, if alleged violations of federal statutory rights arose, the dispute would be dealt with by arbitration. But

judges declined to do so objecting to the pro forma contracts seen as adhesive because of the overwhelming bargaining power of one party. Judges also explained that arbitration was too flexible, too lawless, and too informal as contrasted with adjudication, which they praised for its regulatory role in monitoring adherence to national norms.

However, in the s the United States Supreme Court reversed some of its earlier rulings, as it reread federal statutes to permit rather than to prohibit enforcement of arbitration contracts when federal statutory rights were at stake. Several of the Supreme Court's decisions dealt with consumer contracts, such as between a securities broker and a client or a borrower and a creditor. But a few decisions enforced arbitration between employees and their employers. In , the Court applied that approach to endorse mandatory arbitration despite an employee's claim that his right under state law to be free from discrimination based on sexual orientation had been violated. In addition, when parties disagreed about how to interpret contractual provisions about whether arbitration was required, the Supreme Court held that such issues were to be decided, at least initially, by arbitrators and not judges. Whether invoking rights under state or federal law, as long as the mandatory arbitration provided an adequate mechanism for protecting such rights, the United States Supreme Court insisted on the validity of contracts that put dispute resolution outside of courthouses and away from open and public hearings.

A good many cases have litigated the parameters of the obligation to arbitrate, the kinds of procedures required, the clarity of contract terms, and the costs entailed. Yet to pursue such arguments and challenge the operation of these contract clauses requires both knowledge of the potential for invalidity as applied and resources. Critics argue that when such contracts involve parties with disparate bargaining power (such as when employers require that forms be signed before they will interview an individual for a job), the courts ought not to enforce them. Some legislators have taken up those concerns in proposals, for example, to make such contracts unenforceable for consumers, or for employees bringing civil rights claims. In addition, a few targeted statutes have been enacted to limit their applicability. Further, the enforcement approach of United States federal law is not shared transnationally; several other jurisdictions do not routinely enforce pre-commitments by consumers and employees that enable marketers and employers to avoid courts.

The tension between an adjudication-based model and arbitration is exemplified through a series of events in Nebraska, whose constitution embodied one of the precepts open courts with which we began Chapter . Like several other states, Nebraska had long required that all courts shall be open, and every person, for an injury done him in his land, goods, person, or reputation, shall have remedy by due course of law, and justice administered without denial or delay. At the end of the nineteenth century, the Nebraska Supreme Court interpreted this provision to preclude the enforcement of obligations to arbitrate because to do so would oust the courts of jurisdiction. A few years later, in , that court explained that to enforce those contracts would open a leak in the dyke of constitutional guarantees which might some day carry all away.

Almost a century later, in , the Supreme Court of Nebraska held that a statute requiring arbitration violated the state's constitutional requirement that its courts shall be open. In response, a constitutional amendment was ratified in that provided for ADR. The text was altered to add the caveat that the Legislature may provide for the enforcement of mediation, binding arbitration agreements, and other forms of dispute resolution which are entered into voluntarily and which are not revocable other than upon such grounds as exist at law or in equity for the revocation of any contract.

Thus, legal regimes in the United States have been reconfigured through the work of a host of actors, including judges and legislators. Provisions now require that contracting parties, be they co-equals or employees and consumers, use mandatory arbitration programs, some of which are created by employers, manufacturers, and providers of goods and services, so long as the alternatives provide adequate means to vindicate federal or state rights. The change in law reflects a change in attitude about both adjudication and its alternatives. Judges once bemoaned the informality of arbitration but over time came to praise its flexibility. Further, judges once argued the distinctiveness of adjudication as a public regulatory mechanism but came to reappraise what courts did; adjudication and arbitration were homogenized as variations on a theme.

Proponents of mandatory arbitration and various other ADR and DR mechanisms argue that they augment the adjudicatory regime by making opportunities to be heard available to individuals who would otherwise be priced out of court. Given the ever-present challenges of empirical research and baselines, evaluation of that proposition is difficult, made all the more so because providers do not routinely offer either qualitative or quantitative data.

Indeed, secrecy about both processes and outcomes is often a signature of such programs. Commentators describe confidentiality as an essential element designed (as one court put it) to foster an atmosphere of open discussion aimed at avoiding trials. Such privacy is protected by the rules of various providers as well as by statutes and court judgments. For example, an organization called JAMS Judicial Arbitration Mediation Services promised that it and the arbitrator shall maintain the confidential nature of the Arbitration proceeding and the Award, including the Hearing unless required by courts to do otherwise. As one court explained when enforcing cell phone contracts akin to figure , confidentiality was part of the character of arbitration itself that

prevented it from having precedential value and gaining the trappings of adjudication.

In addition to banning disclosure by participants, attendance by third-party observers is either presumptively prohibited or depends on the parties and the arbitrator. Moreover, some dispute resolution providers' rules note that if members of the media are permitted to attend, they may not record the proceedings. The absence of public access makes it difficult to assess either the degree of fairness of the process or the neutrality of the decisionmakers.

In lieu of that form of information, some research has focused on another measure whether mandatory arbitration clauses are used when corporations enter contracts with each other, as contrasted with imposing them on consumers. In one study, researchers looked at negotiated contracts entered into among telecommunications, credit, and financial services companies that also proffered mandatory arbitration clauses to purchasers of their products. In that set of contracts, less than of negotiated nonconsumer, non-employment contracts included arbitration clauses. By way of contrast, mass contracts (such as that offered by our cell phone provider) included obligatory arbitration in three-quarters of the contracts reviewed. The researchers relied on this disparity to conclude that the obligation to arbitrate was imposed more to preclude aggregate consumer action than to facilitate access to dispute resolution. One might still justify such clauses, for example, by arguing that litigation lacks social utility in that the costs outweighed the benefits because transaction costs were high, or regulatory oversight more efficient, or service providers would increase the cost of products or be deterred from entering certain markets.

But sorting out those claims is made difficult because alternative dispute resolution procedures do not regularly produce transcripts, public observers, or reported outcomes. As a consequence, support for the proposition that contractual dispute resolution programs are better than adjudication in terms of access, costs, speed, or outcomes is hard to come by. Law has thus outsourced to the private sector services that were once provided through public institutions, although not all who wanted to use courts had the resources to do so. Scant data are available that inform discussions about the volume, the location, the processes, or the outcomes of such proceedings. The kinds of inter-community conversations, norm development, and formal obligations to treat opponents in a dignified fashion, provided through public courts, are less available to the segments of disputants consigned to these other venues.

Regulatory Options: Public Access to Alternative Dispute Resolution

Limited access to information about ADR is not necessarily intrinsic to it. Courts that enforce arbitration contracts require that the alternatives are adequate to vindicate the claimant's legal rights. Under that test, judges have concluded that processes that impose significantly higher access fees on litigants than do courts would not be an adequate substitute for courts. One could graft other requirements onto adequate vindication, such as procedures that include a public dimension. Courts or legislatures could, for example, condition enforcement of contracts for arbitration on regulatory interventions enabling public access to arbitration results and processes, as well as insist on data about outcomes produced through other forms of ADR.

Adding such requirements could be understood as consistent with the many ways in which the law has regulated settlement processes. For example, a Florida statute requires that settlements above a certain value of medical malpractice claims be recorded on the web. More generally, in , Florida enacted its Sunshine in Litigation Act prohibiting the enforcement of agreements or contracts that have either the purpose or effect of concealing a public hazard or . . . any information which may be useful to members of the public in protecting themselves from injury which may result from the public hazard. Several other states have similar provisions, with comparable proposals put forth at the federal level. Further, jurisdictions routinely require that criminal defendants enter settlements by pleading guilty in open court. Some states also insist that litigants record civil settlements by assenting in open court as well.

In addition, many courts prohibit the routine sealing of court documents. And while parties have sought to condition settlements on courts' willingness to vacate prior judgments, some jurisdictions have declined on the grounds that such judgments may not be part of the bargains struck by private parties. On the other hand, many jurisdictions permit and enforce confidential orders governing exchanges of information in discovery, closure of proceedings related to children, and the occasional sealing of court files.

In short, various forms of regulation already set parameters for public and private access to information in negotiation, settlement, and adjudication and more could be imposed. Proposals include, for example, licensing mediators and arbitrators, imposing court oversight requiring arbitrators to apply substantive law or explain their decisions, and providing parameters for mediators working in and outside of courts so as to circumscribe ADR providers and ensure greater loyalty to the rule of law. These regulations could enhance accountability, transparency, fairness, and the democratic norm development that are enabled by public court procedures.

Yet the more regulation is imposed on ADR, the more proponents worry that the vitality of the alternative is undermined through over-legalization. Some of that concern is focused on the higher-end commercial arbitration, with illustrations such as the International Bar Association's Rules on the Taking of Evidence in International Commer-

cial Arbitration.⊠⊠⊠Others look at efforts to impose rules on consumer arbitrations. ADR specialists have argued that arbitration is becoming the ⊠new litigation,⊠⊠⊠ meaning that it is increasingly expensive, lawyer-driven, and rule-bound. Some report that repeat players are shifting to a more informal process, mediation, justified as offering ⊠⊠speed, cost, and control.⊠⊠⊠That preference is echoed in court-based ADR, where mediation has ⊠emerged as the primary . . . process in the federal district courts.⊠⊠⊠

⊠Bargaining in the shadow of the law⊠ is a phrase often invoked,⊠⊠⊠ but bargaining is increasingly a requirement of the law of conflict resolution. As a consequence, the distinctive character of adjudication as a discrete activity and a specific kind of ⊠social ordering⊠ (to borrow from Lon Fuller) is diminishing.⊠⊠⊠Through case management, through judicial efforts at settlement and mandatory ADR in courts, through devolution to administrative agencies, and through enforcement of waivers of rights to trial, the framework of ⊠due process procedure⊠ with its independent judges and open courts, is being replaced by what can fairly be called ⊠contract procedure.⊠⊠⊠ And, in mimetic symmetry, both court-based judges and their counterparts in the private sector now produce private outcomes that are publicly sanctioned.

Multi-Jurisdictional Premises (Again)

Our examples have been from the United States, but the phenomenon we have described is not territorially bounded. Complaints about costs, delays, and undue complexity in courts span the globe (as well as the centuries). So do lawyers, some clients, and judges, who are part of an international marketplace.

Some of the networks facilitating exchanges in legal practices are institutional actors, such as the International Bar Association, which was founded in ⊠⊠⊠⊠.⊠⊠⊠Others are more recent, such as newly-minted ⊠global⊠ law firms in which hundreds of lawyers work in regional offices sited in major commercial centers around the world. Judges are likewise members of various global conferences and organizations, such as the European Judicial Network.⊠⊠⊠ Consumers of legal services, such as governments and corporations, also regularly criss-cross national borders.

In various venues, jurists and their clients articulate concerns about litigation akin to those in the United States, as they propose new initiatives ranging from efforts aiming to enhance access to courts to regimes limiting their use.⊠⊠⊠ The remedies have also been parallel⊠ outsourcing and privatization of court processes through the embrace of ADR. Thus, one can map a shift from adjudication to ADR ⊠ or the breaking of the courts' monopoly, to borrow from Yves Dezalay and Bryant Garth⊠⊠⊠ at the national and the transnational levels in Europe as well as in international courts such as ITLOS. We illustrate this point with a brief review of some procedural innovations focused on ADR in England and in Europe. Our focus on England comes from its dramatic reconfiguration of procedural rules in the ⊠⊠⊠⊠s, its longstanding identification with commercial arbitration, and the enthusiasm of some of its lawyers for voluntary mediation in a range of disputes.⊠⊠⊠Europe offers another example through a ⊠⊠⊠⊠ directive for Member States to develop mediation in cross-border disputes. (Various other transnational trends could be mapped, such as the formulation of procedures in many countries for the aggregation of claims to enable group-based litigation bearing a resemblance to American class actions.⊠⊠⊠Aggregate litigation could be understood as a kind of alternative system, but here we focus on the shift in handling individual cases.)

As we move from the United States to other jurisdictions, we do not argue a simple homogenization that ignores distinctive features of discrete legal systems or different understandings of the range and role of courts in a given polity.⊠⊠⊠ Rather, our goal is to sketch the shared embrace by judges and legislators of methods other than adjudication that divert disputes eligible to be heard in courts. Success, if measured by declining numbers of trials, can be found in venues other than the United States, for the phenomenon of the ⊠vanishing trial⊠ is not limited to the United States. Researchers in England have also documented ⊠steep increases⊠ in filings accompanied by declining rates of trial.⊠⊠⊠Dame Hazel Genn found, by the ⊠⊠⊠⊠s, a reduction in ⊠authoritative⊠ adjudication.⊠⊠⊠

Tracking, Managing, and Obliging Mediation: Lord Woolf's Reforms in England and Wales

As Jeremy Bentham's nineteenth-century critique illustrated, reflections on the procedural rules of England have a long history. By one calculation, during the twentieth century some sixty official reports were commissioned to evaluate civil processes as reformers wrestled with access, cost, delay, and complexity. In the ⊠⊠⊠⊠s, England underwent a great many changes related to courts, from abolishing the office of the Lord Chancellor, a position hundreds of years old, to creating a new Supreme Court. In addition, England changed its procedural system as it also cut back its funding for legal aid.

England had been at the forefront of recognizing access to justice as a civil right, supported through a broad entitlement program. England's ⊠⊠⊠⊠ Legal Aid Program was remarkably ambitious, initially aiming to be responsive to need. (Recall that Bentham had called for funding access to justice, including support for transportation and lodging near courts.⊠⊠⊠) Twentieth-century reformers shared some of his ideas; their goal came to be described as putting parties on ⊠an equal footing.⊠⊠⊠To operationalize those aspirations, individuals certified as meeting the means test for eligibility could seek assistance from the private bar, paid according to a schedule of fees. Usage was high; by the

[illegible]s, one study reported that during the course of four years the legal aid budget grew from some [illegible] million pounds to more than [illegible] million pounds, with most certificates for legal assistance related to family matters. By the mid-[illegible]s, civil legal assistance cost about [illegible] million pounds, and public funds represented significant percentages of private lawyers' incomes.[illegible] That distribution method prevented the segregation of a small cadre of lawyers into a [illegible]poverty bar.[illegible]

The growing budget for legal assistance made visible the high costs of using civil justice processes. One response by the government was to limit eligibility, which fell from [illegible] to [illegible] percent of the population. In the [illegible]s, two more fundamental changes occurred. Through legislation styled [illegible]The [illegible] Access to Justice Act,[illegible] new restrictions were imposed that capped the amount of funds to be made available and changed the organizational structure of legal aid providers.[illegible] The limits placed on legal aid dovetailed with limits placed on litigants seeking to go to court. In the [illegible]s, Lord Harry Woolf, then a senior jurist in London, was asked by the Lord Chancellor to chair an inquiry into the handling of civil cases. Woolf's two reports[illegible] a preliminary and a final version of [illegible]*ccess to Justice*[illegible] argued that procedural opportunities were too expansive and expensive and that judges needed to take a more active role in managing cases to curb undue adversarialism.[illegible] As Hazel Genn has noted, these reports were part of a larger discourse with contradictory elements, in that complaints about [illegible]too little access[illegible] clashed with distress about [illegible]too much law.[illegible]

Woolf's goals were to shift control over the pace and quantum of litigation away from individual lawyers to judges and to find ways to encourage the use of ADR to achieve settlements. (As another jurist, Randall Cranston, put it, ADR was [illegible]the flavour of the decade.[illegible]) Woolf's final [illegible] report proposed that lawyers [illegible]front load work[illegible]; before filing lawsuits, lawyers were to be obliged to confer with opponents to see if agreements in lieu of litigation were possible. To do so, the report called for detailed [illegible]protocols[illegible] (to be developed for different kinds of cases through bench-bar committees) specifying the steps to be taken before filing. Further, Woolf urged that judges be given managerial powers to ensure that the costs of proceedings were [illegible]proportionate[illegible] to the amount at stake as well as the authority to sanction misbehavior by allocating costs based on assessments of the reasonableness of positions taken.

In [illegible], pre-action protocols and new rules became effective in England and Wales. Claimants were required to serve demands on opponents, who were charged with investigating and replying.[illegible] If unsuccessful, litigants were to proceed through different [illegible]tracks[illegible] tailored in principle to be [illegible]proportional[illegible] to the needs of cases ([illegible]small claims,[illegible] [illegible]fast[illegible] and [illegible]multi-track[illegible]).[illegible] In addition to imposing these pre-filing and post-filing protocols,[illegible] the Woolf Reforms commended the use of mediation. While initially envisioned as voluntary, rules authorized sanctions for litigants who declined to participate in mediation.[illegible] These mandatory obligations stood in some tension with two predicates of the report, access to courts and the desirability of voluntary conciliation. Yet, in practice, it appeared that without coercion, mediation was chosen less often by litigants (or their lawyers), who expressed preferences for adjudicatory procedures. And indeed, reports of settlement practices describe exchanges as something other than pastoral moments in which parties come together in warm embrace. As Simon Roberts has observed from his close study of a commercial court in London, conciliation could be a [illegible]long, bruising process, characterized by secrecy and suspicion,[illegible] at the end of which the court ratifies what the parties have agreed to live with.

Further promotion of ADR came from a [illegible] government [illegible]White Paper[illegible] called *Modernisin*[illegible] *Justice*[illegible] that explained that [illegible]for most people, most of the time, going to court is, and should be, the last resort.[illegible] All government agencies were to use ADR, when appropriate.[illegible] As Shirley Shipman, who has studied the shift in procedures explained, the government then used various methods of [illegible]encouragement[illegible] including education, reprimands to the bar, public promotion, court orders, and sanctions, and put the courts under [illegible]political pressure[illegible] to adopt modes different from court-based adjudication.[illegible] Reports of a normative shift come from Roberts, who described the [illegible]fundamental reorganization[illegible] taking place in English courts as judges embraced a [illegible]culture of settlement.[illegible] Reminiscent of Judge Hornby's comments about changes in the United States federal judicial role, Roberts argued the need to reconceptualize courts from places of public trials to spaces providing [illegible]an arena for structured bilateral negotiations[illegible] that entailed [illegible]protracted conversations[illegible] among parties.[illegible]

Moreover, as in the United States, the English reforms were not limited to the trial level. In the late [illegible]s, a committee chaired by Sir Jeffery Bowman filed a report on civil appellate procedures.[illegible] Like the Woolf Report, that committee worried about expense, delay, and complexity, and focused on enhancing efficiency. Concerned about rising numbers of appeals, the Bowman Report concluded that courts were too lenient in granting permission (leave) to appeal. Rejecting an [illegible]automatic right of appeal,[illegible] the report called for a change in culture through court management, a fast track for certain appeals, and constraints on others[illegible] all aiming to make the quantum of process [illegible]proportionate[illegible] to the scope of a given controversy.[illegible] In [illegible], the recommended restrictions were put into place. Litigants were required to seek permission from judges for almost all civil appeals or cross-appeals; moreover, a decision on whether to grant leave to appeal was itself final and not appealable. To gain permission, applicants needed to show a real chance for success or [illegible]some other compelling reason.[illegible] Grants could also be limited to specific issues and accompanied by conditions, such as requiring security for pay-

ment of an opponent's appellate costs or for the judgment itself.

A decade after the Woolf Reforms were put into place, debate about their effects was underway, albeit with little empirical information and more calls for interventions, as government spending on civil and criminal cases reportedly exceeded billion pounds. Commentators described the influence of Woolf's approach in other countries, such as Australia, England, Scotland, and Israel, and some saw the work as related to more general efforts to be less court-centric when imposing the rule of law. As for its impact on cases in England, a small study found that ADR provisions had added somewhat to costs, as did some research in the United States. Other researchers reported that many practitioners found the reforms a success in that they provided a clearer structure for work, but that problems of delay and cost remained. A third survey of judges described the views of some that the reforms were themselves a new source of delay. Other critics argued that the new system had rendered an already cumbersome procedural world more complex.

Questions were posed about the rationales for and the utility of the changes. One issue was whether the claimed crisis in civil justice existed, and if so, whether it was an artifact of England's budgetary processes that linked criminal and civil justice. When prosecutions increase in a system where the government pays for both impoverished criminal and civil litigants, the obligation to support prosecution and defense puts pressure on the civil side, where funding has been conceived to be discretionary. Other critics of the Woolf Reforms found the revisions too radical, undoing the best of English practices by unduly increasing the discretion accorded judges and yet not responding to the needs to expand access to justice. On the other hand, some complained that the reforms did too little, failing to alter the incentives of lawyers and therefore not able to constrain the fundamental problem of the high cost of process.

Work by researchers based at University College London and the National Centre for Social Research suggested a different critique that of irrelevance. While ordinary individuals believed that law affected their lives, almost none used court-based processes. Eight out of ten surveyed used neither ADR nor courts, nor did they seek assistance from ombudspersons to remediate the many problems they encountered. Even after the Woolf Reforms and the revamping of legal aid, government funding costs were high but coverage was inadequate. More generally, Genn argued, reforms took place based on too little data, and the result was policymaking in the dark

Outsourcing to Tribunals

As in the United States, a good many disputants in England are sent to tribunals akin to administrative agencies in the United States. Under English practice, these tribunals resemble common law courts in some respects, in that independent decisionmakers render judgments after hearing oral evidence. Yet one study of the Social Security Appeals Tribunals reported about the many problems of this alternative to courts including poor first-tier decisionmaking, a lack of independence of decisionmakers, high error rates that went unchallenged due to claimants' general confusion, lack of knowledge, sense of powerlessness, and stress. Another project considered the Immigration Appeal Tribunal, operating under greater formality than some other tribunals and with support through state-funded representation for claimants. Researchers saw the more court-like procedures as playing a significant role in claimants' success.

The disheartening indications from the research projects were that speed and reduced expenses were associated with losses in fairness, accuracy, and consistency of decisions. Furthermore, the complexity of the administrative regulations meant that specialist tribunals were not havens from legalism but rather depended on it. As a result, when claimants had lawyers, they could rely on them appropriately to buffer against inaccurate and unfair decisionmaking. In , in the wake of the Woolf Report, reforms in some tribunals reformatted procedures to place greater emphasis on early dispute resolution and to reduce reliance on formal oral hearings. Objections were then leveled that cutting back on oral hearings was unwise; critics argued that hearings were both more user-friendly than the new alternatives and offered a transparency that constrained government authority. That proposition found support in various studies of disputants, who repeatedly reported their preference for participatory opportunities before a neutral decisionmaker.

Competing for Transnational Arbitration

The City of London has long been famous for offering its services as a seat for commercial arbitrations of disputes arising around the world. Competition for this business became acute over the twentieth century as various private providers (such as the International Arbitration Association) and new courts (such as the Permanent Court of Arbitration and ITLOS) became options. To underscore its continuing desire to attract disputants of this genre, England has repeatedly revised its law of arbitration to give more autonomy to parties.

England's Arbitration Act of had enabled parties to create their own procedural template but licensed judicial oversight to ensure that arbitrators' substantive decisions would not result in a commercial law different from that of the English courts. Substantial revisions came through the Arbitration Act, responding to criticism that English arbitration law had become too cumbersome and inaccessible, too judge-controlled, and therefore that it put at risk London's historic centrality to international commercial disputes.

According to commentators, the changes were transformative in valorizing party autonomy and imposing "judicial minimalism" that restricted courts' powers to intervene. In an effort to appeal to arbitrators themselves, new provisions conferred upon them a statutory immunity from liability, like that enjoyed by judges, to insulate them from unhappy disputants. Some constraints on party autonomy remained in place. In contrast to the United States, judicial oversight of consumer arbitrations gave judges the power not to enforce "unfair contraction terms," sometimes defined as those not negotiated individually or those creating a significant imbalance of rights between contracting parties. England's [illegible] Arbitration Act also detailed some rules to clarify expectations in the absence of specific tailoring by the parties through contract.

The changes in England followed and interacted with the creation, through the U.N. Commission on International Trade Law (UNCITRAL), of a model arbitration law, promulgated in the mid-[illegible]s and aimed at harmonizing provisions for international arbitration. Further, efforts were undertaken to shape a "transnational civil procedure" that could be adopted by countries or entities to attract (or reassure) disputants in particular venues.[illegible] The creation of more rules and entities for dispute resolution was responsive to an increase in international investment treaties that often provided a range of options for settling disputes when national governments were in conflict with claimants from other countries. As noted in Chapter [illegible], the competition for transnational arbitrations can be intense, as the Permanent Court of Arbitration (PCA), the International Centre for the Settlement of Investment Disputes, the International Arbitration Association, the Paris International Chamber of Commerce, and national commercial courts and dispute resolution organizations seek to attract disputants.[illegible]

When proffering their services, several of these organizations offer privacy as an asset. UNCITRAL, for example, describes "confidentiality of information" as one of the "advantageous and helpful features" of arbitration.[illegible] Similarly, the International Bar Association's rules on evidence-taking in arbitrations confirm the obligation to ensure confidentiality.[illegible] Yet concerns have been raised about the wisdom of keeping secret conflicts that could involve major commercial interests as well as nation-states. Some have argued that at least the "bare facts" of cross-border commercial disputes involving governments ought to be made public.[illegible] Furthermore, not all international arbitrations entail parties of equal bargaining power. Some of those whom Catherine Rogers calls the "Have-Nots" [illegible] employees, consumers, and human rights victims, may also be sent to arbitration when they become involved in cross-border disputes.[illegible] As for kinds of regulation, UNCITRAL provided something like an "internal" law of arbitration, creating a format for selecting arbitrators and developing a case and the possible structures for awards. These guidelines did not address either what principles should govern or the coercive authority to enforce contractual terms, prompting reconsideration of UNCITRAL's procedural regime in [illegible].[illegible]

Radical reforms in England were not limited to the embrace of ADR. In [illegible], Parliament passed the Human Rights Act, domesticating the European Convention on Human Rights (ECHR).[illegible] As a consequence, elements of the implementation of the Woolf Reforms, such as the imposition of sanctions for those litigants declining to participate in mediation, have been questioned as incompatible with the English tradition of access to courts, as well as with the "fair hearing" rights of Article [illegible] of the ECHR.[illegible] In addition, EU understandings of judicial independence have had a major impact. As of the fall of [illegible], England's "Law Lords" no longer sat in Parliament but became part of a new Supreme Court for England and Wales, whose new court opened (as discussed in Chapter [illegible]) in [illegible] in a refurbished Middlesex Guildhall in London's Parliament Square.

Thus, at one end of the litigation spectrum, its top, the creation of a Supreme Court brought attention to the importance of court-based adjudication. In contrast, throughout the other tiers, efforts were underway to reduce court-centered judgments. At the lower levels, disputants were diverted to various forms of ADR and blocked from bringing appeals to the intermediate courts. And because England hoped to continue to attract a share of the market of commercial disputes, entities or individuals with resources have the ability to shop procedural offerings and to shield both process and outcome from public scrutiny.

Mediation under the Direction of the European Union

In addition to the procedural opportunities offered by the PCA and ITLOS, another example of the transnational embrace of ADR, intersecting with express admiration for rights and access to justice, comes from the European Commission (EC). In [illegible], the EC issued a directive giving Member States three years to develop frameworks for mediation in "cross-border disputes"[illegible] involving entities or individuals from different EU countries. In [illegible], the European Commission appointed a new Commissioner for Justice, Fundamental Rights, and Citizenship, to put a higher profile on those very issues.[illegible] As the new Commissioner explained in a press release, "EU citizens should not face barriers to justice when they leave their home countries."[illegible] Thus, in many jurisdictions, a double discourse exists, simultaneously celebrating courts and discouraging claimants from seeking their services in various kinds of disptues.

The attempt to keep both commitments can be found in the Mediation Directive's findings that preface the directive, describing it as an effort to develop a "balanced relationship between mediation and judicial proceedings."[illegible] But the Directive appeared weighted toward mediation, explained as "a cost-effective and quick extrajudicial resolution of disputes in civil and commercial matters through processes

tailored to the needs of the parties.[illegible] Further, the Directive argued mediation's greater efficacy: agreements were [illegible]more likely to be complied with voluntarily and more likely to preserve an amicable and sustainable relationship between the parties.[illegible] The EC called on its Member States to create methods to encourage disputants to use mediation. National courts were to [illegible]draw the parties' attention to the possibility of mediation whenever . . . appropriate.[illegible] While the use of mediation was nominally voluntary, a range of provisions imposed pressures to do so. Moreover, the Directive recognized the authority of national courts to make mediation [illegible]compulsory or subject to incentives or sanctions provided that such legislation does not prevent parties from exercising their rights of access to the judicial system.[illegible] In addition, Member States could set forth time frames for parties to mediate, and when judges were themselves not [illegible]responsible[illegible] for the judicial proceeding, they could directly conduct mediations.[illegible] Further, parties' agreements to mediate were to be enforced,[illegible] with the results of mediations to be confidential, in part to protect subsequent opportunities to arbitrate or litigate.[illegible]

The Directive had limits in that it applied only to cross-border disputes in which parties consented to mediation in civil and commercial matters. In the United States, courts have enforced contracts mandating alternative dispute resolution even if the parties do not have equal bargaining powers. Under the European Directive, mediation was not required where [illegible]parties are not free to decide themselves under the relevant applicable law[illegible] and thus generally did not apply to disputes in family or employment law.[illegible] The Directive also noted that European law already regulated [illegible]out-of-court bodies[illegible] in consumer protection, which were subject to [illegible]minimum quality criteria[illegible] In addition, the Mediation Directive called for the development of a database of acceptable [illegible]out-of-court[illegible] schemes.[illegible] More generally, the EC called for another database by requiring reports on implementation from each country by [illegible].[illegible] Some proponents also hoped that initial efforts to impose a requirement of mediation in cross-border disputes would provide a model for Member States to create domestic legislation to require the same in national courts.[illegible]

In sum, Europe has pressed national systems to shift procedural formats toward ADR. Initial responses were mixed, with some commentators enthusiastic, others skeptical,[illegible] and yet others notably critical.[illegible] One aspect of that concern was the tension between the push toward mediation and the precepts of the European Convention on Human Rights, which under Article [illegible] guarantees fair and public hearings.[illegible] Yet, as can be seen by commitments on both sides of the Atlantic, [illegible]the development and encouragement of the use of ADR, together with the expansion of techniques for promoting settlements, reflect a view that disputes should be resolved whenever possible outside the courts and by methods other than actual litigation.[illegible] Furthermore, the managerial model for judges, embraced in the [illegible]s in the United States and in the [illegible]s in England, came to be seen as useful in other countries and even in international criminal procedures.[illegible]

Transnational Procedural Shifts

Before we turn to the adoption of ad hoc procedural mechanisms for [illegible]/[illegible] detainees and explore the relationship between ADR in ordinary litigation and the processes crafted for alleged terrorists, a summary is in order of the trends identified thus far. First, dissatisfaction with civil processes has become commonplace, resulting in a language of [illegible]crisis[illegible] that outlasts temporal dimensions implied by that term. Second, much of the discussion of procedural reform borrows from the language of law and economics to focus on incentives and efficiencies rather than relying on a political theory of the role of courts in democratic orders. Even as [illegible]rights[illegible] of access are formally iterated in national and transnational documents, opportunities for using public courts are diminishing. While Bentham set forth the utilities of publicity and sought to broaden access to courts through subsidies, contemporary procedural modeling puts little value on either.

Third, the interdependence of civil processes and the legal and juridical professions (Bentham's [illegible]Judge [illegible] Co[illegible]) continues. The turn toward [illegible]case management[illegible] gives judges some degree of authority over lawyers as rules of civil process become prescriptions to lawyers for providing client services and responding to court demands. As judges are given authority to superintend lawyers, they also gain discretion, largely immune from oversight by either the public or appellate courts. Moreover, the practice of judging has itself shifted through the development of administrative infrastructures that focus on dispositions and shield individual judges from visible responsibility for outcomes.

Fourth, providers of process and forms of process have proliferated in both public and private settings. As the volume of claimants rose during the twentieth century, so did the tension between highly individualized inquiries undertaken by relatively visible and costly government actors and the need to produce millions of judgments about disputed claims of obligation and right. One response was to vest decisionmaking authority in government institutions such as agencies. These alternative courts have augmented capacity but have not provided a great deal of confidence in the quality of processes and outcomes, nor have they regularly built in public procedures or accountings.

Another technique is the turn to aggregation of cases through class-action-like devices. Large-scale litigation has demonstrated utilities in redressing adversarial imbalances but brings a host of challenges. The point of bundling claims is often to press opponents to capitulate through settlements to avoid the risk of trials. Yet aggregation is also problematic, as it raises questions about the requisite degree of relatedness of claims, the quality of representation, the loyalty of lawyer-agents often holding economic stakes

larger than do individual claimants, the interests of defendants in precluding subsequent claimants, and the capacity of judges to monitor risks to absentees.

Fifth, the piling up of procedural options, from agencies to private providers and from individual to aggregate processing, demonstrates for some that judicially-based civil processes are anachronistic, predicated on an obsolete nineteenth-century individualistic model. As societies organized through bureaucracies and lawyers moved toward aggregate practices, judges were still peculiarly functioning as solo practitioners, inefficiently engaging in labor-intensive craft-like work. From this vantage point, higher-court judges are appropriately becoming administrators, overseers, and employers selecting and dispatching their juniors and rationing court attention. First-tier judges are, in turn, seen as properly engaged in multi-tasking, molding processes and inter-personal techniques to fit needs. The tradeoffs, however, are a loss of individualization, and of judges taking personal responsibility for judgments, and hence accountability for the rulings there entailed.

Sixth, assessing the effects of the various new procedures is complicated both by the variety of disputes and by a lack of clarity about what metrics to use. Some critics rest their concerns on usage rates (too much or too little), others on the distribution of usage or of costs (variously measured and charged), and yet others on the forms of remediation possible and achieved. Proponents laud the new initiatives and cite declining percentages of trials and formal appellate rulings as measures of success, while critics bemoan them. In contrast, other empirical work argues the failure of both the earlier and the new models of process as unresponsive and therefore irrelevant to many would-be claimants unable to afford to go to court or to use the alternatives.

A final note is a reminder that a focus on proceduralism ought not to imply an autonomy that does not exist. Reforms of procedure are not only about procedure but are also related to the goals of substantive law, the creation of professionalized judiciaries, the institutionalization of courts as corporate actors within governments, the development of agendas by academic and practicing lawyers, and the aims of court users, all of which are also founded in country-specific and in transnational social movements.

The Continuum on Which Guantanamo Bay Sits

During the first years of the twenty-first century, another site Guantanamo Bay became important to the discussion about the relationship between adjudication and privatization. For most of the twentieth century, Guantanamo was simply the naval base of the United States in Cuba. In the 1980s, the base gained another identity as the place of detention for thousands of Haitian refugees whom the United States intercepted at sea and sought to exclude from the country.

After the attacks on the United States on September 11, 2001, Guantanamo gained worldwide infamy as a prison for individuals detained there by the United States. Initially, more than 600 persons were housed at Guantanamo; by the end of 2004, fewer than 500 remained. In the intervening years, detainees at Guantanamo alleged that they had been tortured (there or elsewhere). Corroboration emerged when information became available about memoranda subsequently known as the Torture Memos that had been prepared in 2002 by lawyers in the United States Department of Justice.

In a formal legal opinion, lawyers advised that, under federal law, for an act to constitute torture it required the infliction of pain that is difficult to endure . . . equivalent in intensity to the pain accompanying serious physical injury, such as organ failure, impairment of bodily function, or even death. Further, for purely mental pain or suffering to amount to torture . . . it must result in significant psychological harm of significant duration . . . lasting for months or even years. As details of conditions of detention were made public, some commentators suggested that surveillance activities in facilities at Guantanamo echoed aspects of Jeremy Bentham's Panopticon.

For constitutional lawyers, Guantanamo is also shorthand for a series of cases about the legality of such detention. In an Executive Order issued in November of 2001, the President (then George W. Bush) decreed that the status of Guantanamo detainees was to be determined by ad hoc processes organized under the Department of Defense. A few months later, the Department of Defense issued Military Commission Order No. 1 describing the Secretary of Defense (or a designee) as the Appointing Authority with the power to create special commissions to try detainees. But beginning in 2004, the United States Supreme Court ruled that the federal courts had jurisdiction to consider the legality of detention at Guantanamo and that the constitutional guarantee of due process constrained the government's treatment of at least the detainees who were American citizens. The executive branch then set up various proceedings for those incarcerated at Guantanamo.

The Appointing Authority's Adjudicatory Discretion

The procedures created bore a resemblance to administrative adjudication in the United States. Under regulations issued by the Department of Defense, an entity termed a Combatant Status Review Tribunal (CSRT) was charged with determining whether a detainee was an enemy combatant (EC), a category created by United States law and variously defined as including those who have been part of or supporting the Taliban or al Qaeda forces, or associated forces that are engaged in hostilities against the United States or its coalition partners.

CSRT classification proceedings could (at the discretion of the Department of Defense) be followed by administrative reviews conducted by another new entity, an "Administrative Review Board" (ARB) empowered to make a yearly determination about "whether each detainee should be released, transferred or further detained." As one press briefing explained, the question was whether a detainee remained "a threat to the United States or still "held" intelligence value." Insisting that it had no obligation to provide process, the government outlined its decisionmaking procedures. Before a hearing, the government was to solicit information about an individual detainee from the Department of Defense, other government agencies, and "through the government" from that person's family and national government. A military officer could provide assistance to the detainee at a hearing, where the detainee was permitted to appear in person before a panel of three military officers and "provide information to support his release."

The military officers were the first-tier decisionmakers. They were to be "qualified for the duty by reason of education, training, experience, length of service, temperament, and objectivity" and at least one was to be "experienced in the field of intelligence." Opportunities existed after the hearing for "additional fact-gathering" including obtaining "behavior assessments of the combatant." Thereafter, and based on its "review of all reasonably available information," an ARB was to make written recommendations with reasons and specification of the evidence relied upon. The final decision remained with a "Designated Civilian Officer" (DCO), identified as the Deputy Secretary of Defense.

In addition to the CRST–ARB–DCO procedure, a subset of detainees, "whose actions rise to the level of suspected war crimes," could also be subjected to another procedure, termed a Military Commission, overseen by three to seven individuals, each of whom had to be "a commissioned officer of the United States armed forces . . . including . . . reserve personnel." Those Commissions were given the power to try any individual "subject to the President's Military Order" and "alleged to have committed an offense" involving "violations of the laws of war" and "all other offenses triable by military commission." The regulations promulgated by the Department of Defense gave the Executive the authority to impose sentences including "death, imprisonment for life or for any lesser term" or another "condition of punishment as the Commission shall determine to be proper."

Court-Like, Court-Lite: "Honor Bound to Defend Freedom"

Thus, rather than using the regular federal court system (in which other terrorists had been tried in the s) or using the regular military courts that have existed for decades and have tried individuals in the United States Armed Forces, the Executive created an ad hoc, sui generis set of procedures for anyone whom the government decided to send through them. The CSRTs, ARBs, and Military Commissions made Guantanamo appear somewhat court-like. Echoing the town halls of Europe, the facility was a multi-function site, with some spaces for detention and others for hearings. The United States government produced a spectacle akin to those of yore; individuals branded terrorists might be glimpsed through the barbed wire of the outer fence at detention facilities (fig.) on the island. The government thus represented itself as having the power to provide safety to those on the mainland.

To legitimate its detention, the government also offered website images of its deliberation room, complete with its courtroom-like setup, as replicated in figure . In , the military proposed building its own courts, estimated to cost between and million, on the base. The plan, circulated through a "presolicitation notice," called for "up to two new courthouses" and space for –, administrative personnel, as well as places for lawyers, journalists, and others to live and eat. As the press detailed architectural renditions of layouts, objectors registered concerns. One commentator noted that, given the number of detainees, the construction price could have been calculated at . million per detainee.

In February of , Secretary of Defense Robert Gates reported in a Senate hearing that the proposal had been withdrawn, as he acknowledged that his Department would be "handed our hat" if it requested such funds from Congress. Instead, the Department sought . million to upgrade existing facilities. Yet another courthouse version, a new portable complex dubbed "Camp Justice" was then envisioned to provide for a scaled-down group of court officials, lawyers, security personnel, journalists, and observers. The presidential election and conflicts about whether to close the facility interrupted discussions of building, and the new President, Barack Obama, announced plans to close the detention facility. Members of Congress objected, and, as of the end of , Guantanamo continued to house detainees and to serve as a site for decisions about their confinement.

The room depicted in figure , to be used for procedures related to military commission hearings, is inside the Joint Task Force (JTF) building (fig.), which the Department of Defense explained was to house the "first U.S. military commissions in more than years." The photograph of the flags above the "Camp Justice" sign (fig. , left panel) reiterates the effort to invoke the rule of law, as does the logo on that sign (figure , right panel). The Camp Justice logo is a variation on the official seal of the Department of Defense, which is, in turn, a variation on the Seal of the United States. In the Camp Justice version, the Defense Department's eagle with a shield of red, white, and blue, three arrows, and thirteen

stars is encircled at the top by the Department's name. Superimposed are scales and a pentagon at the logo's center, and the words ⊠Office of Military Commissions⊠ at the bottom. Under the eagle and scales is the slogan ⊠Freedom through Justice.⊠

Text can also be found above the entry to the JTF building, shown in figure ⊠⊠⊠.⊠⊠ That inscription reads: ⊠Honor Bound to Defend Freedom⊠; that is also a call (⊠Honor Bound⊠) and response (⊠To Defend Freedom⊠) exchanged among soldiers as they walk past each other on the base.⊠⊠ (The phrase has also been used as the name of a British play protesting ⊠U.S. abuses of human rights.⊠⊠⊠) The maxims offered at Guant⊠namo Bay stand in contrast to words found inscribed in regular courts. In ⊠⊠⊠⊠, the entrance to the United States Supreme Court was marked by the words ⊠Equal Justice Under Law⊠ (fig. ⊠⊠⊠⊠⊠). The injunction ⊠Hear the Other Side⊠ can be found in Renaissance town halls, such as the one in Gouda, the Netherlands (fig. ⊠⊠/⊠⊠⊠), and in the occasional courthouse in the United States, such as the Illinois Supreme Court (fig. ⊠⊠/⊠⊠⊠). The Missouri Supreme Court features a Latin sentence translated as ⊠Where there is a right, there is a remedy⊠ (Ubi jus, ibi remedium).⊠⊠ Another Latin injunction, ⊠Fiat justitia, ruat coelum⊠ (Let justice be done, though the heavens may fall), is also a fixture in courts, most famously pronounced in the English judgment of ⊠⊠⊠⊠ in *Somerset⊠ Case* finding slavery illegal.⊠⊠ While depicting scales, none of the texts chosen by the Department of Defense refer to obligations of equality, and the repeated use of the term ⊠freedom⊠ is not likely meant to be read as referencing the rights of detainees to be freed if wrongly held.

The distance between the work of those in a building marked by the words ⊠Honor Bound to Defend Freedom⊠ and the requirements imposed on those obliged to provide equal justice and hear both sides is echoed by the Guant⊠namo procedures, which lack the central normative obligations that define courts. As Bruce Ackerman has commented, the oath taken by officials at Guant⊠namo tribunals did not affirm commitments specifically to the United States Constitution.⊠⊠ Nor were these officials asked to repeat

what federal judges must say when they take office, that they ⊠will administer justice without respect to persons, and do equal right to the poor and to the rich, and will faithfully and impartially discharge and perform all the duties incumbent . . . under the Constitution and laws of the United States.⊠⊠⊠ The military decisionmakers sat inside the chain of command, in no way independent from the Appointing Authority, the Secretary of Defense.⊠⊠Guant⊠-namo's processes harked back to Renaissance Europe, where judges' charters depended on the ruling powers⊠ perhaps making paintings of the story of Cambyses (figs. ⊠/⊠⊠ and ⊠/⊠⊠) object lessons for both litigants and judges. Indeed, a few military personnel who served as prosecutors or sat on CSRTs and who disagreed with decisions of the Department of Defense in charging or detaining individuals, reported publicly (and sometimes in court filings) about efforts to undermine their independence. Some lost their jobs as a consequence.⊠⊠

But in the town halls of many city-states, leaders had been insistent on the public display of authority. In contrast,

the Department of Defense tried to assert its power to hold, classify, and try alleged terrorists at Guantánamo Bay far from the public view. The government seemed not to think it needed to generate legitimacy through procedural formality. Only those with permission from the government were permitted to enter the base, which in turn required travel by either air or sea. Detainees' lawyers lodged complaints about the difficulties of reaching their clients, communicating with them, and working collaboratively, as did the Red Cross. Moreover, at times, the government took the position that it was not obliged to provide information about detainees to federal judges sitting in courts inside the United States.

As for the public, attendance depended on the "discretion of the Appointing Authority." A Military Commission Order stated that the proceedings "should be open to the maximum extent practicable" but did not recognize a "right" to attend, a presumption of openness, or a requirement that closures be narrowly tailored as needed in particular cases. Instead, the Presiding Officer of the Military Commission was authorized to "close proceedings" to protect classified or "classifiable" information, for the safety of personnel, and based on "other national security interests." The Presiding Officer could make that decision on his or her "own initiative" without notification to prosecution, defense, or others. Further, the Presiding Officer had the power to exclude the accused or "any other person" other than the military defense counsel.

As figure suggests, closed-circuit television had been proposed to permit members of the media to watch the Military Commissions scheduled to have begun in . But, as the press reported, while inviting "journalists and human rights observers to the terrorism trials," the Department of Defense "imposed a censorship policy" "that limited" the openness of the first military commissions since World War II. Reporters were to sign a five-page set of "ground rules," agreeing not to "publish or discuss anything mentioned in open court that the presiding officer decides should have been kept secret." The military reserved "the right to seize notebooks from human rights observers." After objections, the compromise was to have the reporters cross out information in their notebooks.

As for observing the classification proceedings through CSRTs and ARBs, the military initially deemed its processes "administrative," as it asserted the right to keep those kinds of processes closed. Even when permitting observers, the Defense Department limited what could be reported, and issued "Media Ground Rules for Coverage of Administrative Review Boards." In , the Associated Press filed a lawsuit under the Freedom of Information Act (FOIA) to obtain transcripts of those proceedings. From published decisions by federal judges addressing that

Figure Closed-circuit television system, Joint Task Force Guantánamo hearing room.

claim, one can glean that someone termed a "recorder person" (rather than a "court reporter") made notes at CSRTs and ARBs and that some members of the press in attendance were able to hear testimony proffered by witnesses. But tape recording was prohibited, and the Defense Department tried to block disclosure of transcripts. The government argued that the need to protect the privacy of detainees and their families made the materials exempt under FOIA. A federal district judge disagreed, holding that the government had not met its burden of showing that the detainees had any reasonable expectation of privacy. As the court noted, in dozens of court filings, detainees had provided information about their home life in efforts to establish that they were not appropriately detained.

Between [illegible] and [illegible], information became available that explained the government's interest in secrecy. The Torture Memos, the mistreatment of detainees at Abu Ghraib prison in Iraq, and congressional inquiries revealed a horrific pattern of abuse. Further, a few individuals who had participated in proceedings at Guantánamo reported routine failures of process. One example, submitted to the courts, came from Lieutenant Colonel Stephen Abraham, a member of the reserves who had been commissioned in [illegible] as an officer in the Intelligence Corps. After [illegible], he was assigned to work in the Office for the Administrative Review of the Detention of Enemy Combatants, and he sat on one CSRT panel.

In June of [illegible], Abraham submitted an affidavit in court about the poverty of the information provided as a predicate for detention ("often outdated, often 'generic,' rarely specifically relating to the individual subjects of the CSRTs or to the circumstances related to those individuals' status"), the inability to verify whether exculpatory information existed, and the pressures to find a person an "enemy combatant" ("What were purported to be specific statements of fact lacked even the most fundamental earmarks of objectively credible evidence"). In addition, former military prosecutors (such as Colonel Morris Davis and Lieutenant Colonel Darrel Vandeveld) indicated their disquietude with the blanket closures and the degree of control over prosecution exerted by the Pentagon. Thus, disclosures of abuse of persons and process came before the public.

As various domestic and foreign commentators have argued, the procedures at Guantánamo were unfair. They lacked the four signature features of courts: the evidentiary procedures did not ensure that both sides were heard; the judges were not independent; the public had no right of audience; and detainees were not afforded rights equal to those of other criminal or civil litigants. In contrast, these attributes can be found in both international criminal courts dealing with allegations of crimes against humanity and in the United States military court system. As described in Chapter [illegible], all of the international criminal courts build in public access. The International Criminal Tribunal for the former Territories of Yugoslavia (ICTY), for example, permitted persons to watch behind huge glass walls that secure the courtroom; the court transmits its proceedings to the Balkans, where they are broadcast in English, French, and Bosnian/Serbian/Croatian. Further, the accused had a right of access to the court, personally, to register concerns directly and in public to the international judges. Like Jeremy Bentham, who described reasons to close certain proceedings, such as to protect state secrets, the ICTY also created ways to shelter information. If an individual witness was at risk or security required closure, the blinds closed to preclude the live audience from seeing what transpired, the broadcast screen scrambled, and voices were recalibrated to make them unidentifiable.

As for regular domestic military courts in the United States, the procedure for trials (called "courts-martial") of members of the armed forces are codified in federal statutes and regulations. The [illegible] Manual for Courts Martial required that "courts-martial shall be open to the public," including "members of both the military and civilian communities." As those regulations specify, the military judge was not to violate the "accused's right to a public trial" and could authorize closure only by a specific showing of necessity: a "substantial probability that an overriding interest will be prejudiced" and after "reasonable alternatives to closure were considered and found inadequate." Exclusions required "findings on the record establishing a reason" that they were both "necessary" and "as narrowly tailored as possible." Blanket closures were not permissible; rather case-specific findings had to be made on the record. (In practice, as in other administrative adjudication systems, observers interested in attending may encounter challenges in learning about where hearings are held.)

The procedures at Guantánamo thus departed from precedents in both international and domestic law. Recall that pre-democratic powers put on spectacles of authority in an acknowledgment that the sheer imposition of power was insufficient to obtain public acceptance. In contrast, the Appointing Authority initially took no steps to make visible its procedures to legitimate its power. The administration, aided by the Congress, also tried to block detainees' access to life-tenured judges. (As was subsequently revealed, its secrecy was also animated by efforts to hide the treatment of detainees.) Repeatedly, however, the United States Supreme Court concluded that individuals held at the base could bring habeas corpus actions challenging their confinement. Yet those already released and seeking to hold individuals liable for injuries had not, as of [illegible], been able to obtain redress in court for past injuries.

Foucault's Footsteps

One might well think of Guantánamo as isolated in both the literal and legal senses. But unfortunately, some of its

procedures are not as foreign to contemporary decision-making as one might wish. Our examples from America's courts and agencies, England's procedural reforms, and European directives to mediate cross-border disputes aim to substantiate the thesis that Guantánamo is radically aberrational, and yet must also be understood to be continuous with developments in much more ordinary and much less high-profile contexts where the exercise of both public and private power is also becoming less visible. Outsourcing, devolution, subcontracting, and facilitating non-public resolutions are increasingly the norm, as courts and legislatures send work to agencies and to private dispute resolution centers. Recall that, when precluding access to the CSRTs and the ARBs, the Department of Defense denoted its processes "administrative," implicitly referencing regulations that presumptively close hearings for veterans and social welfare recipients and operating against the backdrop of confidentiality provisions proliferating in ADR.

Yet an important distinction exists between the procedures at Guantánamo and various forms of ADR in other settings. The closure of ordinary administrative proceedings and the privacy of ADR are argued as benefiting the participants: for example, by shielding from public scrutiny needy individuals seeking the state's financial support. More generally (whether empirically supported or not), the movement toward ADR is justified as offering more than adjudication can: more access for claimants, less cost, and more congenial procedures. In contrast, the government's move to appoint itself the judge and create its own CSRT–ARB–Military Commission activities was claimed to benefit the government and the public and to be safer because of unfettered government control of detainees. No arguments were offered that the process improved the opportunities of detainees to be treated fairly and with respect.

But the lack of publicity in all of these settings leaves outsiders dependent for information on participants. In terms of Guantánamo, one could read government materials extolling Military Commissions as providing "a fair "and" full trial, while protecting national security and the safety of all "those" involved, including "the" accused." Alternatively one can focus on claims made by objectors: such as the Center for Constitutional Rights, the American Civil Liberties Union, some members of the press, the United Nations Special Rapporteur for the Independence of Judges and Lawyers, and the Rapporteur on Torture: condemning the processes as profoundly unfair and illegal. But closure and secrecy dispossessed citizens of their capacity to evaluate these claims directly.

Courts are constituted by practices. The need for independent judges to hear both sides of disputes in public and for judges to be independent does not follow only from a theory of the justice of those attributes. Rather, there remains the need to struggle with the disquieting question at the heart of judicial power with which we began this book: when can violence be used in the name of law? When that issue is engaged in open court processes, we: those outside the immediate dispute: have a role in understanding, legitimating, delegitimating, and interpreting what law means, what justice entails, what the predicates of its practices are, and what violence is acceptable or intolerable.

Political theorists such as Seyla Benhabib speak of "democratic iterations" as a way to capture a dense set of interactions that can, over time, function as a mechanism to limit the scope of rulers' powers and change normative precepts. In Chapter 2, we proffered the example of the public execution that, along with public pillory, produced what Michel Foucault called a "gloomy festival." Over time, as this "great spectacle of punishment ran the risk of being rejected by the very people to whom it was addressed," the state developed a new form of private punishment. The prison asserted its coercive authority while removing it from public view. Guantánamo provides the vivid contemporary parallel. The fear of terror was repeatedly invoked to justify closed procedures on the naval base, as well as to bar detainees from bringing claims to mainland federal courts. While some judges insisted that detainees had a right to be heard in court, several rebuffed efforts to obtain information and redress for mistreatment and torture. As one explained, the "need for secrecy can hardly be doubted."

The procedures crafted by the Department of Defense at Guantánamo are nested in the developing traditions of various other kinds of closed procedures. Through administrative hearings and the devolution of the power of judgment to private processes, we are watching a larger phenomenon, the imposition of discipline (the power and the law of the state) without state acknowledgment of a need to show its power in order to justify its exercise. The seventeenth- and eighteenth-century French legal regime that framed Foucault's book *Discipline and Punish: The Birth of the Prison,* entailed a more secretive trial procedure than that of the twentieth century. As we mapped in Chapter 2, the establishment of "rights" of access to court is a modern phenomenon, representing a struggle to gain control over both government and private power.

Today, courthouses are so familiar that one might assume that they always existed, just as the rights that they have come to embody feel deeply entrenched. Within these many purpose-built structures sits the "pearl of the courtroom." As building manuals dictate, the courtroom is the one designated space in which judges, otherwise "completely separated from the public," can interact with disputants before the public. Yet even though the exterior glass facades are designed to convey openness, not much remains to be seen. Instead, one finds "too little publicity, with a consequent increase of secrecy, in areas hitherto considered public." A courthouse may remain "public" but only to denote, as Habermas put it, that a structure "simply houses" state institutions."

In Chapter 2, we pointed to the parallel functions of post offices and courts. Both institutions were once seen as

providing central public services that were used, metaphorically and literally, to build national identities and norms. Both institutions enabled the free exchange of information without government censorship. The impact of the postal service has been impressive, as it secured the right of every individual and organization in America to send almost anything from anywhere to anyplace else, for a relative pittance and played a major role in knitting together the country's economic and social fabric.

The longevity of public post offices in their incarnation as segregated special buildings and as recipients of government subsidies supporting the mailing of newspapers, magazines, packages, and letters has been put into doubt by claims that provide yet another parallel to courts. The basic criticisms of the two institutions are the same: inefficiency, the existence of better private alternatives, and technological obsolescence. The proposed remedy for post offices is to end the public subsidies and recycle the buildings. Cutbacks have already taken place as public funding has been reduced, competitive services expanded, and many local post offices closed. Of course, post offices are one of many institutions that, during the course of centuries, came under the public charge and are in the process of being deaccessioned. Other government services, including schools, the military, and prisons, have also been outsourced through what Jody Freeman and Martha Minow have called Government by Contract.

Courts may be next in line. One intriguing data point comes from a committee of the federal judiciary charged with implementation of that system's *Long Range Plan* (discussed in Chapter). In , worried about a deluge of cases, researchers in the federal judiciary had forecast that, by , more than , cases would be filed in the federal district courts (holding bankruptcy filings aside). But instead, the number of filings (civil and criminal) for several of the years between and averaged about , to , annually, which was about where filings had been in the decade before. Thus one can map a move away from courts on various dimensions. Crossing the Atlantic Ocean to England, Simon Roberts's study of one English civil court in a metropolitan commercial center provides another image. The courts buildings with now often empty courtrooms take on an increasingly symbolic character, just as judges now appear as exemplary, ceremonial figures, legitimating other peoples' decision-making.

Of course, the shift to alternative procedures might not necessarily be problematic. One could celebrate the multiplication of diverse governance regimes that mix public and private functions in what Gunther Teubner has described as a hybridization and Martha Minow as a partnership, while also acknowledging that the intermingling of public and private is no novelty. Historic examples include the authority of private persons, as well as public officials, to initiate prosecutions in courts. Moreover, the building of roads, the detention of individuals, and schooling were all private enterprises that became public as the realm of government expanded and as various services came to be understood as state-run or state-regulated because of the public interest in such functions.

Yet the violence entailed in conflict resolution cannot be readily assimilated into a model that envisions the ebb and flow of functions between the public and private domains. To borrow again from Martha Minow, outsourcing power (there referring to the military) raises troubling questions. Indeed, much of the ideology of ADR suggests that conflict is to be avoided rather than that conflict is not only intrinsic to social ordering but important to its well-being. Conflicts are part of how polities legitimate their norms. Rather than seek to avoid or suppress the liveliness (per Stuart Hampshire) of conflicts, regimes need to both engage the underlying disagreements and encourage open processes that enable disputants to face their disagreements and explore their differences. As currently formatted, however, ADR procedures cut off the communicative possibilities provided through courts to record, as well as to struggle with, conflicts of meaning, rights, and facts. The new procedures also undermine the discipline to be imposed on decisionmakers. Various private procedures prize caucusing meeting with one side, then the other, *ex parte* (to borrow the Latin) rather than enabling each side, as well as the judge, to hear the other side.

The set of pictures and the rights elaborated in this volume make plain that the deployment of courts in the effort to proclaim and to cabin power has both a long history and a recent evolution. Views of the thousands of impressive courthouses around the world and texts guaranteeing open and public courts in national and international conventions suggest a stability rendering the buildings and the precepts invulnerable. Representing an amalgam of law and culture, tradition and ritual, courts could be understood to be all the more entrenched. One could put the rising number of claimants, the development of new information technologies, and the popularity of media portrayals of trials (both real and fictional) into a picture in which courts have an unprecedented scope of authority whose processes and outputs are disseminated through diverse outlets.

That description is both accurate and incomplete. This chapter has offered a different perspective and a competing narrative. In the United States in the s, consumers of goods and services and employees were not required to sign form contracts that imposed bars to bringing claims to courts. In that era, those who did file federal lawsuits were not greeted by judges insistent that they explore alternatives to adjudication. The new approaches leave vulnerable not only claimants alleging violations of rights but also judges who come to resemble other governmental workers engaged in an array of tasks. As judges themselves press to alter juridical modes and thus come to resemble other offi-

cials, it is not clear how they will or why they should sustain special claims on resources or rights of independence from political oversight. More generally, the United States, England, and Europe are exemplary of jurisdictions confident in the stability of their judiciaries, and therefore reformers believe it unlikely that changes would undermine the rule of law and confidence in and respect for judges. But commentators from jurisdictions with newer judiciaries and more recently formed democracies have raised the caution that the kind of judicial intervention promoted on both sides of the northern Atlantic are inappropriate for fragile and overworked systems. On this account, the publicity accorded judicial processes protects judges as much as litigants.

In sum, the mapping of the declining public dimensions of conflict resolution is aimed at undermining the assumption that public access to and transparent proceedings within courts are inevitably enduring features *of* courts. Procedures, laws, and norms have great plasticity. Practices that seemed unimaginable only decades ago (from the mundane examples of the relatively new reliance on court-based settlement programs to the stunning assertions by the United States government of the legitimacy of according few or no procedural rights to individuals at Guantanamo) are now part of the collective landscape.

Yet, as we discussed earlier, privatization of conflict is not inevitable, nor are procedures unchangeable, whether based in courts or their alternatives. Just as the ADR movement in courts has made it implausible, circa 1970, to equate court-based litigation with inherently public processes, it would be erroneous to assume that outsourced procedures must be closed off from public purview. The task is to find methods to protect "collective, diffuse and fragmented interests" at a time when new technologies enable identification of shared problems and recording of information in ways that are radically different from those that were available in earlier eras. In the "intersection of administrative, economic, and social practices," procedures need to be crafted to operationalize the values associated with democracy: public participation, accountability, transparency, and equality. Further, processes need to protect judges who are at risk not only from rulers' domination but from disinterest and the lack of financial support.

Thus, one ought not assume that secrecy is an essential characteristic of the alternatives: agencies, ADR, private providers: to courts. As the variety of rules and customs surrounding ADR suggests, even as judges and other dispute resolution providers move away from trials and focus on pre-trial management and dispute resolution in chambers and conference rooms, it is possible either to build in a place for the public ("sunshine," to borrow the term that legislators have used) or to wall off proceedings from the public. Whatever the places constituted as authoritative, opportunities exist to engender or to preclude communal exchanges.

In the nineteenth century, Jeremy Bentham explained that "publicity" could occur through "natural" instruments: "without any act done by any person (at least by any person in authority) with the intention and for the purpose of producing or contributing to the production of this effect." Alternatively, decisionmaking in public had to rely on what Bentham termed "factitious" opportunities, which were those "brought into existence or put in action by the hand of power." The creation of buildings: of courtrooms as sites of adjudication: required choosing whether to provide for the public or not. As Bentham described:

> Considered in itself, a room allotted to the reception of the evidence in question . . . is an instrument rather of privacy than of publicity; since, if performed in the open air . . . , the number of persons capable of taking cognizance of it would bear no fixed limits . . . .

Bentham's imagery underscores that the question of public or private proceedings is a political choice. To create a public space as an active site requires normative commitments predicated on a political theory about the roles that judges, disputants, and the audience play in juridical proceedings. This excursion into a melange of cultural history, custom, practice, data, budgets, and rules is aimed at provoking efforts to generate such theories. The display of justice is on the wane in some of the venues in which it was once vibrant, and its relocation elsewhere has not been accompanied by either rites or rights of audience. As the processes of judgment become increasingly rare, they return to the realm of the spectacle. The audience becomes voyeuristic rather than participatory, and power flows back to the spectacle's producers.

Transitional and Transnational Idioms

We began this volume by detailing the myriad adjudicative activities, over many centuries and across borders, that prompted the creation of discrete government buildings denominated courthouses. Governments deployed architecture and art to attest to their economic wherewithal in efforts to legitimate their authority. Thereafter, we mapped both the ideological predicates for the expanding aegis of courts as well as for the failing faith in adjudicatory procedure. We have shown that, while an ancient form, adjudication is both "new" in important respects and also at risk. The four pillars that have come to mark the political theory of adjudication: individual entitlements for all "persons" to justice, fair hearings, the importance of insulating judges from reprisals, and obligations to provide public access" are deteriorating. Given the disaggregation of adjudication, detailed in Chapter [illegible], we need to address questions about the future of courthouses as purpose-built, identifiable, and discrete structures. Will this category remain durable? If so, what shapes and imagery might be proffered?

The claim here is not that courts are going out of business. High-visibility constitutional and commercial conflicts continue to command political attention. At the lower levels, the functions of regulating economic transactions and imposing criminal sanctions produce a steady stream of dispositions. But, as we argued in Chapter [illegible], such decisionmaking increasingly takes place outside the public purview through the devolution to administrative agencies and tribunals, the outsourcing to private providers, and the reconfiguration toward settlement within courts. Many courthouses have become places through which tens of thousands of criminal defendants enter guilty pleas en route to detention, and into which a very few civil litigants make their way to appearances before judges and the public.

Yet even as sovereignties organize other forms of dispute resolution in diverse and less public places, this cross-temporal, cross-border analysis demonstrates that courthouses have become the modern iteration of political interest in creating symbolic stages for rituals. Support comes from political and economic interests that, as the World Bank puts it, all rely on the "justice sector." Within the architecture of justice, the functions and forms of buildings have diversified: offering varying degrees of self-announced importance. Aspects of this variety have historical roots. As elaborated by Claire Graham in her detailed account of English courthouses across centuries, "*dis*"*nified*" presentations of law were staged in imposing buildings that helped to "excite and preserve the reverence of the population" and the "*efficient*" parts (through which the state "works and rules") took place elsewhere."

By the late twentieth century, dignified and efficient functions were allocated to different buildings. A [illegible] review of court architecture in rural areas of England concluded that, while "Crown courthouses celebrated" the power of the State," county courthouses had no "architectural identity" and local magistrate courthouses were undistinguished buildings "designed to meet the requirements of staff" but not of consumers." Moreover, as Simon Roberts has explained, by [illegible], some of the "great Victorian courts erected during the second half of the [illegible]th century" were lending their "symbolic character" embodied in their substantial physical presence to "legitimize the decision-making of the parties themselves," pressed to mediate their disputes under the aegis of the court."

In the United States, the grand tradition of courthouse-building extended well into the twentieth century as county courthouses in states served as the "indisputable focus" of local government from the country's inception." But by the end of the twentieth century, that function was waning, reflected in the "fading" of the label "courthouse" subsumed by terms such as "Law Enforcement Center" that referred to a cluster of buildings mixing administration, adjudication, and detention." Furthermore, on both sides of the Atlantic, courthouse interiors, especially in elaborate courthouses, became increasingly segregated. As discussed in the context of the United States (Chapters [illegible]–[illegible]) and in other countries (Chapter [illegible]), the internal geography of the

courthouse came to delineate hierarchical relations of authority as professional judges and lawyers worked in spaces walled off from lay participants, criminal defendants, and the public.

Today's grand courthouses are not only symbolic of government authority but, as they become empty of the business of judging and evolve into museums for school children and destinations for tourists, they are becoming symbols of courts. In some buildings, court sessions take place only a few days per month and, in some months, not at all. In contrast, in the low-visibility, poorly appointed law enforcement centers, a vast number of criminal defendants move from arraignment through plea bargaining to incarceration. A dense thicket of civil decisionmaking is likewise underway in parts of the adjudicatory apparatus, including venues other than courts. As detailed in Chapter , agencies and private dispute resolution centers do not welcome observers or otherwise put their processes before the public eye.

One conclusion from this multi-chapter analysis is that a radical maldistribution of resources exists. Resources are inadequate for the public in the ordinary courts, tribunals, and administrative agencies that decide so many of the disputes that dot peoples' lives. Absent renewed commitments to what national and transnational constitutions and conventions regularly promise open and public hearings before impartial tribunals to which everyone is entitled these texts will become all the more hortatory and distant from individuals' experiences.

Those put at risk by this shift are not only litigants and members of the potential audience. As judges press to alter juridical modes and reconfigure courts as but one of many places for dispute resolution, as judges embrace management and settlement, and as judges stop working before the public eye and producing results subject to public scrutiny, they weaken the arguments for judicial independence from political oversight and for substantial public subsidies for their unique and peculiar function. Given the unending need for peace and security state-based criminal justice decisionmaking (now also infused with bargained-for sanctions) is more secure than the public civil justice systems, only recently configured as formally accessible to all persons. Spaces of authority will remain, but little by way of public enactment may be provided to materialize constitutional commitments to independent judges, fair hearings, and open processes for a diverse array of claimants who, under democratic precepts, are entitled to equal access and treatment.

In the first part of this book, we looked back at various representations of Justice, from the glorious iterations such as Raphael's ceiling ornamentation (fig. /) in the Stanza della Segnatura to less distinguished art. This documentation of the iconography surrounding Justice has not been undertaken to romanticize its history. As forecast in Chapter , the visual traditions are rooted in social organizations predicated on profound inequalities. Medieval and Renaissance imagery inscribed obligations of judicial subservience, followed by emblems of judicial distance, impassivity, and disengagement. Contemporary deployments rarely signal the difficulties of rendering judgment or the distance between the promises for access and equality and their realization. Only a very few (discussed later in this chapter) of today's courts purposefully make visual references to the problematic circumstances under which they function. Moreover, while tens of thousands of adjudicatory decisions are made in government agencies and tribunals that operate largely outside the public purview, no official agenda aims to celebrate or to dignify the participants, working in cramped quarters not easily accessed by the public.

Should governments try to do otherwise Government services have multiplied and disaggregated, with a fragmentation forming an analogy to the deconstruction of pictorial space. Photography, microscopes, air travel, and the internet have radically altered what can be seen, just as they have dethroned a centralized, unified perspective, producing a cacophony of administrative functions and of visual opportunities. In law, images have been replaced by texts, as lawyers and judges focus on doctrines and precedents. Yet the spate of courthouses built at the turn of the twenty-first century suggests both an interest in making visual statements and some ambivalence about the privatization of public processes. The many contemporary courtroom-centered buildings aim to instill a sense of legitimacy in state-based processes as though public proceedings were still a major modality of decisionmaking.

Even as the new grand courts are becoming spaces more symbolic than inhabited, they also offer, in some respects, fair representations of the melange of authority, privatization, and public ideology currently promoted by law. The impressive (and often quiet) courtrooms, surrounded by segregated passages and vast amounts of square footage devoted to administrative activities, capture the allocation of work of the modern state dominated by bureaucratic forms. Further, the dedication of significant funds to a few grand buildings, while a great deal of the business of judging occurs in less well-appointed administrative facilities, is reflective of the maldistribution of resources not only for courts but for all sorts of state services. And the grandeur does work to express a political program committed to assimilating new rightsholders persons of all classes, ethnicities, races into judicial traditions. The buildings visibly express the idea that courts, once protective of limited classes, are today spaces aiming to dignify a diverse community of rightsholders, expansively defined.

Thus, while some read new courthouses as symbolically silent, they can also be understood as symbolically apt capturing (advertently or not) the class stratifications reflected in law, the embeddedness of courts in economies reliant on law, the political capital of jurists and architects,

and the aspirations of politicians claiming the capacity to protect all persons. The loneliness of the grand structures and the austerity of the ordinary ones bring into focus the struggle to develop actual practices instantiating rights through public hearings and accountings. Rather than see courthouses as masking the complex interaction by which the law court institution really operates, one can find in them revelatory exhibits, commemorating affection for practices of open justice amidst a transformation of legal processes that devotes the vast bulk of usable space to offices. The stratification expresses, as Marie Bels put it, the operation of an institution that superimposes the different and contradictory work methods represented by the . . . business' side of the legal system and the technical aspects that allow the justice machine' to function.

But the issue is not only whether courthouse construction expresses current trends and ideologies but what law should do. Deeper problems come by way of a return to Jeremy Bentham, who underscored the relationship between publicity and responsive government entailing public access to the exchanges between jurists and disputants. As currently formatted, conciliation procedures take place in private. Even if (as Simon Roberts has argued) the trip to the massive buildings to confirm a negotiated settlement serves to legitimate parties' decisions, it offers no opportunities for third parties to engage as participatory observers.

The reason to depict the long history of public practices of power and the short history of courts as we know them today is to underscore the dynamic nature of adjudication. Although embodied in stone, courts are fragile. We have argued the utilities of adjudication; here we focus on how to reconfigure the many spaces of adjudication so as to signal the weight of the decisions made. In addition to marking power, public spaces have to find modes of acknowledging the struggles to produce readily available and fair processes, as well as the remarkable difficulty of actually rendering judgment and the obligation to account for the implications of doing so.

Law like education, roads, utilities, and support for health and well-being is part of a packet of government-based social services. The multiplication of transnational courts is a testament to the proposition that this function is both an artifact of nation-states and crosses borders. Courts (whether denominated criminal, civil, or administrative) do the state's violence through their jurispathic powers (to borrow Robert Cover's terms) to trump local or individual normativity and to reorganize persons' liberties, personal assets, and public obligations. Making courthouses identifiable in form rather than homogenized with malls and museums is one means of acknowledging the relationship between the intensity of those powers and the potential for constraint through public exchanges that document norm application and enable revisions. Whether recycling a distillery in Helsinki (fig. /) or using a renovated department store in Sydney (with words such as corsets and gloves still legible on its facade) or undertaking to make a national statement as in Israel (fig. /), a transnational idiom of courthouse construction pays homage to the Benthamite obligation of publicity by placing courtrooms the public's space as their centerpieces.

The shared sensibility is, as we argued in Chapters – , partially a result of the market of lawyers, judges, and architects. But it also reflects another form of sharing of aspirations for law's role in social orders. The first half of this book displayed Renaissance town halls of various city-states in Europe, all relying on emblems of iconic Virtues and narratives reflecting common understandings and shared references. Hulking courthouses became their modern counterpart. In Chapters and , we argued that democracy changed and challenged adjudication. Here, by way of conclusion, we explore the implications of these claims for the buildings and art that signal a space as a court. We explore what a democratic iconography of courts could entail. Before examining the idioms available, however, we need to address a preliminary issue for contemporary designers of courts currently claim themselves successful at capturing courts' special attributes, the democratic premises of open and public access.

Symbolic Courts with Facades of Glass

In the early chapters of this book, we reflected on the transnational idiom of Medieval and Renaissance structures, with shared classical and biblical narratives taken up by localities to provide normative instruction. The contemporary counterpart is the frequent reliance in courts on an extensive transparent glass skin admired for providing an open face to the public. While these words come from a description of the design of the German Constitutional Court, built in the s to provide almost total transparency coupled with a popular feel, we could have pulled such phrases from descriptions of courts in many locales. In the United States, for example, glass is said to signify the new openness and accountability of the court to its community, as well as the justice system's principles of *transparency*, *accessibility*, and *civic engagement*.

Architects have put these precepts into practice. Courthouses with glass walls can be found in a host of locations, such as Boston, Massachusetts; Youngstown, Ohio; and Wyoming County, New York or, when traveling outside the United States, in places ranging from Vancouver, Canada; to Nantes, France; and Reykjavik, the capital of Iceland. In the spring of , when a new courthouse opened in Manchester, England (the biggest court building to be constructed in Britain since the Royal Courts of Justice in London were opened in), Europe got its largest hung glass wall.

Glass is not the only facet of new courthouses to provide a public face, nor is it the only means to denote openness. While seeking to capture both authority and solemnity,

contemporary courts generally make a point of welcoming visitors, at times offering tours and clocking attendance. The media garner special attention, assigned reserved seating or desks inside courthouses. Many buildings include space for public information officers, tasked with disseminating information through electronic postings and webcasts.[illegible] Like courthouse architects, public information officers have become so common as to gain an acronym (PIO) and their own professional organization.[illegible] Thus, even as the privatization of process that we outlined in Chapter [illegible] is underway, the buildings and their staff proclaim commitments to communications with the public, in person and through new technologies.

Opaque Transparency

Yet an equation of glass with courts of law and access to justice is simplistic, for glass is by no means especially prominent in courthouse construction, and courthouses are not the only structures proclaimed as particularly appropriate for glass. A baseball stadium completed in [illegible] in Washington, D.C., has also been praised for using glass, said to have been chosen by the architects to express the relationship of baseball to the [illegible]transparency of democracy.[illegible] Likewise, glass came to dominate many late twentieth-century constructions (for example, the [illegible] *rand Pro[illegible]ets* of Fran[illegible]ois Mitterrand, president of France[illegible] in the [illegible]s and [illegible]s[illegible]), as it had during the nineteenth century, when glass provided facades for train stations, commercial arcades, and exposition sites including the Grand Palais in Paris and the Crystal Palace in London.[illegible]

Part of the explanation for the embrace of glass is technological. During the nineteenth century, clear glass became easier to produce, as did other translucent materials. The [illegible] Crystal Palace designed for London's Great Exposition provided a grand-scale demonstration of glass's potential.[illegible] Twentieth-century engineering technologies lowered the price and expanded the possibilities, enabling glass to become commonplace in a variety of structures[illegible] houses and their bathrooms included.[illegible] During the early part of the twentieth century, this turn to glass was celebrated, complete with its own [illegible]crystal metaphor.[illegible] The German author Paul Scheerbart is credited as a source; in [illegible] he wrote a couplet about the architecture of Bruno Taut: [illegible]Light seeks to penetrate the whole cosmos / And is alive in crystal.[illegible] Scheerbart has been described as the [illegible]theorist[illegible] of an [illegible]architecture of glass and steel[illegible] and Taut [illegible]put the skin and bones on the concept.[illegible] In [illegible] Scheerbart published [illegible] *lasarchitektur* ([illegible] *lass* [illegible] *rchitecture*), heralding that the [illegible]earth's surface will once more be transformed, this time by glass architecture.[illegible]

Glass was thus deployed not only for [illegible]botanical purposes but also for human concourse and habitation.[illegible] In the early [illegible]s, Mies van der Rohe designed a model of a glass skyscraper, and in [illegible] Frank Lloyd Wright wrote in a vein similar to Scheerbart, calling for reducing the [illegible]glooms[illegible] of cities through buildings [illegible]woven in rich glass; glass all clear or part opaque and part clear, pattered in colour or stamped to harmonize with the metal tracery that is to hold it all together.[illegible] By [illegible], glass was [illegible]all the fashion.[illegible]

Decades thereafter, environmental concerns challenged the wisdom of heating or cooling glass-clad structures. In response, new coatings evolved to reduce [illegible]the cost of interior climatological systems.[illegible] Building with glass continued apace, making plain the degree to which glass bedazzled,[illegible] even as architectural theorists debated the distinctions between [illegible]literal[illegible] and [illegible]phenomenal transparency[illegible] and as some critics objected to the redundancy produced by [illegible]contemporary architects . . . obsessed by glass.[illegible]

The Politics of Glass

Not only is glass a prevalent feature of a variety of building types, its deployment is also regularly accompanied by explanations about why it is particularly apt for a diverse array of facilities. The choice of glass as a construction material has periodically been complemented with explanations that can be summarized as [illegible]form follows philosophy.[illegible]

For the Renaissance, [illegible]transillumination[illegible] enabled the [illegible]metaphysical implications of light[illegible] the divine *lu*[illegible] (truth and God's will) to be perceived.[illegible] Centuries later, Mitterrand's glass buildings for Paris were intended to meet concerns that cultural institutions were perceived as inhospitable to the public. Political statements were made through buildings enabling persons to see and be seen, such as in the multi-story exterior glass-enclosed escalator that adorns Paris's Pompidou Center. As Annette Fierro has explained, every [illegible]centimeter between glass and support, every decision to weld rather than screw, every chemical additive to the surface coating of the glass [illegible]became[illegible] extravagantly significant.[illegible] Mitterrand's ambitions make plain that the use of glass in service of democratic precepts has not been limited to the courthouse context. Aiming to link his government's authority with the two hundredth anniversary of the French Revolution to signal his embrace of democratic institutions,[illegible] Mitterrand wanted to make the logic of the building [illegible]*transparent*[illegible] Whether his methods fit his goals is a question; his projects were dramatically expensive, taxing the public fisc with [illegible]disproportionate expenditures[illegible] at a time of economic duress ([illegible]*la crise*[illegible]).[illegible] And just as those glass buildings offered transparency as a metaphor for democracy,[illegible] so did constructions elsewhere. The architectural historian Jane Loe[illegible]er has documented that American embassies built during the Cold War regularly [illegible]adopted the glass box as an expression of democracy.[illegible]

As we discussed in Chapter [illegible], the relationship between sight and knowledge has been plumbed in religious, scientific, philosophical, and political literatures, and reflected in debates about whether Justice ought to be shown with or

without a blindfold, and about whether law ought to be ⍰color-blind⍰ As for the term ⍰transparency⍰ it has political roots in the philosophy of Jean-Jacques Rousseau, whose arguments paralleled the claims made for ⍰publicity⍰ (detailed in Chapter ⍰⍰) developed by Jeremy Bentham and by Immanuel Kant. As we have also explored, what should be open or accessible or known to whom and when, as well as what meaning might be drawn from that which is revealed, are complex and politically fraught questions.⍰⍰

The irony of relying on glass for embassies and for courts during an anxious age of terrorism is evident. If glass truly enables openness, it can undercut efforts to make facilities secure. As Loe⍰ er put it, when embassies became ⍰targets for terror⍰ they were turned ⍰into the modern equivalent of frontier stockades.⍰⍰⍰ But rather than rule glass out, those concerns have prompted technological innovation. The newer glass skins are ⍰ballistic-resistant⍰ Visibility can shift through ⍰gradations of clear, transparent, and opaque⍰⍰⍰ reflected (pun intended) in the title of this subsection, ⍰Opaque Transparency.⍰⍰⍰

Glass has another politics, foreshadowed in this book by the discussions of Bentham and Foucault, who shared an understanding about the centrality of architecture to power. When glass was used in greenhouses, people spoke of its ⍰nurturing⍰ qualities, providing a habitat that brought plants to life.⍰⍰ When covering government buildings, glass is accorded other valences, for it can be deployed to enable or to preclude sight and thereby to permit or to limit opportunities for transparency or surveillance. Yet glass can also be a barrier: the viewer who looks at glass may look at the pane itself, finding one's mirrored reflection rather than what lies through or beyond the glass. As a consequence, art theorists also see glass functioning as a ⍰blockage⍰ imposing a ⍰kind of threshold⍰ that distances the observer.⍰⍰

As eerily shown by the filmmaker Alfred Hitchcock in ⍰*ear Window,* glass is also a mechanism for isolation, as well as for the transfer of voyeuristic control to a viewer watching from a distance. Indeed, complaints were leveled against the Biblioth⍰que Nationale de France for putting scholarly readers on display, as if ⍰⍰⍰animals in a zoo,' exposed to scrutiny from a general public who were too distant . . . to engage reciprocally and meaningfully.⍰⍰⍰ And in some courtrooms denoted ⍰high-security⍰ defendants may be required to sit in a glass box expressly to separate and control them. In short, the relationship of glass to access and transparency is complex, captured by the title of a ⍰⍰⍰⍰s exhibit at New York's Museum of Modern Art. That show, depicting some thirty glass-clad buildings, was called ⍰Buildings That Hide and Reveal.⍰⍰⍰

Zones of Authority

In many new courthouse buildings, whatever transparency may be provided by glass skins ends at the courthouse door. Once inside, the aim is⍰ to borrow from commentary on new Italian court design⍰ ⍰to keep the various users of the building (magistrates, judges, lawyers, public, prisoners) as separate as possible.⍰⍰⍰ Would-be entrants are screened,⍰⍰ and those admitted are sent off into their own zones.

Within, many courthouses are not user-friendly. One courthouse architect explained: ⍰It is remarkable how many existing court facilities have no adequate waiting space outside the courtrooms.⍰⍰⍰ While the buildings are to express that ⍰⍰⍰y⍰ou, your liberty and property, are important,'⍰ they are not accompanied by ⍰clear and generous lobbies, corridors, counters, and waiting areas⍰ nor do they denote anything of the ⍰bond between the individual and the justice system upon which all depend.⍰⍰⍰ Security is not the only rationale for isolating groups of participants. Patterns of segregation are also argued on socio-political grounds, that judges ought not have to confront those whom they must judge, and that ordinary persons ought not have to see ⍰defendants walked, in shackles, through public corridors in the presence of other citizens who may be there merely to pay a traffic ticket.⍰⍰⍰

In many state court systems in the United States, hallways can be crowded with people standing as they wait to meet lawyers or to enter courtrooms. Yet in other jurisdictions, neither the courtroom nor its waiting areas serve as venues for exchange. Courtrooms are sometimes literally dark (as discussed in Chapters ⍰, ⍰⍰, and ⍰⍰), as jurists and litigants respond to pressures ranging from lawyers' costs to judicial and legislative insistence on using alternative private processes in lieu of trial.⍰⍰

Moreover, the imagined citizen paying a fine may not need a dedicated hallway or a courtroom, for new technologies have rendered a great many ⍰encounters⍰ in courthouses ⍰virtual⍰ Fees can be paid online, just as litigants file documents electronically, and even some ⍰meetings⍰ take place via video or telephone.⍰⍰ For those in search of information, record data can often be pulled via computers. Courthouses might nonetheless serve as repositories for older documents, but many materials have been shipped elsewhere or destroyed. And the many administrative personnel⍰ who do much of the work⍰ are largely hidden from public view through modular systems that segregate functions. As a consultant to the World Bank's project on Courthouse Development explained, ⍰the greater percentage of the modern courthouse is composed of general-purpose office space⍰ perhaps ⍰⍰ to ⍰⍰⍰ ,⍰⍰⍰ with much of the work done behind closed doors.

Thus one of the ⍰unintended . . . consequences⍰⍰⍰ of the rules that shifted the action from oral proceedings in courtrooms to an exchange of papers, discussions in chambers, and outsourcing is that some courthouses are both secure and ⍰lonely.⍰⍰⍰ Even as courts lay claim to an architecture of openness made plain through glass, various of the grand

buildings depicted in this book have been reported to convey a feeling of entering an empty ⊠fortress⊠ replete with both perimeter and interior surveillance.⊠⊠ Both the exterior glass and the interior circulation patterns mask (per Foucault) the violence inherent in the disciplinary powers of the state.

The many new square feet dedicated to grand symbolic courtrooms ignore the risk of obsolescence, but some smaller-scale projects for lower-level courts are being shaped to assimilate court functions with other work of the administrative state. For example, a survey of construction projects in England reported that ⊠replacement civil courts in particular are deliberately built as anonymous blocks, largely made up of offices and with courtrooms containing movable fittings⊠so as to be able to recycle those spaces for other uses.⊠⊠ An alternative strategy has been to try to repopulate courthouses by multiplying their uses. During the late nineteenth century and the first half of the twentieth, federal courthouses shared space with post offices; one could mail a letter and then drop by a courtroom. County courthouses echoed some of the variety of old European town halls, providing offices for making land transfers, obtaining licenses, or recording life cycle changes. Until the ⊠⊠⊠⊠s, the century-old tradition of ⊠court day as a political and social event⊠ continued.⊠⊠ Some local courts continue to be multi-function buildings, but many became dedicated to the single purpose of adjudication.

In more recent decades, efforts have been made to retrieve some of the sociability of courthouses by diversifying the activities pursued. The federal courthouse in Boston, for example, hosts educational programs about law for school children and offers lectures. The Mexican Supreme Court and the Constitutional Court of South Africa serve on occasion as performance venues. To enhance the comfort of courthouse employees as well as visitors, designated areas in some courthouses are provided for commercial outlets, cafeterias, and gyms.⊠⊠ Another approach is to build what advocates of alternative dispute resolution (ADR, discussed in Chapter ⊠⊠) call a ⊠multi-door courthouse⊠⊠⊠ into which disputants enter in search of mediators and arbitrators as well as judges. As noted in Chapter ⊠, the ⊠⊠⊠⊠ ⊠⊠⊠ *Desi⊠n ⊠uide* for the federal system called for suites specially shaped to accommodate ADR procedures. Mindful of economic constraints, however, revisions in ⊠⊠⊠⊠ cut out requirements for mediation and conference rooms while preserving (and sometimes expanding) large areas for courtrooms.⊠⊠ The new uses lost out, in part because they were underspecified, in contrast to the detailed descriptions for the size, height, and fixtures of a courtroom.⊠⊠

In other jurisdictions, the work of courts has been reconfigured to bring ⊠auxiliary services⊠ in-house. For example, specialized ⊠drug courts⊠ aim to avoid reincarceration of addicts by requiring offenders to appear repeatedly before judges who superintend programs of detoxification and stabilization.⊠⊠ In ⊠family courts⊠ areas are provided for social workers, psychologists, and other experts to offer therapeutic interventions and for children to play. Moreover, one can also find a return to the eighteenth-century model in which courts and jails were merged, housing law enforcement personnel, pre-trial services, and some detainees in the same structure. The term ⊠law enforcement center⊠ mentioned earlier, is one of several used to denote that such buildings are ⊠multi-occupant facilities⊠⊠⊠ or ⊠government centers.⊠⊠⊠ The facades, however, often reiterate forms associated with courts. The architect of one late twentieth-century consolidation explained: ⊠While we didn't want to hide the fact that it is a jail, the focus is on the public courthouse entrance of the building.⊠⊠⊠

Yet, if the new labels take hold, the identity of the courthouse could diminish and with it the protective veneer it offers. The ⊠day of the county courthouse might pass, almost without notice, as the word disappears from our lexicon.⊠⊠⊠ That comment comes from the United States but was echoed in France, where specialized building complexes came into vogue in the ⊠⊠⊠⊠s. By century's end, the focus was on ⊠rehabilitating⊠ the courthouse as an identifiable and discrete legal space,⊠⊠ an approach many builders in the United States used as well.

The melding of services is thus an aesthetic, linguistic, and political concern. With ⊠one-stop shopping⊠ courts risk appearing ⊠adjunct to police-related functions⊠⊠⊠ which, given the expansion of incarcerated populations all over the world, is one way to understand the dominant function of courts. Another is to see courts as subservient to other branches of government. Recall that one of the arguments advanced in support of the ⊠⊠⊠⊠ United States Supreme Court building project was that a stand-alone court building would substantiate the idea of judicial independence.⊠⊠

We opened this discussion by raising the question of whether the transparency described by courthouse buildings was materialized in practice. Historically, local courthouses were places of communal activity, generating traditions that developed into the doctrine of public access as a legal right and buildings that were open. Such familiarity helped to breed respect. Social scientists reported that, at least in some countries, those who went to court and used the legal processes had more favorable opinions of the legal system than did nonusers.⊠⊠ But despite legal and rhetorical commitments to access, the utilities of public activities for legitimating authority, and the ready deployment of glass by architects around the world, many contemporary courthouses no longer make accessible the processes and practices of judges. The last century of celebratory architecture has generated impressive buildings that mark a worldwide embrace of adjudication but reflect little of the ideological shift entailed in ⊠new⊠ adjudication⊠

that a host of new claimants now have access and that this democratization *of* courts poses profound challenges *to* courts.

Architectural critic Paul Spencer Byard understood these difficulties when describing new courthouse buildings as intensely sad, responding to the huge weight of a system bent toward retribution. He wrote of the bind for courthouse architecture: that the political emphasis on criminalization, prohibition, and retribution as proper responses puts the architect in a position of meeting demands for quantities of space for courtrooms and related functions duplicated and even trebled by requirements for segregation and security to accommodate all the required adjudication and punishment. Byard explained that courthouse designers had been called upon to celebrate the authority that generates all the trials and penalties but, he objected, the design exercise is reduced to an effort to bury very large volumes of space in symbols that will lend them some legitimacy. Thus, as Byard viewed them, several of the new and monumental buildings had nothing to say other than attempting to lend authority through recognizably important architectural forms. Earlier we offered a somewhat different (although also somewhat sad) reading, that the structures reflect both the hopes that the great aspirations of widening the aegis of courts to welcome all persons but also demonstrate how wide are the gaps between those aspirations and practices.

Replenishing the Visual Vocabulary

If a first conclusion is that redistribution of resources is required to match the redistribution of authority to multiple venues of adjudication and a second is that contemporary courthouse construction hints at some of the challenges but has not yet found methods to engage with the democratic project of adjudication, our third conclusion is that alternatives are available in art, architecture, law, and doctrine. The precepts of what constitutes good democratic governance, as encoded and displayed in contemporary courthouse symbolism, are narrow. Many governments continue to deploy large women, in paint or stone and equipped with scales, swords, and sometimes a blindfold. Alternatively, courthouses have a range of decorations in an array of materials, some of which are obliquely referential such as Pascal Couvert's large bell (fig. /), reminiscent of liberty and religion yet sitting on the floor of the courthouse in Bordeaux, or the movingly beautiful color panels (fig. /) of Ellsworth Kelly in Boston that can be read to invoke universal possibilities. Relatively few aim to engage in normative explication about role and responsibility.

Critique and engagement occur infrequently. In Chapter , we identified instances of what could be understood as inadvertently subversive images such as the s Justice figure (fig. /) accused of representing the spirit . . . of ruthless confiscation and hence referencing Communism, or the s brightly clothed Justice alleged to be a mulatto (fig. /) impermissibly breaking a racial barrier in Aiken, South Carolina. In Chapters and , we looked at the work of two artists, Jenny Holzer and Tom Otterness, whose art purposely signaled some of the puzzles and challenges of justice. Holzer relied on a selection of famous truisms deployed in stone in Sacramento, California (fig. /), and in LED for the installation in Nantes, France (fig. /), while Otterness offered up whimsical bronzes, such as in Portland, Oregon, in a scene of a prosecuting dog examining a defendant cat, shown with a feather in its mouth and sitting in a witness box (fig. /). These works of art, however, required substantial negotiation because judges were reluctant to acknowledge the troubled past or present of courts. Other attempts were rebuffed, such as Jan Mitchell's proposals for a *Moco Jum ie* (fig. /), evoking African traditions of protective spirits, or *eachin Man* (fig. /), a figure escaping the slavery of sculpted stone, for placement outside a federal courthouse in the Virgin Islands.

Those interventions provide windows into alternatives, and we conclude by expanding on that repertoire. We first consider how visual vocabularies could be built on historical allegories that embrace a wider range of sources and a richer political history about the virtues and obligations attached to government. Thereafter we explore the rare extant courthouses that insist on frankly showing the harms, the inadequacies, and the challenges of justice.

An Interdependent Collective: The Cardinal Four of Justice, Prudence, Temperance, and Fortitude

Justice was once part of a foursome, detailed in Chapter and seen together again by way of figure , a composite of the individual Virtues displayed at the outset (figs. /, /–). These four were grouped rather than shown in isolation because, together, they captured the ideal attributes needed for governance. Yet that set, and some of what it was said to embody, has dropped from sight. What is lost in terms of the virtues for government, judging included, can be seen by a brief review of why this foursome came to be known as the Cardinal Virtues.

Plato's list of four qualities wise, brave, moderate, and just were analytically distinct; he showed that the connection of one virtue to another achieved a kind of unity of function. By the fourth century, these attributes were nested in Christian theology, perhaps by way of St. Ambrose's funeral oration for his brother, which analogized the four Platonic Virtues to four periods in the Old and New Testaments and called them cardinal to capture their moral freight and cosmological significance.

Thomas Aquinas brought the four down to earth, for he argued that they were cardinal not because they were more

Figure [illegible] Top: [illegible]*usticia* (*Justice*), Cornelis Matsys, circa [illegible]–[illegible]; *Prudence,* Agostino Veneziano, [illegible]. Bottom: *Temperance,* Agostino Veneziano, [illegible]; [illegible]*ortitudo* ([illegible]*ortitude*), Marcantonio Raimondi, circa [illegible].

perfect than all the other virtues, but because human life more principally turns on them.[illegible] Aquinas cited Pope Gregory I for the proposition that [illegible]unless prudence is just and temperate and brave, it is not true prudence, nor is there perfect temperance which is not brave, just, and prudent, nor complete fortitude which is not prudent, temperate and just, nor true justice which is not prudent, brave and temperate.[illegible] Indeed, the interrelations were so deep that Aquinas argued they [illegible]should not be called the four cardinal virtues[illegible]but named as one.[illegible] Moreover, [illegible]all virtues must, simply speaking, be equal for the same reason that they are connected, since equality is a kind of connection in quantity.[illegible] Artists, in turn, regularly displayed them as a set and, as discussed in Chapter [illegible], deployed them in various epic battles against a host of Vices.

While the virtues were reciprocal and interactive, a sustained literature aspired to [illegible]know the form and outline of each.[illegible] In Chapter [illegible], we analyzed debates about the nature(s) of Justice. Hence a bit of elaboration of her siblings is in order. Prudence, a habit [illegible]obtained and perfected through practice in deliberation and action,[illegible] was especially associated with governance. Yet, because prudence was [illegible]knowledge gained from experience, rather than from theoretical speculation,[illegible] it was sometimes subordinated to the broader term for wisdom, *sapientia*[illegible] But Cicero [illegible]elevated the concept[illegible] by giving the two parity. He saw prudence as requisite for [illegible]the best[illegible] citizens,[illegible] [illegible]the first of the virtues possessed by the ideal statesman and the wise man.[illegible] That proposition has been many times reiterated, with a contemporary literature positing prudence as a [illegible]tradition of statecraft[illegible] with a [illegible]normative[illegible] rather than [illegible]value-free[illegible] content,[illegible] important for leaders in politics and law.[illegible] For Ralph Waldo Emerson, prudence was central to all human flourishing because it entailed [illegible]the art of securing a present well-being.[illegible]

Several of the qualities associated with prudence have a ready connection to the work of judges. Commentators speak of prudence as [illegible]the humility . . . of unbiased perception; the trueness-to-being of memory; the art of receiving counsel; alert, composed readiness for the unexpected.[illegible] Aquinas, in particular, is cited for the idea that prudence requires careful inquiry producing wise judgment ([illegible]rightly to counsel, judge, and command concerning the means of obtaining a due end[illegible]). [illegible]Sympathetic understanding[illegible] is how one modern commentator put it.[illegible] Prudence is relevant for judges not only for its association with the investigation of situations and deliberation about action (for Aquinas, [illegible]prudence is in reason,[illegible] while justice is [illegible]in will[illegible]) but also because prudence was seen as related to the auxiliary virtue *s[illegible]nesis,* or understanding.[illegible]

Temperance, in turn, moderated the desires and appetites of both the gods and humankind. Helen North traced the development of the Greek term *sophros[illegible]ne* to the Roman temperance that came to encompass [illegible]soundness of mind[illegible] and self-knowledge, valued attributes for literary heroes.[illegible] North also noted the close association between temperance and justice in Greek thought.[illegible] The [illegible]*polis* by its very nature required a much greater exercise of restraint[illegible] than had a more loosely organized society.[illegible] Thus *sophros[illegible]ne* became a social political attribute as well as an internally desirable mode for conducting one's own life.

Cicero embraced the term *temperantia* as when he called for consistent good sense. The goal of [illegible]attaining the mean[illegible] required self-reflection[illegible] or [illegible]order within oneself.[illegible] As North also explained, the qualities of temperance were seen as the opposite of hubris, [illegible]considered a characteristic vice of tyrants.[illegible] Obtaining balance was good for the health of both persons and social orders,[illegible] and the requisite character of mind produced a degree of sobriety that resulted in moral action. By the end of the sixth century, the association between *sophros[illegible]ne* and [illegible]the general idea of restraint or even abstinence[illegible] was established.[illegible] As a result, the virtue was especially prized in women, supposed to be loyal to particular men or chaste more generally. Temperance thus came to be linked to the virtues of chastity, sobriety, modesty, and humility.[illegible] But temperance was also an important [illegible]masculine virtue[illegible] as explained by St. Ambrose in his funeral oration for his brother and as imbued with religious as well as secular content by St. Augustine.[illegible]

The last of the four, fortitude (sometimes equated with courage), came to denote strength and endurance. Fortitude was associated with the virtues of perseverance, patience, and loyalty as well as magnanimity, which was, in turn, explained as resoluteness despite difficulties.[illegible] Cicero described fortitude as the virtue [illegible]by which one ([illegible]) undertakes dangerous tasks and ([illegible]) endures hardships.[illegible] But which tasks to undertake or hardships to endure required something more, and thus fortitude had to obtain direction from elsewhere. St. Ambrose is quoted for the propositions that [illegible]Fortitude must not trust itself[illegible] and that [illegible]Fortitude without justice is a lever of evil.[illegible]

The capacity to do great deeds and to understand the need to perform them was admirable, Aquinas posited, in contrast to the undesirable qualities of ambition, vainglory, or presumptiveness.[illegible] With fortitude, something worthwhile could come into being through the ability to pursue and execute tasks, so long as a person had a degree of confidence in conjunction with sustained or careful attention over time.[illegible] Aquinas stressed that fortitude was a steadfastness related not only to work over time but as an aspect of the character of one's mind.[illegible] More recent analyses have underscored that fortitude comes in the face of vulnerability and even the risk of death.[illegible]

These virtues encompassed a wide range of human aspirations and, as discussed in Chapters [illegible]–[illegible], Medieval and Renaissance literature and arts offered up personifications coupled with various objects, birds, animals, and flowers.[illegible] Like the Justices of those eras, the iconography was capa-

cious. A motley array of items was sometimes affixed to more than one Virtue and varied as well across time, place, and setting. Some images remain familiar through famous renditions by Giotto, Botticelli, or Raphael, and some appendages— the ostrich for Justice, the deer for Prudence, the diamond for Fortitude, and hot tongs for Temperance— have dropped from sight.[illegible]

As shown in figure [illegible], Prudence often had a mirror, said to capture self-knowledge, as well as two faces to look forward and backward, or sometimes a third eye to watch the present as well. In addition, some Prudences were accompanied by a serpent for wisdom, a dove for innocence, a stag or an eel for strength, a book, and a torch, flame, or lamp that referenced or united Prudence with the theological Virtue Hope.[illegible]

Temperance, in turn, was regularly shown with a bridle for restraint (as in fig. [illegible]) but could also be found with a pitcher (or two, with one for water to dilute the wine in the other), a goblet, or a sheathed sword. Occasionally, she held a torch, a spray of flowers or a palm or was accompanied by an elephant, a windmill, or an hourglass, and eventually a clock (a [illegible]pun on *tempus*[illegible]). As North chronicled the imagery, it ranged from objects to denote health and healing to those showing the mastery of beasts or military prowess. The mix of water and wine demonstrated moderation, referencing alcohol specifically and more generally suggesting the desirability of blending and mixing.[illegible]

Fortitude often had a column (as in fig. [illegible]) that signified endurance and something underfoot, conquered, such as a lion, its trophy skin, or a dragon (echoing St. Michael or St. George). At times Fortitude wore armor and held a sword, dagger, or spear, as well as some kind of vise-like press that required physical strength to use. Myrtle branches occasionally lay about to reference victory or grace.[illegible]

As we detailed at this book's outset, Justice also once had a richer repertoire than a sword, scales, and the occasional blindfold. Some ancient Justices had a cornucopia that linked Justice to prosperity— an apt signifier given the nexus between economic development and courts. A few were shown with the ever-vigilant crane and the occasional ostrich (fig. [illegible]/[illegible]), defined as a bird with a unique digestive system that could handle all forms of matter. The elephant that occasionally followed Temperance was similarly imbued with wisdom from its eating habits. According to the codification of iconography by Cesare Ripa, the elephant was [illegible]the most temperate of animals, never eating any more than it need.[illegible]

Surviving depictions from early Medieval times regularly had Virtues holding various liturgical texts. All could be found at war with the Vices as well as joining a larger ensemble of Virtues, portrayed on schematic Trees or Ladders of Virtue in many illustrated books and on [illegible]an infinite variety of small objects.[illegible] Before the set dropped largely out of sight,[illegible] the Cardinal Four were part of funerary sculptures and regularly deployed as symbols of various governments, large and small, as reflected by the title of an early seventeenth-century drawing, *The Cardinal [illegible]irtues Presentin[illegible] a Coat of [illegible]rms to a [illegible]oun[illegible] Bo[illegible]*, by Alessandro Tiarini.[illegible]

Skipping centuries forward, one mostly finds a lone actor [illegible] Justice, with a few tidy attributes.[illegible] One could, however, take the new imagery provided in both French and American courthouses (detailed in Chapters [illegible] and [illegible]) as the descendants of the older traditions. A remarkable array of items in a host of forms and fabrics is displayed, albeit with less apparent didacticism than in earlier eras, when visual depictions were sparse and references widely shared. As we argued in Chapter [illegible], the political deployment of Justice as propaganda has rendered her legible but left popular audiences with little else by way of other signifiers of government's mandates. Thus a mirror, a column, or a bridle propped up in a courthouse today would not provide hints for many viewers that a much richer, interconnected set of attributes is requisite to good judging, let alone good governance.

The reasons to widen the range are multiple. As discussed in Chapter [illegible], courts are seen as impoverished, with too few remedies, undue harshness, and failures of vision. Further, in contemporary accounts of courts, to the extent temperance or restraint is called for, it is usually a code for cutting off judicial power rather than an injunction to deploy it carefully. Various legal doctrines that embody self-abnegation (such as deference to administrative agencies or immunity for sovereigns) are explained as self-protective (insulating judges from being disobeyed) rather than linked to ideas of temperance. And judges are often faulted for their [illegible]activism— rather than lauded for their courage. Given the complex roles of courts, theories of justice are not enough. A vocabulary that addresses a wider array of attributes would help to elaborate and parse the qualities entailed in rendering wise and just decisions, far better than what a solitary Justice can invoke. Self-knowledge, patience, endurance, steadfastness, wisdom, moderation, and insight need to be assimilated into the analyses of rights, remedies, liabilities, and sanctions.

In short, the visual reductionism yielding the singular icon Justice reflects an erosion in both theory and practice of the breadth of qualities needed to discharge the tasks asked of courts. The conventional imagery for Justice, coupled with the erection of large courthouse buildings to denote the power and authority of law, projects a barren view of what adjudication entails. Although the admonition to judges to [illegible]hear the other side— (figs. [illegible]/[illegible] and [illegible]/[illegible]) transcends centuries, guidance about what judges ought to do when listening and deciding has thinned. This brief excursion back to the four Cardinal Virtues offers but a glimpse of a much richer normative and didactic account needed for the doctrine, practice, and imagery of adjudication.

The Burdens of Judging: The Nails of a *Nkisi* Figure

The diverse qualities required for judges and the law that they generate are not the only facets of justice lacking references on courthouse walls. Reminders are in order of the burdens inherent in giving judgment— once displayed in Renaissance town halls through pictures of fathers such as Brutus sending their sons to death (fig. —/—) or Zaleucus taking out one of his own eyes to mitigate the punishment he had to impose on his son (fig. —/—). In lieu of the idealization of human death and disfigurement, other traditions have created renditions to invoke the power and the weight of community customs. One illustration is a forty-six-inch wooden Kongo figure from the end of the nineteenth century (fig. —) studded with screws, nails, blades, cowrie shells, and other materials and described by art historian Robert Thompson as a —lord of jurisprudence.—

This figure, generally called a *nkisi* (pluralized as *minkisi* or —*akisi*), comes from the Congo region of Central Africa; similar figures are also found in Gabon and Angola.— The purposes of these objects are complex to identify, in part because of a multitude of different uses and a host of invocations and narratives coupled with some traditions of secrecy,— and in part because studies in different disciplines have attributed various meanings to these objects, such as —healing, government, divination and the like.— Given an underlying question of which objects to put into the category *minkisi,* Dunja Hersak called it the —most baffling notion to reckon with.— Some scholars group a wider array of local, spirit-related objects together under that nomenclature, while others delineate *minkisi* as only those figures representing —an —immanent force of nature,' a seemingly diffuse universal force.— Wyatt MacGaffey, an anthropologist who has extensively studied *minkisi,* noted that the effort to understand their import reflects the —contradictions between the social process that produced them and the process that identifies some of them as art.—

Whether using a broad or narrower definition, *minkisi* come in a range of sizes and shapes, both human-like and in animal form. A few are affixed, but most are portable.— The term *nkisi* is related to —other Central African words often translated as —spirit,' —capturing the sense that *minkisi* embody personalities —from the land of the dead, through which the powers of such spirits are made available to the living.— The form depicted in figure — typifies those with a —body element— (in this example a snail shell but sometimes a small gourd) that provides a repository for some specific objects. The container can be metaphoric or literal, in that some hold a bone of a person who has died or a piece of clay, a stone, or grave-dirt.—

Many discussions locate the objects as related to healing or fixing (or righting) a situation, such that their use could be translated as referencing medicine, religion, spirituality, justice, or interrelated aspects of all of these functions.—

Figure — Nail Figure, Kongo, circa —–—, The Detroit Institute of Arts, Michigan.

Photograph copyright: The Detroit Institute of Arts, Founders Society Purchase, Eleanor Clay Ford Fund for African Art, —. Image reproduced with the permission of the copyright holder.

—The invocation and activation of a *nkisi* inscribes the experience of disease, theft, adultery, or other problem in a standardized cultural register, so that it ceases to be idiosyncratic and unmanageable.— To the extent that the figures (especially those serving as containers) are read to express the ability to contain and control evil forces,— one can make analogies to law and to medicine.— What one attributes to *minkisi* depends in part on what one thinks about the —other category— law or medicine— as well as how one reads the diverse uses of various objects created by different peoples and classified as *minkisi*—

As illustrated in figure ⍰⍰⍰, some *minkisi* in both human and animal form have nails or spikes in them. Commentators understand the import differently. Thompson, an authority on African art quoted at the outset, read them to denote the pain and burdens of authority: ⍰He is a spirit so strong he can wear on his stalwart chest the painful, intricate issues of his peoples symbolized by inserted blades.⍰⍰⍰ Some commentators believe the nails are driven in through communal rituals as acknowledgment of whatever has transpired that prompted the use of *minkisi*.⍰⍰⍰

According to another art historian, Zdenka Volavkova, evidence of nail *minkisi* in Lower Congo is scarce before the nineteenth century. She posited that nails reflect a mix of local and Christian traditions. In ⍰the complex syncretic process the symbols of Christ's suffering . . . might have been amalgamated by the African system of signs and become instruments inflicting an enemy with serious disease or death.⍰⍰⍰ European as well as African traditions displayed powerful figures with spiritual capacity, sometimes mortifying their bodily forms.⍰⍰ As Volavkova explained, parallel magical figures are European icons, such as Baroque ⍰images of saints specializing, for instance, in the relief of toothache, ⍰or in the⍰prevention of fire or lightning.⍰⍰⍰ Further, she commented, while the nails could be read to denote injury, they were also deployed to bind materials together. Given the various communities deploying *minkisi* over centuries, she argued for plural understandings, that classifying *nkisi* figures by ⍰functions was useless if not impossible⍰ and that interpreting them as static was misguided.⍰⍰

Some anthropologists demurred, positing that the figures had little or nothing to do with Christian imagery or, for that matter, with justice, but rather were kinds of hunters whose nails represented the suffering that was to be inflicted on others.⍰⍰ On their account, the nails ⍰annoy the nkisi, arousing it to action,⍰⍰⍰ and nails were driven in to animate the figures to ⍰seek vengeance on a designated victim.⍰⍰⍰ But that very description could be turned into a link with law, for one of the Justices in Siena's fifteenth-century fresco the ⍰*lle*⍰*or*⍰ *of* ⍰ *ood* ⍰ *overnment* (fig. ⍰/⍰⍰), by Lorenzetti, has a severed head on her lap. Scholars likewise debate the political, religious, and moral import and whether to read the murals as references to theories associated with Aristotle or Cicero or others. Whatever the intentions, both the Siena murals and the *minkisi* offer the purposeful display of images of power.

We show the Nail Figure not to claim its intrinsic relationship to law but rather to make the aesthetic point that objects can movingly capture both pain and power. Whatever reading one adopts of the nails in figure ⍰⍰⍰, the sharp ends intrude. Someone or some group⍰ the wrongdoer, the avenger, the community⍰ is torn, agitated, animated, or reconciled by the exercise of power. The object embodies the proposition that its authority inflicts itself on self and/or others. If viewers attribute to these figures ideas about the weight, the difficulty, the power, and the pain of judgment in its making, its acceptance, and its imposition, *minkisi* provide representations of normative lessons for both judges and the judged.

The Nail Figure thus complements the examples of Prudence, Temperance, and Fortitude, in that all could add to Justice by expanding understandings of both the attributes and the experiences of authority. Buildings can do so as well, and we turn from reconsideration of personifications to the places where courts are held and thus move from classical depictions, both European and African, to courthouses and contemporary adjudication in South Africa, Mexico, Australia, and the United States.

Facing Justice's Injustice

Court construction at the national, regional, and transnational levels is deeply self-conscious, engaged with history by seeking either to embrace and link to traditions or to create distance from them. At this chapter's outset, we quoted descriptions of the ⍰⍰⍰⍰s Constitutional Court of Germany, celebrated for its glass facade. That court's design is also relevant to this discussion, for it was a ⍰conscious break with the oppressive pathos-filled historical forms in which the authoritarian state had found architectural expression. . . . ⍰T⍰he new building was intended as both the visual embodiment of the new socio-political start of the young ⍰Bonn republic' and as an endeavour to symbolize democracy and the rule of law using transparent forms.⍰⍰⍰ A parallel decision was made in Spain for its new constitutional court that took up residence in ⍰⍰⍰⍰ in a modern building. Once used as a medical center, the structure (consisting of several stories tiered in a metallic drum) looked nothing like the palatial courts associated with the fascist regime of Franco. Similarly, discussions of some of the major new court buildings⍰ such as those in Germany and Israel⍰ make the point that the spaces were deliberately modestly proportioned to avoid intimidation.⍰⍰

This architecture-of-difference aims to disassociate new courts from their predecessors through size, scale, and style. And, on occasion, a few buildings quietly commemorate tragic events through subtle references. For example, in ⍰⍰⍰⍰, the Palace of Justice in Bogot⍰, Colombia was the scene of an attack in which more than one hundred people, including the chief justice and ten of his colleagues, were killed.⍰⍰ In the new building, completed in ⍰⍰⍰⍰, the justices' names are inscribed to commemorate the siege. In addition, the architect Roberto Londo⍰o retained the inscription that had been on the older courthouse's front facade. There quoted was General Francisco Santander, who fought with Simon Bolivar during Colombia's nineteenth-century war for independence from Spain and later became the President of Gran Colombia. The words read: ⍰Colombians: Arms have given you independence, Law will give you Liberty.⍰⍰⍰

Both the distancing from the past and references made through such quotes require viewers to know or have experienced what is abjured or commemorated. Relatively few court designers, however, have made a point of built-in reminders of injustices, past and present, that viewers cannot avoid confronting. Courthouses in South Africa and Mexico are dramatic exceptions.

Nelson Mandela's Jail as South Africa's Constitutional Court

In ⍰⍰⍰⍰, Apartheid in South Africa ended and the country adopted a provisional constitution, followed in ⍰⍰⍰⍰ by a permanent one.⍰⍰ As that Constitution's preamble explained, South Africa thereby established ⍰a society based on democratic values, social justice and fundamental human rights⍰ as it took ⍰its rightful place as a sovereign state in the family of nations.⍰⍰⍰ South Africa's ⍰⍰⍰⍰ Constitution bespeaks a clear commitment to adjudication; the ⍰courts are independent and subject only to the Constitution and the law, which they must apply impartially and without fear, favour or prejudice.⍰⍰⍰ Other organs of the state are enjoined from interfering with courts as well as required to ⍰assist and protect the courts to ensure the independence, impartiality, dignity, accessibility and effectiveness of the courts.⍰⍰⍰

In addition, a robust bill of rights insists on access to courts and public processes (⍰Everyone has the right to have any dispute that can be resolved by the application of law decided in a fair public hearing before a court or, where appropriate, another independent and impartial tribunal or forum⍰⍰⍰). Disputants also have rights to be given reasons for administrative actions taken,⍰⍰ and criminal defendants are specifically cloaked in detailed rights to fair trials.⍰⍰ Moreover, access to information is not limited to that produced in court. Jeremy Bentham would have been pleased to see a codification providing everyone ⍰the right of access to any information held by the state⍰ and to ⍰any information that is held by another person and that is required for the exercise or protection of any rights.⍰⍰⍰ Further, before legislation can be validly enacted, the public must have opportunities to participate.⍰⍰ Atop what some would call these ⍰procedural⍰ rights, ⍰substantive⍰ rights are also robust. While many constitutions protect property holders, South Africa's Constitution also makes commitments to shelter, health care, and education⍰⍰⍰ ⍰social rights⍰ that not all constitutions affirmatively protect.⍰⍰

The constitution shaped a tiered set of courts, including Magistrates' Courts, High Courts, and a Supreme Court of Appeal, as well as a distinct body, the Constitutional Court.⍰⍰ South Africa chartered eleven jurists to function as the ⍰highest court in all constitutional matters⍰ to decide questions about the constitutionality of acts of parliament and disputes among organs of the government as well as to interpret the constitution itself.⍰⍰ Because of generous endowments that authorize ⍰anyone⍰ acting on behalf of oneself, others, or associations to make legal claims seeking protection of the Bill of Rights,⍰⍰ a host of issues come regularly before the Constitutional Court.

In ⍰⍰⍰⍰, a few months after the first democratic elections, the new Constitutional Court formally came into being. Over its relatively short life, the court has generated an impressive jurisprudence contributing to transnational discussions of constitutional norms.⍰⍰ South Africa's Constitutional Court is generally seen as a remarkably successful ⍰start-up⍰ often praised in academic literature for its thoughtful reasoning.⍰⍰ The court has gained a degree of security, albeit (like many of its counterparts in other countries) not always popular approval of particular judgments.⍰⍰

⍰*imin*⍰ *to Capture the* ⍰ *umanit*⍰ *of Social* ⍰*nterdependence*

Like courts of other countries establishing themselves, the South African Constitutional Court, when first begun, had ⍰no building, no Rules of Court, no library and virtually no administration.⍰⍰⍰ It rented space while subcommittees addressed the questions of both a building and its d⍰cor. Early on, the plan was for a new structure. As Justice Albie Sachs, who was deeply involved in the design, explained: ⍰Existing court buildings in South Africa possessed well-established ghosts that resisted expulsion.⍰⍰⍰ What was needed, instead, was a ⍰radical rupture⍰ with the country's past.⍰⍰

Thus, as one can see, while figure ⍰⍰⍰ (color plate ⍰⍰) provides a somewhat familiar court facade,⍰⍰ it is unusual, with bright coloration and its name written in the country's eleven official languages. (The Mixed Courts of Egypt, shown in fig. ⍰⍰/⍰⍰⍰, also bore four languages⍰ Arabic, Italian, French, and English⍰ above its doorway.) Near the entrance are the words ⍰human dignity, freedom, equality⍰ taken from the Founding Provisions of the Constitution and presented in scripts garnered from the handwriting of the eleven judges on the court. These words are also offered in the eleven official languages as well as translated into Braille on the handle of the large doors to the main entrance.⍰⍰ As one viewer⍰ Justice Ruth Bader Ginsburg of the United States Supreme Court⍰ described the facade, its aim was to tell entrants that ⍰whatever your race, language or station, you are welcome here.⍰⍰⍰

The architects, Janina Masojada and Andrew Makin of OMM Design Workshop and Paul Wygers of Urban Solutions,⍰⍰ sought to create ⍰a physical representation of the constitutional values⍰ inscribed on the courthouse door.⍰⍰ Their work and the art it contains are now memorialized in two books, one dedicated to the building⍰⍰ and another to its art.⍰⍰ In some respects, the judges and architects sounded familiar themes as they sought to erect a complex of buildings demonstrably about justice. Further, the common element of glass, relied upon in modernism to de-

materialize space and create a sense of transparency, can likewise be found. Yet, as architect Andrew Makin commented, they had designed the group of buildings with a subtlety that rendered them accessible [illegible]where appropriate, open where appropriate.[illegible]

The goal of denoting [illegible]justice[illegible] was coupled with a second, distinctive aim; the designers wanted to express[illegible] in both the structure and its art[illegible] a [illegible]humanity[illegible] grounded in social interdependence.[illegible] The kind of [illegible]access[illegible] the builders wanted was not only an entr[illegible]e to courts but also [illegible]free and unencumbered passage[illegible] to the fundamental rights of shelter, education, and health care that were requisite for [illegible]the dignity of all people[illegible] which were protected in the constitution.[illegible]

The large, airy foyer (fig. [illegible]) aims to materialize those sentiments by offering comfortable seating that distinguishes itself from many austere spaces, such as the *salle des pas perdus* designed by Jean Nouvel for the courthouse in Nantes (fig. [illegible]/[illegible]). The South African architects described the foyer as [illegible]an easy extension of the adjacent public paths and places[illegible] shaded from the sun and, [illegible]like a handshake[illegible] introducing the other components of the building.[illegible] Inside[illegible] and as in other courthouse interiors such as in Boston (fig. [illegible]/[illegible])[illegible] the foyer provides a forum for exhibitions, discussions, dance, and other performances. The point was to have the public use the court [illegible]in all sorts of ways.[illegible]

As can be seen from the photograph, leafy chandeliers hang high from the ceiling.[illegible] That design references the court's logo[illegible] [illegible]justice under a tree[illegible] with its umbrella-like arbor sheltering a human figure [illegible]symbolising the people's right to protection under the law.[illegible] The logo refers to traditions of local communities gathering under trees for dispute resolution by their leaders. As detailed in Chapter [illegible], trees were a fixture of French justice iconography, referencing Louis IX (St. Louis), also described as dispensing justice under a tree. A modern reinterpretation comes from G[illegible]rard Garouste's wall panels in a new courthouse in Lyons; there vines envelop excerpts from the text of the Universal Declaration of Human Rights, including, as depicted in figures [illegible]/[illegible] and [illegible]/[illegible], the prohibition against torture.

Like the glass facades of many contemporary courts, trees are also said to presuppose [illegible]openness[illegible] although that proposition depends not only on the status of those who could sit under them but also on whether others could see and hear what transpired. Recall that Jeremy Bentham proffered the open field, accessible to all who wanted to watch, in contrast to enclosed rooms where doors could be used to exclude. Bentham added the caveat that the com-

municative capacity of fields depended on the vocal and auditory powers of speakers and listeners.[illegible]

Prison [illegible]istas of Bar[illegible]ed Wire

In addition to its welcoming entry, open foyer, and a major courtroom, the Constitutional Court of South Africa offers visitors sights very different from those provided in other courthouses. The court complex was built atop some remnants of the Old Fort Prison, where many Apartheid resisters[illegible] including Nelson Mandela and Mahatma Gandhi [illegible] were detained.[illegible] As figure [illegible] (and color plate [illegible]) shows,[illegible] barbed wire gives glimpses from some angles of the court's library tower, adorned with the court's logo near the top.[illegible] The wire marks off the interior cell block (fig. [illegible]). Visitors can also look directly at empty jail cells (fig. [illegible]), with the graffiti and wall scratchings of the prisoners intact.

According to Mandela, who was President of South Africa when the design was selected, its purpose was to incorporate [illegible]horrid memories of torture and suffering'[illegible] to honor the struggle for freedom as well as to express confidence that these practices would not recur.[illegible] Other courts have used recycled buildings, including (as discussed in Chapter [illegible]) one in Aix-en-Provence, France, where a late twentieth-century courthouse occupies the former site of a prison known for providing a setting for a novel by Émile Zola. One of that prison's walls was apparently preserved not to interrogate the quality of justice past or present, but rather as [illegible]testimony to prison architecture[illegible] to be respected within the corpus of French historic buildings.[illegible]

The Old Fort in Johannesburg dates back to the [illegible]s. After the Anglo-Boer War, it became a dedicated prison. [illegible]It was a place where everybody locked up everybody. Boers locked up Brits, Brits locked up Boers, Boers locked up Blacks.[illegible] Famously, by the second half of the twentieth century, the prison had a segregated cell block[illegible] [illegible]a [illegible]native' prison, known as Number Four for sentenced black men[illegible] as well as a jail for women.[illegible] White male prisoners were, [illegible]literally and metaphorically, [illegible]in[illegible] a higher position[illegible] than the black inmates, for whites were kept on upper floors and given better conditions and food.[illegible] Yet South Africans also describe the Old Fort Prison as a point of community [illegible]solidarity[illegible] to which [illegible]supporters and families brought food and books and clothing to prisoners from various political and cultural backgrounds.[illegible]

In [illegible], the prison was closed, but the building remained an [illegible]ominous presence[illegible] amidst crowded high-rise apart-

Figure [illegible] Court tower and barbed wire, Constitutional Court of South Africa.

Photographer: Maria E. Burnett, [illegible]. Photograph reproduced with the permission of the photographer.

ments.[illegible] In the [illegible]s, it became a national monument.[illegible] The committee recounted how it seized on this spot, in part to help [illegible]the regeneration of the inner city of Johannesburg[illegible] but [illegible]primarily [illegible]because[illegible] it was a site saturated with a history that bore directly on the theme of human rights.[illegible] The goal was to convert the [illegible]intense negativity associated[illegible] with the prison into [illegible]optimism[illegible] about the new commitments to a very different legal regime.[illegible]

In the tradition of important court construction recounted in earlier chapters, South Africa convened a competition for a building to embody the new democracy.[illegible] Some two hundred submissions were reviewed by a jury composed of individuals both local and international, expert and lay.[illegible] One member of the jury was Thenjiwe Mtintso, who then chaired the Commission on Gender Equality and who had herself spent several months in the women's section of the Old Fort Prison. Mtintso saw the challenges[illegible] that [illegible]courts have always been frightening buildings for black women in South Africa[illegible] the ultimate incarnations of repression[illegible] associated with words such as [illegible]injustice, exclusion, marginalisation, dehumanisation, humiliation, fear, repulsion, rejection, distrust, unfriendly, cold, ugly, austere, stern.[illegible] What the jury hoped for was a space that would negate such terms [illegible] a building representing [illegible]the democratic value of public participation[illegible] that was warm and welcoming even as it expressed [illegible]the value of power.[illegible]

The jury selected local architects Janina Masjoda, Andrew Makin, and Paul Wygers because, as Justice Sachs explained, they had shaped a [illegible]site-specific, climate-specific, light-specific[illegible] solution rather than showing [illegible]off what fabulous sculptural visions they had.[illegible] Within a relatively short time[illegible] supported by the local authority, the national government, and a specially created entity[illegible] the complex went from its conception in [illegible] to its opening in [illegible].[illegible]

Photographer: Maria E. Burnett. Photograph reproduced with the permission of the photographer, [illegible].

Known as Constitutional Hill, the building complex consists of more than a million square feet and cost some [illegible] million to construct.

What resulted are four areas[illegible] the Foyer, the Administration Wing, the Court Chamber, and the Library [illegible] linked by arcades with courtyards.[illegible] Two gathering places [illegible] the Foyer and the Court Chamber[illegible] are connected by three walkways through the building. One, the Judges' Walkway,[illegible] can be seen in some areas through transparent glass.[illegible]

Janina Masojada described the architects' interest in the [illegible]complete intermingling of past and present[illegible] for the Foyer, they used prison bars as climbers for plants and some of the bricks from what had been the [illegible]Awaiting Trial Block[illegible] of the Old Fort Prison.[illegible] At some points [illegible]new and old stand side by side, indistinguishable from one another.[illegible] The court chamber, banked and arc-shaped for easy observation, has a thin [illegible]long ribbon window.[illegible] Through that window judges and others in the room can watch the feet of passers-by, explained as serving to [illegible]keep judges and counsel down to earth.[illegible]

Decisions on the shape of the building have been described as collaborative. [illegible]Each area of the Court developed

by the architects was presented to the judges for comment.[illegible] In contrast to many new court buildings, the administrative apparatus of the court is not entirely walled off. Rather, people using public spaces such as the Exhibition Gallery can observe court staff or judges, as they are given [illegible]glimpses into the more private areas of the Court.[illegible] Unsurprisingly, the building was designed to be [illegible]green[illegible] employing passive cooling and other state-of-the-art resource conservation techniques.[illegible]

Splashes of Color and [illegible]eferences to [illegible]ppression

The official budget for art was the equivalent of [illegible],[illegible] United States dollars.[illegible] As Justice Sachs reported, those funds were rapidly exhausted by commissioning a tapestry, [illegible]*umanit*[illegible], to mark the [illegible]social interdependence that underlay[illegible] the Bill of Rights.[illegible] Thereafter, with the help of the [illegible]cultural departments of various European governments[illegible] and foundations in North America,[illegible] an impressive array of art [illegible]collected itself.[illegible] Postage stamps reproduce some of the art in the collection, and a book documents its contents, managed by curators.[illegible]

The idea of art [illegible]in[illegible] architecture went beyond what many countries have done. Deliberately [illegible]unmindful of the distinctions between decoration, craft and high art,[illegible] the designers worked to integrate craft and art in the doors, security gates, carpets, and lights of the building.[illegible] Further, they wanted the building to [illegible]bear the signs of *makin*[illegible], a building that would represent the work of South African artisans, . . . the product of human interaction with ideas and materials rather than of systems and technologies of management.[illegible] To do so, the court advertised that more than two dozen sites in the building were available for proposals on their design.[illegible]

The proclaimed result is art [illegible]of, by, and for [illegible]the people of South Africa,' now [illegible]united in [illegible]their[illegible]diversity.'[illegible] Included are objects from some who died in exile during the Apartheid era as well as donations from collections and newly created, site-specific objects. Some images are festive and flowered, and others record oppression, such as *The Scene of the Crime* by Robert Hodgins, a painting of an interrogation room.[illegible] The designers aimed to avoid [illegible]easy and facile symbolism[illegible] and, specifically, what was seen to be [illegible]the clich[illegible] of the personification of Justice.[illegible] Rather, the art needed to reflect that the court and its justices, representing a [illegible]diversity of the citizenry as well as a variety of legal opinions[illegible] had a common task.[illegible]

In some respects, the results are familiar in that a range of forms and styles can also be found in new buildings in the United States and France, both of which provide a set-aside for art, as detailed in Chapters [illegible], [illegible], and [illegible]. In South Africa, an array of artistic styles and materials[illegible] woven fibers, wood, neon, and metals[illegible] create patterns to [illegible]soften[illegible] the building by offering moments of a [illegible]bright splash of colour.[illegible] But unlike many of its counterparts, the South African court placed an unusual emphasis on collaborative projects, such as a huge hand-beaded flag made by the African Art Centre of Durban to hang behind the judges' bench. In [illegible], after months of work by a group of beaders, the flag was installed, complete with the names of its many crafters.[illegible]

Moreover, in a pointed break from the commonplace effort of uplifting iconography, many of the objects in the South African Constitutional Court are, like the building, grimly referential to the recent past. In *Prison [illegible]acks,* eight slabs of Zimbabwe black granite, shaped by artist Willem Boshoff, mark off the thousands of days served in prison by Nelson Mandela, Walter Sisulu, Ahmed Kathrada, and others of the [illegible]Rivonia Trialists.[illegible] Judith Mason's *The Man Who San[illegible] and the Woman Who [illegible]ept Silent* consists of [illegible]two oil panels and a dress made from blue plastic bags.[illegible] The first part of the title refers to Harald Sefola, [illegible]electrocuted with two comrades in a field[illegible] who sang a freedom song while waiting to die.[illegible] The second part of the title memorializes an African National Congress member whose story came to light through the Truth and Reconciliation Commission: [illegible]Phila Ndwandwe was shot by the security police after being kept naked for weeks in an attempt to make her inform on her comrades. She preserved her dignity by making panties out of a blue plastic bag. This garment was found wrapped around her pelvis when she was exhumed.[illegible] Mason made a complete dress of blue plastic to cloak Ndwandwe, and the dress is all that is shown.[illegible] The power [illegible]resides not in its figuration . . . but in the absence of a human figure in all three parts of the work.[illegible] Mason commented that the dress was also a reference to the [illegible]*ictor*[illegible] *of Samothrace,* a monumental headless Greek winged statue that dominates a staircase at the Louvre in Paris.[illegible]

The Challen[illegible]es of Crime and Caseloads

The courthouse and its art have been widely celebrated, providing an emblem for the new nation and inscribing its civic identity as rising above a horrific past.[illegible] In [illegible], the South African Institute of Architects gave the building an Award for Excellence, and commentators have praised its preference for [illegible]open-endedness [illegible]and[illegible]inclusivity[illegible] in lieu of [illegible]conventionalized grandeur.[illegible] But the impressive building, the hopes it represents, and the jurisprudence that has been generated stand in tension with another aspect of South Africa's legal order[illegible] crime. The country faces the enormous challenges of a transition from Apartheid to democracy that have been mediated by efforts at reconciliation and the embrace of constitutionalism but that have not (yet) produced economic stability, health, and personal safety.

Crime rates are dramatically high, such that the [illegible]experience of being violently victimised in South Africa has almost become a normal feature of everyday life in many urban and rural settings.[illegible] While the Constitutional Court is open

and airy, some well-to-do households are part of gated communities that wall off one area from another in an effort to gain spatial, if not legal, control. As a [illegible] book on crime and justice in South Africa noted, the country could be on its way to becoming what Michel Foucault called a "carceral society" in which "pervasive surveillance and supervision" regularly constrain personal freedom.[illegible]

Of course, private policing denoted by gated entries dots the landscapes of many countries, just as safety on the streets is a challenge around the world. Further, class can provide some buffer, leaving the poorer members of a polity vulnerable. And, like elsewhere, the problems of safety in the streets are challenges for the regular courts. Delays in the criminal courts continued to be "appalling" in [illegible] the average case took more than two years to move from referral to sentencing" and a "shocking backlog" of pending cases made the prospect of reform low.[illegible] The Constitutional Court has also experienced administrative challenges, prompting efforts in [illegible] to improve case management and performance as part of its annual planning.[illegible] In addition, in [illegible], the International Bar Association's Human Rights Institute sent a group on a mission to investigate "threats to the independence of the judiciary" and returned to register objections to proposed legislation that would have made the judiciary more "dependent upon the executive branch.[illegible] Yet the court has also weathered several transitions as founding justices have either retired at the mandatory age of seventy or served out the limited term of fifteen years.[illegible]

Visually Recording (in)Justice in Mexico's Supreme Court

South Africa's [illegible] Constitutional Court is the rare contemporary building insistent on expressing something about injustices perpetuated by the state. The court has a predecessor, continents away, also embedded in revolutionary politics. In [illegible], Jos[illegible] Clemente Orozco painted several politically charged murals for the new building of Mexico's Supreme Court.[illegible]

A sense of the complexity of the expansive configurations is provided by figures [illegible] and [illegible].[illegible] The dimensions of the central panel, which extends from wainscot to ceiling, are about thirty-five feet wide by ten feet high. The two side panels, also from wainscot to ceiling, are slightly shorter. And the panel over the stairway is approximately eighteen square feet.[illegible] They sit in the *Sala de los Pasos Perdidos,* the room of "lost steps" the terminology for waiting areas shared by Spanish, French, and other Romance languages.[illegible]

La Justicia (*Justice*), which consists of two scenes, covers the north and south walls, and flanks another mural, *Las [illegible]i[illegible]ue[illegible]as Nacionales* (*National Wealth*), filled with brightly colored symbols of the country's resources. The Supreme Court's brochure reproducing these images explains that *National Wealth* shows "the most precious and richest metals: gold, silver, copper, steel, and that other element . . . petroleum.[illegible] Inscribed in Latin at the bottom is a quote from Cicero translated (roughly) as "We are servants of the Supreme Law in order to be free.[illegible] That mural could be seen as celebrating the minerals' value or, as one commentator suggested, as depicting "the twisted metal remains of twentieth century mechanization or perhaps the natural resources "used" to manufacture . . . implements of destruction.[illegible]

By the late [illegible]s, some fifty years after the walls were first painted, the Mexican Supreme Court chose to adorn the cover of one of its brochures (fig. [illegible]) with a detail of the *Justice* mural from the north wall.[illegible] But when the murals were first installed, the justices then sitting were less than enthusiastic about the vivid criticism depicted in their courthouse.

Me[illegible]ican Muralists, [illegible] ro[illegible]co, and [illegible]Profound[illegible] National[illegible] Paintin[illegible]s

Born in [illegible] near Guadalajara, Orozco was a leading figure in the Mexican muralist school.[illegible] Joining Diego Rivera, David Alfaro Siqueiros, Gerardo Murillo, and others, he helped to shape an artistic movement that had a profound impact on painting in many parts of the world.[illegible] Involved in various ways with Mexican revolutionary movements, these artists' depictions have become iconic of the period.

Orozco had worked as an illustrator for political publications such as [illegible]*l* [illegible]*no del* [illegible]*hui*[illegible]*ote* (*The Son of* [illegible]*hui*[illegible]*ote*" an animal in Aztec myths and the name of Motecuhzoma's predecessor) and *La* [illegible]*an*[illegible]*uardia* (*The* [illegible]*an*[illegible]*uard*).[illegible] In the [illegible]s, the first "experiments" of the Mexican mural paintings "blossomed into a full-blown movement,[illegible] with installations in [illegible] in Mexico City's San Ildefonso College and, in [illegible], in the Escuela Nacional Preparatoria (National Preparatory School), also in Mexico City.[illegible] Those murals "transformed the walls of the school into a gigantic, multicoloured cloth which . . . will forever reproduce the bloodstained image of the fatherland during the tormented days of the revolution.[illegible] Orozco used the opportunity (as he would again at the Mexico Supreme Court) to caricature justice, both divine and earthly. He painted a "wrathful figure of God the Father" in a Last Judgment scene and a "drunken pair in carnival costume" as human judges.[illegible] His Justice was "a vulgar prostitute, accomplice of anyone who could pay her"

Orozco spent a few years in New York,[illegible] where he was equally unabashed in challenging authority. In a series at Dartmouth College called *The* [illegible]*pic of* [illegible] *merican Civili*[illegible]*ation,* Orozco depicted skeletons "in academic garb presiding over the birth of useless knowledge, . . . "indifferent to the crises of modern civilization.[illegible] In [illegible], Orozco returned to Mexico and he again received major commissions such as murals for the city hall in Guadalajara.[illegible]

Figures [illegible] and [illegible] reproduced with the permission of the Committee of Government and Administration of the Supreme Court of Justice, September [illegible], [illegible], Order [illegible]/[illegible].

While this discussion is not the occasion for a detailed account of the history of either the Mexican system of justice or the reconstruction of Mexico City after the revolution, situating the Supreme Court and its art is in order. In [illegible], Mexico gained independence from Spain and, in [illegible], adopted its first constitution. That document formally shaped a federation [illegible]consisting of nineteen states, four territories, a federal district, and an independent judiciary.[illegible] An [illegible] constitution included the doctrine of separation of powers and a role for the judiciary in reviewing executive branch decisions, as well as rights of free expression, equal treatment of citizens, and the end of certain privileges for the clergy and military.[illegible]

These two constitutions are a testament to the role adjudication was coming to play in republican and democratic political theory. Further evidence comes from the history of the [illegible] legislation authorizing [illegible]*amparo*,[illegible] a procedure by which an individual could turn to court for protection [illegible]against abusive government actions.[illegible] Historian Linda Arnold attributed its roots to nineteenth-century Mexican jurisprudence based in [illegible]Castillan and Indies laws [illegible]that[illegible]had long empowered judges to inspect prisons [illegible]and[illegible]review the status of cases.[illegible] But by the latter part of that century, the legislature and the courts were subservient to the [illegible]unlimited[illegible] authority of the executive branch.[illegible] As Pilar Domingo explained, [illegible]the principle of judicial independence has been, at least nominally, affirmed in Mexican constitutionalism[illegible] since the second half of the nineteenth century, but [illegible]the history of political development in Mexico . . . attests to a marked absence of judicial independence.[illegible] Thus, the proto-democratic elements of justice analyzed in Chapter [illegible] contributed to ideas that arbitrary government action against individuals was unacceptable, which, in turn, generated conflicts over authority among the branches of government.

A multi-party Mexican revolution erupted in [illegible], and battles among armed groups continued until [illegible]. [illegible]In the

Reproduced with the permission of the Committee of Government and Administration of the Supreme Court of Justice, September ⍰⍰, ⍰⍰⍰⍰, Order ⍰⍰⍰⍰/⍰⍰⍰⍰.

decade from ⍰⍰⍰⍰ to ⍰⍰⍰⍰ some two million people were killed in Mexico.⍰⍰⍰ In ⍰⍰⍰⍰, the country adopted a new constitution that protected various rights, such as universal education, but did not instantiate a more powerful judicial branch.⍰⍰ ⍰Mexican presidents historically controlled key aspects of the administration of justice⍰including directing criminal prosecutions.⍰⍰

When fighting stopped in ⍰⍰⍰⍰, ⍰lvaro Obreg⍰n was elected President. He turned to new building and art ⍰to show the world . . . that we are capable of reconstructing the country we have half-destroyed.⍰⍰⍰ Obreg⍰n appointed Jos⍰ Vasconcelos the Minister of Public Education. In ⍰⍰⍰⍰, he launched a ⍰program of didactic public muralism⍰⍰⍰ designed to promote a unified national identity after the fractured years of the Revolution. ⍰Strategies for the creation of a ⍰Mexican' art . . . openly adopted a propagandistic function: to conform a vision of modern Mexico.⍰⍰⍰ In the words of one historian: ⍰Only walls, the immense walls of public buildings . . . could serve as rostrums to men who had so much to say.⍰⍰⍰

An energetic building program supplied such platforms, including plans for the Supreme Court.⍰⍰ As in other countries, courthouse construction was preceded by a design competition. In ⍰⍰⍰⍰, Antonio Mu⍰oz Garc⍰a, a well-known architect who in the early ⍰⍰⍰⍰s also served in the government's Office of Buildings and Monuments, won the

commission. Muñoz García had designed Mexico's Centro Escolar Revolución (Student Center of the Revolution) and the Mercado Abelardo Rodríguez (Abelardo Marketplace), both of which were completed in [illegible]. The original conception of the courthouse featured a "monumental neo-Colonial structure," proposed to have "two immense, somber seated bronze figures," a frieze with a "stylized Mexican eagle and scales of justice at the center, surrounded by kneeling and standing figures representing the various classes of Mexican society."

The new courthouse was located off the main plaza in Mexico City. The first stone was ceremonially laid on November [illegible], [illegible], the national holiday commemorating the start of the Mexican Revolution. The point was to mark "a reclamation of civic space in the name of the revolution, and as a sign of the achievements of the government." While provisionally called a palacio de justicia ("palace of justice," in the Spanish and French tradition), by [illegible], that nomenclature seemed inapt for "a government that derived legitimacy from the revolution." (Recall that Bentham had urged using "judicatory" in lieu of the word "court" so as to avoid the royal referent.) Mexico's building came to be known, in terms closer to North American forms, as the "tribunal" or the Supreme Court building.

The title change comported with a revised design that moved away from the perceived political signals that the initial Neoclassical proposal had entailed. The aim was to capture something of the "new policies about race, public health, and civic participation" as Mexican architects worked out their "complex engagements with national architectural traditions, International style modernism, and Art Deco." The completed building, constructed from [illegible] to [illegible], cost [illegible] million pesos, or over [illegible] million at that time. It "featured little of "the" original exterior design," for "solemnity" it relied instead on steel and reinforced concrete. But the three-and-a-half-ton decorated bronze doors that formed the entryway were far from austere. The didactic reliefs, in Art Deco style by Ernesto Tamariz, represented "four momentous stages in the history of Mexico" evangelization during the sixteenth century, the Federalist Republic, the Reform period, and the modern era."

After President Lázaro Cárdenas came to power, he revamped the structure of the Supreme Court by giving justices six-year terms (the same as that for the President), and he put a new group of justices in power. The point, as one analysis put it, was to have a "compliant Court" committed to a "passive role" and plainly subservient to the ruling political party. The rationale was a need to protect "a highly complex political movement" from "judicial interference" by judges seen as "conservative and reactionary" and hence likely to put up obstacles to "progressive and desirable" social reforms. In the [illegible]s such concerns were familiar farther north, where the United States Supreme Court was also seen as a roadblock to needed government interventions. While President Franklin Roosevelt's proposal to add more justices to the court (termed "court-packing" by critics) formally failed, the Supreme Court switched gears and approved New Deal legislation as new justices filled seats.

In [illegible], President Cárdenas selected Orozco to paint murals because (according to the court's materials) of "the ideological agreement between" the two. In a letter to Cárdenas, Orozco offered to produce "a profoundly national painting, necessarily based in our cultural origins, but at the same time like a living body, an integral part of our modern manner of being and feeling, a faithful expression of our history, of our daily life, of our desires and ambitions, of our customs, vices and virtues.'"

In these courthouse murals, the vices are more evident than the virtues. The *Justice* mural on the south wall is shown in figure [illegible] (color plate [illegible]). The mural and its counterpart on the north wall occupy awkward spaces; like Simka Simkovitch, whose mural for the [illegible] Jackson, Mississippi courthouse (fig. [illegible]/[illegible]) surrounded a door, Orozco too had to work around doorframes. The Mississippi painting was intended to be bucolic even as its segregated scene, with white men constructing houses on one side while black men and women worked in the fields on the other, caused an uproar in the [illegible]s that resulted in its being shrouded in drapes (fig. [illegible]/[illegible]). In contrast, the Orozco murals were seen as stark and disturbing at the outset, even as they were appreciated as great Mexican art.

In both the north and south murals, the front half of an imposing female body (identified by various commentators as Justice) swoops over a doorway lintel and wields, like an avenging angel, an axe (on the north wall) and a flaming torchlike sword (on the south wall). In each scene, figures with "larvae-like bodies . . . painted with gray and flesh color electrified by convulsed, white highlights" cower below, in "a violence of movement and color peculiar to Orozco." On the south wall, the avenging Justice figure is poised over a trio of ghostly figures, one of whom is holding a coiled rope while another male" masked and wearing a red cap (the Phrygian cap of liberty)" is grasping a tied-up bundle of papers. Justice is thus shown attacking someone wearing a symbol of the liberty of the Republic and perhaps gathering up papers, either to protect them or steal them from her. A third smaller, androgynous figure lies on the ground either unconscious or dead. On the north wall, the avenging Justice's axe threatens a group of six males (one masked) who seem to be covering (and perhaps hiding) a body whose star-like headdress is askew. Given that the Statute of Liberty had been standing in the New York Harbor for some fifty years, the figure could also be a reference to that version of Liberty.

Both walls show the back portion of their respective Justices dissolving into a cone of brightly painted rays of orange" fire perhaps" that penetrate figures below it. One interpretation is that the swooping figure is properly attacking" "discharging the full fury of its anger against prevarica-

FIGURE [illegible] *La Justicia* (*Justice*) (south wall), Jos[illegible] Clemente Orozco, Supreme Court of Mexico, [illegible].

Reproduced with the permission of the Committee of Government and Administration of the Supreme Court of Justice, September [illegible], [illegible], Order [illegible]/[illegible]. See color plate [illegible].

tors and corrupt judges[illegible] on both sides. Alternatively, although the rays are continuous with the bodies of the females, the two sides (separated by door frames) could be read as sending different ambiguous messages. For example, the Supreme Court's monograph identifies the front part of each figure, with axe and torch or sword, as representing [illegible]human[illegible] justice and the tail-end fiery orange rays as denoting a [illegible]metaphysical justice[illegible] that either animates or contrasts with earthly justice.[illegible] Whether such a distinction is plausible and what valence to attach to the rays are yet other questions. Some deemed them [illegible]cathartic,[illegible] while others saw them as threatening.

Given the display, Orozco surely had not taken the occasion to celebrate institutional justice. The bottom level is filled with evildoers, as were the Lorenzetti murals (fig. [illegible]/[illegible]) in Siena, where several Justices sat upright; one, with sword raised, had a severed head in her lap[illegible] plainly punishing malfeasance. In contrast, the Orozco rendition offers up two dysfunctional Justices. One is elevated as if on a pedestal (detail, fig. [illegible], color plate [illegible]), at the right corner of the south wall. But she lies back, her sword hanging down, at best inattentive if not asleep, while disorder surrounds her.[illegible]

Another Justice, directly below the oblivious one, is being jostled by the throng of evildoers. This Justice holds scales. Her blindfold is a domino mask with eyeholes, giving her a masked-ball, carnivalesque or cartoonish look.[illegible] She also wears a diadem reminiscent of Lady Liberty. Two men, both masked, are attempting to put objects in or to take objects out from the pans of her scales. Not only has justice gone seriously awry, but one cannot tell whether this Justice is overborne by the injustice around her or is a willing participant.[illegible] Whether deliberately referencing predecessors such as Luca Giordana's *Justice Disarmed* (fig. [illegible]/[illegible]), with her scales drooping and her sword being taken from her hand, or Bruegel's depiction of a blindfolded, duncecapped *Justice* (fig. [illegible]/[illegible]) standing in the midst of mayhem, Orozco's vision is dark: [illegible]Everything is violent: the downthrust of the revengeful spirit of Justice, the flight of the judges, the breaking of the old structures by the revolutionaries. Color itself trumpets the theme of judgement.[illegible]

One historian of Mexican muralists offered the view that one of Orozco's Justices was [illegible]a cynical com[illegible]dienne or a degenerate prostitute, viewing with indifference from the height of her pedestal the crime and injustice committed around her.[illegible] Another saw the critique to be aimed at judges, portrayed as [illegible]desperadoes. They avert their eyes while the public is tied up and pillaged; wear masks while they tamper with constitutional documents.[illegible] The various columns strewn about ([illegible]elements of classical architecture[illegible]) make the point [illegible]that in ancient and modern times, monuments could be dedicated to a false conception of justice.[illegible] One could see Orozco's [illegible]prophetic vision . . . [illegible]of the[illegible] abuses of man-made justice aligned with the ever-growing greed of the monopolists.[illegible] As a commentator later summed them up, the murals were [illegible]aggressively attack[illegible]ng[illegible] the Mexican justice system, with parodies of bureaucracy, book learning, and even justice itself.[illegible]

The impression that Orozco was referencing contemporary Mexican justice was shared by some of the judges watching as the installation was progressing. Over the course of almost a year of work, Orozco had the occasion to hear [illegible]complaints of lawyers and judges who felt he was treating them spitefully in his fresco designs.[illegible] Critical comments were not the only obstacles: [illegible]The new commission [illegible]at the court[illegible] was a heartbreaking job[illegible] for the walls [illegible]proved to be awkwardly broken into uneven and inharmonious areas by functional doorways[illegible] in the uninspiring [illegible]dark vestibule . . . of the upper landing.[illegible] Half-hidden behind rows of columns, they were miserably lighted.[illegible]

The unveiling of the first section of murals produced what [illegible]*rt Di*[illegible]*est* called a [illegible]fiery reaction[illegible] and led [illegible]Fair Lady Justice over a merry, bouncing trail.[illegible] One contemporary

Figure [illegible] *La Justicia* (*Justice*) (detail) (south wall).

Reproduced with the permission of the Committee of Government and Administration of the Supreme Court of Justice, September [illegible], [illegible], Order [illegible]/[illegible]. See color plate [illegible].

commentator described the murals as [illegible]proof once more of the greatness of Orozco's capacities as a painter[illegible] yet given their setting in the court, the murals had a [illegible]startling character.[illegible] Another praised the symbolic freedom they demonstrated; [illegible]judges must walk under their own judgment pronounced by Orozco on the walls of the building. What respect of a government for the creative freedom of the artist[illegible] Justice on earth is blind, but a Holy Revenger descends with searing flames and chases the bribable judges from the ground.[illegible]

That [illegible]creative freedom[illegible] did not last long. According to one historian: [illegible]The functionaries of the Supreme Court of Justice . . . [illegible]had[illegible]expected homage to that divine goddess . . . with the mortar-board and the toga,[illegible]but the results[illegible] a [illegible]blindfolded Justice in a compromising position[illegible] did not meet those expectations. Orozco had completed about [illegible],[illegible] square feet of the nearly [illegible],[illegible] reserved for him when the commission was cancelled because of [illegible]the disgust that the frescoes . . . provoked[illegible] in some of the justices.[illegible] Apparently some justices wanted more than the cancellation. Several justices were [illegible]particularly exercised over the section[illegible] detailed in figure [illegible] and [illegible]demanded that the murals be removed.[illegible] But, as the reporter put it, in [illegible]Mexico, where art is taken almost as seriously as politics, removing Orozco's frescoes was out of the question.[illegible]

[illegible]*eorge Biddle*[illegible] [illegible]*edemption from the* [illegible]*orrors of War*

Blank walls remained, needing to be filled. In what *Time* magazine called [illegible]a curious compromise,[illegible] the Mexican government turned to an American painter, George Biddle. As recounted in Chapter [illegible], Biddle had been instrumental in shaping the Works Progress Administration (WPA) program in the United States that supported art in New Deal buildings of the [illegible]s.[illegible] Mexico commissioned Biddle to paint the empty space in the foyer as well as additional murals on the entry-level floor of the courthouse. *Time* quoted the Mexican Minister of Education, Torres Bodet, as exhorting Biddle to [illegible]do something constructive[illegible]

The compromise was [illegible]curious[illegible] because [illegible]n[illegible]ever before had a foreigner been invited to decorate a Mexican federal building.[illegible] On the other hand, Biddle was a great enthusiast and champion of Mexican muralists. In [illegible] he had painted a scene, *Shot* [illegible] *Bandits,* that [illegible]sympathetically por-

trayed the tragic effect of politics and social unrest on the daily lives of the Mexican peasantry. Moreover, Biddle was not just any foreigner. In addition to his own government service, his brother Francis was the former Attorney General of the United States, a key northern neighbor and regular financial supporter of Mexico.

The Biddle murals, titled *La guerra y la paz* (*War and Peace*), completed after a year of work in as World War II ended, covered the pictorial space over the magnificent High Court Library door. The three panels are dark thematically as well as in tone, reflecting the miseries produced by World War II. On the central panel, over the lintel of the door, a horse is ridden by a disfigured skeleton, holding embryonic prehistoric-looking monsters. Also depicted are an odd lot of animals: a lizard, a jackal, an owl, a vulture, a hippopotamus, an apelike figure, a warthog or wild boar, and a troll or ogre: some of whom are clawing and gnawing at each other. The Supreme Court of Mexico described the scene as symbolizing the fight among nations for dominance, while an art critic saw it as a fantastic scene of dinosaurs and hideous monsters, galloping over two sculptural reliefs representing downtrodden humanity. The flanking, lateral scenes include more death and destruction, with bodies, skeletons (which seem to have emerged from photographs of Nazi concentration camps), dead horses, several gas masks, grenades, and other weapons strewn about. A figuration of the grim reaper: himself spectral in skeletal form: sits atop a pile of skulls and holds a scythe.

The horrors of war on those panels are contrasted, at the edges, with the fertility of peace. Biddle used the far right and the far left of the lateral panels for male and female deities that float above typical Mexican landscapes. On the right, below the female god are a man and a woman who holds a child: composing what the Supreme Court called the holy family. The Supreme Court explained: Mary and Joseph are rocking the baby Jesus who has arrived on Earth and with him, the hope of peace. On the left panel, below the male god are two men and two oxen working a field; as the Mexican Supreme Court put it, they are gathering an abundant harvest. Thus, while Biddle did not level his critique at Justice, he made humanity appear bestial and warring, in need of salvation through religious intervention.

The inaugural ceremonies for the new courthouse were held on June , , a time when, in the words of the President of the Republic, Manuel Ávila Camacho, hate and destruction were hovering over humanity. The published speeches of the President and the Chief Justice reflect anxiety about the fragile role of the judiciary, while making no mention of the import of the vivid images provided by either Orozco or Biddle. Rather, both focused on how the building itself represented a new era for executive-judicial relations. President Ávila Camacho pledged his commitment to the precepts of independent judges. He assured the judiciary that his government would place all its moral and material force at its service to guarantee the respect for and the execution of the decisions of this Court and of all Federal Tribunals. (Yet he reminded the judges that their authority was limited and that their role was not to make laws but to deal with individuals.) Camacho also used the occasion to call for a revision of the six-year terms for judges, inadequate to guarantee their independence because the short tenure deprived them of the autonomy . . . necessary if they are to be impartial.

In turn, Salvador Urbina, the Chief Justice of the Mexican Supreme Court, noted that the deteriorated building in which the court had sat prior to the splendid new edifice had been all too symbolic of its lack of institutional significance. He complained of the historic absorption of all political power by one government branch. The new building was a vast improvement over those very unsatisfactory buildings, unsuited to the dignity of the Judiciary. Urbina hoped the new era was represented by the new building: No political or social group should be allowed to bring pressure on the Judiciary under the pretext of defense of our revolutionary principles and both the legislature and the executive should recognize the sovereignty of the Judiciary.

The building itself was met with mixed reviews: the subject of both withering criticism and glowing praise. Some objected that it was both huge and costly: Its , square feet cost two million pesos (around , U.S. dollars at that time) over the projected budget. Enthusiasts appreciated the building's geometric forms, seeing its simplicity as appropriately identified with the character of the High Tribunal. Detractors found it the coldest building, physically and architecturally speaking: lacking any outstanding element. It also did not mark a change in the relations among the branches. Executive oversight of the judiciary persisted into the late twentieth century and, during periods of one-party control, the Mexican Supreme Court was deferential on various issues, abjuring involvement in electoral and political matters.

Cauduro: Vision: Torture, Homicide, and Other Crimes, Unpunished

The Orozco murals are now on proud display, described as representing one of the most important elements of the court's artistic patrimony. Materials published by the court that welcome visitors on tour describe the images as a critique of monopolist corporate behaviors and the perpetuation of injustice. Like the South African Constitutional Court, the space is sometimes used for performances. Moreover, like the leaders of the South African Constitutional Court, twenty-first century Mexican justices also took up the theme of law's injustice. In honor of the hundredth anniversary of the Mexican Revolution, the justices asked four artists, Rafael Cauduro, Leopoldo Flores, Luis Nishizawa, and Ismael Ramos to create new art for each

of the four stairwells.[illegible] Thus, once again, artists were invited to use the [illegible]immense walls of public buildings . . . as rostrums.[illegible] This time, the justices themselves embraced a critique unmistakably speaking to the contemporary failures to secure personal safety and to provide even-handed administration of the law in Mexico.

Our focus is on a series by Rafael Cauduro,[illegible] an artist born in Mexico City in [illegible],[illegible] who has been the recipient of various public commissions, including a project for the Mexico City subway.[illegible] For the Supreme Court, Cauduro did a sequence of works that, like Ellsworth Kelly's *Boston Panels* (fig. [illegible]/[illegible]), are conceptualized as a whole. But the serenity and balance of the Kelly *Panels* are at the opposite end of the visual spectrum, for Cauduro's series, titled *La historia de la [illegible]usticia en M[illegible]ico* (*The [illegible]istor[illegible] of Justice in Me[illegible]ico*) provides graphic depictions of [illegible]Los siete cr[illegible]menes mayores[illegible] (The Seven Major Crimes).

Unlike Orozco, who did not explain his sometimes enigmatic imagery, Cauduro wrote about the project in advance and spoke about it when unveiled.[illegible] Cauduro found the challenges of the site inspiring; [illegible]what drove me to enter the competition was the form of the walls, which are not rectangular like most surfaces on which murals are painted. When I saw the walls, I saw what I wanted to paint.[illegible] Cauduro linked content to location. The [illegible]space determined the aesthetics of the project; the structure of the staircase accentuates concepts of ascent and descent in an [illegible]elliptical form from[illegible]. . . earth to heaven.[illegible] Further,

> There are various ways to approach the challenge of painting a series of murals on [illegible]The History of Justice in Mexico[illegible]; . . . perhaps one could narrate important moments, such as the vote for the Constitution of [illegible], the promulgation of the Reform Laws, or the ratification of the Constitution of [illegible]. However, in the history of justice there are also other types of histories, above all those that have been more constant and permanent: the history of its limitations, its failures, its unsolved problems. We continue to search for and demand justice . . . [illegible]even[illegible] while there are cases in which, due to delay or red tape, someone is denied; while someone is tortured to obtain a confession; while jail is like a game of fate into which some fall for lack of defense; while the law does not check repression and violence. This history is what matters, in so far as it reveals what we want to avoid with justice, its reason for being, the hope that it animates. This is the history that I wanted to present in these seven walls . . . .[illegible]

The murals, totaling more than [illegible],[illegible] square feet, extend from the basement to the third floor, to be viewed by the justices as they move from chambers to courtroom (fig. [illegible]). As Justice Jos[illegible] Ram[illegible]n Coss[illegible]o Diaz of the court explained, the [illegible]violent images are the last thing that we see before starting sessions.[illegible]

Cauduro began his [illegible]*istor*[illegible] [illegible]in the basement (earth)[illegible] with *T[illegible]ompantli,* which is the Aztec term for a rack (fig. [illegible], color plate [illegible]) used in some Mesoamerican societies to display the skulls of those sacrificed. Cauduro's *T[illegible]om[illegible]pantli* holds about three hundred skulls, created by a glass-fusion technique[illegible] that required the pieces to remain in a kiln for over three weeks. (The weight required special supports in the walls.[illegible]) Also depicted at the lower level is the [illegible]underground crime[illegible] of *Procesos viciados* (Corrupt Processes),[illegible] which is partially visible in figure [illegible] and more clearly shown in figure [illegible]. That mural is filled with file cabinets stacked high with papers. Eerie images of shadowy people, trapped within, peer out from the filing cabinets as evidence of the hell created through bureaucracies formally generating files as human rights are violated.

Also visible in figures [illegible] and [illegible] is [illegible]*iolaci*[illegible]*n* (*[illegible]ape*). Cauduro gave the scene a three-dimensional sense by using a fiberglass construction of a fragmented window through which viewers see a blindfolded woman, her head thrown back, with arms apparently tied behind her, strapped in a chair with men standing over her.[illegible] At another level, one encounters [illegible]*omicide,* a broken young female body seen as if thrown down a well (fig. [illegible], color plate [illegible]). The perspective and the off-center brick walls that surround her create a dizzying effect. To the left of [illegible]*omicide* one can see a part of another crime, *Tortura* (*Torture*); a person's head is being forced into a toilet bowl. The mural sequence also includes *Secuestro* ([illegible]*idnappin*[illegible]), [illegible]*epresi*[illegible]*n* ([illegible]*epression*), and [illegible]*l m*[illegible]*s puro de todos los cr*[illegible]*menes* (*The Purest of* [illegible]*ll Crimes*)[illegible] shown as six windows through which one can see [illegible]uniformed repressors[illegible] or guards in various poses reminiscent of Da Vinci's [illegible]*itruvian Man*[illegible] In *The Purest of* [illegible]*ll Crimes* (the [illegible]use of brute force, one of the worst crimes[illegible]) people flee from a menacing tank[illegible] an image evocative of government actions in Mexico and elsewhere.[illegible] To crown the work, Cauduro added angels at the murals' top around windows[illegible] according to one account, to represent the European colonial tradition and perhaps [illegible]celestial soldiers[illegible] coming to do battle with injustice.[illegible]

The work thus moves from the basement mural that evokes the pre-Hispanic origins of Mexico through to the subsequent cultural permeation of Europe.[illegible] The angels did not, however, herald a new age; both victims and oppressors are plainly contemporary, not clad in historical costumes. Moreover, throughout the scenes, officialdom is regularly the source of the violence. Unlike George Biddle's paean to religious salvation, Cauduro has offered what some commentators described as a tour through the circles of Hell in Dante's [illegible]*nferno*[illegible]

The parallels between the Orozco and the Cauduro murals are plentiful. Both deployed references to pre-

Hispanic Mexico and Europe to cast a critical eye on justice. Cauduro, like Orozco, intended to paint [illegible]a reminder, an everyday message of what must be done.[illegible] While justices of Orozco's era had stopped his work, in [illegible], Mexican justices proudly, if somberly, celebrated Cauduro's work, which, they understood, depicted the failures of the system they ran. The panels, made off-site,[illegible] were installed in groups as they were completed; the installation of the last segment and the formal inauguration of the murals came in July [illegible]. To complete the piece, Cauduro inscribed on the wall: [illegible]I am here to be judged.[illegible]

At the inaugural ceremony for Cauduro's final section, Justice Ortiz Mayagoitia described the disquieting imagery as a [illegible]vision of the author that challenges us to make these scenes disappear forever from our country, such that they last as images, but not as experiences.[illegible] Justice Jos[illegible] Ram[illegible]n Coss[illegible]o Diaz [illegible]referred to the courage of the work. He said that he and his co-workers, every working day, will see the murals and every one will internalize their message in their own way.[illegible] Cauduro added that it was important to reflect on the [illegible]errors of justice[illegible] and that he hoped that (as Justice Ortiz Mayagoitia had suggested) his work would come to exemplify an era that had passed.[illegible] The justices, in turn, were praised for licensing the work [illegible]without censorship.[illegible] And the artistry was also [illegible]judged[illegible] positively, with praise for the boldness of the hyperrealist work.

The Mexican Supreme Court thus stands, along with the Constitutional Court of South Africa, as one of the few institutions to incorporate injustice on the walls of its courthouse. And while the South African court showed the horrors of a recent legal regime, Mexico's justices understood that they were speaking to the present. In the words of one commentator, [illegible]the figures [illegible]depicted in the *Seven Ma[illegible]or Crimes*[illegible] are not the product of the imagination of an artist, but human beings with tragic destinies torn from reality to be fixed upon a wall, in view of everyone.[illegible]

[illegible]*mpunit*[illegible] *and* [illegible]*nsecurit*[illegible]

Cauduro's art was both an artifact of political reform and evidence of its failures. In [illegible] the newly elected President Ernesto Zedillo helped to put into place constitutional amendments restructuring the Mexican judiciary and its Supreme Court.[illegible] (Since [illegible], the Mexican Constitution has been amended numerous times, and the judiciary reformed on several occasions.[illegible]) Animated by financial crises and needs for legitimacy, Zedillo's government hoped to buttress its own legitimacy by shaping a more autonomous

court that took law and order, corruption and impunity seriously.

The size of the Supreme Court was reduced from twenty-six to eleven justices, nominated by the President and approved by the Senate. This format parallels that of the United States, and in both instances, when the party in control of the executive branch also controls the legislature (as was the case for the Zedillo government), that party can choose justices. The reforms also endowed the Mexican Supreme Court with greater authority than its predecessors by providing a more expansive power of judicial review. Moreover, the justices were given fixed fifteen-year terms, and hence some insulation from political pressures when the government changed hands, which it did in .

The Cauduro murals thus reflect a judiciary exercising its own voice. After the reforms, the court did so through various decisions that held pieces of legislation violative of the constitution. Whether the court can attain the autonomy to which some aspire, the Cauduro murals bespeak a courageous judiciary that sits at the apex of a judicial structure that consists of circuit courts, about district courts, various administrative or specialized courts, and the state court systems. As a consequence, the court receives thousands of cases a year and, to handle its volume, the court (like the Israeli Supreme Court) operates in both plenary and specialized chambers.

As the startling images of *Corrupt Processes,* *omicide,* and the other crimes suggest, volume was but one of the problems. Between the s and , violent crime increased dramatically. Even as the justice system was restructured in various respects, the government and its law enforcement officials could not effectively guarantee public security, accountability, and access to justice. From the flagrant disobedience of traffic signals to a marked increase in serious violent crimes, legal institutions were weakening. By , Mexicans consistently ranked crime, corruption, and injustice among their top concerns, as officials proffered the view that the justice system does not work.

Not only had violent crime increased, but allegations of police brutality had also increased. The Inter-American Commission on Human Rights concluded: Impunity of torturers is the rule owing to the difficulty of initiating criminal action against them or the leniency of the judicial branch in such cases. Although in a new Law against Torture had gone into effect, not a single case had been brought to court for such a crime, despite the repeated reports of torture carried out to extract confessions. Moreover, Cauduro's choice of a broken young female body as exemplar of homicide was not happenstance; poor young females, aged to years old, had been targeted as victims and murdered.

A report, the *Situation of uman ights in Me ico,* by the Inter-American Commission on Human Rights (discussed in Chapter), wrote of the special problems of the right to justice. In particular, the report noted the politicization of the judicial system and the widespread lack of trust in the administration of justice. A major problem was impunity the commission of crimes without fear of prosecution or punishment. Moreover, h umerous complaints about corruption, lack of independence and impartiality have made the judicial branch in Mexico one of the organs that enjoys the least public prestige.

A report by the United Nations documented the disorganization of the legal profession, as well as trial procedures using forced confessions, unequal treatment of women, and a general lack of accountability and transparency. Isolation, poverty, and the lack of electricity and roads resulted in millions of Mexicans liv ng in places that remain largely beyond the law.' While in Argentina had judges per , inhabitants and Costa Rica had , Mexico had far fewer, . judges per , inhabitants. In , the backlog of pending cases came to million.

By , the World Bank was helping to support an effort to restructure and modernize the judicial system, but the crisis of law was a crisis of politics. Citizens reported insecurity linked to perceptions that the government was unable to enforce the law. The government appeared at risk of the militarization of civil institutions. In addition, judicial, prosecutorial, and police authorities were specifically targeted. The year was, according to the Trans-Border Institute, Mexico's bloodiest year on record.

Open Tents, Tattered Coats, and the Challenges Entailed in Democratic Promises of Justice

The iconography of the South African Constitutional Court reflects a tortured history and great hopes for a better future. One might view the s Mexican Supreme Court's Orozco murals similarly, as negative commentary on the past or, as some of the jurists then felt, as expressing bitterness about their era as well. The completion of the installation of the Cauduro paintings in , as the country struggled with assaults on police and waves of killings that gave new meaning to the term drug wars, spoke to the present by recognizing the fragility of the justice system. These examples confront injustice masquerading as law-like regimes, law's inability to contain evil, and the failure of countries to secure human dignity and personal safety.

Another iconic vocabulary aims to address the struggle to deliver justice, the persistent problems of inequality of resources within the litigation system, and the puzzles of how to meld private conciliation with public obligations. To look at such efforts again requires travel, to Western Australia and the northern part of the United States.

[illegible]If performed in the *open air*[illegible]: The Federal Court of Australia's Ruling on the Ngaanyatjarra Land Claims

In Chapter [illegible], we quoted Jeremy Bentham's comment that, [illegible]if performed in the *open air* . . . , the number of persons capable of taking cognizance of [illegible]judicial proceedings[illegible] would bear no fixed limits.[illegible] That proposition was put into practice at the Parntirrpi Bore Outstation in the Great Victoria Desert of Australia, where in [illegible] the Federal Court of Australia set up a makeshift court (fig. [illegible]), some [illegible] arid miles northeast of Perth, the capital of Western Australia.

The photograph shows the ceremonial announcement of a settlement allocating land rights claimed by the Peoples of the Ngaanyatjarra Lands over an area three times the size of Tasmania. Solicitous of the claimants' needs, the Federal Court traveled thousands of miles from its home base in Sydney to hold the session, which recorded the settlement of a multi-party dispute.[illegible] The agreement recognized the preexisting rights of indigenous peoples to a vast land mass, while enabling use by telecommunication and mining companies and by state and national governments.[illegible]

Such land claim litigation is an artifact of twentieth-century human rights movements that prompted lawmaking by courts, legislatures, and the executive branch, as well as power-brokering among a host of disputants. What is shown is not a trial but the announcement of judicial approval and entry of the compromise as an enforceable court order. When doing so, the court relied on rituals of law, complete with icons of sovereign authority displayed before the community to which it traveled. Hence the story of what produced the image provides an appropriate coda to these many chapters probing the changing contours of adjudication.

Terra nullius and the Native Title [illegible]ct

Riding circuit (noted in Chapter [illegible]) has been a practice of judges over many centuries and in various countries. In England and the United States, some judges continue to travel to hold court in various venues. In Chapter [illegible], we showed the newly designed courthouse (fig. [illegible]/[illegible]) in Melbourne in which the Federal Court of Australia has one of its main registries.[illegible] But on occasion, the Australian Federal Court decamps to temporary quarters, as figure [illegible] illustrates.

Figure [illegible] Federal Court of Australia sitting in Parntirrpi Bore Outstation, Great Victoria Desert, Australia, [illegible].

Photographer: Bob Sheppard, Trial Logistics Manager, Federal Court of Australia. Photograph reproduced with the permission of the photographer and courtesy of the Federal Court of Australia.

The State of Western Australia is (as its name indicates) the entire western side of the continent. Some [illegible] million people reside on almost a million square miles.[illegible] The dispute that brought the Federal Court so far from any of its home bases was whether the Peoples of the Ngaanyatjarra Lands, the State of Western Australia, its subdivisions, some private entities, or the national government owned various parts of more than [illegible],[illegible] square miles of land.[illegible] Native peoples inhabited that area long before the eighteenth century, when Europeans settled and Britain claimed possession.[illegible] In the late [illegible]s, the Ngaanyatjarra Peoples began to pursue their titleship rights. At the time, Australian law adhered to a doctrine known as [illegible]*terra nullius*,[illegible] presuming that colonists found [illegible]uninhabited lands[illegible] and therefore that indigenous interests did not survive assertion of the sovereignty of the occupying power (in this case England).[illegible]

The landmark event in Australia on the question of the land rights of indigenous peoples was the [illegible] decision of *Ma[illegible]o v[illegible] ueensland* (*Ma[illegible]o [illegible]*).[illegible] That ruling by the High Court of Australia was the first to recognize that, under Australian law, land rights that predated colonization survived in some form.[illegible] The ruling was [illegible]transforming,[illegible] but a host of issues about the kind and nature of such rights and their relationship to sovereignty and self-governance have produced commentary that too much has been [illegible]compromised[illegible] in its wake.[illegible]

Befitting our theme that adjudication has long been awash in transnational currents, *Ma[illegible]o [illegible]* followed several other rulings by constitutional courts in Canada, the United States,[illegible] and other former British colonies recognizing rights of indigenous peoples.[illegible] In addition, in [illegible], the year that *Ma[illegible]o [illegible]* was decided, the United Nations promulgated the Declaration on the Rights of Persons Belonging to National or Ethnic, Religious and Linguistic Minorities,[illegible] and soon thereafter debate began about a Draft Declaration on the Rights of Indigenous Peoples.[illegible] (Another transnational current can be found in the subsequent proclamation by the Ngaanyatjarra Council [illegible]to an international audience that conservation values exist on their Lands[illegible] and that the Council was developing means to protect natural resources.[illegible])

The *Ma[illegible]o [illegible]* court concluded that indigenous people could hold communal title [illegible]against the whole world to possession, occupation, use and enjoyment of the lands,[illegible] but that state and municipal laws could operate to extinguish title. As a consequence, questions immediately emerged about how to sort out, in a wide variety of circumstances, which Native groups owned what kinds of rights to specific lands.[illegible] In response, in [illegible], the Parliament of the Commonwealth of Australia enacted the Native Title Act (NTA), which created a range of dispute resolution mechanisms that included methods to assist in negotiating settlements for group-based claims.[illegible] On the remedial side, the act also chartered Prescribed Bodies Corporate to manage Native title rights on behalf of the many members within titleholding groups.[illegible]

The Native Title Act created a complex dispute resolution system that bears a familial resemblance to the United Nations Convention on the Law of the Sea (detailed in Chapter [illegible]). Various routes for decisionmaking that emphasize compromise through alternative forms of dispute resolution. The statute chartered a Native National Title Tribunal (NNTT) to function as a research and mediation service rather than as a court of law.[illegible] The NNTT was to carry out its functions [illegible]in a fair, just, economical, informal and prompt way[illegible] rather than be [illegible]bound by technicalities, legal forms or rules of evidence.[illegible] Akin to the Permanent Court of Arbitration (PCA, fig. [illegible]/[illegible]) and the International Tribunal for the Law of the Sea (ITLOS, fig. [illegible]/[illegible]), the NNTT's name implies adjudication-like functions but departs from those traditions. Each of these institutions could be understood as borrowing authority by adopting court-like nomenclature as well as redefining what it means to be a [illegible]court[illegible] or [illegible]tribunal.[illegible]

Like the PCA and ITLOS, the NNTT interacts with formal litigation mechanisms. Australia's Native Title Act authorized the Federal Court of Australia to entertain claims and to make referrals to the NNTT.[illegible] Specifically, the Federal Court could send matters to the Tribunal for conferences (by phone, by closed-circuit television, or in person), and the Tribunal, in turn, was obliged to provide a [illegible]written report[illegible] to the Federal Court.[illegible] Governmental parties were required to negotiate in good faith and, if they failed to do so, the National Native Title Tribunal was authorized (after notice to the recalcitrant participant) to detail such failures in its annual reports.[illegible] Although the legislation did not provide for the automatic enforcement of mediated outcomes,[illegible] within a few years of its enactment, some half-dozen agreements had been reached[illegible] while a host of other cases made their way through the courts.

Yet claimants faced significant challenges. Both the Australian courts and Parliament recognized Native Title rights, but claims required evidence of a historical connection between peoples and particular lands and waters. Proving history[illegible] much of it not preserved in records[illegible] is an enormous practical challenge.[illegible] Atop the difficulties of substantiating particular cases came shifts in the legal regime post–*Ma[illegible]o [illegible]* Some of the High Court of Australia's opinions were read to expand methods by which Native titles were extinguished.[illegible]

Beginning in [illegible], individuals brought land claims related to the Ngaanyatjarra Peoples, which, according to the Ngaanyatjarra Council's website, is [illegible]a[illegible]single social system[illegible] (a [illegible]Western Desert Cultural Bloc[illegible]) that shares a degree of [illegible]cultural homogeneity[illegible] distinctive from some other sets of indigenous peoples.[illegible] The Ngaanyatjarra Peoples had a precarious economic base; they lived in an area with little by way of mining or export industries. Inhabitants relied on agriculture and emu farming, as well as [illegible]an emerging market in bush foods[illegible] some arts and crafts, and tourism.[illegible]

In ⍰⍰⍰⍰, a group of applicants led by Stanley Mervyn, Adrian Young, and Livingston West brought a claim ⍰on behalf of the Peoples of the Ngaanyatjarra Lands.⍰⍰⍰ Their application was filed against several respondents, including the State of Western Australia, the Shire of Laverton, various private entities such as the telecommunications company Telstra and the Western Mining Corporation, and the Commonwealth of Australia.⍰⍰ At issue were the rights of some ⍰⍰,⍰⍰⍰ men and women . . . with their descendants⍰ (the Peoples of the Ngaanyatjarra Lands)⍰⍰ over those thousands of acres of land and waters. This application consolidated several other claims relating to the same area⍰⍰ and resulted in ⍰⍰⍰⍰ in the consent order ceremonialized in figure ⍰⍰⍰.

Commemoratin⍰ Power, Witnessin⍰ Compromise

The photograph in figure ⍰⍰⍰ records the setting in which judgment was entered ⍰on behalf of the Peoples of the Ngaanyatjarrra Lands⍰ Viewers might not intuit that the court was exercising its power under the Native Title Act to enter an order turning the settlement into a judgment ⍰without holding a hearing.⍰⍰⍰ Depicted, instead, is a public proceeding commemorating a private agreement, and hence looks like, but departs from, some court-based practices in which independent jurists render public decisions following the mandate to ⍰hear the other side⍰ Indeed, as the court's brief opinion explained, it was entering the ⍰terms the parties seek.⍰⍰⍰ Through a dozen or so prefatory comments and a nineteen-paragraph statement of reasons, the court explained its role as that of modest overseer. The court praised the parties' agreement for consolidating other claims, for its speed (from filing to disposition ⍰within little more than a year⍰⍰⍰), and for the provision of clear and ⍰unambiguous⍰ terms that the court adopted verbatim.⍰⍰

Further, the court described the propriety of acceding to the negotiated outcome; the parties had ⍰competent legal advice⍰ and no one had suggested that the ⍰agreement was not freely entered into.⍰⍰⍰ More generally, the court took the occasion to repeat from earlier opinions its views on the desirability of settlement itself: ⍰Courts have always encouraged parties to settle their claims amicably. Agreement is especially desirable in native title cases due to the importance, complexity, and sensitivity of the issues involved. Agreement between the parties minimises cost and distress and establishes goodwill between the parties for future dealings.⍰⍰⍰

The proceedings recorded in figure ⍰⍰⍰ are an antidote to the opaque privatization we questioned in Chapter ⍰⍰. The ritual is evidence of an effort to legitimate the settlement not only by making it legally enforceable (through the court order) but by using traditions associated with courts to locate the outcome inside law. The settlement was, of course, an artifact of law in the sense that, but for *Ma⍰o* ⍰⍰ and the Native Title Act, the Peoples of the Ngaanyatjarra Lands would have been hard pressed in Australia to have rights to negotiate. On the other hand, *Ma⍰o* ⍰⍰ had also provoked angry protests from opponents to its precepts, resulting in retreats by the High Court from some of its broader implications.⍰⍰⍰ (One scholar described the newer decisions as generating a ⍰legal fog.⍰⍰⍰) The outcome was thus ⍰bargain⍰ed⍰ in the shadow of the law,⍰⍰⍰ and that law reflected the legal revolution that produced recognition of Native peoples as rightsholders as well as efforts to reassert ownership rights founded in the last two centuries.

We know from one of the participants⍰ Chief Justice Michael Black⍰ that the court took pains to specify the open-air tent as a court of law. The ⍰symbols of justice⍰ were, as Chief Justice Black wrote, ⍰present just as they would be in one of our courtrooms in the capital cities.⍰⍰⍰ The title ⍰Federal Court of Australia⍰ appeared as a ribbon around the cloth that skirted the table behind which the jurist and his staff sat. The Chief Justice, in turn, sat in front of a canvas rendition of the court's symbol⍰ the Coat of Arms of the Commonwealth of Australia, described in Chapter ⍰⍰. The canvas, which traveled with the court for its ⍰⍰on-country' hearings,⍰ was ⍰designed by an aboriginal artist following the Commonwealth's protocol⍰ permitting replication of the coat of arms,⍰⍰⍰ an emblem regulated to preserve its use as an official method of authenticating documents.⍰⍰

Although not easily seen in the photograph, the Australian Coat of Arms includes an emu and a red kangaroo, two animals native to the continent. The animals flank a shield on which appear symbols of the six states of Australia, ⍰enclosed by an ermine border⍰ and adorned at its top by a seven-pointed star to represent the six states plus the territories.⍰⍰⍰ Why the emu and kangaroo are deployed has been a subject of discussion. Sounding somewhat like the explanations in Ripa about why Justice has an ostrich and Temperance an elephant, the Australian government noted that the emu and kangaroo could symbolize ⍰a nation moving forward, reflecting a common belief that neither animal can move backwards easily.⍰⍰⍰ Alternatively, they could be read as signifying the conquest of the continent.

Chief Justice Black was attired in traditional garb, a ceremonial robe made from Australian merino wool, faced in red silk that was divided into ⍰seven equal segments that symbolise the elements of our federation and also equality before the law.⍰⍰⍰ Yet more didacticism was sewn in, for the black robe itself was made of seven segments deliberately ⍰unequal in size, symbolising the diversity of our nation and the circumstance that the elements of different size make for a unified whole.⍰⍰⍰ Layers of colonialism (in addition to those producing the underlying dispute) were reflected in these accoutrements. Australia's coat of arms reflected its status as an English colony. The design, somewhat revised in ⍰⍰⍰⍰, derived from a ⍰Royal Warrant⍰ granted by Edward VII in ⍰⍰⍰⍰.⍰⍰ The judicial garb, in

turn, reflected a reinvention of English traditions by dropping the wigs and importing symbolism into the pattern cut in cloth. The totemistic deployment of these Australian symbols turned the tent into a space in which the justice was authorized to exercise government power.

The photograph of the Federal Court sitting on a tiny piece of the contested lands also has a family relationship to the image of the frontispiece of the Dutch book on civil and criminal procedure. That image, shown initially in Chapter and reprinted as figure , stems from another colonial moment, for it was published during the golden age of Dutch colonial authority. Both the Australian open tent court and the Dutch courtroom are scenes of sociability. Unlike contemporary lonely grand courthouses, these are inhabited spaces, with dogs as well as people milling about, some individuals seemingly attentive to the proceedings and others focused elsewhere. In both scenes, a judge sits at the center, and in both icons mark the court. In the seventeenth-century Dutch scene, Justice with scale and sword stood behind the judge. In twenty-first-century Australia, the viewer is supposed to understand that a table under a tent has become the Federal Court of Australia through the display of the emu and kangaroo on the Australian Coat of Arms. In both instances, the appointments and etiquette aimed to communicate authority to the assembled audience.

And assemble they did in an openness that was literal rather than implied by buildings of glass. The Australian Federal Court convened under a tent, echoing doing justice under a tree as would have Louis IX, and as is reflected in the logo of the South African Constitutional Court. The *Ngaanyatjarra Lands Newsletter* reported that more than people made their way to hear Chief Justice Michael Black read aloud the court's discussion of Australia's largest native title application. Given that the actual population of the entire area was only about seven thousand individuals (of whom , were claimants), the group's size was impressive.

Further, as the court's opinion recounted, the substance of the reasons for judgment was translated simultaneously into the Language of the Peoples of the Ngaanyatjarra Lands. That translation was important. In a report about how to work with the Australian government, the Ngaanyatjarra Council described differences in the way language was used and understood in its culture as contrasted with one based on English traditions. Political theorists have pondered how distinct communities can bridge such gaps, and one can see the exchange portrayed in the photo as an effort to respect the need to find new ways to provide a culturally diverse deliberation. Our reports come from those who speak English; if those reported views were shared by the Ngaanyatjarra Council, the ceremony may also have commemorated the achievement of consensus through deliberation.

What did the settlement entail The court's published opinion, marked for general distribution and hence available on the web, consisted of two parts, a preface and the Reasons for Judgment. The court's order explained that, but for Australia's partial or complete extinguishment of native title over particular areas, the Peoples of the Ngaanyatjarra Lands would have held native title rights and interests conferring the right to possession, occupation, use and enjoyment of the land and waters to the exclusion of all others, save in respect of flowing and subterranean water. The court then reported that it had gained some knowledge (from uncontested statements) about the laws and customs of the Peoples of the Ngaanyatjarra Lands, as well as how their spiritual connection to their Country can be found in the collective belief that the *Tjukurrpa* are responsible for the existence and form of the land itself.

After adopting the parties' settlement, the court concluded its opinion by emphasizing to all present that its order determined under the laws of Australia, that native title exists, as it always has, according to the traditional laws and customs of the Peoples of the Ngaanyatjarra lands, and that the title is held by the Peoples. The court's preface and statement of reasons are brief when compared to the lengthy appendix (a minute of consent determination), composed of various schedules.

There one can get some explanation of what recognizing Native title means. The Ngaanyatjarra Peoples had the right to enter and remain, to take fauna and flora, to take water for personal, domestic, or non-commercial communal purposes, to take other natural resources such as ochre, stones, soils, wood and resin and to care for, maintain and protect various sites. They also had some rights to exclude others. But the Ngaanyatjarra Peoples did not gain title to the potential commercial uses that might develop in whatever waters existed or to various minerals or oil, governed under other Australian legislation. Rather, under Schedule , subleases and exploration rights enabled the state and national governments and specified private companies involved in mining, telecommunications, and air service to have some use of the land and its minerals. For example, the Gibson Desert Nature Reserve was excluded from the accord. And, while settling rights to a vast area of land (percent of mainland Australia), the value of the property appears, as of , to have been relatively low. According to a report on indigenous rights, the remote nature of the region combined with the relatively austere nature of the surrounding environment and the lack of substantive pastoral or mineral-extraction interests made the area of limited economic value, and hence not easily inhabited.

The staging for the public pronouncement of the settlement is an example of an alternative dispute resolution mechanism that, as we called for in Chapter , mitigates the privatization of mediated outcomes. Further, by temporarily seating the court in the Great Victorian Desert, the Australian government underscored that the relevant audi-

Figure [illegible] Engraved title page, *Dutch Law and Practice in Civil and Criminal Matters* (*Practycke der nederlansche rechten van de daghelijcksche soo civile als criminele questien*) by Bernhard van Zutphen, [illegible].

Image courtesy of the Rare Book Collection, Lillian Goldman Law Library, Yale Law School.

ence was constituted not only by those who could travel to the court's regular home bases but also by those for whom such a trip would be arduous. (Recall that Bentham had recommended an Equal Justice Fund that would pay the costs of travel to courts and of lodging.[illegible]) The simultaneous use of two languages when the court announced its approval of the settlement reflected that the agreement was forged between peoples coming from different polities. Moreover, in addition to the ritual based in the tent called the Federal Court of Australia, the participants had the night before shared another ritual on the same spot. As the court's opinion explained, they had all participated in dance and song, performed last night at the place where the court sits today, about the emu and the turkey, who met up at a place called Yankal-Tjungku to the north of here, and continued on.[illegible]

While the spectacle is reminiscent of the court scene from Amsterdam, the colonial regimes had shifted over the three centuries that intervened, as have the demographics of the spectators. The stone figure of Justice was the sole woman present in the Dutch court scene of [illegible]. In contrast, in [illegible], the ruling colonial power traveled to those it had displaced in recognition of their right to that place. The audience included both women and men, of varying social classes and ethnic backgrounds. The agreement was negotiated by the parties rather than decided (as *Mabo* [illegible] had been) by a court. Yet the outcome is hardly an example of

private ordering; it is infused with law from more than one sovereign regime. The law of many countries purported to extinguish native rights. Laws were then changed to enable reassertion. The Chief Justice underscored (literally) that his order did not *grant* native title but recognises what they have long held. Fifteen years earlier, Australian law was otherwise. The open-air tent court could be seen as gesturing toward indigenous sovereignty as well as Australian authority. The tent also captured, in this case, the transient nature of legal regimes and the ability of law to transform its own entailments.

An Icon of Free Legal Services in Minnesota

Our final images come from a county courthouse (figure , color plate) in a small United States town, Grand Marais, that has long served as a county seat in the northern part of Minnesota. The structure replaced a courthouse from that had been a two-story, wood-frame building measuring twenty-four by thirty feet. At that time, Cook County had fewer than , residents, but in the decade that followed some dozen logging camps were set up, swelling the population to more than , raising concerns about law and order as it also added resources for construction.

By , the earlier simple building (augmented by a -square-foot one-story add-on) was seen as obsolete, limited in space, and far too modest an expression of the county's future. Voter-authorized bonds supported the new building. The courthouse had cost , to construct. Its replacement, designed by the Duluth architectural firm of Kelly and Lignell, cost . An additional , was spent for the jail, a one-story structure a few steps away at the back of the courthouse. In , the building continued to serve the , -square-mile county with its population of some , people.

Thousands of miles from Australia, Minnesota is also a colonial mix. Minnesota occupies land to which the Dakota (Sioux) and the Ojibwe (Chippewa) tribes, as well as the Spanish, French, British, and the United States have laid claim, as did Virginia, Indiana, Illinois, Missouri, Michigan, Iowa, and Wisconsin. Initially part of the Northwest Territory of the United States and governed under a congressional ordinance of , Minnesota became the name of a federal territory through the Organic Act of , which detailed boundaries three times the size of the current state. In , shortly before the Civil War, a downsized Minnesota became the thirty-second state.

More Courthouses than Counties

Courts predate Minnesota's statehood, and most of its early court proceedings were, like those of many other places, held in an odd-lot set of buildings a log school house, a tavern, a trading post. Statehood, in turn, built courts into the system; Minnesota's first constitution of devoted several provisions to its justice system. In a familiar pattern, Minnesota established three branches of government, one of which was Judicial, with judges given constitutional assurance that their salaries could not be diminished during their term of office. The original constitution set forth a Supreme Court, an intermediary court (at the legislature's option), and lower courts, as well as probate courts and justices of the peace. Guarantees included jury trials in criminal cases and, on the civil side, for all cases at law without regard to the amount in controversy.

In addition, the Constitution provided that no member of this state could be deprived of any of the rights or privileges secured to any citizen thereof, unless by the law of the land or the judgement of his peers. Further, Every person is entitled to a certain remedy in the laws for all injuries or wrongs which he may receive to his person, property or character, and to obtain justice freely and without purchase, completely and without denial, promptly and without delay, conformable to the laws.

Figure Cook County Courthouse, Grand Marais, Minnesota. Architects: Kelly and Lignell, .

This Remedies Clause has been interpreted to mean that if lawsuits were traditionally available for an alleged wrong, that opportunity could not be precluded without the legislature providing an adequate substitute.

The Cook County Courthouse depicted in figure is illustrative of many others. As soon as counties became sufficiently prosperous, with populations large enough to support the financing and construction, they built courthouses that were often the most imposing structure in the county. The result has been that Minnesota has more courthouses (ninety-some) than counties (eighty-seven), and more than half of the older court buildings, including the Cook County Courthouse, are on the National Register of Historic Places.

Like many constructed between and , Cook County's courthouse is made for longevity from brick and concrete. For authority it relied on a Classic Revival facade, with multi-story Ionic columns supporting a carved cornice. A first-floor porch is sheltered by a second-floor gallery reached only after ascending dozens of steps. The courthouse does not, however, have a Lady Justice despite that figure's status as the favorite of all the statuary figures that adorn Minnesota courthouses. Indeed, an account of Minnesota's courthouses reports that one such Justice, assigned to the tiptop of a building, served inadvertently as a lightning rod (just as the Justice that crowned New York's City Hall had burned from fireworks' sparks celebrating the completion of the Atlantic cable resulting in a rebuilt metal version shown in figure /).

The county courts have served to center many a city, with time kept by the clocks on their towers and with storage for records of births, deaths, marriages, and land conveyances. Many had jails attached or nearby, which made economic sense. In Benthamite terms, local courts were both theatres and schools, aiming to make plain governing norms and punishments for their violations. During the latter part of the nineteenth century, executions were carried out in the jail courtyard during the daylight hours; a crowd of almost two thousand in St. Paul reportedly watched one such event in . Evocative of the WPA murals in Idaho (fig. /) that displayed an Indian about to be hung, in thirty-eight Native Americans were subjected to a simultaneous hanging in one Minnesota county. Some half-century later, in , the state abolished the death penalty.

Some of the court buildings of its vintage have been recycled into office buildings or local museums or have been torn down. Cook County's remains in use, serving multiple functions, as do many government buildings in small towns around the United States. In , aspects of the county courts and the building's stewardship changed hands. Minnesota shifted to a unified court system centrally funded by the state rather than with resources varying by county. As a report of the Judicial Branch explained, the goals were to make courts open, affordable and understandable.

Jacket, Worn

In , we were asked to speak about courthouse architecture at a conference in Minnesota that was convened by the Eighth Circuit, encompassing the federal courts of seven states, including Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota. We drove through Grand Marais, miles north of Duluth, and came upon the building. Drawn to the structure by its own self-importance (a majestic building on a hill) that could have meant it was a courthouse, a bank, or an insurance company, we presented ourselves to a staff person, who in turn introduced himself as a probation officer.

Explaining our interest in courthouses and their iconography, we asked if we might look around. When we inquired about what (if any) icons of justice were displayed, he did not hesitate to bring us to the courtroom (fig.) on the second floor, a modestly proportioned room with a judge's bench, flags, and computers that can be glimpsed in the photograph. The probation officer directed our attention to a wall near the public benches. There hung a memorial plaque (fig.) in tribute to a local lawyer, James A. Sommerness, who had practiced law as a public defender for more than twenty years in Cook County.

In , as a testament to Sommerness's contributions, a memorial service was held for him in the courtroom. A judge presided in what he described to be about as formal a setting as Cook County afforded. The event, transcribed as if a legal proceeding (In the Matter of a Memorial Service Honoring James A. Sommerness, Attorney and Counselor), is not only a testament to Sommerness but also to a courthouse providing a gathering place for diverse segments of the community. The judge reassured the audience that, despite the courthouse's deliberately imposing facade, the local practice was not to be overly formal. Advising the assembled group to feel at home (we certainly don't want anybody to think that they should be intimidated from speaking), the judge noted that Sommerness had probably appeared in this courtroom thousands of times.

Inviting participants to comment, the jurist further opined that to celebrate the work of Sommerness was what in Yiddish is called a Mitzvah, a Mitzvah being a good thing, a thing that we should do as a community. Many people offered details about Sommerness's work. As one judge explained, Sommerness combined being a top notch advocate with professional kindness. What they described reflects the words on the plaque. Sommerness's personal commitment to the human dignity of others, expressed through his work in improving and delivering volunteer legal assistance to the poor. Next to the plaque was a proudly framed corduroy jacket, plainly well worn, shown in figure (color plate). Sommerness had been described as a lawyer steeped in the early common law (familiar with the names of Bracton, Littleton, Coke . . . and Blackstone), but his sartorial attire was far afield

from the formality of English courtroom silks. He wore turtlenecks and the corduroy jacket to court.

This display is the one instance we have located in a courthouse that aims specifically to mark the problem of ⊠legal assistance to the poor⊠ in need of resources in order to seek justice.

Facets of Judgment

What does one learn by looking at the imagery arrayed in this chapter⊠ Why put the Renaissance Virtues of Justice, Prudence, Temperance, and Fortitude next to the Kongo wooden Nail Figure⊠ Or juxtapose barbed wire and cells within South Africa's Constitutional Court, the murals depicting homicide and mayhem in the Mexican Supreme Court, Australia's open-air tent adorned with its coat of arms in the Great Victoria Desert, and a Neoclassical courthouse sitting in the rural Midwest of the United States and housing a corduroy jacket in tribute to a lawyer working for the poor⊠

These images reflect the complex relationship between adjudication and democracy and capture the three interrelated narratives that thread this book. The first is the remarkable durability of the political icons of justice, launched from early Babylonian, Egyptian, Greek, and Roman depictions and brought forward via Medieval and Renaissance iterations to the age of modern democracies. This visual account records the longevity of the practice of adjudication, its trans-temporal and intercontinental dimensions, and offers hints about its many transformations.

Governments have long struggled to gain legitimacy for their judgments by relating them to facts and norms, but neither the imagery nor the practices have been static. During the past five centuries, judges moved from subservience to a posture of independence. Along the way, justice imagery lost markers of the pain and burdens of judging, as well as of the various components of wise judgment. The brutal allegories denoting the freight of judging (for judges, vulnerable to being flayed alive or obliged to send their sons

to death, as well as for those judged) have been replaced by serene renditions of stony women (clear-sighted or presumed properly blindfolded) to denote the distance of judges from those who seek to influence them.

In contrast, images such as those of Prudence, Fortitude, and Temperance, and the Kongo Nail Figure offer glimpses of what a fuller account of the complexity and inevitable violence entailed in legal judgments could produce. The tidy symmetry of the balance accorded Justice and the linearity of a historical progressivity should, along with her lone(ly) figure, give way. The quest for a broader and more nuanced visual diversity derives in part from a recognition of the wider array of "persons" eligible to be part of adjudication, that a shift is reflected in the conflicts we detailed about whether blindfolds are appropriate attributes and what colors, shapes, genders, and narratives should adorn courthouse walls. But the richer visual array is also needed to acknowledge the diversity of skills, literacies, and capacities needed to make judgments. Social ordering through law requires collegial and communal support— hardly hinted at by an icon that has become notable for her singularity.

The buildings of South Africa and Mexico pick up the second strand of this chronicle, in which the courthouse became the icon of government authority, obligations, and constraints. As we have traced, even in eras when rulers had autocratic power, they sought through public performance to demonstrate both the rightfulness of their judgments and authority to enforce them. Yet while adjudication had proto-democratic elements that sometimes constrained the arbitrariness of power, Enlightenment norms changed adjudication by instantiating the role of the independent judge, by moving the public processes from "rites" of spectatorship to obligatory "rights" of access, and finally— and only under twentieth-century democracy— by imagining that "every person" can take any of the roles within a courthouse, from litigant and witness to lawyer and judge. Reflect back on the lively courtroom scene from Amsterdam (fig.) and remember that it included no females, save the depiction of the Virtue Justice. The Australian tent court, in contrast, portrayed some of the variety of persons within democratic adjudication.

But democracy's promise that everyone is an equally entitled rightsholder presents a profound challenge to adjudication, reflected in the images from South Africa, Mexico, Australia, and Minnesota. The revolutionary moments that produced both the South African and the Mexican buildings rejected the tradition of unabashed salutes to state power and aspired, instead, to express legibly the experiences of injury at the hands of the state. In different ways, these buildings replace the authoritarian, patriarchal imagery with a more democratic iconography, inscribing memories of the injustices of "legal" regimes alongside hopes for justice. South Africa's Constitutional Court is self-consciously made from the handiwork of its people and puts the country's multiple languages in various scripts on its front door in an effort to bridge histories of oppression with new constitutional entitlements. Mexico's murals of – go beyond acts of memory to reflect on the fragility of justice systems through disturbing views of the current world. The depictions of homicide, rape, and torture put human faces on contemporary perpetrators, violating the dignity of identifiable victims.

The open-air tent-court in Australia is one response to the widening gap between form and function inside the new grand courthouses. That public ceremony marked a settlement that involved aggregate rights of hundreds of persons, several corporations, and both state and federal governments. The proceeding acknowledged the reconfiguration of adjudicatory practices to take new demands into account. While some adaptations to volume have relied on managerial judges, delegation to agencies, and outsourcing to private providers, as detailed in Chapter , Australia's tent-court opens an alternative vista by placing the disputants and judge before the public to record the accord reached.

This book's third narrative can be seen by comparing the Neoclassical design of the Minnesota county courthouse and Australia's tent. The courthouse in Grand Marais reflects the evolution from the multi-purpose communal meeting places provided by Renaissance town halls to the purpose-built courthouses designed to denote the authority of localities, nation-states, and, more recently, regional groupings and international bodies. Though modest compared with the majestic new courts in the United States and France or transnational institutions such as ITLOS, the Grand Marais court was nonetheless an outsized structure for a small rural county. Such ponderous stone architectural renditions serve as allegories of adjudication's rise and its triumphant expansion and now provide an inadvertent reminder of its fragility.

The showcase courtrooms have grown larger but are often devoid of action, while the dense, high-volume administrative work takes place in less well-appointed and less readily visited spaces. We used two centuries of building projects in the United States to map the construction of imposing marble buildings to house the national postal service and the national courts. But since , more than , post offices have closed in the United States— supplanted by private services and new technologies that prompt questions about the need for public subsidies. Open-access political orders are a modern development, not to be taken for granted. The solidity of stone and the grandeur of glass mask the vulnerability of the institutions of the post, the courts, and the press— all venerable inventions of centuries past that were flourishing just decades ago but whose durability in the twenty-first century is no longer clear.

New buildings continue to offer testaments to the precepts of openness that have come to define institutions as "courts." Yet the preference for conciliation and consent— for contract

□ over regulatory regimes and constitutionalism moves legal resolutions of disputes offstage. This book is filled with pictures of courthouses but provides little by way of a visual account of the decisionmaking undertaken by administrative and private providers. The renditions of the set-up of a hearing room in Guant□namo Bay (fig. □□/□□□) and of a cell phone contract (fig. □□/□□□) are placeholders for the opacity of such activities, lacking □publicity□□ Bentham's preferred mechanism for the oversight of power.

Australia's ceremonies in an open-air tent return courts to the fields that Bentham admired. The photograph of that event not only marks the arrival of women and men of all backgrounds into the circle of adjudication; it also records that, under democratic principles, individuals and groups have rights against the state. The proceeding itself is evidence that settlements need not, inevitably, be private, nor are they divorced from the state. Rather, the government was ubiquitous in the accord□ serving as the source of newly acknowledged but ancient rights, as a party to the settlement, and as the enforcer of the agreements made.

The underlying agreement, like the open-air tent, makes another point□ about the transient nature of sovereign power, once dispossessing and now recognizing its own limits through the pressures of national and transnational social movements. The flexible and removable structure was situated for the convenience of the least-well resourced litigants, just as the well-worn corduroy jacket of a Minnesota public defender could be read as a reference to Bentham's Equal Justice Fund, acknowledging the need to subsidize individuals' pursuit of justice.

The many images adorning this volume do not represent a romantic quest into adjudication's past to identify some halcyon days of its flourishing. Rather, they illuminate past practices and contemporary challenges. Because governments do not have an inexhaustible quantum of political and symbolic capital, they need to find points of contact to regenerate their relationships with the polities of which they are a part. The contemporary world is full of what Jonathan Crary has called a □continuum□ of □attention and distraction,□□□ splintering one's attention in myriad directions. We have dotted this book with images to underscore that the familiar is not necessarily enduring. Courts have a shorter history than some imagine and an uncertain future.

Mixing Bentham and Foucault, we want to reclaim a space for public participation to provide experiences of state power, to undermine the control exerted by both public and private powers, and to enact the interdependent reciprocal relationships among and within communities to recognize that discord and conflict are necessary artifacts of healthy social orders. The performativity within open courts provides an antidote to the Foucauldian concerns about decentralized, polymorphous techniques that mask power. Cauduro's murals instruct that injustice relies on bureaucratic anonymity, with wrongs hidden in file drawers and walls that hide interrogations, torture, and assault. Locating adjudication in the open offers occasions for participatory observers to constitute themselves as part of the governing body and to gain firsthand knowledge of where the state's resources and capacities stop. To develop these facets of adjudication entails significant challenges, of which resources are but an obvious example.

In recent decades, in countries around the world, rulers have built courts as the markers of their identity even as they have expanded their prisons, limited their postal services, and fortified their borders. Yet the uses to which courthouses will be put remain unclear. As we closed the pages of this book, the United States Supreme Court closed its front steps. Rather than being greeted by the words □Equal Justice Under Law□ (fig. □□/□□□), entrants are routed to the side to enter □a secure, reinforced area to screen for weapons, explosives, and chemical and biological hazards.□□□ One can still walk out from the court down the steps, with the words to one's back.

The forms in which governments represent themselves provide windows into their aspirations. Courts□ in democracies□ can be a venue that enables discursive public exchanges through procedures aiming for participatory parity. Our hope is that this volume serves as a reminder that law's institutional forms should be structured to teach members of polities to make claims on justice as well as to seek justice□ so as to have the capacity to contest and to understand what law can and should do.

One prefatory comment to the endnotes is in order. When titles of books, articles, or objects are not in English, we have provided (in the text, captions, and these endnotes) our own translations in parentheses after the first mention of the original title.

Chapter

1 The illustration, by artist Ivan Allen and published July , , forecast the argument of the magazine's commentary that America's plan to set up military commissions for the trials of terrorist suspects is a big mistake . . . wrong illiberal, unjust and likely to be counterproductive, The Economist, under the section Leaders at (hereinafter Commentary, The Economist, July ,). Figure is reproduced with permission of the artist; the headline and the logo are reproduced with permission of The Economist Newspaper Ltd. The conclusion was that the system was the antithesis of the rule of law which the United States was founded to uphold Id. Subsequently, the United States Supreme Court held that the President's procedures violated the due process rights of an American citizen held there and that the planned military trials failed to conform to United States statutory obligations. See *amdi v umsfeld*, U.S. ( ); *amdan v umsfeld*, U.S. ( ). Congress's responses included the Detainee Treatment Act of , Pub. L. No. -, Stat. , the Military Commissions Act of , Pub. L. No. -, Stat. , and the Military Commissions Act of , Pub. L. No. -, Stat. , discussed in Chapter . As of , the question remained about how decisions would be made concerning continuing the detention of some individuals the United States government alleged were terrorists.

The distribution of *The conomist* gives some evidence of the assumption that its cover illustration of a Justice was widely accessible. The magazine began its publication in in London, England; as of , it reported a global circulation of about . million readers, with more than half in North America, some , subscribers in Latin America, , in the Middle East and Africa, and about , in Europe. See Economist, http://www.economist.com, citing circulation figures from the Audit Bureau of Circulation.

2 Figure , *ustitia*, is by a Toronto sculptor, Walter S. Allward, who also sculpted the companion statue *eritas*. The photograph, copyright Supreme Court of Canada, is reproduced with the court's permission. Our thanks to Chief Justice Beverley McLachlin, to the Honorable Rosalie Abella, to former Justices Frank Iacobucci and Claire L'Heureux-Dub, to Registrar Anne Roland, and to the Court's staff for assistance in obtaining the photograph and related materials.

The Supreme Court's building, in front of which the statues stand, was designed by architect Ernest Cormier of Montreal, Canada. The court, initially comprised of six justices, first sat in in a room of the Canadian House of Commons in Ottawa. In , the court moved to its own facility before, in , taking occupancy in its current (and larger) building, set on a bluff above the Ottawa River. That building includes a courtroom for the Federal Court of Canada.

As of , the Canadian Supreme Court numbered nine justices, including three who, by statute, must come from the Province of Quebec. By tradition, another three justices come from the Province of Ontario, two from the Western Provinces, and one from the Atlantic Coast. The Supreme Court hears appeals from both the Federal Court of Appeal and appellate courts in the provinces and receives cases on reference from the government. The court's authority includes both federal and provincial questions of law as well as (since the adoption of the Canadian Charter of Rights and Freedoms) enforcement issues arising under that Charter. Some of its judgments are subject to legislative revision through what is called a notwithstanding clause See The Supreme Court of Canada (Ottawa, Can.: Minister of Supply and Services Canada,) (a monograph distributed by the Canadian government); Lorraine E. Weinrib, *The Supreme Court of Canada in the e of ights Constitutional Democrac The ule of Law and undamental ights under Canada s Constitution*, Canadian Bar Review ( ).

3 The court's website reiterated that point and explained that Themis, daughter of Uranus and Gaia and the second consort of Zeus was . . . a goddess of order and assemblies and that her name now means law in Greek. This statue, unveiled in , was made by Maria I. Papaconstantinou of Greece and presented by Brisbane businessman Angelo Efstathis This courthouse includes both trial and appellate level courts for Queensland, of which Brisbane is the capital. See *out the Courts Tour of the Bris ane Courts Comple*, Supreme Court of Queensland, http://www.courts.qld.gov.au/about/complex.htm. Our thanks to Chief Justice Paul de Jersey and to former Justice Geoffrey Davies of that Court, who provided the photograph in figure and permitted its reproduction.

4 Figure is a photograph by Ken Irwin of an aluminum *Lad of Justice* that hangs above the front entrance of the Victoria County Court. The figure, an impressive metres in height, was created in by William Eicholtz. The Victoria County Court, housed in a building designed by Daryl Jackson of SKM Lyons Architects, is an intermediate trial court with both civil and criminal jurisdiction. See County Court of Victoria, http://www.countycourt.vic.gov.au. Our thanks to Chief Judge Michael Rozenes of the County Court of Victoria for his assistance in obtaining permission to reproduce the

image and assisting us in gathering more information about it, and to the Challenger Financial Services Group and the Liberty Group and the sculptor, William Eicholtz, for permitting reproduction of this figure.

5 See Court Art Walk at http://www.victorialawfoundation.org.au.

6 Figure ⍰, *Lad⍰ Justice*, erected during the presidency of Dr. Kenneth Kaunda, marks the entrance to the High Court of Zambia in Lusaka. The photograph was provided by and is reproduced with the permission of Elizabeth Brundige, the photographer. The ⍰High Court for the Republic⍰ has the authority, under the Constitution of Zambia Act of ⍰⍰⍰⍰, as amended in ⍰⍰⍰⍰, to ⍰hear and determine any civil or criminal proceeding⍰ assigned to it. See The Zambia Legal Information Institute, http://www.unza.zm/zamlii/const/⍰⍰⍰⍰/partvi.htm.

7 Justice I. C. Mambilima, quoted with permission. Email from Elizabeth Brundige to Judith Resnik (June ⍰⍰, ⍰⍰⍰⍰).

8 Our thanks to Elizabeth Brundige who gave us the cloth shown in figure ⍰, about which she learned while working with the International Association of Women Judges, and to Justice Mambilima of the Zambia Association of Women Judges for allowing Yale University Press to make a facsimile of the material.

9 The Constitutional Court of Azerbaijan came into being in July of ⍰⍰⍰⍰, three years after that country adopted a new constitution that, in Article ⍰⍰⍰, provided for the court. Nine justices have authority over constitutional questions and⍰ upon request from the Parliament, the President, or other officials⍰ authority to review legislation. See The Constitutional Court of Azerbaijan Republic, http://www.constcourt.gov.az/en/. In ⍰⍰⍰⍰, the Constitutional Court was admitted to associate membership in the Conference of European Constitutional Courts, an organization created to share information on the development of constitutional jurisprudence. Since then, the court has obtained full membership. According to the Supreme Court of Azerbaijan's Press Service, its courts, like the country more generally, have had significant challenges in realizing ⍰the principles declared by the Constitution⍰ and reorganization efforts took place in ⍰⍰⍰⍰. See Supreme Court of Azerbaijan Republic, http://www.supremecourt.gov.az/⍰mod⍰⍰ c⍰⍰ lang⍰en. Under Article ⍰ of Azerbaijan's Courts and Judges Act, adopted in June of ⍰⍰⍰⍰, courts are to display ⍰symbols of judicial power⍰ which include the state flag, the state stamp, and the ⍰official emblem of justice⍰; judges are to be in ⍰mantle⍰ See Republic of Azerbaijan, Courts and Judges Act ⍰⍰⍰⍰, http://www.justice.gov.az/eng⍰⍰⍰.html.

Despite its constitutional provisions, a profile on Azerbaijan reported that its ⍰judicial system is plagued by a vast number of problems, among them profound levels of corruption, lack of infrastructure, and inadequate administrative capacity⍰ Further, the ⍰executive branch of government exercises significant influence on judicial decision making, thereby seriously compromising the integrity and independence of the legal system⍰ Christopher Walker, ⍰⍰*er⍰ai⍰⍰n*, in Countries at the Crossroads: A Survey of Democratic Governance ⍰–⍰ (Sarah Repucci ⍰ Christopher Walker, eds., Washington DC: Freedom House, ⍰⍰⍰⍰). Freedom House, founded in ⍰⍰⍰⍰ with the participation of Eleanor Roosevelt, began to provide annual reports on political and civil rights in ⍰⍰⍰⍰. See Freedom House, http://www.freedomhouse.org/template.cfm⍰page⍰⍰⍰.

Our thanks to Rauf Guliyev, Head of the International Relations Department of the Constitutional Court of the Azerbaijan Republic, for providing us with the photograph of *Themis* in figure ⍰ and for assisting us in obtaining permission to reproduce it. We first located a copy of the calendar reproduced in figure ⍰ through the archives of the Office of the Curator of the United States Supreme Court, which mounted an exhibit, ⍰High Courts around the World⍰ between ⍰⍰⍰⍰ and ⍰⍰⍰⍰. Our thanks to Associate Justice Ruth Bader Ginsburg of the United States Supreme Court and to Associate Curator Matthew D. Hofstedt of that Court, both of whom facilitated our research into that office's archives. The ⍰⍰⍰⍰ Calendar shown in figure ⍰ is reproduced with permission of Toghrul Musayev, the Azerbaijan Republic Deputy Minister of Justice.

10 Figure ⍰ is a photograph of a statue by sculptor Alfredo Ceschiatti that was installed in ⍰⍰⍰⍰; made of granite, *Justice* measures about ⍰⍰ feet by ⍰.⍰ feet (⍰.⍰⍰ meters by ⍰.⍰⍰ meters). Our thanks to Director Jarbas Silva Marques of the Office of Historic and Artistic Patrimony of Brazil (Diretoria de Patrim⍰nio Hist⍰rico e Art⍰stico–DePHA), who provided us with the image to reproduce. The photograph in figure ⍰ is reproduced with permission of the Directoria de Patrim⍰nio Hist⍰rico e Art⍰stico–DePHA.

The statue sits in front of the Supreme Federal Tribunal, part of Brasilia's governmental complex, in one of several buildings by Oscar Niemeyer. One commentator described Niemeyer's work as ⍰an architecture that celebrates curved and sensual forms⍰ by wrapping an ⍰International Style box with a series of elegant curving supports that gave the building a feeling of ethereal grace. The palaces of Brasilia recall the prototype of the Greco-Roman temple⍰ See David Underwood, Oscar Niemeyer and Brazilian Free-Form Modernism ⍰⍰, ⍰⍰, and figure ⍰⍰ (New York, NY: George Braziller, ⍰⍰⍰⍰). Niemeyer was quoted as describing the buildings to be ⍰a richness of forms, dreams, and poetry . . . startling visitors by their lightness and creative liberty . . . ⍰and⍰ that would lift the visitor, if only for a few brief instants, above the difficult and at times overwhelming problems which life poses for all of us⍰ Id. at ⍰⍰. See also Norma Everson, Two Brazilian Capitals: Architecture and Urbanism in Rio de Janeiro and Brasilia ⍰⍰⍰ (New Haven, CT: Yale U. Press, ⍰⍰⍰⍰).

The complex of which the Supreme Court is a part was built in ⍰⍰⍰⍰. The development of Brasilia included a triangle of government buildings by Niemeyer, each to represent one of the three branches of government. Two office buildings, with more than two dozen floors, provide space for government workers. See David E. Snyder, ⍰*lternate Perspectives on Brasilia*, ⍰⍰ Economic Geography ⍰⍰ (⍰⍰⍰⍰); Celina Borges Lemos ⍰ Elizabeth A. Jackson, *The Modern⍰ation of Brasilian ⍰ r⍰an Space as a Political S⍰m⍰ol of the ⍰epu⍰lic*, ⍰⍰ J. of Decorative and Propaganda Arts ⍰⍰⍰ (⍰⍰⍰⍰); James Holston, Modernist City: An Anthropological Critique of Brasilia (Chicago, IL: U. of Chicago Press, ⍰⍰⍰⍰). Niemeyer went into exile after the coup of ⍰⍰⍰⍰; in the ⍰⍰⍰⍰s, he returned to Brazil, where, as of ⍰⍰⍰⍰, he continued to live and work.

11 The sculpture in figure ⍰⍰, by Katsuzou Entsuba, is in the ⍰⍰⍰⍰ Supreme Court building by Shin'ichi Okada, who was chosen after a competition to head the design collaborative. Our thanks to Liaison Officer Ikeda Takashi, Secretary Division, General Secretariat of the Supreme Court of Japan, and to Professor Mark Ramseyer for their help in obtaining the photographs in figures ⍰⍰ and ⍰⍰, which are reproduced with permission of the Supreme Court and the Financial Bureau, General Secretariat, Supreme Court of Japan.

Andrea Leers, also an architect of courthouses, described the building as seeking to ⍰express civic symbolism and monumentality in the language of modernism⍰; Entsuba took inspiration from both ⍰Japanese and Western architectural traditions⍰ Andrea P. Leers, *Japan⍰ Palace of Justice*, ⍰⍰ The Japan Architect ⍰⍰ (⍰⍰⍰⍰). The Supreme Court, the highest court, sits in the Chiyoda Ward of Tokyo. Included within is a courtroom with a grand bench for all fifteen justices. See Court Systems of Japan, The Supreme Court of Japan (a publication of the General Secretariat, Supreme Court of Japan, Tokyo, Japan, ⍰⍰⍰⍰). Inside the court's Grand Reading Room are three murals that, according to the court's building guide, have scenes related to the Crown Prince Shotoku ⍰who lived about ⍰,⍰⍰⍰ years ago.⍰⍰Wisdom,⍰⍰Benevolence⍰ and ⍰Courage⍰ are symbolized through events in his life.

Professor Ramseyer, a legal scholar of Japan, suggested to us that this *Justice* is reminiscent of Kannon (or Kwannon) figures. Some

Kannon figures, like this *Justice,* are shown with flowing robes, jewelry, a crown or halo, and a sword. See Masterpieces of Japanese Sculpture [illegible]–[illegible] (J. Edward Kidder Jr., ed., Tokyo, Japan, [illegible] Rutland, VT: Tsu Shuppan-sha [illegible] Charles E. Tuttle, [illegible]). Coming in many forms, Kannon figures represent souls who, having reached enlightenment, remain behind to help others still on earth. Kannon means [illegible]to watch attentively or to heed the sounds' of the prayers of the world. The compassionate Kannon acts to free all sentient beings from their sufferings[illegible]See Yoshiko K. Dykstra, *Tales of the Compassionate* [illegible]*annon*[illegible]*The* [illegible]*asedera* [illegible]*annon* [illegible]*enki*, [illegible] Monumenta Nipponica [illegible] ([illegible]). This tradition dates back to at least the introduction of Buddhism in Japan during the sixth century.

12 New York Times, April [illegible], [illegible], at A[illegible]. Figure [illegible] is reproduced with permission of the New York Times Agency. The article by Bernard Weinraub described a meeting in a [illegible]marble government building resembling an oversize mausoleum near downtown Baghdad[illegible]where an American army lawyer discussed with an Iraqi lawyer the rebuilding of the nation's legal system. Recounted were brutal aspects of the justice system under Mr. Hussein. One Iraqi reported the frequent payment of bribes to clerks and judges. Id. The article does not specify the street from which the mural could be seen. According to the photographer Ozier Muhammad (interviewed by telephone in November [illegible]), the picture in figure [illegible] was transmitted to the *New* [illegible]*ork Times* during the week of April [illegible], [illegible]. He took the picture in the central business district of Baghdad soon after the United States military gained control of the city. Many such large, glorifying pictures of Hussein were visible from Baghdad's streets at that time; this photo was the only one the photographer saw of Hussein holding scales.

13 As Professor Fedwa Malti-Douglas pointed out to us, both the creation of monumental images of rulers and the destruction of such objects have long histories, with exemplars still visible to those who visit archaeological sites in Egypt. She translated the legible graffiti as including [illegible]the traitor to Islam,[illegible]no Saddam after today,[illegible]down with Saddam,[illegible] something illegible followed by [illegible]no Shia,[illegible] [illegible]yes to Islamic unity[illegible] and [illegible]no Saddam (after today)[illegible] Letter to the authors (Dec. [illegible], [illegible]). One cannot see from the photograph what, if anything, had been in the pans of the scales.

14 Verrio's [illegible]*ueen* [illegible]*nne as Justice*, Hampton Court Palace, is discussed in Chapter [illegible].

15 Matthew Bender [illegible] Co. Inc., the vendor that allowed us to reproduce the photograph shown in figure [illegible], the statue on the New York City Hall, had used it on the cover of a catalogue in [illegible]; Matthew Bender claims no copyright as to any part of the original photographic or architectural works depicted.

The Municipal Building, dating from [illegible]–[illegible], was designed by John McComb Jr. and Joseph Francois Mangin. The original sculpture was a [illegible]mass-produced[illegible] object made by William H. Mullins's studio and commissioned by the building's architects. According to New York's City Hall records, the sculpture cost [illegible]. [illegible]That figure, depicted without a blindfold, was the work of John Dixey, a sculptor trained in London, who received [illegible] for his work[illegible] See City Hall Roof Restoration Project, Office of the Mayor, http://www.ci.nyc.ny.us/html/om/html/cityhall.html. The drawings for the statue are in the archives of the New York Historical Society. Dixey also sculpted *Justice* for Albany's State House.

The first *Justice* burned in August of [illegible] in a blaze set off by fireworks celebrating the laying of the Atlantic cable. The *New* [illegible]*ork Times* reported that *Justice* stood [illegible]surrounded and wrapt like a martyr in flames. The balances a minute after whirled around and fell. Then she glowed as if made of iron, and . . . fell with a crash through the tower[illegible] Account of the burning of City Hall, Aug. [illegible], [illegible], quoted in Isaac Newton Phelps Stokes, The Iconography of Manhattan Island, [illegible]–[illegible], vol. [illegible] at [illegible] (Clark, NJ: Law Book Exchange, [illegible]) (hereinafter Stokes, The Iconography of Manhattan Island). That [illegible] book republished volumes originally published by R. H. Dodd from [illegible]–[illegible]. A second wooden statue was then erected. Again commentary is available from the *New* [illegible]*ork Times*, which described the [illegible]figured Goddess, in robes of shining white, . . . [illegible]who[illegible] invites those who seek her aid to the temple on which she stands[illegible] Based on its negative appraisal of some of the city's leaders, the *New* [illegible]*ork Times* argued that Mercury, [illegible]the god of thieves[illegible] would be a better image for Manhattan. *Cit*[illegible] [illegible]*ntelli*[illegible]*ence*, New York Times, May [illegible], [illegible] (also quoted by Stokes, vol. [illegible] at [illegible]).

The [illegible] version of *Justice* was later replaced by a copper *Justice* weighing about [illegible] pounds. Photographs at the New York Historical Society indicate that, at least through [illegible], she had a flagpole in her left arm. See Stokes, vol. [illegible] at [illegible]–[illegible]. In [illegible], as part of a [illegible] million roof repair project, the statue was restored and equipped with internal stainless steel and a cleaned, dent-removed exterior. See *Ma*[illegible]*or* [illegible]*iuliani* [illegible]*ededicates the Statue of Justice and Cele*[illegible]*rates the* [illegible]*estoration of Cit*[illegible] [illegible]*all*, Press Release No. [illegible]-[illegible] (Oct. [illegible], [illegible]), Archives of the Mayor's Press Releases, at New York City, http://www.ci.nyc.ny.us/html/om/html/[illegible]b/pr[illegible]-[illegible].html. The New York skyline also has a [illegible]Civic Virtue[illegible] on top of a tower of the Municipal Building, and, of course, the harbor is marked by the Statue of Liberty. See generally Nancy Fox, Liberties with Liberty: The Fascinating History of America's Proudest Symbol (New York, NY: E. P. Dutton, [illegible]); Marvin Trachtenberg, *The Statue of Li*[illegible]*ert*[illegible]*Transparent Banalit*[illegible] *or* [illegible]*vant*[illegible] *arde Conundrum*[illegible], [illegible] Art in America [illegible] (May/June [illegible]).

The gesture of putting a Justice on top of a building, and more specifically on a courthouse, was common in the United States as well as in Europe. See, for example, Court House: A Photographic Document plate [illegible] (Richard Pare, ed., New York, NY: Horizon Press, [illegible]) (Pitkin County Court House, Aspen, Colorado, [illegible]–[illegible]); see also id. at plate [illegible] (Monterey County Court House, Monterey, California, [illegible]–[illegible]); id. at plate [illegible] (Merced County Court House, Merced, California, [illegible]–[illegible]); id. at plate [illegible] (Belmont County Court House, Saint Clairsville, Ohio, [illegible]–[illegible]); id. at plate [illegible] (Stained Glass Window, Courtroom in La Porte Court House, Indiana, [illegible]–[illegible]).

16 The quoted excerpt comes from a once-popular satiric epic poem, [illegible]*ann*[illegible], by Fitz-Greene Halleck. One biographer described the story as about [illegible]the rapid rise into society of a poor merchant and his daughter, Fanny[illegible] The many stanzas gave Halleck the means to comment on the [illegible]follies of the *nouveau riche*[illegible] and on local politics and literature. See Nelson Frederick Adkins, Fitz-Greene Halleck: An Early Knickerbocker Wit and Poet [illegible] (New Haven, CT: Yale U. Press, [illegible]). Praised during his time, Halleck was later relegated to obscurity. See John W. M. Hallock, The American Byron: Homosexuality and the Fall of Fitz-Greene Halleck [illegible], [illegible] (Madison, WI: U. of Wisconsin Press, [illegible]). The verse from [illegible]*ann*[illegible] is cited in William Loring Andrews, The Journey of Iconophiles around New York in Search of the Historical and Picturesque [illegible]–[illegible] (New York, NY: Gilliss Press, [illegible]). The original of that [illegible]-stanza poem of [illegible] can be found as part of a volume that bears the title of both [illegible]*rthur Sin*[illegible]*leton,* [illegible]*s*[illegible] *Letters from the South and West* (Boston, MA: Richardson [illegible] Lord, [illegible]) and of [illegible]*ann*[illegible] (New York, NY: G. Wiley, [illegible]). An [illegible] travel guide to New York also mentioned New York City Hall's *Justice,* describing the statue as a [illegible]colossal figure[illegible] See Edmund M. Blunt, Blunt's Stranger's Guide to the City of New York [illegible]–[illegible] (New York, NY: printed and published by Edmund M. Blunt, [illegible]). Blunt noted that this Justice was clear-eyed and not wearing a blindfold [illegible]as she is represented in Europe[illegible] Id. In [illegible], the City's Common Council authorized repairs, including replacing the steelyard (a kind of scales that did not have symmetrical pans) with a set of scales that had two pans. See Stokes, The Iconography of Manhattan Island, vol. [illegible] at [illegible].

17 During the summer of [illegible], the artists Jim and Judy Brooks did a series of sculptures called *Lookin*[illegible] *for Luc*[illegible] as a public arts sum-

mer event sponsored by the Capital City Partnership and the City of St. Paul, Minnesota. That year was the third in which the city had paid tribute to cartoonist Charles Schulz. *Lad* *Justice Luc* was statue number out of Lucy statues on the city's Looking for Lucy map for the summer of . In , Snoopy statues by local artists were on display. In , Charlie Brown statues were erected. The project, Linus Blankets Saint Paul, included Linus images. Our thanks to William Mitchell College of Law for providing us with the photograph in figure and permission to reproduce it.

18 A fifty-year survey including Justice cartoons used during the nineteenth century is provided by Michael Handler's *Tennie* *lle* *orical Cartoons*, in The Telling Image: Explorations in the Emblem –(Ayers L. Bagley, Edward M. Griffin, Austin J. McLean, eds., New York, NY: AMS Press,).

19 Facts Forum News at (Sept.). That month's cover ran as its headline Supreme Court Under Fire and included a picture of Congressman Frances E. Walter, then chair of the House Committee on Un-American Activities. The cartoon (fig.), signed by Emerson, illustrated the story, also titled The Supreme Court Under Fire which began by noting that Justices of the United States Supreme Court have been accused of amending the Constitution rather than interpreting it, substantiating their decisions by citing sociologists and psychologists Id. at . The critical reference was the landmark decision of *Brown v. Board of Education*, U.S. , n. (), finding segregated schools unconstitutional. In that decision the Supreme Court had in a footnote mentioned two experts, Kenneth B. Clark, a psychologist who had attested to the injury to self-esteem imposed by schools segregated by race, and Gunnar Myrdal, a Swedish economist who had written the book *The American Dilemma*. According to *facts Forum News*, the Court gave evidence of its usurpation of state rights through reliance on someone like K.B. Clark, a Negro so-called social science expert employed by the principal plaintiff in the segregation cases, the NAACP and Myrdal, who was associated with Communist and Communist-front organizations Id. at .

This article, accompanied by a photograph of Earl Warren, noted that while Senators James O. Eastland and Joseph McCarthy had not accused h Chief Justice Earl Warren of being a Communist, his expressed judicial opinions have certainly followed the Communist line.' Id. at . Further, the article invoked Senator Sam Erwin Jr., who had previously been quoted as commenting that the lettering on the Court, Equal Justice Under Law ought to be replaced by Not justice under law, but justice according to the personal notions of the temporary occupants of this building This quote comes from a column by Holmes Alexander published in the *Manchester Union Leader*, a New Hampshire newspaper, on June , , at page .

facts Forum News, funded by Haroldson Lafayette Hunt from Dallas, Texas, existed for five years (–); it was a monthly publication with a circulation of about , . The *Forum* described itself as nonpartisan, supporting no political candidate or party and also explained that it was unalterably opposed to the Communist conspiracy, and uses every means within its power to keep the American people aware of the dangers of communism See, for example, the contents of the September issue at . When *facts Forum News* closed, *Time* magazine described that publication as one of the biggest private political-propaganda machines in the U.S. supportive of McCarthyism as it aimed to provide an antidote to the socialism attributed to both Democrats and those Republicans to whom Mr. Hunt objected. Mr. Hunt also funded radio and television weekly shows, polls, and letter-writers to newspapers. See *The Press* *facts* *Forum* *facts*, Time, Jan. , , at –. Our thanks to Yale Law School Reference Librarian Camilla Tubbs and to the Rare Book and Manuscript Library of Columbia University for locating a copy and enabling the reproduction in figure .

20 *lternative to oe vs Wade*, Los Angeles Times, Nov. , , at II . The case *oe v. Wade*, U.S. () serves in the United States as shorthand for women's rights to have abortions. The Supreme Court there concluded that, at least during certain phases of a pregnancy, the Constitution prohibited states from making abortions illegal but permitted some forms of regulation. Opposition to that ruling prompted protests, as well as many efforts to have the Supreme Court reverse its position. On November , , the Solicitor General of the United States submitted a brief to the Supreme Court on behalf of the Reagan Administration and argued that a then-pending case (*Webster v. Reproductive Health Services*, U.S. ()), about the legality of Missouri restrictions on abortion rights, would be an appropriate opportunity to reconsider *oe*, were the Court prepared to do so See Associated Press, *rges Justices reconsider ortion ulin*, Los Angeles Times, Nov. , , pt. at . See also Tamar Lewin, *ortion oes See Momentum for Their Drive*, New York Times, Nov. , , at B. The following summer, in , the Supreme Court held that aspects of the Missouri law were permissible, including that the state could prohibit the use of public facilities to perform abortions that were not lifesaving for the mother. See *Webster v. Reproductive Health Services*, U.S. () The cartoon in figure is published with the permission of the Tribune Media Services and was given to us by the cartoonist, Paul Conrad.

21 The accompanying article, A Trial for Chinese Justice by Karby Leggett, ran in the *Wall Street Journal* on May , , at A. The focus was on the conviction of Jude Shao, a naturalized United States citizen convicted of tax fraud in China, whose case was reviewed by a panel of six prominent Chinese legal scholars; they determined that his conviction was deeply flawed and recommended that he be retried. Id. The cartoon in figure was provided and the reproduction is licensed by Ray Bartkus, the artist.

22 Cornelis Matsys, the son of the artist Quentin Matsys, was born in , lived in Antwerp, and worked there and in England, Germany, and Italy. He was a landscape painter who became a graphic artist. He used three monograms, COR.MET, CME and CMA on prints. His name was also spelled Massys and Metsys. See Jan Van der Stock, Cornelis Matsys, –: Oeuvre Graphique (Eugène Rouir, trans., Brussels, Belg.: Bibliothèque Royale Albert ier,). This print, signed CMA, explained at page , is Cat. no. . The image is also catalogued at Adam Bartsch, Le Peintre Graveur (The Painter-Engraver) no. , (Leipzig, Ger.: Imprimerie de C. V. Vollrath,) (reprinted as a Nouvelle Édition, Hildesheim, Georg Olms,). Figures – were provided to us by the Warburg Institute, University of London, which authorized their reproduction. Special thanks are due to Jennifer Montagu and to Elizabeth McGrath of the Warburg Institute, who gave us expert and tireless guidance on Renaissance iconography.

23 In addition to the Warburg Photo Archive Collection, the Victoria and Albert Museum (London, England) also has an archive of Virtue and Vice prints.

24 This print is catalogued in Matsys's *euvre raphique* at no. and explained at to be after a sketch by Raphael. The print, signed COR.MET, also appears in Adam Bartsch, Le Peintre Graveur (The Painter-Engraver) (COR.MET, B.), reprinted in The Illustrated Bartsch (formerly vol. , pt.) (Jane S. Peters, ed., New York, NY: Abaris Books,).

25 See generally Adolf Katzenellenbogen, Allegories of Virtues and Vices in Medieval Art –(Alan J. P. Crick, trans., New York, NY: W. W. Norton,) (reprint of a monograph published by the Warburg Institute).

26 Multiple narratives of transmission of these ideas are plausible, with regional variation and the blurring of characteristics attributed to the Virtues. See Helen F. North, From Myth to Icon: Reflections on Greek Ethical Doctrine in Literature and Art –

□□□ (Ithaca, NY: Cornell U. Press, □□□□). Many, however, trace the origins of the Cardinal Virtues as a set to Plato's □*epu□lic* IV □□□ and to Cicero's *De natura deorum* (*The Nature of the □ods*) III xv and *De o□ ciis* (□*n Duties or □n □□li□ations*) I xliii f. See, for example, Jennifer O'Reilly, Studies in the Iconography of the Virtues and Vices in the Middle Ages □□□ (New York, NY: Garland Publishing, □□□□) (quoting Bloomfield).

The line from Plato's □*epu□lic* (dated around □□□ BCE) from which the Cardinal Four are said to emerge calls for both cities and persons to be □wise, brave, moderate, and just□ See Plato, The Republic iv, □□□e. at □□ (G. M. A. Grube, trans., Indianapolis, IN: Hackett Publishing, □□□□). Cicero, *De natura deorum*, is generally dated around □□ BCE. See Cicero in Twenty-Eight Volumes, XIX De natura deorum academica, with an English Translation by Harris Rackham xiii, xviii (Cambridge, MA: Harvard U. Press, □□□□). That translation (at □□□–□□□) provides these verses from *De natura deorum*:

> XV. But what can we make of a god not endowed with any virtue□ Well, are we to assign to god prudence, which consists in the knowledge of things good, things evil, and things neither good nor evil□ to a being who experiences and can experience nothing evil, what need is there of the power to choose between things good and evil□ Or of reason, or of intelligence□ these faculties we employ for the purpose of proceeding from the known to the obscure; but nothing can be obscure to god. Then justice, which assigns to each his own□ what has this to do with gods□ justice, as you tell us, is the offspring of human society and of the commonwealth of man. And temperance consists in forgoing bodily pleasures; so if there is room for temperance in heaven, there is also room for pleasure. As for courage, how can god be conceived as brave□ in enduring pain□ or toil□ or danger□ to none of these is god liable. God then is neither rational nor possessed of any of the virtues: but such a god is inconceivable□

In *De o□ ciis*, according to a translation by Walter Miller, Cicero also gave an overview of virtues:

> XLIII. Now, I think I have explained fully enough how moral duties are derived from the four divisions of moral rectitude. But between those very actions which are morally right, a conflict and comparison may frequently arise, as to which of two moral actions is morally better. . . . For, since all moral rectitude springs from four sources (one of which is prudence; the second, social instinct; the third, courage; the fourth, temperance) it is often necessary in deciding a question of duty that these virtues be weighed against one another.
>
> . . . □T□he foremost of all virtues is wisdom . . . for by prudence . . . we understand something else, namely, the practical knowledge of things to be sought for and of things to be avoided. . . . □T□hat wisdom which I have given the foremost place is the knowledge of things human and divine, which is concerned also with the bonds of union between gods and men and the relations of man to man. (Cicero, De officiis, with an English Translation by Walter Miller □□□–□□□ □London, Eng.: William Heinemann, New York, NY: Putnam, □□□□□)

A set of four virtues are also discussed in other passages of *De o□ ciis*. For example, bk. I at □ reads:

> □A□ll that is morally right arises from some one of four sources; it is concerned either (□) with the full perception and intelligent development of the true; or (□) with the conservation of organized society, with rendering to every man his due, and with the faithful discharge of obligations assumed; or (□) with the greatness and strength of a noble and invincible spirit; or (□) with the orderliness and moderation of everything that is said and done, wherein consist temperance and self-control□ (Id. at □□.)

As the art historian Emile M□le explained, Platonic virtues became a part of Christian thought during the fourth century via the work of St. Ambrose. St. Ambrose drew analogies between four virtues and the □four ages of man□ Prudence was linked to a first stage that ranged from the biblical figures of Abel to Noah, Chastity to the interval from Abraham to Jacob, Fortitude to the time of Moses to the Prophets, and Justice to the fourth era, which began with Jesus. M□le then traced discussions of the Cardinal Virtues that moved from St. Ambrose to Isidor of Seville, Rabanus Maurus, Peter Lombard, and Thomas Aquinas and into many works of art. See Emile M□le, The Gothic Image: Religious Art in France of the Thirteenth Century □□□, n. □ (Dora Nussey, trans., New York, NY: Harper, □□□□) (reprint of a □□□□ volume).

The term *cardinal* derives from the Latin *cardo*, referring to the □earth's poles□ in a □cosmological□ sense. See R. Edward Houser, *The □irtue of Coura□e* (IIa, IIae, qq. □□□–□□□), in The Ethics of Aquinas □□□–□□□ (Stephen J. Pope, ed., Washington, DC: Georgetown U. Press, □□□□) (hereinafter The Ethics of Aquinas). Houser discussed Ambrose's funeral oration for his brother, structured around the □four Platonic virtues□ which Ambrose called cardinal to invest □his brother's life with cosmic significance□ According to Selma Pfeiffenberger, St. Ambrose □was the first to term the □Moral Virtues' □Cardinal.'□ Selma Pfeiffenberger, The Iconology of Giotto's Virtues and Vices at Padua, ch. □, pt. □, at □ (Ph.D. dissertation, Department of Fine Arts, Bryn Mawr College, Philadelphia, PA, □□□□; UMI Publication No.: AAT□□□□□□□). During the thirteenth century, the writings of St. Thomas Aquinas provided another source by bringing Aristotelian virtues into Christian theology. See Thomas Aquinas, Summa Theologica (Dominican Fathers, trans., New York, NY: Benzinger, □□□□) □□□–□□□ (*Treatise on □a□its*); id. at □□□□–□□□□ (*Treatise on □aith, □ope, and Charit□*); and the analyses provided in the compendium The Ethics of Aquinas.

Art historians also cite another thirteenth-century source, the *Somme le roi* (often translated as *The Book of □ices and □irtues* and literally □*Summation for the □in*□□). The various editions of these vernacular compendia set forth similar elements of the Christian faith, emphasized the Virtues and Vices, and provided variations on the iconographical portrayals of them. See Rosemond Tuve, *Notes on the □irtues and □ices □pts*□□ □□, □□ J. Warburg □ Courtauld Inst. □□□ (□□□□), □□ J. Warburg □ Courtauld Inst. □□ (□□□□); Rosemond Tuve, Allegorical Imagery: Some Mediaeval Books and Their Posterity □□–□□□ (Princeton, NJ: Princeton U. Press, □□□□) (drawn in part from the Warburg essays) (hereinafter Tuve, Allegorical Imagery). According to Tuve's book (at □□), the *Somme le roi* was the □largest single category of mediaeval works through which conceptions of what was included in the subject □the virtues' and the demands they made in terms of human action, filtered down to the completely unlearned, lodging definitions and lists and images in people's minds □as a□ part of the common intellectual apparatus.□

The tomes originated as a □□□□ compilation for Philip III (the □roi□□ king□ referenced in the title). These volumes served as confessional manuals that mixed Christian symbolism with □one large image, that of the Christian Knight□ Id. at □□. See also Ellen Kosmer,

A Study of the Style and Iconography of a Thirteenth-Century ⍰Somme le Roi⍰ Introduction, at ⍰–⍰ (Ph.D. dissertation, Department of Fine Arts, Yale University, New Haven, CT, ⍰⍰⍰⍰; UMI Publication No.: ATT ⍰⍰⍰⍰⍰⍰⍰); Ellen Kosmer, ⍰*ardens of* ⍰*irtue in the Middle* ⍰⍰*es*, ⍰⍰ J. Warburg ⍰ Courtauld Inst. ⍰⍰⍰ (⍰⍰⍰⍰); Katzenellenbogen at ⍰⍰–⍰⍰. According to Kosmer, the ⍰virtue-garden scarcely exists in art before the *Somme le roi*,⍰ whose text likened good men to beautiful gardens, with God the Father as gardener, Christ as the sun, and the Holy Ghost as nourishing Virtue; after that ⍰⍰⍰⍰ collection, the imagery becomes prevalent. Kosmer, ⍰*ardens of* ⍰*irtue* at ⍰⍰⍰–⍰⍰⍰. Other important sources for the Virtues and Vices include the works of Theodulf of Orleans and the ⍰sumptuous⍰ manuscripts of Ottonian representations of trees with Virtues and Vices. See North at ⍰⍰⍰. As discussed in later chapters, during the sixteenth century, the encyclopedic books of Andreas Alciatus and Cesare Ripa offered codifications of various attributes and personifications. We return to the Virtues in Chapter ⍰⍰ as well.

27 ⍰ *Corinthians* is the source cited for the three theological Virtues. One translation provides, ⍰And now abideth faith, hope, charitie, these three, but the greatest of these is charitie.⍰ See I *Corinthians* ⍰⍰:⍰⍰ (Letter from St. Paul) in the King James Version of the Holy Bible (London, Eng.: Robert Barker, ⍰⍰⍰⍰). We have used online biblical resources from Yale University Library's database that includes more than twenty different versions. See http://jeeves.library.yale.edu/bie/. Another translation of the passage from I *Corinthians* puts the three as ⍰faith, hope, and love⍰ with the ⍰greatest of them all⍰ as love. See The New English Bible with the Apocrypha (Charles Harold Dodd, ed., Oxford ⍰ Cambridge, Eng.: Oxford ⍰ Cambridge U. Presses, ⍰⍰⍰⍰) (hereinafter New English Bible). Like the other Virtues, the Theological Virtues were typically depicted as females and identified either by labels or by signature attributes⍰ such as an olive branch denoting Hope, a font Faith, and a loaf and pitcher Charity. See O'Reilly at ⍰⍰⍰; Katzenellenbogen at ⍰⍰.

Charity was sometimes portrayed as a many-breasted woman nursing a multitude of children, with a bundle of clothes to give away or holding a cornucopia that had a flame, said to symbolize ⍰abundant giving⍰ and the light of God. See R. Freyhan, *The* ⍰*volution of the Car*⍰*itas* ⍰*ture in the Thirteenth and* ⍰*ourteenth Centuries*, ⍰⍰ J. Warburg ⍰ Courtauld Inst. ⍰⍰, ⍰⍰–⍰⍰, ⍰⍰–⍰⍰ (⍰⍰⍰⍰). M⍰le noted the association in France between Charity and sheep, which he explained as a reference to the people's use of fleece to keep warm. M⍰le, The Gothic Image at ⍰⍰⍰–⍰⍰⍰.

28 The ⍰Gift Virtues⍰ were named after the ⍰Gifts of the Holy Spirit⍰ as described in ⍰*saiah* ⍰⍰.⍰ (New English Bible):

> The Spirit of the Lord shall rest upon him,
> a spirit of wisdom and understanding,
> a spirit of counsel and power,
> a spirit of knowledge and the fear of the Lord.

⍰Grace-given⍰ the Gift Virtues could not be ⍰attained by man save through the merits of Christ's Passion.⍰ O'Reilly at ⍰⍰⍰–⍰⍰⍰. Included in a specific order were Timor Dei (Fear of God), Pietas (Piety or Devotion), Scientia (Knowledge), Fortitudo (Fortitude or Courage), Consilium (Prudence or Discretion), Intellectus (Understanding or Comprehension), and Sapientia (Wisdom). For a time, these seven were ⍰more important⍰ than the Cardinal and Theological Virtues, which today have a greater saliency. In other eras, it was the seven Gift Virtues who were in combat with the ⍰seven capital sins, the vices.⍰ Tuve, Allegorical Imagery at ⍰⍰–⍰⍰. Yet (and perhaps explaining their decline in visibility), unlike the Cardinal and Theological Virtues, the ⍰seven Gift Virtues did not have definitively established names,⍰ nor did they develop a stable iconography. O'Reilly at ⍰⍰⍰, ⍰⍰⍰.

The different sets of Virtues also overlapped. For example, Fortitude was both a Gift Virtue and a Cardinal Virtue. Further, explanations of their characteristics linked Virtues in one set to those in another. Illustrative is that the Gift Virtue Knowledge was connected to the exercise of the Cardinal Virtue Prudence. North at ⍰⍰⍰–⍰⍰⍰. Similarly, Equity, said to entail inquiry, judgment, thoughtfulness, and discretion, was linked to Cicero's conceptions of Temperance, to its Medieval facet of Moderation, and also to Justice. In terms of visual interconnections, Equity is sometimes given a measuring device, as was Justitia. See Tuve, Allegorical Imagery at ⍰⍰⍰.

29 The source generally cited is *Psalm* ⍰⍰:⍰⍰: ⍰Mercy and Truth have met each other; Justice and Peace have kissed.⍰ The Holy Bible Translated from the Latin Vulgate: Diligently compared With the Hebrew, Greek, and other Editions in divers Languages, ⍰ vols. (Richard Challoner, ed., ⍰⍰⍰⍰, reprinted as The Bible in English, Cambridge, Eng.: Chadwyck-Healey, ⍰⍰⍰⍰). A later translation of the verses, appearing in the renumbered *Psalms* at ⍰⍰:⍰⍰, is ⍰Love and fidelity have come together; justice and peace join hands.⍰ New English Bible. The allegory, which ⍰enjoyed extraordinary popularity throughout the Middle Ages,⍰ can be found in Jewish Midrash stories relating to the story of creation. See Hope Traver, The Four Daughters of God: A Study of the Versions of this Allegory with Especial Reference to Those in Latin, French, and English at ⍰–⍰, ⍰⍰–⍰⍰ (Ph.D. dissertation, Bryn Mawr College, Philadelphia, PA: John C. Winston, ⍰⍰⍰⍰).

In Christian traditions, the story was related to human redemption. Id. at ⍰. St. Anselm of the eighth century posited that the allegory showed that Justice included compassion; Medieval dramas styled it a debate about the relationships among these Virtues and their import for Judgment Day. See Lynette R. Muir, The Biblical Drama of Medieval Europe ⍰⍰–⍰⍰ (Cambridge, Eng.: Cambridge U. Press, ⍰⍰⍰⍰). Our thanks to Rosemary McGerr and to William Miller for helping us explore the relationship between the Four Daughters and the pictorial display of Justice and Peace (or Concord). We have used the nomenclature of the Old Testament in lieu of the Hebrew Bible because much of the literature in art history dealing with Synagoga and Ecclesia (discussed in Chapter ⍰) and in legal discussions showing the Ten Commandments in civic spaces (discussed in Chapter ⍰) use the terms Old and New Testaments.

30 Archetypes, or ⍰personified abstractions⍰ of Virtues appeared in Greek art ⍰as early as the seventh century⍰ BCE, with one example ⍰on the Chest of Cypselus, where Dik⍰ (Justice) was represented as dragging, throttling, and beating Adikia (Injustice).⍰ North at ⍰⍰⍰, n. ⍰. A fifth-century poem (dated around ⍰⍰⍰ CE), the *Ps*⍰*chomachia* by Prudentius, became a popular text during the Middle Ages and is frequently cited as a literary source for the visual tradition. See Katzenellenbogen at ⍰. Prudentius, who lived between ⍰⍰⍰ and ⍰⍰⍰ CE, proffered a battle in which ⍰maiden warriors, the Psychomachian Virtues and Vices,⍰ were ⍰locked in epic mortal combat on the battlefield which is the soul of man.⍰ O'Reilly at ⍰. His thousand lines of verse have been called the first allegorical poem to move, through appropriation and reconfiguration, from pagan imagery to a Christian epic. See S. Georgia Nugent, Allegory and Poetics: The Structure and Imagery of Prudentius' ⍰Psychomachia⍰ ⍰–⍰⍰ (Frankfurt, Ger.: Verlag Peter Lang, ⍰⍰⍰⍰); Macklin Smith, Prudentius' ⍰Psychomachia⍰: A Reexamination (Princeton, NJ: Princeton U. Press, ⍰⍰⍰⍰). Prudentius's invention, to name and personify the Virtues and Vices, replaced abstractions with combatants in conflict offering the ⍰first sustained personification allegory⍰ with a revolutionary impact. See Smith at ⍰–⍰.

One eighteenth-century translation of the poem listed the major combatants as Faith versus Idolatry, Chastity versus Lust, Patience versus Wrath, Humility versus Pride, Sobriety versus Luxury, Liberality versus Avarice, and Concord versus Discord. Prudentius, Psychomachia: The War of the Soul, or, the Battle of Virtues and

Vices Translated from Aur. Prudentius Clemens (London, Eng.: [illegible]), Eighteenth Century Collections Online (hereinafter Translated Prudentius). More recent commentators offered different translations. See Morton W. Bloomfield, The Seven Deadly Sins: An Introduction to the History of a Religious Concept, with Special Reference to Medieval English Literature [illegible] (East Lansing, MI: Michigan State College Press, [illegible]). Included as major Virtues were Fides (Faith), Sobrietas (Sobriety), Humilitas (Humility), Pudicitia (Chastity), Patientia (Patience), Operatio (Reason), and Concordia (Order or Harmony), placed in opposition to Veterum Cultura Deorum (Idolatry), Sodomita (Lust), Ira (Anger), Superbia (Pride), Luxuria (Luxury or Indulgence), Avaritia (Avarice), and Discordia (Discord or Heresy). Bloomfield argued that Prudentius himself crafted pairings that were only vaguely similar to other groupings. Katzenellenbogen offered a slight variation, with a focus on Superbia (the "root of all evil" and translated as Pride or Arrogance), joined by Libido (Violent Desire or Lust), Ira (Anger or Wrath), Luxuria (Excess, Extravagance), Avaritia (Avarice), Discordia (Dissension or Discord), and Veterum Cultura Deorum (Pagan Idolatry), in conflict with Pudicitia (Chastity or Modesty), Patientia (Patience), Mens Humilis (Humble Mind / Judgment), Spes (Hope), Sobrietas (Sobriety, Sensibleness), Ratio (Reasonableness), Parsimonia (Thrift), Pax (Peace), and others. Katzenellenbogen at [illegible]–[illegible]. Tuve identified the Gift Virtues as those often depicted in battle against seven sins. Tuve, Allegorical Imagery at [illegible].

In the Prudentius text, Justice was not a major combatant, although she appeared as one of the warriors in a scene in which Superbia (Pride) was in conflict with Mens Humilis (Humility) and Spes (Hope). Nugent, Allegory and Poetics at [illegible]–[illegible]. Superbia "taunts Mens Humilis with the worthlessness of the crew . . . assembled" to assist; that "crew" included Prudence, Piety, Justice, Honesty, Sobriety, and Simplicity. Id. at [illegible]. Justice can also be identified with Concordia, one of Prudentius's central figures. Id. at [illegible], n. [illegible]. In the Translated Prudentius at [illegible], the text reads:

> What feats will Chastity's cold nerves perform?
> In war will Piety support a storm? . . .
> There Justice doom'd to indigence by fate;
> And Honesty, who never will be great;
> Sobriety, just wither'd to a shade;
> And pale-fac'd Abstinence, a pining maid.

In another conflict, between Avarice and Liberality, justice (not personified) is mentioned when Avarice "o'er charg'd with spiteful wrath, express / the flood of passion boiling in her breast" ([illegible]) in the lines "With justice now, since over-match'd in war, / For Judah's sons I'll bait the fraudful snare." Translated Prudentius at [illegible].

The Prudentius text can be found in sixteen illustrated manuscripts, dating from the ninth century to the thirteenth. O'Reilly at [illegible]. Some illustrations may have existed during Prudentius's era. See M[illegible]le, The Gothic Image at i, [illegible] (discussing the classical design of a tenth-century manuscript). Depictions of the Psychomachia scene were common in a variety of media, including wall paintings and architectural church sculptures. O'Reilly at [illegible]–[illegible]. M[illegible]le, focused on thirteenth-century France, traced Psychomachia scenes in French churches and the movement away from the combat descriptions of Prudentius as artists turned to ladders and trees to capture the ascendancy of Virtues over Vices. M[illegible]le, The Gothic Image at [illegible]–[illegible]. In her study, O'Reilly considered pictorial representations made between the twelfth and fifteenth centuries in Germany, England, Italy, the Netherlands, Belgium, and France. She described the "variety of allegorical expression" given to the "perpetual conflict" between good and evil. Some scenes showed the Virtues and Vices in battle, while others depicted a "Tree of Adam" rooted in sin and producing "fruits of Vice" as contrasted with a "Tree of the New Adam" bearing the "life-giving fruits of Virtue." O'Reilly at xv. Following Tuve, O'Reilly cautioned against ignoring this variation; the Virtues and Vices "are, on close inspection, very far from being standard." Id. at [illegible]. Similarly, Katzenellenbogen examined the visual translation of the Prudentius poem and the shift from a dynamic battle scene to more "static" displays of Virtue triumphant. Katzenellenbogen at [illegible], [illegible]–[illegible]. Smith argued that Prudentius's combatants were linked to Jewish and Christian texts, such that Fides was the ancestor of the [illegible] Martyrs and Pudicitia was connected to Judith and Mary, Patientia to Job, Mens Humilis and Spes to David, and the like. Smith at [illegible]–[illegible].

As noted earlier, in addition to the writings of Prudentius, those of St. Thomas Aquinas and the various versions of the *Somme le roi* influenced depictions of Virtues and Vices. See Pfeiffenberger, ch. [illegible], pt. [illegible] at [illegible]–[illegible], [illegible]–[illegible]; Kosmer at [illegible]–[illegible]; Tuve, Allegorical Imagery at [illegible]–[illegible]. For a detailed analysis of one example, with animals providing clues to the identify of various Vices, see Maurice L. Shapiro, *The [illegible]irtues and [illegible]ices in [illegible]m[illegible]ro[illegible]io Loren[illegible]etti's [illegible]ranciscan Mart[illegible]rdom*, [illegible] Art Bulletin [illegible]–[illegible] ([illegible]).

31 Katzenellenbogen discussed a "system of seven based on Humilitas" that became common in literature in the eleventh and twelfth centuries as "artists steadily increase the number of virtues." Id. at [illegible], [illegible]. O'Reilly noted that "Humilitas is often added" to the Theological and Cardinal Virtues as a "root or leader," and diverse sets ranged across the Cardinal, Theological, and Gift Virtues. Id. at [illegible], [illegible]. Sometimes other figures appeared in the scenes. For example, one Psalter showed David with the Virtues as he overcame the "arrogant Goliath." Katzenellenbogen at [illegible].

Tuve underscored both the variety and the many groupings of Virtues and Vices. Illustrative is Macrobius's account that "Ratio, Intellectus, Circumspectio, Providentia, Docilitas, Cautio" (Reason, Intellect, Consideration, Prudence, Docility, and Foresight) are part of Prudence, while "Temperance has in her train Modestia, Verecundia, Abstinentia, Castitas, Honestas, Moderatio, Parcitas, Sobrietas, Pudicitia" (Modesty, Bashfulness, Abstinence, Chastity, Honesty, Moderation, Parsimony, Sobriety, and Shame). Tuve, Allegorical Imagery at [illegible], [illegible]. Aquinas proffered other allocations, categorizing aspects of Virtues discussed by Cicero as subparts of others. For example, Aquinas linked Courage, Confidence, Magnanimity, and Magnificence; connected Humility with Temperance; and placed Liberality as a part of Justice. See Houser, *The [illegible]irtue of Coura[illegible]e* (IIa, IIae, qq. [illegible]–[illegible]), in Pope's The Ethics of Aquinas at [illegible], [illegible]–[illegible].

North also examined variations in the depictions, numbers, and postures of the Virtues and Vices. See North at [illegible]–[illegible]. While five to twelve were in sets in earlier eras, by the fourteenth century sets of seven became common— perhaps in reference to the seven sacraments. Id. at [illegible]–[illegible]. A compendium can be found in *The [illegible]nde[illegible] of Christian [illegible]rt*; listed are [illegible] different images, including [illegible] Virtues, arranged from Abstinence to Wisdom, as well as [illegible] Vices. Collective images include the Tree of Virtue, the Cardinal Virtues, and the Trees and Wheels of Vices. See "*[illegible]irtue[illegible] [illegible]ice[illegible]The Personifi[illegible]cations*, in the Index of Christian Art, pt. [illegible] (Colum Hourihane, ed., Princeton, NJ: Princeton U. Press, [illegible]). Pages [illegible]–[illegible] are on Justice.

32 O'Reilly argued that the Vices in Prudentius's *Ps[illegible]chomachia* were not "the Seven Deadly Sins" discussed by others but the set of "Veterum cultura deorum, Sodomita, Ira, Superbia, Luxuria, Avaritia, and Discordia" (Pagan Idolatry, Libido, Anger, Arrogance, Extravagance, Avarice, and Discord), which overlapped somewhat with the Deadly Sins, and then were conflated with them. O'Reilly at [illegible]–[illegible]. One reason artists did not use the Cardinal and Theological Virtues in *Ps[illegible]chomachia* illustrations was that not all of those seven had "exact counterparts" among the Deadly Sins. Id. at [illegible]–[illegible]. Examples of pairings come from Katzenellenbogen (at [illegible], n. [illegible]); Idolatria (Idolatry) was opposed by Fides (Faith), Fallacia (Deceit or Fraud) by Justitia (Justice or Righteousness), Blasphemia (Blasphemy) by Fortitudo (Forti-

tude), Ira (Anger) by Patientia (Patience), Ventris Ingluvies (Gluttony) by Sobrietas (Sobriety), and Avaritia (Avarice) by Largitas (Generosity). See also Bloomfield, The Seven Deadly Sins, and Erwin Panofsky, Studies in Iconology: Humanistic Themes in the Art of the Renaissance [illegible] (New York, NY: Harper [illegible] Row, [illegible]).

Like their counterpart Virtues, each of the Vices has its own literature. See William Ian Miller, [illegible]*lutton*[illegible], [illegible] Representations [illegible] ([illegible]). Miller traced the roots of the [illegible]chief sins[illegible] in Christian traditions; they once numbered eight, with gluttony having [illegible]first billing[illegible] until overtaken by Superbia (Pride). Id. at [illegible].

33 Katzenellenbogen at [illegible], n. [illegible], and [illegible], n. [illegible]. As detailed in Chapters [illegible], [illegible] and [illegible], [illegible]emblem books[illegible] provided instruction on which attributes identified a particular figure, but idiosyncratic depictions as well as fads affected portrayals. North provided one example of [illegible]an independent and highly original method of portraying the personified virtues[illegible] when Temperance was shown with an hourglass or [illegible]a clock on her head and holding in her mouth a bit to which are attached reins which she grasps with her left hand, while holding a pair of spectacles in her right. She wears spurs on her feet, which rest on a windmill.[illegible] North at [illegible]. See also [illegible]*ppendi*[illegible] *nusual* [illegible]*ttri*[illegible]*utes of Temperantia*, id. at [illegible]–[illegible]. Clocks, then an innovative technology popular in France and the Netherlands, were used in relationship to Temperance to indicate order. The bridle[illegible] as a restraint[illegible] became the dominant signifier, while hourglasses and clocks dropped out. North at [illegible]–[illegible], [illegible], n. [illegible]. One should, thus, be careful when identifying a personified figure from an attribute. Moreover, even when an attribute had a dense association with a particular virtue, such as the bridle with Temperance, artists have given it to another. A well-known print by Albert Dürer, for example, portrays Fortuna holding a bridle. See The Complete Engravings, Etchings and Drypoints of Albert D[illegible]rer [illegible], plate [illegible] (Walter L. Strauss, ed., New York, NY: Dover Publications, [illegible]). We return to these attributes in our discussion in Chapter [illegible] of the contemporary import of the Cardinal Virtues.

34 Dougal Blyth and Tom Stevenson, *Personification and* [illegible]*lle*[illegible]*or*[illegible] *in* [illegible]*reek Literature and* [illegible]*rt*, in Under the Aegis, The Virtues [illegible]–[illegible] (Peter Shad, ed., Auckland, N.Z.: Fortuna Press, [illegible]).

35 In the [illegible] CE *Ps*[illegible]*chomachia of Prudentius,* both Virtues and Vices were female. In [illegible], Emile M[illegible]le commented that from [illegible]primitive Christian times the Virtues took concrete and living form, and were conceived as heroic maidens, beautiful and simple[illegible] who when gaining arms, became the [illegible]warrior-maidens struggling with the Vices.[illegible] M[illegible]le, The Gothic Image at [illegible]. One of the oft-cited examples of the female-male contrast is Giotto's Virtues and Vices in the Padua Chapel. There, some but not all of the Vices[illegible] specifically Folly, Injustice, and Infidelity[illegible] were given male form. See Bruce Cole, [illegible]*irtues and* [illegible]*ices in* [illegible]*iotto*[illegible] [illegible]*rena Chapel* [illegible]*rescoes*, in The Arena Chapel and the Genius of Giotto [illegible]–[illegible] (Andrew Ladis, ed., New York, NY: Garland Publishing, [illegible]). But, as Henry Kraus has noted, the gendering of various allegorical figures was not random. In twelfth-century churches, the Vice Unchastity is a female in hell[illegible] [illegible]usually shown in a revolting posture, her naked body entwined by serpents which feed on her breasts and sexual organs. Sometimes, too, she is accompanied by the Devil, who assumes an intimate relationship with her[illegible] Further, the [illegible]typical [illegible]male' Vice, on the other hand is either Pride or Avarice, the former denoting the chief failing of the feudal nobles, the latter that of the middle class[illegible] See Henry Kraus, [illegible]*ve and Mar*[illegible]*Con*[illegible]*ictin*[illegible]*ma*[illegible]*es of Medieval Woman*, in Feminism and Art History: Questioning the Litany [illegible], [illegible] (Norma Broude [illegible] Mary D. Garrard, eds., New York, NY: Harper [illegible] Row, [illegible]).

A general consideration of [illegible]the female form as an expression of desiderata and virtues[illegible] comes from Marina Warner's Monuments [illegible] Maidens: The Allegory of the Female Form xix (New York, NY: Atheneum, [illegible]) (hereinafter Warner, Monuments [illegible] Maidens). Warner considered representations of Justice, other goddesses and virtues, and more recent deployments of the female body such as the Statue of Liberty. Warner attributed one source for the female imagery as the [illegible]common relation of abstract nouns of virtue to feminine gender in Indo-European languages[illegible] Id. at xxi, [illegible]–[illegible], [illegible]–[illegible].

Carol Clover provided an analysis of women in Medieval Norse texts; she argued that [illegible]sexual binary[illegible] interpretations of those stories missed the complexity of gender roles. Women, seen as householders, were also landholders and in trades and business. Moreover, on occasion, they served as arbitrators in disputes. See Carol J. Clover, [illegible]*e*[illegible]*ard*[illegible] *less of Se*[illegible] *Men, Women, and Power in* [illegible]*ar*[illegible] *Northern* [illegible]*urope*, [illegible] Speculum [illegible], [illegible]–[illegible] ([illegible]). Clover pointed to the [illegible]social binary[illegible] between able-bodied men (and [illegible]the exceptional woman[illegible]) and [illegible]everyone else[illegible] in constructions that delineated the [illegible]powerful and powerless[illegible] Id. at [illegible]. See also Carol J. Clover, [illegible]*celandic* [illegible]*ami*[illegible] *Sa*[illegible]*as*, in Old Norse–Icelandic Literature: A Critical Guide [illegible]–[illegible] (Carol J. Clover [illegible] John Lindow, eds., Ithaca, NY: Cornell U. Press, [illegible]), and Jenny Jochens, Old Norse Images of Women [illegible]–[illegible] (Philadelphia, PA: U. of Pennsylvania Press, [illegible]). Thus, the prose and poetry of historical and mythical genealogies, Clover argued, mediated complex attitudes toward female power. Women appeared at times unusually wise and able to perform magic, and at other times to be avenging warriors or inciters of conflict. In short, women's sexuality prompted anxieties evident both pictorially and descriptively in various parts of Medieval and Renaissance Europe.

36 See Emma Stafford, Worshiping Virtues: Personification and the Divine in Ancient Greece [illegible]–[illegible] (London, Eng.: Duckworth and the Classical Press of Wales, [illegible]).

37 Katzenellenbogen at [illegible]–[illegible]. See also Warner, Monuments [illegible] Maidens at [illegible]–[illegible]. Warner traced depictions of Justice in tapestries, book covers, and sculptures as well as in poetry and prose. She saw the adaptation of the Psychomachian conflict in the [illegible]literature of chivalry[illegible] in which knights took on evil figures from the underworld. By [illegible], when Andrea Mantegna painted the [illegible]*pulsion of the* [illegible]*ices from the* [illegible]*arden of the* [illegible]*irtues* (now in the Louvre in Paris) for the Duchess of Mantua, Justice was a part of the combat. Id. and plate [illegible].

38 Giotto's Padua frescoes offer other examples, with the Cardinal and Theological Virtues on one wall, facing their opposites on another. See Giotto in Perspective (Laurie Schneider, ed., Englewood Cliffs, NJ: Prentice-Hall, [illegible]). The evolution toward increasingly specific symbolic objects to identify the various figures is termed by some a [illegible]New Iconography[illegible] that developed between the thirteenth and fifteenth centuries and corresponded to literary discussions of the Virtues and Vices during that period. O'Reilly at [illegible]–[illegible]. O'Reilly argued that theological developments undermined the utility of the [illegible]Psychomachian classification[illegible] system because the ideas Church leaders sought to convey were not well captured by battle scenes. Id. at [illegible]–[illegible]. Other depictions, such as the [illegible]Arbor Virtutum and the Arbor Vitiorum[illegible] portrayed a shift in the theological focus toward spiritual life and penitent obligations. Id. at [illegible]–[illegible]. For additional analyses of these developments, and specifically of the Tree of the Knowledge of Good and Evil, see North at [illegible]–[illegible].

39 Katzenellenbogen at [illegible]–[illegible]. O'Reilly argued that religious leaders became [illegible]more interested in defining the nature of the Virtues and Vices[illegible] and in setting forth a [illegible]comprehensive scheme of spiritual teaching[illegible] than in the defeat of Vice alone. O'Reilly at [illegible]. The scenes of victory parallel the evolution of the depiction of Synagoga, representing the Old Testament, in relationship to Ecclesia, the female figure personifying the New Testament. Initially, Synagoga was shown more sympathetically but, over time, became a demonized figure, bent and blindfolded, over which Ecclesia towered in triumph. In Chapter [illegible] we discuss this imagery through images from the portals of the Strasbourg Cathedral in France.

40 As O'Reilly discussed at [illegible]–[illegible], artists often tried to impart a [illegible]Christian quality[illegible] to the Cardinal Virtues to mitigate their [illegible]classical[illegible] (i.e., Platonic and Ciceronian) roots. Justice, for example, was linked to religiosity and truth, as Fortitude was with patience and

humble suffering. The Virtues and Vices were also displayed in connection with biblical stories, such as those of Samson, Judith and Holofernes, and Judas. Id. at ⍰⍰⍰–⍰⍰⍰. The Virgin Mary, in turn, came to be identified with Wisdom. See also Warner, Monuments ⍰ Maidens at ⍰⍰⍰–⍰⍰⍰; Marina Warner, Alone of All Her Sex: The Myth and the Cult of the Virgin Mary ⍰⍰⍰–⍰⍰⍰ (New York, NY: Vintage Books, ⍰⍰⍰⍰).

41 See Katzenellenbogen at ⍰⍰–⍰⍰, ⍰⍰–⍰⍰. Katzenellenbogen discussed such ⍰static⍰ representations used in portrayals of ⍰notable personages, especially of rulers⍰ such as a late ninth-century painting of ⍰Charles the Bald⍰ Analyzed in depth is the Virtue/Vice Cycle in Notre-Dame de Paris and other French cathedrals. Id. at ⍰⍰–⍰⍰.

42 ⍰To the Middle Ages art was didactic. All that it was necessary that men should know⍰ the history of the world from the creation, the dogmas of religion, the examples of the saints, the hierarchy of the virtues, the range of the sciences, arts and crafts⍰ all these were taught them by the windows of the church or by the statues in the porch.⍰ M⍰le, The Gothic Image at vii. O'Reilly argued that the ⍰Western Church⍰ was beset in the thirteenth century with challenges to its authority from a ⍰disaffected population, particularly in the developing towns⍰ from the recovery of classical texts, and from intellectual trends ranging from the ⍰growth of vernacular literature⍰ to contacts with ⍰the Arab world⍰ The Church responded by using classical texts to develop a ⍰systematic theology⍰ embarking on ⍰a huge educational task⍰ Id. at ⍰⍰. Episcopal decrees followed, as did efforts to summarize theology and to teach parish priests. Id. at ⍰⍰–⍰⍰. The role of these depictions as mnemonic devices in the oral culture of Medieval Europe is explored in France Yate, The Art of Memory (Chicago, IL: U. of Chicago Press, ⍰⍰⍰⍰) and in Kelyn Roberts ⍰ Ruth Weisberg, *Medieval Drawin⍰ and the ⍰rts of Memor⍰*, ⍰⍰ Coranto ⍰⍰ (⍰⍰⍰⍰). Yet, as M⍰le reported that by the later part of the sixteenth century, the symbolism, predicated in part on rules of symmetry, grouping, and position and specifically influenced by the texts of Aquinas and Vincent of Beauvais, had become obscure. M⍰le, The Gothic Image at vii, ⍰, ⍰⍰, ⍰⍰–⍰⍰.

43 North identified political efforts to incorporate the ancient Virtues as early as Charlemagne's era; the concerns intensified in the fourteenth and fifteenth centuries as political leaders of the city-states in Italy were particularly intent upon linking the Cardinal and the Theological Virtues with their rule. Her examples include the Loggia dei Lanzi, near Florence; the City Hall of San Miniato al Tedesco; the Doge's Palace in Venice; and buildings in Padua, Perugia, Siena, and Naples. North at ⍰⍰⍰–⍰⍰⍰. These developments are further explored in Chapters ⍰–⍰.

44 As the four Cardinal Virtues came to prominence, they were sometimes shown at the four corners of an object or as entwined and embracing. Katzenellenbogen at ⍰⍰–⍰⍰. When shown in four corners on portraits, the Virtues were like ⍰four nails . . . fixing the main theme as an important piece of moral teaching⍰ Id. at ⍰⍰. A well-known rendition is by Albrecht Dürer, who put the Cardinal Virtues in voluptuous form in his Coats of Arms of the German Empire and of the City of Nuremberg. See ⍰⍰ The Illustrated Bartsch (formerly vol. ⍰, pt. ⍰), Sixteenth Century German Artists: Albrecht D⍰rer, plate ⍰⍰⍰ (⍰⍰⍰) at ⍰⍰⍰ (Walter L. Strauss, ed., New York, NY: Abaris Books, ⍰⍰⍰⍰). Other such designs for city-states can be found in the collection of the Victoria and Albert Museum in London. Included in one catalogue by C. Kaufmann from a ⍰⍰⍰⍰ exhibition are catalog no. ⍰⍰ (describing Stocklin, Design ca. ⍰⍰⍰⍰–⍰⍰⍰⍰⍰ arms of the City of Basel supported by two cockatrices) and no. ⍰⍰ (describing Plepp, Design ca. ⍰⍰⍰⍰–⍰⍰⍰⍰⍰ arms of the City of Basel supported by two lions rampant). In addition, tapestries also displayed Virtues and their conflicts with the Vices. See D. T. B. Wood, *Tapestries of the Seven Dead⍰ Sins⍰* ⍰⍰, ⍰⍰ Burlington Magazine ⍰⍰⍰–⍰⍰⍰ (⍰⍰⍰⍰).

45 O'Reilly at ⍰⍰.

46 The Stanza della Segnatura, one of the Vatican's often-visited rooms, includes the Raphael fresco *The School of ⍰thens*. See Vatican Museums, http://mv.vatican.va/⍰⍰EN/pages/SDR/SDR⍰⍰⍰⍰SalaSegn.html. Raphael, born in ⍰⍰⍰⍰ in Urbino, Italy, was a pupil of Pietro Perugino. Both artists were involved in creating the frescoes of the Vatican, which are explained by scholars as exemplifying the efforts by Renaissance humanists to marry the Pope's authority with classical Greek and Roman texts. The Stanza della Segnatura is named for the Pope's Segnatura Gratiae et Iustitiae (or the Signatura of Grace and Justice), the Highest Court of the Holy See, which met there during the sixteenth century. See Christiane L. Joost-Gaugier, Raphael's Stanza della Segnatura: Meaning and Invention (Cambridge, Eng.: Cambridge U. Press, ⍰⍰⍰⍰). Pope Julius II, who held office from ⍰⍰⍰⍰ to ⍰⍰⍰⍰, used the room as a library and private office. The room's frescoes, painted between ⍰⍰⍰⍰ and ⍰⍰⍰⍰, are interpreted by Joost-Gaugier as offering a unified program that, through scenes personifying the disciplines of poetry, philosophy, jurisprudence, and theology, linked theology with a glorification of intellectual activities. Id. at ⍰⍰, ⍰⍰–⍰⍰.

In the text, we use engravings designed from Raphael's *Jurisprudence* to illustrate attributes associated with Prudence, Temperance, and Fortitude. Several commentators have identified these images as these specific Virtues. See, for example, Giorgio Vasari, The Lives of the Artists: A Selection ⍰⍰⍰ (George Bull, trans., London, Eng.: Penguin Books, ⍰⍰⍰⍰); Edgar Wind, *Platonic Justice, Des⍰ned ⍰⍰ ⍰aphael*, ⍰ J. Warburg ⍰ Courtauld Inst. ⍰⍰ (⍰⍰⍰⍰) (hereinafter Wind, *Platonic Justice*). Wind also suggested that the three are doubled, in that each includes a reference to both a Cardinal and a Theological Virtue. In contrast, Joost-Gaugier identified them as the Three Graces, referring to the three daughters of Zeus⍰ Justice, Peace, and Lawfulness⍰ and linking mortals to the gods. She then linked the ⍰(Greek) Graces, the (Roman) Justinian, and the (Christian) Gregory⍰ to describe the scene as a portrayal of a ⍰grandiose concordance or harmony of Greek law, Roman law, and Christian law⍰ Joost-Gaugier at ⍰⍰⍰.

Depictions of Justice as well as other Virtues can be found in many of the Vatican rooms. For example, in the Stanza dell'Incendio (The Room of Fire), where another segnatura (the tribunal of the papal curia) sat to decide disputes, Perugino supervised the painting of *Christ ⍰lanked ⍰⍰ Justice and ⍰race* for one of the ceiling quadrants. The walls of that room were painted during the reign of Pope Leo X by Raphael and his pupils. See Marilyn Bradshaw, *Pietro Peru⍰ino⍰⍰ n ⍰nnotated Chronicle*, in Pietro Perugino, Master of the Italian Renaissance ⍰⍰⍰–⍰⍰⍰ (New York, NY: Rizzoli International Publications and Grand Rapids, MI: Grand Rapids Museum, ⍰⍰⍰⍰). Another Justice, painted by Giulio Romano for the Sala di Costantino and portrayed with a large ostrich at her side, is discussed and depicted in Chapter ⍰. See also Philipp P. Fehl, ⍰*aphael as a ⍰ istorian⍰Poetr⍰ and ⍰ istorical ⍰ ccurac⍰ in the Sala di Constantino*, ⍰⍰ Artibus et Historiae ⍰ (⍰⍰⍰⍰); Kurt Badt, ⍰*aphael⍰ ⍰incendio Del Bor⍰o*,⍰⍰ J. Warburg ⍰ Courtauld Inst. ⍰⍰ (⍰⍰⍰⍰).

47 Veneziano (Agostino dei Musi) was born in Venice around ⍰⍰⍰⍰ and died in Rome, sometime after ⍰⍰⍰⍰. From ⍰⍰⍰⍰ to ⍰⍰⍰⍰, he worked with Marcantonio Raimondi (discussed later) on the production of prints after Raphael, Michelangelo, Giulio Romano, and others. See The Engravings of Marcantonio Raimondi xv (Innis H. Shoemaker, ed., Lawrence, KS: Spencer Museum of Art, U. of Kansas, ⍰⍰⍰⍰). As noted, the figure could be read as a reference both to the Cardinal Virtue Prudence and to the Theological Virtue Hope. Wind advanced this thesis in part from the ⍰putti⍰ or cherubic figures next to Prudence, who, in the original Raphael, hold a flame⍰ denoting Hope⍰ as well as the mirror of Prudence. See Wind, *Platonic Jus⍰tice* at ⍰⍰. As to the iconography for reading this figure as Prudence, the engraving follows an earlier example by Giotto, which some believe to be the first to associate the mirror with Prudence. See Pfeiffenberger, Chapter ⍰.

Mirrors, like other objects that came to be connected to the various Virtues, had multiple meanings. In antiquity, mirrors sometimes served to amplify light and hence gained an association with certain of the gods. See Paula M. Hancock, Transformations in the Iconography of the Mirror in Medieval Art (Ph.D. dissertation, Department of Fine Arts, Emory University, Atlanta, GA, [illegible]; UMI Publication No.: AAT [illegible]). When attached to the Virgin Mary, Humility, Charity, or Faith, the mirror was explained as indicating divine insight, purity, or being unspoiled. When Prudence looked in the mirror, some read it as a [illegible]symbol of the Socratic *nosce te ipsum*[illegible] (know thyself). See Art Treasures of the Vatican: Architecture, Painting, Sculpture [illegible] (D. Redig de Campos, ed., J. Gerber, trans., Englewood Cliffs, NJ: Prentice-Hall, [illegible]). Cicero is often credited as a source, based on his discussion of Prudentia, a Latin translation of the Greek *phronesis* or [illegible]practical wisdom[illegible] linked to circumspection requiring memory, intelligence, and foresight. St. Thomas Aquinas provided parallel discussions. See Hancock at [illegible]–[illegible]; see generally Edgar Wind, Pagan Mysteries in the Renaissance [illegible] (London, Eng.: Faber and Faber, [illegible]). When Prudence was shown with a snake and a dove, the attribution was *Matthew* [illegible]:[illegible], [illegible]Be ye therefore wise as serpents and simple as doves.[illegible] Katzenellenbogen at [illegible]. Mirrors can also be found attached to Vices (such as Lust, Vanity, and Vain Glory), explained as symbols of impermissible vanity, delusion, imperfection, false knowledge, deception, or a lack of substance. Hancock at [illegible]–[illegible].

The copy of Raphael shown in figure [illegible] follows Giotto's *Prudence* in that both are Janus-faced, with a female figure on one side and a bearded man at the back. Giotto's Prudence also had a book and a compass, said to indicate experience and scholarly knowledge. See Milton L. Gendel, Giotto's Representation of the Seven Virtues and Vices in the Arena Chapel at Padua (paper submitted in partial fulfillment of the requirements for the degree of Fine Arts, Faculty of Philosophy, Columbia U., Nov. [illegible]). The images shown in figures [illegible] and [illegible], both marked AV for Veneziano, are catalogued in vol. [illegible], The Illustrated Bartsch (formerly vol. [illegible], pt. [illegible]): The Works of Marcantonio Raimondi and of his School [illegible], [illegible] (Konrad Oberhuber, ed., New York, NY: Abaris Books, [illegible]).

48 In Tuscan imagery of the fourteenth century, Prudence was also shown with a book, a pair of dividers, a snake, or a lamp. See Quentin Skinner, [illegible]*m*[illegible]*ro*[illegible]*io Loren*[illegible]*etti*[illegible]*The* [illegible]*rtist as Political Philoso*[illegible]*pher*, [illegible] Proceedings of the British Academy [illegible] ([illegible]) (hereinafter Skinner, *The* [illegible]*rtist as Political Philosopher*).

49 As noted, Wind argued that Raphael referred to both Cardinal and Theological Virtues with the same image, and hence that the image of Temperance was also Hope, denoted by the gesture of the nearby putti, whose arm is lifted upward, toward the heavens. Wind, *Platonic Justice* at [illegible]. The canonical study of Temperance comes from Helen North, who described her project as [illegible]a kind of Ariadne's thread to serve as a guide through the labyrinthine iconography of sophrosyne/temperantia from its beginnings in the coins and sarcophagi of late antiquity to its end in such specimins as the Reynolds window[illegible] of [illegible] in New College, Oxford. North at [illegible]. As she explained, the Hellenic concept emerged from myths about the punishment of hubris ([illegible]wantonness, arrogance, defiance of the gods, contempt for the rights of others[illegible]) through a principle of [illegible]order[illegible] that has Platonic roots. Id. at [illegible]. Various narratives posited a [illegible]*phr*[illegible]*n* hero[illegible] fending off advances from older married women (id. at [illegible]) and a [illegible]*phr*[illegible]*n* heroine[illegible] as either a chaste maiden or a loyal and sacrificing wife (id. at [illegible]–[illegible]). Sophrosyne then became a value in Greek political thought and a Platonic ideal associated virtually exclusively with men (id. at [illegible]) and later with the state (id. at [illegible]).

The iconography of Temperance was codified through sixteenth-century emblem books, discussed in more detail in endnotes that follow as well as in Chapters [illegible]–[illegible]. For example, the compilation by Cesare Ripa explained that the [illegible]personification of Temperance is a woman . . . who holds a bridle. . . . As a bridle restrains a horse, so does temperance hold appetites in check.[illegible] Cesare Ripa, Baroque and Rococo Pictorial Imagery: The [illegible]–[illegible] Hertel Edition of Ripa's [illegible]Iconologia[illegible] (Edward A. Maser, ed., New York, NY: Dover Publications, [illegible]) (hereinafter Ripa, Maser Edition). One can also find a palm branch or a bit, such as in the [illegible] [illegible]*lle*[illegible]*or*[illegible] *of Temperance* by Domenico Zampiero (Domenichino), in San Carol ai Catinari, Rome, and reproduced by North in plate IX at [illegible]. In works from fourteenth-century Tuscany, Temperance was shown with a vessel, as if pouring liquid, or with an hourglass, both said to express moderation. Skinner, *The* [illegible]*rtist as Political Philosopher* at [illegible]. Further, in the Lorenzetti [illegible]*lle*[illegible]*ories* of the [illegible]s in the Palazzo Pubblico in Siena (discussed in Chapter [illegible] and shown in part in figures [illegible] and [illegible]), Temperance is holding a clock, which according to Skinner provided the [illegible]earliest known depiction[illegible] in Western art of what was then a novel object. Id. at [illegible].

50 Marcantonio Raimondi (c. [illegible]–c. [illegible]), a prominent engraver of the Italian Renaissance, was an important source for the dissemination of Raphael's designs. See Elizabeth Broun, *The Porta*[illegible]*le* [illegible]*aphael*, in The Engravings of Marcantonio Raimondi [illegible]–[illegible]; Lisa Pon, *Mar*[illegible]*cantonio Printmakin*[illegible]*Printin*[illegible] *Marcantonio*, in Changing Impressions: Marcantonio Raimondi [illegible] Sixteenth-Century Print Connoisseurship [illegible]–[illegible] (New Haven, CT: Yale U. Art Gallery, [illegible]); Lisa Pon, Raphael, D[illegible]rer [illegible] Marcantonio Raimondi: Copying and the Italian Renaissance Print (New Haven, CT: Yale U. Press, [illegible]). Some of the prints, taken from drawings or sketches, are not identical to the finished compositions. See Arthur M. Hind, Marcantonio and Italian Engravers and Etchers of the Sixteenth Century [illegible] (New York, NY: Frederick Stocks and London, Eng.: William Heinemann, [illegible]). Wind interpreted the Raphael image to be both Fortitude and Charity, identified by a tree denoting generosity as the fruits could be given away. Wind, *Platonic Justice* at [illegible].

Fortitude's attributes include a lion, sometimes shown [illegible]trampled underfoot[illegible] or with [illegible]its jaws . . . wrenched open in Herculean fashion[illegible]; alternately, a lion's skin is [illegible]worn as a trophy[illegible] or displayed on a medallion or shield. O'Reilly at [illegible]. At times Fortitude is shown with a broken column or a tower, denoting strength. See Skinner, *The* [illegible]*rtist as Political Philosopher* at [illegible], and Tuve, Allegorical Imagery at [illegible]–[illegible] (discussing Francesco Pesellino's [illegible]*ortitude and Temperance*, ca. [illegible], at [illegible], plate [illegible]). Fortitude may also hold a myrtle branch to reference victory and grace. In Cicero's discussion of Fortitude, the subsidiary aspects identified include Patience, Perseverance, Loyalty, and Magnificence. O'Reilly at [illegible]. Later discussions added Magnanimity, Security, Constancy, and Trust. Id. at [illegible]–[illegible], [illegible]. The image shown in figure [illegible] is indexed in J. D. Passavant, Le Peintre-graveur (The Painter-Engraver), vol. [illegible], [illegible], no. [illegible]–[illegible] (Leipzig, Ger.: Rudolph Weigel, [illegible]). The print can also be found in Madeline Cirillo Archer, The Illustrated Bartsch: [illegible] The Italian Masters of the Sixteenth Century, Commentary [illegible], entry no. [illegible].[illegible] (New York, NY: Abaris Books, [illegible]).

51 The mixture of the secular and the sacred can also be found in Northern Europe. For example, in St. Janskirk in Gouda, the Netherlands, Justice (and other virtues) appear in some stained glass windows installed after the Reformation. Society for the Study of Gouda Windows, *The Stained* [illegible]*lass Windows of St*[illegible]*John*[illegible] *Church*, [illegible]–[illegible], [illegible]–[illegible] (pamphlet, undated).

52 Interest in such illustrations and emblem books spanned about two hundred years from the sixteenth century forward. See North at [illegible]. Two figures[illegible] Andreas Alciatus and Cesare Ripa[illegible] were key sources of these compendia of pictures and short didactic commentaries, whose imagery and descriptions varied in different editions. We discuss both in Chapters [illegible], [illegible], and [illegible]. By way of a brief introduction, Andreas Alciatus (or Andrea Alciato, or Alciun, or Alciati) was born in Italy and was a professor of Roman law who taught at Bourges, France, from [illegible] to [illegible] and later at Pavia and Bologna, Italy. Alciatus's emblem treatise, a diverse collection of moralizing short poems

or epigrams and illustrations, was first published in [illegible] and thereafter in some [illegible] editions. See Andreas Alciatus, The Latin Emblems: Index Emblematicus vol. [illegible] (Peter M. Daly, ed., Toronto, Can.: U. of Toronto Press, [illegible]). The attention paid to emblems in the sixteenth century was interrelated with an interest in Egyptian hieroglyphs, presumed to have great symbolic value. See Alison Saunders, The Sixteenth-Century French Emblem Book: A Decorative and Useful Genre [illegible], [illegible]–[illegible] (Geneva, Switz.: Librairie Droz, [illegible]). Such images were conceived to be accessible (albeit with different levels of comprehension) to both the illiterate and the philosophically trained. See Ernst Gombrich, *[illegible]tones S[illegible]m[illegible]olicae[illegible]The [illegible]isual [illegible]na[illegible]e in Neo[illegible]Platonic Thou[illegible]ht*, [illegible] J. Warburg [illegible] Courtauld Inst. [illegible] ([illegible]).

Cesare Ripa, whose original name was Giovanni Campani, was born in Perugia around [illegible]. Although known today for its illustrations, the first edition of Ripa's *[illegible]onolo[illegible]ia* was published without pictures in Rome in [illegible]. See Ripa, Maser Edition at ix. The first illustrated [illegible]Ripa[illegible] was published in [illegible], followed by more than forty editions in eight languages, many of which were selective renditions or extrapolations that described and classified images. Scholars believe that it captured for the period the [illegible]fairly common agreement on the way in which ideas, often very abstract ones, could be intelligibly and effectively represented visually.[illegible] Ripa, Maser Edition at vii. Ripa's centrality to twentieth-century iconography comes through the work of M[illegible]le as well as of Ernst Gombrich, Symbolic Images: Studies in the Art of the Renaissance (Oxford, Eng.: Phaidon, [illegible]), and of Erwin Panofsky, Meaning in Visual Arts (Garden City, NY: Doubleday, [illegible]). Access to the various compilations is facilitated by Yassu Okayama, The Ripa Index: Personifications and Their Attributes in Five Editions of the Iconologia (Doornspijk, Neth.: Davaco Publishers, [illegible]).

These emblem books were important resources for artists during the fifteenth and sixteenth centuries, as can be seen from Vasari's *Lives of the [illegible]rtists*, cited earlier, and by Spenser's use of these materials in *The [illegible]aerie [illegible]ueene*. See Jane Aptekar, Icons of Justice: Iconography and Thematic Imagery in Book V of *T[illegible]* (New York, NY: Columbia U. Press, [illegible]). By the seventeenth and eighteenth centuries, many of the images, sourced in Medieval lore, became obscure. M[illegible]le, The Gothic Image at vii. Our focus is not on the roles played by Virtues in literary and other genres. Cf. William Ian Miller, The Mystery of Courage (Cambridge, MA: Harvard U. Press, [illegible]).

53 Plato is a source for the claim that Justice is the [illegible]supreme of virtues[illegible] See Eric A. Havelock, The Greek Concept of Justice: From Its Shadow in Homer to Its Substance in Plato [illegible], [illegible]–[illegible] (Cambridge, MA: Harvard U. Press, [illegible]). Others invoke Cicero for this proposition. See *De o[illegible] ciis*, bk. III, [illegible] at [illegible], and index at [illegible]: [illegible]for this virtue (Justice) is the sovereign mistress and queen of all the virtues[illegible] Aquinas is also cited for Justice's supremacy as centered on [illegible]one's relations to others[illegible] and therefore [illegible]the most important moral virtue[illegible] See Thomas Aquinas, The Cardinal Virtues, Prudence, Justice, Fortitude, and Temperance xvii (Richard J. Regan, ed. and trans., Indianapolis, IN: Hackett Publishing, [illegible]) (hereinafter Regan's Aquianas). Further, by one count, Aquinas devoted [illegible]sixty-one questions[illegible] to the topic of Justice, [illegible]architectonic with respect to the other virtues[illegible] See Jean Porter, *The [illegible]irtue of Justice [illegible]ae*, in Pope's The Ethics of Aquinas at [illegible], [illegible]. Moreover, Porter noted that Aquinas's discussion of justice [illegible]is the longest, the most complex, and arguably the most difficult treatment of a particular virtue in the *Summa theolo[illegible]iae*.[illegible] Id. at [illegible]. Further, although the other moral virtues are aimed at perfecting [illegible]passions[illegible] Justice is a [illegible]virtue of the will[illegible] Id. at [illegible]. Porter resisted a reading of Aquinas that ignored the [illegible]exterior[illegible] orientation of the other virtues. Id. at [illegible]. She argued that Charity, seen by Aquinas as a distinct virtue, was [illegible]architectonic[illegible] in turn to Justice. Yet [illegible]justice provides a framework for human life[illegible]independent of Christian revelation. Id. at [illegible].

Contemporary political theory echoes the place of Justice at the forefront because it is, in John Rawls's words, [illegible]the first virtue of social institutions[illegible] See John Rawls, A Theory of Justice [illegible] (Cambridge, MA: Belknap / Harvard U. Press, [illegible]), discussed in Chapters [illegible] and [illegible]. Alternatively one could, as one literary historian put it, see Justice as the [illegible]most interesting[illegible] for bridging so many traditions[illegible] [illegible]most violently resist[illegible]ng[illegible] the attempt to denominate virtues classical or Christian.[illegible] Tuve, Allegorical Imagery at [illegible].

54 Tuve, Allegorical Imagery at [illegible]; Cicero placed within the range of the Virtues Justice and Righteousness several others, including Religio (Reverance), Pietas (Piety or Devotion), Gratia (Gratitude), Vindicatio (Vindication), Observantia (Respect), and Veritas (Truth). The commentator Macrobius added as other related Virtues a group including Innocentia (Innocence), Amicitia (Friendship), Concordia (Order or Harmony), Affectus (Emotions), and Humanitas (Humanity or Kindness). Id.

55 See T. K. Dunseath, Spenser's Allegory of Justice, in Book Five of *T[illegible]* [illegible] ([illegible] Press, [illegible]).

56 See Dunseath, Spenser's Allegory at [illegible] (quoting Sir Thomas Elyot's statement of Aristotelian categories). See The Summa Theological of St. Thomas Aquinas (English Dominican Fathers, trans., Allen, TX: Christian Classics, [illegible], reprint of an earlier edition), *Secunda secundae partis* at Q. [illegible], A.[illegible]

57 Porter, *The [illegible]irtue of Justice* at [illegible]. Porter attributed the distinction to Aquinas's reiteration of the idea from Aristotle. See also Joseph Polzer, [illegible]*m[illegible]ro[illegible]io Loren[illegible]etti[illegible] [illegible]War and Peace Murals[illegible] [illegible]evis[illegible]ited[illegible]Contri[illegible]utions to the Meanin[illegible] of the [illegible]ood [illegible]overnment [illegible]lle[illegible]or[illegible]*, [illegible] Artibus et Historiae [illegible], [illegible], and [illegible], n. [illegible] ([illegible]).

58 Porter explained commutative justice as concerning justice between parties such that neither [illegible]suffers unduly, nor benefits at the expense of another[illegible] Porter, *The [illegible]irtue of Justice* at [illegible]. Regan called this [illegible]quid pro quo relations between individuals[illegible] relating to the issue of restitution. Regan's Aquinas at xviii–xix.

59 Porter, *The [illegible]irtue of Justice* at [illegible].

60 Regan's Aquinas at xviii–xix; Polzer, [illegible]*m[illegible]ro[illegible]io Loren[illegible]etti[illegible] War and Peace Murals[illegible]evisited* at [illegible], [illegible], n. [illegible].

61 Randolph Starn, *The [illegible]epu[illegible]lican [illegible]e[illegible]ime of the [illegible]oom of Peace[illegible] in Siena,* [illegible], [illegible] Representations [illegible], [illegible] at n. [illegible] ([illegible]).

62 Jean Bodin described that harmony as coming from the provision of honors to persons based not only on status but on the suitability or fittingness of doing so. See Jean Bodin, Six Books of the Commonwealth, bk. VI, ch. [illegible] at [illegible]–[illegible] (abridged by M. J. Tooley, trans., New York, NY: Barnes [illegible] Noble, [illegible]) (hereinafter Bodin/Tooley Ed.). Bodin contrasted that [illegible]fusion[illegible] with an [illegible]egalitarian order, based on the principle of commutative justice[illegible] in which all estates and honors were [illegible]equally divided[illegible] (id. at [illegible]), and with a regime of [illegible]distributive justice[illegible] in which [illegible]the execution of the law ought to be adapted to the circumstances of each case[illegible] Id. at [illegible]. He argued that wise governance[illegible] the [illegible]monarchical state[illegible] borrowed from both commutative and distributive justice to create a harmonic fusion. Id. at [illegible]. One interpreter argued that Bodin's more general definition of justice was the [illegible]right division of rewards and punishments, and of that which of right unto every man belongeth[illegible] See J. U. Lewis, *Jean Bodin[illegible] Lo[illegible]ic of Sovere[illegible]nt[illegible]*, in Jean Bodin [illegible], [illegible], n. [illegible] (Julian H. Franklin, ed., Aldershot, Eng., [illegible] Burlington, VT: Ashgate, [illegible]) (hereinafter Essays on Jean Bodin).

A different translation[illegible] that of Beatrice Reynolds[illegible] quotes Bodin as stating: [illegible]Just as God maintains the contrariety of celestial movements . . . in a discordant accord, as of contrary voices in a very pleasant and sweet harmony, keeping the one element from oppressing the other, so the prince, who is the image of God, ought to preserve and rule the quarrels and differences of his magistrates . . . .[illegible] See Daniel Engster, Divine Sovereignty: The Origins of Modern State Power [illegible]–[illegible] (DeKalb, IL: Northern Illinois U. Press, [illegible]).

Bodin's innovations as a legal and political philosopher, historian, and sociologist are mapped by Julian H. Franklin, Jean Bodin, and the Sixteenth Century Revolution in the Methodology of Law and History (New York, NY: Columbia U. Press, ⍰⍰⍰⍰). Franklin has criticized the Tooley translation for its selectivity. See Jean Bodin, On Sovereignty: Four Chapters from the Six Books of the Commonwealth xxxv (Julian H. Franklin, ed. and trans., Cambridge, Eng.: Cambridge U. Press, ⍰⍰⍰⍰) (hereinafter Bodin/Franklin Edition).

63 ⍰The great theme of this book is justice, the queen of the four cardinal virtues, without which civilized society as we know it would perish and Faerie Land itself would disappear.⍰ Dunseath, Spenser's Allegory at ⍰. Dunseath read the central aim of justice to be peace (id. at ⍰⍰⍰), as he explicated the link between justice, the heavenly order, and the ⍰Astrea-like figure of Elizabeth,⍰ the Queen presiding over all. Id. at ⍰⍰⍰. The ⍰three handmaidens of Mercilla form a hierarchy of justice, a hierarchy partially established by Aristotle and contemplated by Renaissance Neoplatonic jurists.⍰ Id. at ⍰⍰⍰. Dunseath argued that Bodin's three forms of justice (arithmetical, geometrical, and harmonical) were reflected in the book.

Jane Aptekar also saw the influence of Bodin but argued that Spenser's allegory was full of irony⍰ respecting justice's aspirations while objecting to justice's cruelty and hence simultaneously attentive to ⍰justice's orthodoxy and justice's dubiety.⍰ See Aptekar at ⍰, ⍰⍰–⍰⍰. The book was replete with ⍰verbal pictures . . . ⍰that⍰ visually resemble allegorical illustrations and paintings, or emblems.⍰ Id. at ⍰. Spenser's images were a source for English emblem writers of personifications, as were Ripa and Alciatus. See Freeman at ⍰⍰–⍰⍰, ⍰⍰⍰–⍰⍰⍰. See also John D. Staines, ⍰*li⍰a⍰eth, Mercilla, and the ⍰hetoric of Prop⍰a⍰anda in Spenser*⍰ ⍰*aerie ⍰ueene*⍰, ⍰⍰ J. of Medieval and Early Modern Studies ⍰⍰⍰, ⍰⍰⍰ (⍰⍰⍰⍰).

64 Tuve, Allegorical Imagery at ⍰⍰, n. ⍰⍰.

65 See Plato, The Laws, bk. ⍰, ⍰⍰⍰D (R. G. Bury, trans., London, Eng.: William Heinemann, ⍰⍰⍰⍰). The text reads: ⍰And wisdom, in turn, has first place among the goods that are divine, and rational temperance of soul comes second; from these two, when united with courage, there issues justice as the third; and the fourth is courage.⍰ In *The ⍰epu⍰lic*, Plato also extolled Temperance, in that while courage and wisdom each resides ⍰⍰⍰n a part only, the one making the State wise and the other valiant.⍰ Temperance ⍰extends to the whole.⍰ Plato, The Republic, bk. IV, ⍰⍰ (Benjamin Jowett, trans., Champaign, IL: Project Gutenberg, ⍰⍰⍰⍰).

Cicero can also be cited when one elevates Wisdom to a first-place position. In *De le⍰⍰us*, ⍰.⍰⍰.⍰⍰, Cicero described Sapientia as the ⍰mother of all good things⍰ and in *De o⍰ ciis*, ⍰.⍰⍰.⍰⍰⍰, Sapientia was said to be the ⍰leader of all the virtues.⍰ This translation comes from Skinner, *The ⍰rtist as Political Philosopher* at ⍰⍰. Prudentius's *Ps⍰⍰ chomachia* can also be invoked, for it described the commemoration of the victory of Virtue over Vice through the building of a temple to Sapientia. Nugent, Allegory and Poetics at ⍰⍰–⍰⍰.

66 See Christopher Bobonich, Plato's Utopia Recast: His Later Ethics and Politics ⍰⍰–⍰⍰ (Oxford, Eng.: Clarendon Press ⍰ Oxford U. Press, ⍰⍰⍰⍰).

67 Freyhan at ⍰⍰.

68 Tuve, Allegorical Imagery at ⍰⍰ (citing Moralium Dogma Philosphorum); Skinner, ⍰*rtist as Political Philosopher* at ⍰⍰ (citing Martin of Braga's Formula that ⍰there are four species of virtue⍰ and ⍰that among these the first is prudence⍰ as well as Guillaume Peyraut's that ⍰prudence is the foundation of all the other virtues⍰). See also David Depew, ⍰*eview of Prudence⍰Classical ⍰irtue, Postmodern Prac⍰tice*, ⍰⍰ Philosophy and Rhetoric ⍰⍰⍰ (⍰⍰⍰⍰). See generally Robert W. Cape Jr., *Cicero and the Development of Prudential Practice*, in Prudence: Classical Virtue, Postmodern Practice (Robert Harimon, ed., University Park, PA: Pennsylvania State U. Press, ⍰⍰⍰⍰), and Daniel Mark Nelson, The Priority of Prudence: Virtue and Natural Law in Thomas Aquinas and the Implications for Modern Ethics (University Park, PA: Pennsylvania State U. Press, ⍰⍰⍰⍰).

69 Tuve, Allegorical Imagery at ⍰⍰ (citing Seneca, Martin of Braga, and the *Somme le roi*); Skinner, ⍰*rtist as Political Philosopher* at ⍰⍰ (also arguing the ⍰Senecan roots⍰ for Temperance as the leader, with Justice at the rear, and that magnanimity, an aspect of Fortitude, was ⍰absolutely central.⍰ Id. at ⍰⍰).

70 Skinner, *The ⍰rtist as Political Philosopher* at ⍰, elaborating on Cicero's comments in *De repu⍰lica* (⍰*n the Commonwealth*) that Concordia is ⍰the best and lightest rope of safety in society.⍰ (id. at ⍰⍰) and that to achieve such peace, Aequitas was required to ⍰smooth out our differences⍰ so that ⍰⍰citizens are considered on level terms rather than being handled in a divisive way'.⍰ (translating Cicero, De officiis ⍰.⍰⍰.⍰⍰⍰). Under this approach, Justice becomes a means of keeping the peace. Id. at ⍰⍰.

71 Nicholai Rubinstein, *Political ⍰deas in Sienese ⍰rt⍰The ⍰rescoes ⍰⍰⍰ ⍰m⍰ro⍰io Loren⍰etti and Taddeo di Bartolo in the Pala⍰⍰o Pu⍰⍰lico*, ⍰⍰ J. Warburg ⍰ Courtauld Inst. ⍰⍰⍰, ⍰⍰⍰, n. ⍰⍰, and ⍰⍰⍰ (⍰⍰⍰⍰). Lorenzetti's work is discussed in depth in Chapter ⍰. Charity's stature as ⍰the greatest of virtues⍰ prompted art historian Emile M⍰le to complain that ⍰thirteenth-century ⍰French⍰ craftsmen were unequal⍰ to Giotto and other Italian artists in depicting Charity; the more accomplished Italians showed her nursing a child or giving gifts to the poor. M⍰le, The Gothic Image at ⍰⍰⍰–⍰⍰⍰. Unlike the Cardinal Virtues, which can be acquired by individuals through their efforts, the Gift Virtues are ⍰grace-given⍰ and ⍰cannot be attained by man save through the merits of Christ's Passion.⍰ O'Reilly at ⍰⍰⍰–⍰⍰⍰. That understanding might support political leaders' embrace of the four Cardinal Virtues rather than the Gift Virtues, but not a sole focus on Justice.

72 Were one open to new imagery, Zeus could replace his daughter, Dik⍰ (subsequently Justitia and discussed in Chapter ⍰). To maintain order and as the god of justice, Zeus crushed ⍰anyone, god, man, or Titan⍰ who posed a threat. North at ⍰⍰. Over time, however, the portrayal of Zeus shifted from vengeful purveyor of justice to the embodiment of sophrosyne, doing justice through a range of virtues. Id. at ⍰⍰–⍰⍰. Later, Jean Bodin explained that the three virtues ⍰prudence, courage, and temperance⍰ complement each other; under the monarchical sovereignty he admired, it was the king who added the ⍰rational and contemplative elements⍰ doing justice as his prerogative. Bodin/Tooley Ed., bk. ⍰, ch. ⍰ at ⍰⍰⍰.

73 Conflicts over power stretch across the centuries. By the Renaissance, political theorists such as Andreas Alciatus and Jean Bodin were developing somewhat different views about the source and nature of the power held by judges. Alciatus argued that all state officials derived their authority from delegation by a ruling prince. Donald R. Kelley, *The Development and Conte⍰t of Bodin⍰ Method*, in Essays on Jean Bodin at ⍰⍰⍰, ⍰⍰⍰. Bodin's approach was that judges had some power without delegation. That view might seem in tension with the political theory for which he is famous⍰ that sovereignty was indivisible, residing within a single individual or group. State power could be monarchical, aristocratic, or democratic, but ⍰mixed⍰ systems in which power was shared were a logical impossibility, and confederacies therefore insufficiently unified to constitute a single political system. But relying on the French tradition of holding power through ⍰right of office⍰ Bodin posited that customary law was a source of direct, albeit minor, powers for officials. Bodin conceived of the sovereign prince as holding all the major powers⍰ appointing and assigning duties to magistrates; making and repealing all laws; beginning and ending wars; hearing appeals from magistrates; commuting sentences whether law provided for clemency or not; receiving oaths of fealty; determining coinage, weights, and measures; and imposing taxes. Bodin's theories supported the centralization of power then under way in France.

Franklin argued that viewing Bodin as an untextured absolute monarchist was both empirically and normatively ⍰wrong⍰ missing Bodin's intellectual evolution. See Julian Franklin, Jean Bodin and the Rise of the Absolutist Theory ⍰⍰–⍰⍰ (Cambridge, Eng.: Cambridge U. Press, ⍰⍰⍰⍰). Instrumentally protective of political stability, Bodin supported religious toleration of significant minorities and taxes that were not unduly oppressive. Over time, Bodin came to the view that, aside from having no control over rules of succession to the throne and no right to alienate royal domains, a monarch held unlimited powers. Constraints (such as they were) came from morality, a responsibility to God, and the wisdom to be prudent and humane, but not from others' resistance. Id. Franklin cited Claude Seyssel as an exemplary French constitutionalist who thought three ⍰bridles⍰ checked royal power. These bridles were Religion, Justice, and ⍰La Police⍰⍰ a flexible mix of legal precedent and social custom. Franklin at ⍰⍰–⍰⍰. The religious wars and the related breakdown of royal power spurred Bodin to develop a more absolutist theory of government. Id. at ⍰⍰.

Other commentators read Bodin to insist that a monarch had absolute power vis-⍰-vis positivist legislative enactments but was subject to God's or nature's law. See Lewis at ⍰⍰–⍰⍰ and Donald R. Kelley, *The Development and Conte⍰t of Bodin⍰ Method* at ⍰⍰⍰–⍰⍰⍰, both in Essays on Jean Bodin.

74 See generally Theodore K. Rabb, The Last Days of the Renaissance and the March to Modernity (New York, NY: Basic Books, ⍰⍰⍰⍰). We explore these shifts in Chapters ⍰–⍰.

75 In Chapter ⍰ we analyze the images in Amsterdam's Town Hall, as well as those in Bruges and Geneva.

76 Whether a monarch ought to directly dispense justice or to do so through others was one issue Bodin explored. He argued that although the power of lawmaking and the dispensation of justice belonged to the sovereign (⍰the true function of the prince is to judge his people⍰), the king ought not personally sit in judgment of his subjects but rather delegate that task to magistrates. Bodin proposed that laws be promulgated to ⍰guide magistrates, who are frequently so blinded by passion, by intrigues, or by ignorance, that they have no conception of all of the beauty of justice⍰ Id., bk. VI, ch. ⍰ at ⍰⍰⍰. He also argued that the distance from daily administration enhanced the monarch's focus on statecraft and his power. See Bodin/Tooley Ed., bk. ⍰, ch. ⍰ at ⍰⍰⍰.

77 The image of familial relations was deliberately invoked, for ⍰a king's relation to this subject is that of a father to his children, for he does justice among them.⍰ Bodin/Tooley Ed., bk. ⍰, ch. ⍰ at ⍰⍰⍰.

78 The didactic performativity entailed is the focus of Michel Foucault, Discipline and Punish: The Birth of the Prison (Alan Sheridan, trans., New York, NY: Vintage Books, ⍰nd ed., ⍰⍰⍰⍰), to which we return in Chapters ⍰, ⍰, and ⍰⍰.

79 See Act of Settlement, ⍰⍰⍰⍰, ⍰⍰ ⍰ ⍰⍰ Will. ⍰, c. ⍰, used as the marker of judicial independence and discussed in Chapters ⍰, ⍰, and ⍰⍰. After its enactment, a judge's commission no longer ended at the conclusion of a monarch's reign. Votes in both Houses of Parliament were needed to end a judge's tenure. See David Lemmings, *The ⍰nde⍰ pendence of the Judiciar⍰ in ⍰i⍰nteenth Centur⍰ ⍰n⍰land*, in The Life of the Law: Proceedings of the Tenth British Legal History Conference, Oxford, ⍰⍰⍰⍰ at ⍰⍰⍰ (Peter Birks, ed., Rio Grande, OH: Hambledon Press, ⍰⍰⍰⍰).

80 See U.S. Const., Art. III, ⍰⍰. It provides for tenure during good behavior for federal judges and for salaries that cannot be diminished during terms of office.

81 As North explained, a ⍰recurring phenomenon in every society is the acquisition of political significance by concepts that originally had none.⍰ North at ⍰⍰.

82 Rawls at ⍰⍰⍰, further discussed in Chapters ⍰ and ⍰.

83 *Justice*, from Langston Hughes, The Collected Poems of Langston Hughes (Arnold Rampersad, ed., with David Roessel, Associate Editor, New York, NY: Knopf, ⍰⍰⍰⍰), discussed in Chapters ⍰ and ⍰.

84 See Foucault, Discipline and Punish, discussed in later chapters.

85 Charter or Fundamental Laws of West New Jersey, Agreed Upon, ch. XXIII (⍰⍰⍰⍰), reprinted in Sources of Our Liberties ⍰⍰⍰ (Richard L. Perry, ed., ⍰⍰⍰⍰), discussed in Chapter ⍰⍰.

86 See Jeremy Bentham, Constitutional Code (⍰⍰⍰⍰), in ⍰ The Works of Jeremy Bentham ⍰⍰ (John Bowring, ed., Edinburgh, Scot.: William Tait, ⍰⍰⍰⍰); and Frederick Rosen, Jeremy Bentham and Representative Democracy: A Study of the Constitutional Code ⍰⍰–⍰⍰ (Oxford, Eng.: Clarendon Press, ⍰⍰⍰⍰). Bentham's views are examined in Chapter ⍰⍰.

87 See Jeremy Bentham, Rationale of Judicial Evidence (⍰⍰⍰⍰), in ⍰ The Works of Jeremy Bentham ⍰⍰⍰ (⍰Of Publicity and Privacy, as Applied to Judicature in General, and to the Collection of the Evidence in Particular⍰) (John Bowring, ed., Edinburgh, Scot.: William Tait, ⍰⍰⍰⍰), discussed in Chapter ⍰⍰.

88 See J⍰rgen Habermas, The Structural Transformation of the Public Sphere: An Inquiry into a Category of Bourgeois Society (Thomas Burger, trans., Cambridge, MA: MIT Press, ⍰⍰⍰⍰); J⍰rgen Habermas, Between Facts and Norms: Contributions to a Discourse Theory of Law and Democracy ⍰⍰–⍰⍰ (William Rehg, trans., Cambridge, Eng.: Polity Press, ⍰⍰⍰⍰); Nancy Fraser, ⍰*ethinkin⍰ the Pu⍰lic Sphere⍰⍰ Contri⍰ution to the Criti⍰ue of ⍰ctuall⍰ ⍰⍰istin⍰ Democrac⍰*, in Habermas and the Public Sphere at ⍰⍰⍰ (Craig Calhoun, ed., Cambridge, MA: MIT Press, ⍰⍰⍰⍰); David Zaret, Origins of Democratic Culture: Printing, Petitions, and the Public Sphere in Early-Modern England (Princeton, NJ: Princeton U. Press, ⍰⍰⍰⍰). We examine adjudication's relation to the public sphere in Chapters ⍰⍰, ⍰⍰, and ⍰⍰.

89 International Covenant on Civil and Political Rights, art. ⍰⍰, Dec. ⍰⍰, ⍰⍰⍰⍰, G.A. Res. ⍰⍰⍰⍰A (XXI), U.N. Doc. ⍰/⍰⍰⍰⍰, discussed in Chapter ⍰⍰.

90 The expansion of courts is mapped in Chapters ⍰–⍰⍰; courts in the United States are the subject of Chapters ⍰, ⍰, and ⍰.

91 See, for example, Kathryn Fischer Taylor, In the Theater of Criminal Justice: The Palais de Justice in Second Empire Paris (Princeton, NJ: Princeton U. Press, ⍰⍰⍰⍰). As discussed in Chapters ⍰–⍰, during much of the nineteenth century and into the twentieth, county courts in the United States served localities in ways reminiscent of European town halls, functioning as multi-purpose government and social spaces. See, for example, Martha J. McNamara, From Tavern to Courthouse: Architecture and Ritual in American Law, ⍰⍰⍰⍰–⍰⍰⍰⍰ (Baltimore, MD: Johns Hopkins U. Press, ⍰⍰⍰⍰); Courthouses of California: An Illustrated History (Ray McDevitt, ed., San Francisco, CA: California Historical Society and Heyday Books, ⍰⍰⍰⍰); William L. Virden, Cornerstones and Communities: A Historical Overview of Colorado's County Seats and Courthouses (Loveland, CO: Rodgers ⍰ Nelsen, ⍰⍰⍰⍰). Further, as exemplified by figure ⍰⍰, a photograph of the *Justice* atop New York City Hall, many of the courthouses marked their law-related functions by putting such statues out front. Indeed, in many places, ⍰Lady Justice⍰ was a ⍰favorite of all the statuary figures⍰ See Doug Ohman ⍰ Mary Logue, Courthouses of Minnesota ⍰⍰–⍰⍰ (St. Paul, MN: Minnesota Historical Society Press, ⍰⍰⍰⍰).

92 See Clare Graham, Ordering Law: The Architectural and Social History of the English Law Court to ⍰⍰⍰⍰ (Aldershot, Eng.: Ashgate, ⍰⍰⍰⍰).

93 See, for example, Judicial Conference of the United States, Proceedings of the Judicial Conference, Sept. ⍰⍰–⍰⍰, ⍰⍰⍰⍰, at ⍰⍰. We discuss the development of the federal judiciary and its buildings programs in Chapters ⍰ and ⍰.

94 See Vision ⍰ Voice: Design Excellence in Federal Architecture, Building a Legacy vol. ⍰ (Washington, DC: U.S. General

Services Administration, Public Buildings Service, Office of the Chief Architect [illegible]). More discussion of this text and subsequent volumes in the series is provided in Chapters [illegible] and [illegible].

95 See La Nouvelle Architecture Judiciaire: Des Palais de Justice Modernes Pour Une Nouvelle Image de la Justice (Paris, Fran.: La Documentation Fran[illegible]aise, [illegible]), discussed in Chapter [illegible].

96 As we detail in Chapters [illegible]–[illegible], architects have developed expertise in this arena, with support from organizations such as the Academy of Architecture for Justice (AAJ), an interest group (termed a [illegible]knowledge community[illegible]) associated with the American Institute of Architects (AIA) and focused on [illegible]high-quality planning, design, and delivery of justice architecture[illegible] Details are provided at the AIA website, http://www.aia.org/caj[illegible]about.

97 Regional courts of the twentieth century are the topic of Chapter [illegible].

98 See Assembly of State Parties, Report to the Assembly of State Parties on the Future Permanent Premises of the International Criminal Court: Housing Options at [illegible] (ICC-ASP/[illegible]/[illegible], [illegible] March [illegible]), http://www.icc-cpi.int/iccdocs/asp[illegible]docs/library/asp/ICC-ASP-[illegible]-[illegible]English.pdf. That building is discussed in Chapter [illegible] along with other transnational courts.

99 See Jack Irby Hayes Jr., South Carolina and the New Deal [illegible]–[illegible] (Columbia, SC: U. of South Carolina Press, [illegible]). This image and the conflict are discussed in Chapter [illegible].

100 [illegible]*Justice*[illegible] [illegible]*n*[illegible]*lindfolded,* [illegible]*aises Newark* [illegible]*ow*, [illegible] Art Digest [illegible] ([illegible]), quoting a federal district court judge, Guy L. Fake. Chapter [illegible] explores the controversy over this image and others.

[illegible] (to be codified at various sections of [illegible] U.S.C. [illegible] [illegible] et seq. and [illegible] U.S.C. [illegible] [illegible]), and *Boumediene v*[illegible]*Bush*, [illegible] S. Ct. [illegible] ([illegible]), discussed in Chapter [illegible].

111 Marc Galanter, *Wh*[illegible] *the* [illegible] *aves*[illegible] *Come* [illegible] *ut* [illegible] *head*[illegible]*Specula*[illegible]*tions on the Limits of Le*[illegible]*al Chan*[illegible]*e*, [illegible] Law [illegible] Society Rev. [illegible] ([illegible]).

112 Foucault, Discipline and Punish at [illegible]–[illegible], discussed in later chapters.

113 The construction of ITLOS is detailed in Chapter [illegible], along with the development of other transnational courts.

114 This description comes from North's analysis of how during the Roman period it was [illegible]political necessity that really dictated the change[illegible] the necessity of fostering the reputation of the absolute ruler[illegible] as a temperate and persuasive force rather than relying purely on crude power. North at [illegible].

115 These buildings are discussed and depicted in Chapter [illegible].

Chapter [illegible]

1 Our thanks to Dr. Kathryn Slanski for her intellectual generosity in educating us about the legal and iconographic materials on Mesopotamia and about Yale's Babylonian Collection at the Sterling Library and for assisting us in finding the depiction reproduced in figure [illegible].

2 A photograph of this seal can be found at plate xxxviii, no. [illegible], and at p. [illegible] in Rainer Michael Boehmer, Die Entwicklung der Glyptik W[illegible]hrend der Akkad-Zeit (The Development of Hieroglyphics during the Akkadian Period) (Berlin, Ger.: Walter de Gruyter, [illegible]). The seal was once a part of the collection of Mrs. William H. Moore and was also published in XLVII Ancient Oriental Cylinders and Other Seals, plate [illegible] (Chicago, IL: U. of Chicago Press, [illegible]). Figure [illegible] is provided and reproduced with the permission of the University of Texas Press and the Trustees of the British Museum; our thanks to Peggy Gough of the University of Texas Press for facilitating our use of this drawing.

3 These cylinder seals, dating from around [illegible] BCE, often not larger than an inch or two, sometimes display scenes of communal activities and of the [illegible]priest-king[illegible] See Kathryn Slanski, *Social Class S*[illegible]*stem and the* [illegible]*conom*[illegible], in World Eras, vol. [illegible]: Ancient Mesopotamia [illegible] (Farmington, NY: Thomson Gale, [illegible]) (hereinafter Slanski, *Social Class S*[illegible]*stem*).

4 Kathryn E. Slanski, *The Mesopotamian* [illegible]*od and* [illegible]*in*[illegible]*on of* [illegible]*ighteous* [illegible]*in*[illegible]*ship and Balance of Power* [illegible]*etween Palace and Temple*, in Regime Change in the Ancient Near East and Egypt: From Sargon of Agade to Saddam Hussein, [illegible] Proceedings of the British Academy [illegible], [illegible]–[illegible] ([illegible]) (hereinafter Slanski, [illegible]*od and* [illegible]*in*[illegible]). Slanski interpreted the [illegible]rod and ring[illegible] to be symbols of [illegible]righteous kingship sanctified by the gods[illegible] communicating [illegible]an aspect of the enduring relationship between the palace and the temple[illegible] Id. at [illegible].

5 Slanski, [illegible]*od and* [illegible]*in*[illegible] at [illegible]–[illegible]. See also Francesca Rochberg, The Heavenly Writing: Divination, Horoscopy, and the Astronomy of Mesopotamian Culture [illegible]–[illegible] (Cambridge, Eng.: Cambridge U. Press, [illegible]) (hereinafter Rochberg, The Heavenly Writing). Shamash was regularly seen throughout Mesopotamian iconography beneath [illegible]astral symbols (lunar crescent, solar disk, and eight-pointed star)[illegible] Texts also referred to him as [illegible]judge (of the regions) above and below[illegible] Id. at [illegible]–[illegible]. Various discussions suggested that judgments and decisions emanated from Shamash as well as from other central deities. Id. at [illegible]–[illegible].

6 Martha T. Roth, *Mesopotamian Le*[illegible]*al Traditions and the Laws of* [illegible]*ammura*[illegible]*i*, [illegible] Chicago-Kent L. Rev. [illegible], [illegible] ([illegible]) (hereinafter, Roth, *Le*[illegible]*al Traditions*); Slanski, *Social Class S*[illegible]*stem* at [illegible].

7 See Martha T. Roth, Law Collections from Mesopotamia and Asia Minor [illegible]–[illegible] (Atlanta, GA: Scholars Press, [illegible]) (hereinafter Roth, Law Collections). Hammurabi, who reigned from about [illegible] to [illegible] BCE, was the sixth king of Babylon and the first of its Empire. The diorite stele in the Louvre was discovered in [illegible] in Susa (within what became known as the Khuzestan province of Iran). That stele has more than forty columns of writing inscribed in bands around the stone. Compilations of laws have been found on other steles and tablets, although not all of the rulers who promulgated them have been identified. See Slanski, *Social Class S*[illegible]*stem* at [illegible],

[illegible]–[illegible]. The texts often begin with a [illegible]historical-literary prologue and epilogue[illegible]providing information on the ruler's background. A set of detailed rules or what might be called scenarios follows[illegible] for example, that if x occurred, y should be the consequence. Id.

8 See Kathryn E. Slanski, *Classification, [illegible]istorio[illegible]raph[illegible] and Mon[illegible]umental [illegible]uthorit[illegible]The Ba[illegible]lonian [illegible]ntitlement [illegible]Nar[illegible]s [illegible]udurrus*[illegible] J. Cuneiform Stud. [illegible], [illegible] ([illegible]). What this scene represents is a question: whether [illegible]god is dictating the laws to the king, or that the king is offering the laws to the god, or that the king is accepting the rod and the ring that are the emblems of temple-building and sovereignty.[illegible] Roth, Law Collections at [illegible]. For additional discussion of the imagery on the Hammurabi Code, see Slanski, [illegible]*od and* [illegible]*in*[illegible] at [illegible]–[illegible].

9 Roth, Law Collections at [illegible], [illegible].

10 Transactions related to interpersonal and commercial matters were recorded on clay tablets. The relationships among the codes on stele, the clay records, and daily practices are not clear. See Roth, Law Collections at [illegible]–[illegible]. What is known is that between [illegible] and [illegible] BCE, Sargon of Akkad (a city whose site has not yet been identified) conquered city-states and created an empire that was unified in part through its written system. By [illegible]–[illegible] BCE, a legal system that encompassed regulations of weights, measures, and trading routes was in place. Between [illegible] and [illegible] BCE, a [illegible]royal archive[illegible] documented the interactions among Babylonia, Egypt, and Assyria. Slanski, *Social Class S[illegible]stem* at [illegible]–[illegible]. Thousands of these inscribed small clay tablets detail the sophisticated organization, with efforts, for example, to standardize production and provide instruction on various forms of manufacture and rules on the treatment of native-born subjects, aliens, and slaves. Id. at [illegible]–[illegible].

11 See Kathryn Slanski, *Mesopotamia[illegible]Middle Ba[illegible]lonian Period*, in A History of Ancient Near Eastern Law, vol. I, [illegible], [illegible] (Raymond Westbrook, ed., Leiden, Neth.: Brill, [illegible]). These materials, from roughly the sixteenth through the eleventh centuries BCE, are in Akkadian, the language of southern Mesopotamia. Slanski explained that the processes of litigation included oath taking, the giving of evidence by witnesses in trials, and the rendering of judgments and penalties related to conflicts about property, status, inheritance, contracts, and misdeeds or crimes. Id. at [illegible]–[illegible]. Rather than having absolute power, the king and his deputies were to take advice and behave in ways understood to be just. Slanski, *Social Class S[illegible]stem* at [illegible].

12 Kathryn E. Slanski, [illegible]*epresentation of the Divine on the Ba[illegible]lonian [illegible]ntitlement Monuments [illegible]udurrus*[illegible] pt. I: *Divine S[illegible]m[illegible]ols*, [illegible] Archiv f[illegible]r Orientforschung [illegible], [illegible]–[illegible] ([illegible]/[illegible]), Slanski noted that with the invocation of divinity, judgments were all the more binding.

13 Figures denoting [illegible]Law[illegible] as well as Justice can be found holding books. One example is the [illegible]*lle[illegible]or[illegible] of Law*, from the [illegible]s, in the Cour d'appel in Paris, France. See Katherine Fischer Taylor, In the Theater of Criminal Justice: The Palais de Justice in Second Empire Paris at xix, fig. [illegible] (Princeton, NJ: Princeton U. Press, [illegible]) (hereinafter Taylor, The Palais de Justice). Taylor argued that over time, the representation of expertise denoted by the book became unpopular. The [illegible] [illegible]*lle[illegible]or[illegible] of Justice* outside the Palais de Justice in Paris instead shows a Justice with an urn into which jury ballots could be cast[illegible] thereby denoting a preference for jury evaluation of oral evidence. Id. at fig. [illegible].

14 See Rochberg, The Heavenly Writing at [illegible]–[illegible]; Erica Reiner, [illegible]*stral Ma[illegible]ic in Ba[illegible]lonia*, [illegible] Transactions of the American Philosophical Society [illegible] (Philadelphia, PA: American Philosophical Society, [illegible]); Stephen Langdon, Babylonian Menologies and the Semitic Calendars: The Schweich Lectures of the British Academy [illegible] (London, Eng.: Oxford U. Press, [illegible]).

15 Cultural significance was attached to various parts of the calendar deemed auspicious or unfavorable for different activities. Further, some rituals relied on the presence of the moon and the sun. See Reiner at [illegible], [illegible]–[illegible], [illegible]–[illegible]. Dating these beliefs is complex, because later Hellenistic sources are sometimes conflated with earlier writings that, in turn, may reflect yet undiscovered predecessors. Mesopotamian culture is an important source of what became, in modern parlance, astrology and astronomy. See generally Rochberg, The Heavenly Writing; see also Langdon at [illegible]–[illegible]; Richard Hinckley Allen, Star-Names and Their Meanings, [illegible]–[illegible] (New York, NY: G. E. Stechert, [illegible]). Reiner's reading of Mesopotamian poetry also suggested that the stars were understood as mediators between people and the gods, a role she likened to the parts played by saints in later theologies. Reiner at [illegible].

16 Peoples from Egypt, Babylonia, and China are all cited, sometimes with reference to the development of astronomy and mathematics and other times as demonstrating the universality of Jungian archetypes. The commentary aspiring to document these sources is both popular and academic. See, for example, Rupert Gleadow, The Origin of the Zodiac [illegible], [illegible], [illegible]–[illegible] (New York, NY: Castle Books, [illegible]).

17 A chronology of the history and references to months and to astral signs is provided by Rochberg, The Heavenly Writing at xxiii–xxvi. As Rochberg explained, Babylonian inscriptions from about [illegible] BCE refer to the [illegible]heavenly writing[illegible] interpreting the stars. Id. at [illegible]–[illegible]. Stars and planets were also named. For example, Libra was called the [illegible]Star[illegible] of Shamash, who was the divine judge. Reiner at [illegible]. See also Gwyneth Heuter, *Star Names[illegible] [illegible]r[illegible]ins and Misconceptions*, [illegible] Vistas in Astronomy [illegible] ([illegible]).

With dramatic flourish, Langdon argued that Babylonia [illegible]out of pure imagination saw the sign of the scales[illegible] connected the scales and the constellation of the [illegible]hypsomoa of Saturn[illegible] identified with Shamash, and then called the planet Saturn to denote that it was the [illegible]star of justice and righteousness.' [illegible] Langdon at [illegible]–[illegible]. Gleadow, at [illegible], described [illegible]Zibaniitu, the Scales[illegible] as a [illegible]well-known Babylonian constellation[illegible] corresponding to the [illegible]myth of the Last Judgment in the autumn and the weighing of souls. It happens also to be seasonally suitable to Egypt, for the harvest would be weighed, and taxes assessed, when the moon was full in Libra.[illegible] The words [illegible]*a an[illegible]na* (or [illegible]*[illegible]anitu*) can be translated as [illegible]balance of heaven[illegible] Heuter at [illegible]. Langdon reported that a legend echoed the association, for [illegible]he of the scales' [illegible]was an angel who [illegible]dwells in the lower world and passes judgment on the souls.[illegible] Langdon at [illegible]. As for the timing, some believe that the [illegible]peoples of the Euphrates region[illegible] used a system of constellations similar to what the Greek poet Aratus later described in [illegible] BCE. See Archie E. Roy, *The [illegible] [illegible]r[illegible]in of the Constellations*, [illegible] Vistas in Astronomy [illegible], [illegible], [illegible] ([illegible]). Rochberg discussed Babylonian horoscopes dated from the fifth century BCE. Id. at [illegible]–[illegible]. Whether these attributions will be sustained as new materials are found, the [illegible]astronomical and astrological traditions of ancient Mesopotamia[illegible] have had a significant impact on subsequent astronomy. Id. at [illegible].

18 According to Rachel Hachlili, the names of the months on the Jewish calendar are derived from Babylonian words. The earliest calendar that has been found listing the order of months dates from around the first century CE. The Jewish community also adapted its calendar in relationship to the Roman one and borrowed signage. See Rachel Hachlili, *The [illegible]odiac in [illegible]ncient Jewish S[illegible]na[illegible]o[illegible]al [illegible]r[illegible] [illegible]eview*, [illegible] Jewish Studies Q. [illegible], [illegible] ([illegible]) (hereinafter Hachlili, *The [illegible]odiac*). These images later influenced Christian art depicting the seasons. By Roman times, the word *Ja[illegible]um*, or [illegible]Yoke, or Beam, of the Balance[illegible] was associated with the sign of the fall equinox. In the Julian calendar dated [illegible] BCE, the term [illegible]Libra[illegible] can be found. Allen at [illegible]–[illegible]. Langdon also argued that the Jewish time of judgment tradition was [illegible]a myth undoubtedly inherited from Babylonia[illegible] and that the [illegible]same belief is preserved in Arabic tradition[illegible] about the observance of Ramadan, where fates are also decided. Langdon at [illegible].

19 George M. A. Hanfmann, The Season Sarcophagus in Dumbarton Oaks, vol. I, [illegible]–[illegible] (Cambridge, MA: Harvard U. Press, [illegible]).

20 Hachlili, *The Zodiac* at [illegible]–[illegible]. See also Zeev Weiss, The Sepphoris Synogogue: Deciphering an Ancient Message through its Archaeological and Socio-Historical Contexts [illegible]–[illegible] (Jerusalem, Isr.: Israel Exploration Society, Hebrew University, [illegible]). An example from the sixth century CE is a mosaic floor, lettered in Hebrew and Aramaic, of a synagogue in Bet Alpha at the foot of Mt. Gilboa in Israel. Included is a female figure holding scales. See *Bet Alpha National Park* (Israel Nature and Parks Authority, pamphlet, June [illegible]). In other synagogue floor mosaics, Greek lettering has also been found.

Given that such imagery shares features common with other sites under Roman influence, Jewish traditions are not perceived to have made a distinctive contribution to Justice iconography. See Rachel Hachlili, *Jewish Art and Iconography in the Land of Israel*, in Near Eastern Archaeology: A Reader [illegible]–[illegible] (Suzanne Richard, ed., Winona Lake, IN: Eigenbrauns, [illegible]). The design of the synagogue zodiac mosaics generally follow the pattern discussed in the text, with a square in which two concentric circles appear. Weiss provided analyses of the depictions of animals, fruits, and scenes of daily activities in the Sepphorois Synagogue. In its zodiac, the male figures, not found in other synagogue mosaics, are similar to personifications in Roman and Byzantine Art. Weiss at [illegible].

In the four corners of the Sepphoris Synagogue are allegories of the Seasons, shown as females and based largely on the iconographic traditions known in the Roman-Byzantine world. Id. at [illegible]. The Bet Alpha Synogogue mosaic follows a similar pattern. Its base includes a depiction of the Old Testament story of Abraham and Isaac and a Hebrew passage naming the artist who made the mosaic, as well as the date (during the reign of Emperor Justinus, [illegible]–[illegible] CE) and the cost. Because some of the motifs in synagogue mosaics have not been found outside Palestine, that distinctive pattern suggests local traditions completely unknown in the synagogues in the Diaspora. Id. at [illegible]. Our thanks to Professor Lee Levine of Hebrew University and Professor Steven Fraade of Yale University for pointing us to these sources, and to Elinor and Robert Slater for facilitating a visit to the Bet Alpha site.

21 Some scholars interpret the design as a pagan reference to the sun god Helios, and therefore to the supremacy of the laws of nature. In Jewish iconographical schemes, the design is read to refer to God or to denote that the zodiac functioned as a calendar. Hachlili, *The Zodiac* at [illegible]–[illegible]. With the rise of Christianity, the design was reinterpreted as the representation of the Christian creation in which Christ becomes a central figure. Hanfmann at [illegible]–[illegible]. A well-known iteration is Albrecht Dürer's woodcut *Sol Justitiae* (*The Sun of Justice*, also sometimes called *The Judge*), executed around [illegible]; there a male figure, often described as Jesus, appears as a judge. Sitting atop a lion, he is wide-eyed and holds an upright sword in one hand and scales with uneven pans in the other. A halo and rays of sun surround his head. See The Complete Engravings, Etchings and Drypoints of Albrecht Dürer [illegible]–[illegible], plate [illegible] (Walter L. Strauss, ed., New York, NY: Dover Publications, [illegible]) (hereinafter Walter Strauss, Dürer). See also Erwin Panofsky, The Life and Art of Albrecht Dürer [illegible] (Princeton, NJ: Princeton U. Press, [illegible]). Dürer may have been inspired by a line from the [illegible] *Repertorium morale* of Petrus Berchrious: "The Sun of Righteousness shall appear ablaze when he will judge mankind on the day of doom." Walter Strauss, Dürer at [illegible]–[illegible]; Panofsky at [illegible]. The solar disc around the head of Jesus echoes not only Helios but other god figures as well, including the Babylonian Shamash. Panofsky noted the association with the Islamic East and the zodiac. Panofsky at [illegible].

22 Hachlili, *The Zodiac* at [illegible]–[illegible]. Reiner commented that the constellation Virgo, adjacent to Libra, was associated with Dike and that in Babylonia's astral magic the Scales (the constellation Libra, Akkadian Zibanitu) are linked to Shamash's "star of Justice." Reiner at [illegible].

23 For example, the zodiac became a decorative element in the Town Hall of Amsterdam, discussed in Chapter [illegible]. See Katharine Fremantle, *Themes from Tiepolo and Rubens in the Royal Palace of Amsterdam*, [illegible] Burlington Magazine [illegible], [illegible]–[illegible] ([illegible]). The zodiac was also on the walls of the room in Padua in which judgments were given and to which the public had access. See Eva Frojmovic, "Giotto's Allegories of Justice and the Commune in the Palazzo della Ragione in Padua: Reconstruction," [illegible] J. Warburg & Courtauld Inst. [illegible], [illegible]–[illegible] ([illegible]).

24 Gleadow at [illegible]. As Rochberg explained at [illegible]–[illegible], the "zodiac is a beltway through the heavens through which the sun, moon, and planets may be seen to move. In a conception of the sky as a sphere, the zodiac is a circular belt bisected" by an ecliptic and further extending about [illegible] degrees north and south of it. "Nothing in the astronomical cuneiform texts suggests that the Babylonians thought in terms of a celestial sphere." Some constellations fell within the "zodiac belt" and were identified by Babylonian texts as in "the path of the moon." Id. at [illegible]. Discussion of the zodiac can be found in texts dating from between [illegible] and [illegible] BCE. Id. at [illegible].

By the twentieth century, the term zodiac came to denote "a circle of twelve constellations, each of exactly thirty degrees extent, lying along the path of the sun, and by means of which the positions of the sun, moon, and planets can be measured." Gleadow at [illegible]. The "tropical or moving zodiac" is measured from the tropics, whereas a "fixed or sidereal zodiac" is measured from fixed stars but moves forward by one day "every [illegible] years." Id. at [illegible]. In Gleadow's view, the zodiac was first a method of measuring time and subsequently became a basis for "divination." Id. at [illegible].

25 See generally William Ian Miller, Eye for an Eye (Cambridge, Eng.: Cambridge U. Press, [illegible]). For example, James Whitman noted that the Laws of Hammurabi on talionic maiming varied with social status and that the medieval Germanic Code of Alfred detailed payments in shillings for particular injuries; for instance, the loss of an eye cost [illegible] shillings, [illegible] pence and the third part of a penny as compensation." James Q. Whitman, "Ancient Rights and Wrongs: Art the Origins of Law and the State's Supervision of Violence, Mutiliation of Bodies, or Setting of Prices," [illegible] Chicago-Kent Law Review [illegible], [illegible]–[illegible] ([illegible]).

26 See Bruno Kisch, Scales and Weights: A Historical Outline (New Haven, CT: Yale U. Press, [illegible]).

27 Kisch at [illegible].

28 Erik Hornung, Idea into Image: Essays on Ancient Egyptian Thought [illegible] (Elizabeth Bredeck, trans., New York, NY: Timken Publishers Inc., [illegible]) (hereinafter Hornung, Idea into Image). He described the Sanskrit word rta" as coming "closest." Id.

29 Geraldine Pinch, Egyptian Mythology: A Guide to the Gods, Goddesses, and Traditions of Ancient Egypt [illegible] (Oxford, Eng.: Oxford U. Press, [illegible]). Pinch also described Maat as a regenerative quality, relevant to the gods as well as to humans. What the terms mean, either for those who lived during the early Egyptian period or for modern scholars, remains in dispute. Some argue that ancient Egyptian practices, engaged with nature and the cosmos, would today be described as ascribing magical properties to the world. Others posit that Maat had philosophical and sociolegal dimensions, obliging individuals to behave in ways one would call moral or ethical. See Anna Mancini, Maat Revealed: Philosophy of Justice in Ancient Egypt (Paris, Fran.: Buenos Books International, [illegible]); Gary A. Stilwell, Conduct and Behavior as Determinants for the Afterlife: A Comparison of the Judgments of the Dead in Ancient Egypt and Ancient Greece (Ph.D. dissertation, Florida State U., Tallahassee, FL, [illegible]; UMI Publication No.: AAT [illegible]).

30 Pinch at [illegible], [illegible].

31 Joyce Tyldesley, Judgement of the Pharaoh: Crime and Punishment in Ancient Egypt [illegible] (London, Eng.: Weidenfeld & Nicolson, [illegible]).

32 Hornung, Idea into Image at ⍰⍰⍰. Maat is regularly contrasted with injustice and disorder. See Siegfried Morenz, Egyptian Religion, ⍰⍰⍰–⍰⍰⍰ (Ann E. Keep, trans., Ithaca, NY: Cornell U. Press, ⍰⍰⍰⍰). Her opposing god was Seth, representing disruption yet retaining some qualities that made him revered. See Tyldesley at ⍰⍰.

33 Erik Hornung, ⍰*ncient* ⍰⍰⍰*ptian* ⍰*eli*⍰*ious* ⍰*icono*⍰*raph*⍰, in Civilizations of the Ancient Near East ⍰⍰⍰⍰, ⍰⍰⍰⍰–⍰⍰⍰⍰ (Jack M. Sasson, ed., Miriam Lichtheim, trans., New York, NY: Charles Scribner's Sons, ⍰⍰⍰⍰). As in other iconographical traditions, an attribute associated with one figure could also be connected to another. For example, in Egyptian imagery the feather also signified the air god Shu. Pinch at ⍰⍰⍰.

34 Hornung, Idea into Image at ⍰⍰⍰.

35 Figure ⍰⍰, copyrighted by the Trustees of the British Museum, is reproduced with their permission. The papyrus from the Nedjmet *Book of the Dead* may have come from the Royal Cache at Deir el-Bahari, Egypt; it is dated around ⍰⍰⍰⍰ BCE, the time of the Twenty-First Dynasty. According to the British Museum, robbers were at the Deir el-Bahari site prior to its excavation by Egyptologists. The Prince of Wales (later Edward VII) apparently acquired the scroll around ⍰⍰⍰⍰ when he visited Egypt, and in ⍰⍰⍰⍰ he gave the papyrus to the British Museum. Parts of this scroll are in other museum collections. According to the museum, the scene shows Nedjmet (also spelled Nodjmet and Nodjnet) and Herihor, who was her husband and the ⍰first prophet-priest of Amon-Re⍰ He is said to have ⍰usurped royal style and power at Thebes and initiated a line of Priest-Kings⍰in about ⍰⍰⍰⍰ BCE. The scene includes the ⍰judgment⍰ of Nedjmet, but ⍰instead of her heart being represented in the pan of the balance against the image of the goddess Maat, there is a kneeling figure of the queen. Thoth, in the form of a baboon, is shown holding a scribe's palette, recording the verdict.⍰ T. S. Pattie ⍰ E. G. Turner, The Written Word on Papyrus ⍰⍰ (London, Eng.: British Museum Publications, ⍰⍰⍰⍰) (catalogue for an exhibition held in the British Museum). Although this funeral papyrus was in Nedjmet's possession, Herihor is shown in the ⍰primary place.⍰ Gay Robins, Reflections of Women in the New Kingdom: Ancient Egyptian Art from the British Museum ⍰⍰ (Atlanta, GA: Michael C. Carlos Museum at Emory University, ⍰⍰⍰⍰). Questions of dynastic succession and women's roles have prompted additional efforts to identify these actors. See John H. Taylor, *Nod*⍰*met, Pa*⍰*ankh and* ⍰ *erihor*⍰*The* ⍰*nd of the New* ⍰*in*⍰*dom* ⍰*econsidered*, ⍰⍰ Proceedings of the Seventh International Congress of Egyptologists ⍰⍰⍰⍰ (Leuven, Belg.: Peeters Publishers, ⍰⍰⍰⍰).

36 In some texts Ra, Maat's father, is described as weighing Maat. See Maulana Karenga, Maat, The Moral Ideal in Ancient Egypt: A Study in Classical African Ethics ⍰⍰ (New York, NY: Routledge, ⍰⍰⍰⍰).

37 The title *Book of the Dead* is a ⍰term coined in the nineteenth century for a body of texts known to the Ancient Egyptians as the Spells for Going Forth by Day.⍰ Pinch at ⍰⍰. In Pinch's view, the oft-made comparison between that text and the Bible was ⍰very inappropriate⍰ because the *Book of the Dead* was not ⍰the central holy book of Egyptian religion⍰ but ⍰just one of a series of manuals composed to assist the spirits of the elite dead to achieve and maintain a full afterlife⍰ Id. The spells or formulas within varied; they were not ⍰fixed⍰ until sometime around ⍰⍰⍰ BCE. As Carol Andrews put it, the *Books of the Dead* provided a ⍰repertoire⍰ accompanied by illustrative vignettes. The earliest *Book of the Dead* papyri found date from about the fifteenth century BCE; earlier hieroglyphs from ⍰⍰⍰⍰ BCE include some of the same rituals or addresses. Introduction to The Ancient Egyptian Book of the Dead ⍰⍰–⍰⍰ (Carol Andrews, ed., Raymond O. Faulkner, trans., London, Eng.: British Museum Publications, ⍰⍰⍰⍰) (hereinafter Andrews's Book of the Dead). That volume includes many illustrations reproduced from the British Museum's collection of papyri.

Many such books were produced at the behest of wealthy families, and no authoritative version of any of the *Books of the Dead* exists. The practice of placing such writings with a person at death appears to have begun with ⍰Pyramid Texts⍰ made for kings and their families beginning around ⍰⍰⍰⍰ BCE. Subsequently, other persons wealthy enough to afford sarcophagi had ⍰Coffin Texts⍰ placed inside. *Books of the Dead* came thereafter, around ⍰⍰⍰⍰ BCE during the era of the New Kingdom. The amalgam of texts had a good deal of variation. Indeed, to speak of a ⍰scriptural canon⍰ is to mislead. *P*⍰*ramid Te*⍰*ts* were somewhat similar, but *Co*⍰ *n Books* and *Book of the Dead* texts had ⍰very little textual consistency⍰ as well as ⍰little uniformity in the order in which chapters appear on papyri⍰ See Ogden Goelet Jr., ⍰ *Commentar*⍰ *on the Corpus of Literature and Tradition Which Constitutes the Book of* ⍰ *oin*⍰ ⍰*orth* ⍰⍰ *Da*⍰, in The Egyptian Book of the Dead, The Book of Going Forth by Day, Being the Papyrus of Ani, Royal Scribe of the Divine Offerings of All the Gods, Written and Illustrated circa ⍰⍰⍰⍰ BCE, at ⍰⍰⍰–⍰⍰⍰ (Raymond O. Faulkner ⍰ Dr. Ogden Goelet Jr., trans., San Francisco, CA: Chronicle Books, ⍰⍰⍰⍰) (hereinafter Faulkner and Goelet's Book of the Dead).

The illustrations in these books were likely drawn by ⍰royal and aristocratic women who served as priestesses in the temples.⍰ Pinch at ⍰⍰. These images have been reproduced repeatedly since the early nineteenth century, when, after Napoleon's invasion and the discovery of the Rosetta Stone, ⍰the rage for collecting Egyptian antiquities⍰ spread imagery from papyri and related objects around the world. Id. at ⍰⍰. See also E. A. Wallis Budge, The Chapters of Coming Forth by Day: The Egyptian Text According to the Theban Recension in Hieroglyphic Edited from Numerous Papyri, with a Translation, Vocabulary, etc. (London, Eng.: Kegan Paul, Trench, Trübner, ⍰⍰⍰⍰). One of the many associations between Justitia and Maat can be found in Otto Rudolf Kissel, Die Justitia: Reflexionen ⍰ber ein Symbol und Seine Darstellung in der Bildenden Kunst (Justitia: Reflections on a Symbol and Its Representation in Sculpture) ⍰⍰–⍰⍰ (Munich, Ger.: Beck, ⍰⍰⍰⍰).

38 Andrews's Book of the Dead at ⍰⍰. In later texts and illustrations related to death and the afterlife, the scales became less central. Christine Seeber, ⍰*ntersuchun*⍰*en* ⍰*ur Darstellun*⍰ *des Toten*⍰ ⍰*erichts im* ⍰*ltern* ⍰*e*⍰⍰*pten* (⍰⍰*aminations of the* ⍰*epresentation of the Court of the Dead in* ⍰ *ncient* ⍰⍰⍰*pt*), ⍰⍰ M⍰ nchner ⍰gyptologische Studien ⍰⍰–⍰⍰ (Munich, Ger.: Deutscher Kunstverlag, ⍰⍰⍰⍰) (translation by Chavi Keeney Nana).

39 An excerpt of this ⍰judgment⍰ described in Spell ⍰⍰b, is translated in Faulkner and Goelet's Book of the Dead, text accompanying plate ⍰:

> O my heart of my different ages⍰Do not stand up as a witness against me, do not be opposed to me in the tribunal, do not be hostile to me in the presence of the Keeper of the Balance . . . . Do not tell lies about me in the presence of the god; . . . .
>
> Thus say Thoth, judge of truth, . . . : Hear this word of very truth. I have judged the heart of the deceased, and his soul stands as a witness for him. His deeds are righteous in the great balance, and no sin has been found in him.

40 Pinch at ⍰⍰. For example, one judgment scene described the balance as ⍰that balance of Ra in which he weighs Maat⍰ The balance was sometimes called the ⍰Scales of Maat⍰ The god Anubis has also been described as the ⍰Master of the Balance⍰ Further, Thoth, the ⍰Lord of Just Measure⍰ was said to have recorded the results. See Karenga at ⍰⍰⍰, ⍰⍰⍰–⍰⍰⍰ (providing translations and commentary on scenes and judgment processes). In other iterations, the gods Ra (or Re) and Osiris dominate. In addition to Spell ⍰⍰b, a second, Spell

□□□ (□The Declaration of Innocence Before the Gods of the Tribunal□) provided a □formula□ for □descending to the great hall of the Double Maat□ Once deceased, a person would face a □jury of gods and goddesses and declare himself or herself innocent of forty-two specific sins.□ Pinch at □□. Pinch also described (and provided in her figure □) a □vignette to Spell □□□□ of the *Book of the Dead* that shows Maat bringing in a dead woman, weighed by □Horus and Anubis□ with the result recorded by Thoth□ Further, if, like Ra, the dead person had Maat in his or her heart, the scales would balance and the deceased would be declared □true of voice□ or □justified□ Id. at □□□.

Thoth was the □god of wisdom and secret knowledge who invented writing and the different languages of humanity□ Understood as having great insight, Thoth is sometimes shown as an ibis-headed man holding out the wedjat (also spelled wadjet or wadjit and referring to a representation of a human-looking eye, often outlined and sometimes blue), that in turn could be interpreted to be the Eye of Ra. Id. at □□□. According to Hornung, forty-two judges of the dead, as well as Osiris, are addressed in Spell □□□. Hornung, □*ncient* □□□*ptian* □*eli*□*ious* □*cono*□*raph*□ at □□□□. A translation of the version of Spell □□□ as it appeared in the Papyrus of Ani is provided in Faulkner and Goelet's Book of the Dead at □□–□□, plate □□ and accompanying text.

41 Hornung, Idea into Image at □□□. However, unlike the chaos attributed to Egyptian cosmology, the Mesopotamian cosmos had an □orderliness . . . manifest in the reciprocity of heaven and earth and further conceived of in terms of the rule of regions by designated deities.□ Rochberg, The Heavenly Writing at □□□.

42 See generally S. G. F. Brandon, The Judgment of the Dead: An Historical and Comparative Study of the Idea of a Post-Mortem Judgment in the Major Religions (London, Eng.: Weidenfeld □ Nicolson, □□□□). As noted, Western scholars have sometimes equated Egyptian myths and texts with those of more recent religions but, unlike the Old Testament, the New Testament, and the Koran, no central repository of various Egyptian practices existed. Pinch at □, □.

43 William Stevenson Smith, *The* □*elationship* □*etween* □□□*ptian* □*deas and* □ *ld Testament Thou*□*ht*, □□ J. of Bible and Religion □□, □□ (□□□□). Further, Brandon argued that by the Greco-Roman period, □□g□ood or bad, rich or poor, king or peasant, all alike shared this shadowy consciousnessless existence in the realm of the dead, over which ruled Pluto and his queen Persephone.□ Brandon at □□. Jewish traditions also spoke of a shadowy world, she'ol, where the dead resided.

44 Several translations of both the Old and New Testaments, the Koran, and Apocrypha literature are now online, thereby permitting word searches for scales, balance (also spelled □baulance□ in Middle English), and the like. In addition to finding many references to judgments about individuals, we also located many references to weights as important to commercial transactions because honest assessments of value are central obligations in many religious traditions. Further, because databases can be searched by time period, one can trace the changing usage of terms in English. For example, the word □balance□ was often used in earlier periods, and the term □scales□ came to be used more frequently in later periods. For the biblical quotations we used an English database at Yale, found at Jeeves Library, http://jeeves.library.yale.edu/bie, which includes many versions of the Old and New Testaments, such as The New English Bible with the Apocrypha (Charles Harold Dodd, ed., Oxford □ Cambridge, Eng.: Oxford □ Cambridge U. Presses, □□□□) (hereinafter New English Bible); The Twentieth Century New Testament: A Translation into Modern English, Made from the Original Greek (New York, NY: Fleming H. Revell, □□□□, revised □□□□), and a version often called the □common language bible□ officially The Good News Bible with Deuterocanonicals/Apocrypha, Today's English Version (Robert G. Bratcher, trans., New York, NY: American Bible Society, □□□□). For the Koran, an electronic English version, The Holy Qur'an (M. H. Shakir, trans., New York, NY: Tahrike Tarsile Quar'an, □□□□), is available online through the University of Michigan at http://www.hti.umich.edu/k/koran.

45 *Jo*□ □□:□, in the Old Testament, from New English Bible. Another translation is □Let me be weighed in an even balance, that God may know mine integrity□ See David Daube, *The Scales of Justice*, □□ Jurid. Rev. □□□, □□□–□□□ (□□□□).

46 *Psalm* □□:□, New English Bible. See also Mary Phillips Perry, □ *n the Ps*□*chostasis in Christian* □ *rt*□ *Part* □*and Part* □□, □□ Burlington Magazine □□–□□, □□□–□□□ (Nov. □□□□) and □□□–□□□, □□□–□□□ (Jan. □□□□) (hereinafter Perry, □ *n the Ps*□*chostasis* □□□).

47 *The Prophets* □□.□□, The Holy Qur'an.

48 Homer, The Iliad, ch. xxii at □□□ (George Chapman, trans. With an Introduction by Henry Morley, London, Eng.: George Routledge □ Sons, Ltd. □th ed. □□□□). In a more recent translation by Robert Fitzgerald, relevant portions of text read: □the Father poised his golden scales. He placed two shapes of death, death prone and cold, upon them, one of Akhilleus, one of the horseman, Hektor . . . . Down sank Hektor's fatal day, the pan went down toward underglooom . . . □ Homer, The Iliad, ch. xxii □□□, lines □□□–□□□ (Robert Fitzgerald, trans., Introduction by Andrew Ford, New York, NY: Farrar, Straus □ Giroux, □□□□). See generally Frank Harper Moore, □*straea, the Scorpion, and the* □ *eaven*□ *Scales*, □□ English Literary History (□□□□) (discussing Homer's use in *The* □*iad* of the □golden scales□ to weigh the destinies of the Trojans and the Greeks and Milton's invocation of weighing in *Paradise Lost*).

49 Brandon at □–□. He relied on Egyptian □Wisdom Literature□ that was supplemental to the □Pyramid Texts□ to identify a concept of justice that referred both to rightful behavior during life and to assessments of a person's behavior after death. Id. at □□–□□. Brandon described a two-stage □process of judgment□ a first in which accusations are made and a second for assessment, based on one's deeds. Id. at □□.

50 Tyldesley, for example, at □□□, used the □general list of offenses compiled□ for the dead as a source of insight into unacceptable behavior in Egypt. Hornung also described the relevance of individual good deeds, such as providing for the needy and the poor. Hornung, Image and Idea at □□□. Further, Karenga argued that the □idea of everyone being subjected to judgment□ was □central to Maatian ethics.□ Karenga at □□□. Stilwell concluded that a consequential morality existed in both Egypt and Greece and that the relevance of moral character to a judgment made at death served to gain compliance with customary rules that maintained social order. In contrast, Seeber observed that because the scales are generally shown to be level, that evenness indicated the role played by Fate, providing magical help to the dead. Seeber at □□–□□.

Moreover, disputes exist about whether □ritual magic□ could absolve individuals of misdeeds or that a □moral□ assessment was made. Brandon at □□–□□. Brandon read the relevant texts to include the concept that the □inequities□ of this world were to be □adjusted□ in the next. Id. at □□. In his view, the *Book of the Dead* included conflicting traditions, with Chapter (or Spell) □□ providing a vision of a □divine tribunal□ giving judgment based on hearing statements and assessments. Chapter □□□ suggested that upon recitals of two □Declarations of Innocence□ addressed to forty-two deities (□demonic beings who executed the wicked□), a kind of formulaic release took place. Id. at □□–□□. Brandon suggested that a deceased person might first have declared innocence of a long list of offenses, set forth in Chapter □□□, and thereafter, that person's heart was weighed against the feather representing Maat □to test its truthfulness□ Id. at □□. Thus, ritual magic was not enough, for □the moral quality of one's life on earth□ was central to a □happy after-life□ Id. at □□.

A parallel discussion questions whether scenes of assessment in Greek literature and art depict evaluations of personal behavior or illustrate the work of fate. One such scene is on a Greek vase, dated from about the sixth century BCE, described by Perry in □ *n the Ps*□□

chostasis at ⧫⧫, as portraying Hermes with a balance that has, on each of the scales, ⧫a small winged figure, the fate of the combatant⧫ See also Brandon at ⧫⧫, ⧫⧫–⧫⧫, and fig. ⧫. A caveat is in order about the idea of attributing ⧫magical thinking⧫ to ⧫ancients⧫ Attitudes nested in myths and magic do not necessarily preclude analogic reasoning; we have much yet to understand about what inferences to draw from identifying beliefs as ⧫magical⧫ See Rochberg, The Heavenly Writing at ⧫⧫⧫–⧫⧫⧫.

51 See Jan Assmann, Ma'at: Gerechtigkeit und Unsterblichkeit im Alten ⧫gypten (Ma'at: Justice and Immortality in Ancient Egypt) (Munich, Ger.: Verlag C. H. Beck, ⧫⧫⧫⧫). Assmann read the actual judgment to come at the end of examinations at each of twenty-one gates, where the dead had to prove the right to pass on to enter an afterlife where Maat reigned. The test determined whether one had lived one's life according to Maat. Id. at ⧫⧫⧫–⧫⧫⧫ (translation by Chavi Keeney Nana).

52 Mancini, for example, argued that the symbolic representation in the *Book of the Dead* has been misread. In her view, the picture shows not a process of decisionmaking (weighing and balancing) but rather the ⧫balance obtained through the right circulation of Maat through the heart⧫ These scenes depict the balance of ⧫cosmic energy⧫ in lieu of the moment of judgment. Id. at ⧫⧫–⧫⧫. Under this interpretation, ⧫Maat is not justice, but justice consists of letting Maat flow correctly⧫ Id. at ⧫⧫. For a discussion of Babylonian conceptions of fate, see Rochberg, The Heavenly Writing at ⧫⧫–⧫⧫; there Rochberg quoted a prayer addressed to Shamash (⧫king of heaven and earth, judge of the things above and below, light of the gods⧫) to prevent ⧫anything bad from happening⧫ as a result of an ominous omen.

53 Hornung, Image into Idea at ⧫⧫⧫–⧫⧫⧫; Tyldesley at ⧫–⧫⧫.

54 Tyldesley at ⧫⧫. She detailed pharonic rules, including a prohibition on rebellion, edicts against thefts, and enforcement of obligations to pay taxes, as well as delegation of authority to deputies who decided disputes. Id. at ⧫⧫–⧫⧫, ⧫⧫⧫–⧫⧫⧫.

55 Several scholars have explored their roles. See, for example, Jane Ellen Harrison, Epilegomena to the Study of Greek Religions and Themis: A Study of the Social Origins of Greek Religion (New Hyde Park, NY: University Books, ⧫⧫⧫⧫) (reprint of the ⧫⧫⧫⧫ and ⧫⧫⧫⧫ editions of the two volumes); Hugh Lloyd-Jones, The Justice of Zeus (Berkeley, CA: U. of California Press, ⧫⧫⧫⧫); J. Walter Jones, The Law and Legal Theory of the Greeks (Oxford, Eng.: Clarendon Press, ⧫⧫⧫⧫); Helen North, From Myth to Icon: Reflections of Greek Ethical Doctrine in Literature and Art (Ithaca, NY: Cornell U. Press, ⧫⧫⧫⧫) (hereinafter North, From Myth to Icon); Emma Stafford, Worshipping Virtues: Personification and the Divine in Ancient Greece (London, Eng.: Gerald Duckworth ⧫ Classical Press of Wales, ⧫⧫⧫⧫). Greek myths have provided a central source for the ⧫European tradition of personifying features of physical nature and of the human psyche, including the moral qualities (the Virtues)⧫ See Dougal Blyth ⧫ Tom Stevenson, *Personification in ⧫reek Literature and ⧫rt*, in Under the Aegis, The Virtues ⧫⧫⧫ (Peter Shand, ed., Auckland, New Zeal.: Fortuna Press, ⧫⧫⧫⧫).

56 See Cathleen Burnett, *Justice⧫ M⧫th and S⧫m⧫ol*, ⧫⧫ Legal Studies Forum ⧫⧫, ⧫⧫–⧫⧫ (⧫⧫⧫⧫) (summarizing other sources).

57 Harrison at ⧫⧫⧫–⧫⧫⧫.

58 Harrison at ⧫⧫⧫.

59 Harrison at ⧫⧫⧫–⧫⧫⧫.

60 Harrison at ⧫⧫⧫, ⧫⧫⧫.

61 Synn⧫ve des Bouvrie, *Book ⧫eview of Th⧫mis et les ⧫orai⧫ ⧫echerche sur les divinit⧫s ⧫rec⧫ues de la ⧫ustice et de la pai⧫*, ⧫⧫ History of Religions ⧫⧫⧫, ⧫⧫⧫ (⧫⧫⧫⧫). Hanfmann cited Hesiod as the source of the reinterpretation of the ⧫horae⧫ (denoting for the Greeks either seasons or female powers and spirits) as the daughters of Zeus and of Themis⧫ with the first, Eunomia, representing Good Government; the second, Dik⧫, Righteousness; and the third, Eirene, Peace. Hanfmann, The Season Sarcophagus at ⧫⧫, ⧫⧫. Hanfmann described their individual importance as greater than their effects as a ⧫triadic combination⧫ Id. In *The ⧫aerie ⧫ ueene* by Spenser, the three are described as ⧫Just Dice, wise Eunomie, myld Eirene⧫ See Jane Aptekar, Icons of Justice: Iconography and Thematic Imagery in Book V of ⧫The Faerie Queene⧫⧫⧫ (New York, NY: Oxford U. Press, ⧫⧫⧫⧫).

62 Burnett at ⧫⧫ (summarizing several sources).

63 Boccaccio identified Astraea as ⧫born of Aurora, because just as the dawn goes before the brightness of the sun, so from the knowledge of things done does justice arise⧫ See Liana de Girolami Cheney, ⧫*ion⧫io ⧫asari⧫ ⧫⧫ straea⧫⧫⧫ S⧫m⧫ol of Justice*, ⧫⧫ Visual Resources ⧫⧫⧫ (⧫⧫⧫⧫). In mythical accounts (from Hesiod and others), Astraea/Justice was the last of the gods to leave heaven as the golden age (the world before the fall of man) declined; the time of Astraea's return was said to have been the era in which Christ had likewise returned ⧫as Judge⧫ Id. at ⧫⧫⧫. See Frank Harper Moore at ⧫⧫⧫–⧫⧫⧫. Moore related this myth to Spenser's *The ⧫aerie ⧫ ueene*, in which Astraea was identified as the constellation Virgo and relied on Libra as ⧫her righteous balance⧫ Id. at ⧫⧫⧫. In ⧫⧫⧫⧫, Sir John Davies dedicated a poem to Queen Elizabeth I. Its title was ⧫*straea*, and its text read: ⧫By Love she rules more than by Law / Even her great mercy breadth awe; / This is her sword and scepter⧫ Quoted by Aptekar at ⧫⧫. As Aptekar further explained, Spenser opened ⧫his lesson of Justice⧫ by deploying ⧫the figure of the Dread Soverayne Goddesse (Queen Elizabeth) sitting in judgment⧫ He linked monarchy and justice, although it was his Queen Mercilla to whom he attributed gracious and ⧫merciful justice⧫ Id. at ⧫⧫, ⧫⧫.

64 Harrison, at ⧫⧫⧫, pointed to the link between the Greek word ⧫*themis*⧫ and the English word ⧫doom⧫ and argued that both entail a sense of fixed judgment. In Stafford's view, the ⧫literary and iconographical record⧫ suggested that Themis had a ⧫firmly established position amongst the Olympian gods, but only a minor role.⧫ Stafford at ⧫⧫.

65 See Lloyd-Jones at ⧫⧫⧫, n. ⧫⧫ (discussing the etymology of dik⧫ and themis and analyzing dik⧫s seven mentions in *The ⧫iad*). Harrison, at ⧫⧫⧫–⧫⧫⧫, also argued that Dik⧫ has aspects of vengeance, while Theodore Ziolkowski translated *Dik⧫* as ⧫blood vengeance⧫ See Theodore Ziolkowski, *The ⧫i⧫ure of Justice in Western Literature and ⧫rt*, ⧫⧫ Inmunkwahak: The Journal of Humanities ⧫⧫⧫, ⧫⧫⧫ (Seoul, Kor.: Institute of the Humanities, Yonsei University, ⧫⧫⧫⧫) (hereinafter Ziolkowski, *The ⧫i⧫ure of Justice*). Our thanks to the author for providing us with an English copy. See also Theodore Ziolkowski, The Mirror of Justice: Literary Reflections of Legal Crises (Princeton, NJ: Princeton U. Press, ⧫⧫⧫⧫).

66 See, for example, Edward Goldsmith, ⧫*rchaic Societies and Cosmic ⧫rder⧫ ⧫ Summar*y, ⧫⧫ The Ecologist ⧫⧫, ⧫⧫ (Jan.⧫Feb. ⧫⧫⧫⧫), translating Pythagoras as stating: ⧫Themis in the world of Zeus, and Dik⧫ in the world below, hold the same place and rank as Nomos in the cities of men; so that he who does not justly perform his appointed duty may appear as a violator of the whole order of the universe⧫ See also Lloyd-Jones at ⧫⧫⧫–⧫⧫⧫ (describing dik⧫ as ⧫the order of the universe⧫); Barry Sandywell, *Presocratic ⧫e⧫e⧫ivit⧫⧫ The Con⧫struction of Philosophical Discourse c⧫⧫⧫⧫⧫⧫⧫⧫ BC*, in ⧫ Logological Investigations ⧫⧫–⧫⧫ (London, Eng.: Routledge ⧫⧫⧫⧫); Jean Rudhardt, Thémis et les Horai: Recherche sur les divinités grecques de la justice et de la paix (Themis and the Horai: An Investigation into the Greek Goddesses of Justice and Peace) (Geneva, Switz.: Librarie Droz, ⧫⧫⧫⧫). Rudhardt, at ⧫⧫⧫, warned against attributing current ideas to Greek understandings that situated these figures as ethical, religious presences: ⧫Themis est une exigence d'⧫quilibre qui surgit dans les esprits⧫ roughly translated as ⧫Themis is a demand for equilibrium emergent in one's spirit.⧫

67 See Sandywell at ⧫⧫ and ⧫⧫⧫, n. ⧫⧫. For this understanding he relied on the etymological work of Emile Benveniste, who examined the origins of the words themis and dik⧫ in his book Indo-European

Language and Society [illegible]–[illegible] (Elizabeth Palmer, trans., London, Eng.: Faber [illegible] Faber, [illegible]).

68 Max Weber, Economy and Society: An Outline of Interpretive Sociology, vol. [illegible], [illegible]–[illegible] (Guenther Roth [illegible] Claus Wittich, eds., Berkeley, CA: U. of California Press, [illegible]).

69 A keen sense of new [illegible]old[illegible] information, as well as of what remains to be known, permeates Michael McCormick's Origins of the European Economy: Communications and Commerce, A.D. [illegible]–[illegible] (Cambridge, Eng.: Cambridge U. Press, [illegible]). For example, [illegible]Some [illegible] foreign relics, over [illegible] documentary mentions of mancosi, more than [illegible] Arab coins and [illegible] Byzantine coins have expanded, dramatically, the evidence which bears on the great question of Mediterranean communications at the origins of Europe[illegible] Id. at [illegible].

70 The question of the meaning of justice in the context of the Greeks is debated. For example, Michael Gagarin argued that discussions of dik[illegible] were focused less on the development of a theory of morality and justice and more on the creation of a functioning social order, with [illegible]effective legal process[illegible] as a prerequisite to commercial prosperity. See Michael Gagarin, *Dik[illegible] in the Works and Da[illegible]s*, [illegible] Classical Philology [illegible], [illegible] ([illegible]) (hereinafter Gagarin, *Dik[illegible] in the Works and Da[illegible]s*[illegible] See also Michael Gagarin, *Dik[illegible] in [illegible]rchaic [illegible]reek Thou[illegible]ht*, [illegible] Classical Philology [illegible] ([illegible]). Others disagree. See Matthew W. Dickie, *Dik[illegible] as a Moral Term in [illegible]omer and [illegible]esiod*, [illegible] Classical Philology [illegible] ([illegible]).

A more variable set of meanings is ascribed to dik[illegible] in Eric A. Havelock, The Greek Concept of Justice: From Its Shadow in Homer to Its Substance in Plato [illegible]–[illegible] (Cambridge, MA: Harvard U. Press, [illegible]). Havelock detailed different meanings of dik[illegible] in Homer[illegible] that dik[illegible] encompassed [illegible]propriety[illegible] (id. at [illegible]), an attribute of a person (id. at [illegible]), and a sense of process to permit [illegible]redress of grievance and the adjustment of claims[illegible] (id. at [illegible]). Havelock argued that for Hesiod the focus was on consequences and [illegible]redress, readjustment, repayment[illegible] Id. at [illegible]. Havelock viewed the justice of both Homer and Hesiod as different from that assumed to be part of the modern concept. On the other hand, contemporary philosophers have seen the tensions between law as order and law as justice as rooted in Greek traditions. See David Luban, *Some [illegible]reek Trials[illegible] [illegible]rder and Justice in [illegible]omer, [illegible]esiod, [illegible]esch[illegible]lus and Plato*, [illegible] Tenn. L. Rev. [illegible] ([illegible]).

71 Benveniste at [illegible]. The term *themis* was used for divine law. [illegible]*us*, in turn, derives from the verb *iurare*, meaning [illegible]to swear[illegible] Id. Further, the Indo-European word [illegible]*ous* meant [illegible]state of regularity, of the normality required by the rules of ritual[illegible] Id. at [illegible]–[illegible].

72 See Barbara Lichocka, *Justitia sur les monnaies imp[illegible]riales romaines* (*Justitia in [illegible]mperial [illegible]oman Coina[illegible]e*), [illegible] Travaux du Centre D'archéologie Méditérranéenne de L'Académie Polonaise Des Sciences [illegible]–[illegible] (Warsaw, Pol.: Pa[illegible]stwowe Wydawnictwo Naukowe, [illegible]). Lichocka argued that various statues of other Virtues, such as Abundance and Fortune, provided prototypes. Id. at [illegible]–[illegible]. Ziolkowski, in contrast, believed no cult or temple in her honor was maintained. Ziolkowski, *The [illegible]i[illegible]ure of Justice* at [illegible].

73 Ziolkowski, *The [illegible]i[illegible]ure of Justice* at [illegible].

74 During the Republican era, Justice images were not much used but in the Imperial period, various leaders of government and particularly emperors linked themselves to Justitia. Lichocka at [illegible]. This connection parallels the views of Slanski about the relationship between [illegible]palace and temple[illegible] in which Mesopotamian Kings sought validation through the judge/god Shamash. See Slanski, [illegible]*od and [illegible]in*[illegible] Emperors also embraced other Virtues. For example, when becoming Emperor Augustus, Octavian proclaimed that he embodied courage, piety, clemency, and justice and put personifications of Fortune, Peace, and other virtues on coins. Lichocka at [illegible]–[illegible]. In [illegible] CE, he established a festival day in honor of Justitia. Ziolkowski, *The [illegible]i[illegible]ure of Justice* at [illegible].

75 Lichocka at [illegible]–[illegible] (listing the set). She distinguished six major types, including a portrait of the head of a woman; a woman draped in cloth sitting on a throne or chair and holding an object like a scepter; a similarly positioned woman holding a cornucopia; a personage Lichocka identified as Aequitas shown as a matronly woman standing with a balance and either a scepter or a cornucopia; two capricorns with the image of the universe; and a woman or emperor propped up by or seated on an upright shield and holding a scepter in one hand and perhaps a goblet in the other. Id. at [illegible]–[illegible]. Ziolkowski argued that some figures identified as Justitia are [illegible]her counterpart, Aequitas[illegible] Ziolkowski, *The [illegible]i[illegible]ure of Justice* at [illegible]. However, at least some of the figures that Lichocka identified as [illegible]Aequitas[illegible] appear on coins that bear the label [illegible]Justitia[illegible] See Lichocka at [illegible] (providing a photograph of one such coin).

76 See Judith Shaw, Images of Justice in Medieval Art [illegible] (paper submitted to Professor Robert M. Cover for his seminar, Myth, Law, and History, Yale Law School, April [illegible], [illegible]). The cornucopia imagery may come from a Herculean myth in which Hercules fought the river god Achelous, who in the course of battle changed himself into a bull. Hercules prevailed and broke off one of the bull's horns, which he presented to the beautiful Deianira, over whom the fight had taken place. The bull's horn [illegible]of plenty[illegible] has since become a symbol of fertility and generosity. As described by Ovid:

> This horn, now heaped
> With fruits delicious and sweet-smelling flowers
> The Naiads have held sacred from that hour
> Devoted to the bounteous goddess Plenty . . .
> A lovely nymph . . . brought to them
> All Autumn's plenty in an ample horn . . .

See Ovid, Metamorphoses, sect. III, vol. II, book [illegible]:[illegible], [illegible]*ercules and [illegible]chelous* at [illegible], [illegible]–[illegible] (Brookes More, trans., Francestown, NH: Marshall Jones, rev. ed. [illegible]).

77 The word [illegible]fasces[illegible] comes from the Latin *fas*, a counterpart of *ius*. A government's potential to use legal regulation for oppression is reflected in the modern-day word fascism. The actual objects were, in the Roman era, [illegible]a portable kit for flogging and decapitation[illegible] that were also [illegible]brutally functional[illegible] serving as [illegible]ceremonial symbols of office [illegible]that[illegible] also carried the potential of violent repression and execution[illegible] See Anthony J. Marshall, *S[illegible]m[illegible]ols and Showmanship in [illegible]oman Pu[illegible]lic Life[illegible] The [illegible]asces*, [illegible] Phoenix [illegible], [illegible] ([illegible]). Made of birch or elmwood, these rods measured about a meter and a half and, at times, had axes bundled with them. The bundle could be interpreted to denote the strength that only such a collection, exemplifying unified powers, could provide. Marshall argued that the seriousness of the display of fasces in Roman ceremonial pageantry has been obscured; the many customs involving fasces (such as parades, monthly rotations, and their ceremonial laying down when office terms ended) as well as the occasional smashing of a magistrate's fasces by a mob made plain that fasces expressed very real authority. Id. at [illegible]–[illegible]. Marshall also traced the rejection and then the reappearance of fasces under Christianity[illegible] first disliked as Caesar's emblem and then again associated with executive power.

Fasces continued long after those eras to be emblems of government; they can be found as decorative items on the Lincoln Memorial in the United States and on Queen Victoria's statue outside the Supreme Court of Canada in Ottawa. Id. at [illegible]. Throughout the Renaissance, some artists depicted Justice holding fasces. See, for example, Battista de Lutero Dossi, *Justice with [illegible]asces and Scales* ([illegible]), reproduced in Kissel at [illegible], plate [illegible]. An eighteenth-century edition of Ripa's [illegible]*ronolo[illegible]ia* put lictor rods with Justice as well as with other personifications. Lictor rods were explained to be an attribute of a special class of guards (Roman Lictors) who attended the magistrates and

carried rods decorated with fasces. See Cesare Ripa, Baroque and Rococco Pictorial Imagery: The [illegible]–[illegible] Hertel Edition of Ripa's [illegible]conologia[illegible] with [illegible] Engraved Illustrations (New York, NY: Dover Publications, [illegible]). Shown with lictor rods are Justice at [illegible]; Aristocracy at [illegible]; Government at [illegible]; Punishment at [illegible]; State Craft at [illegible]; Spiritual Authority at [illegible]; and Victory at [illegible]. That edition built on the eighteenth-century one by Johann George Hertel through an introduction, translations, and [illegible] commentaries by Edward A. Maser. The nineteenth-century *Justice* in front of the Palais de Justice in Paris, France, has both an urn (to collect juries' ballots) and lictor rods. See, Taylor, The Palais de Justice at xix, fig. [illegible].

78 Lichocka at [illegible]. Coins remained a principal source of popular imagery and [illegible]important vehicles of propaganda[illegible] through the Middle Ages. Colette Beaune, The Birth of an Ideology: Myths and Symbols of Nation in Late-Medieval France [illegible]–[illegible] (Fredric L. Cheyette, ed., Susan Ross Huston, trans., Berkeley, CA: U. of California Press, [illegible]).

79 North, From Myth to Icon at [illegible], n. [illegible]. North cited the images of Dik[illegible] on coins, with attributes of [illegible]scales, scepter or cornucopia[illegible] See also Lichocka at [illegible] (reproducing one such image). North, at [illegible], noted that coins from around [illegible] BCE provided various personified Virtues, including Clementia, Virtus, Iustitia, and Pietus. In Lichocka's volume, many coins show a clear-eyed woman.

80 Stafford at [illegible].

82 Ziolkowski, *The [illegible]ture of Justice* at [illegible].

83 Michael Evans, *Two Sources for Maimed Justice*, [illegible] Source: Notes in the History of Art [illegible] ([illegible]).

84 See Adolf Katzenellenbogen: Allegories of the Virtues and Vices in Medieval Art [illegible] (Alan J. P. Crick, trans., New York, NY: W. W. Norton, [illegible]) (reprint of a [illegible] monograph published by the Warburg Institute; describing a dome fresco in El Bagawat).

85 See Perry, [illegible]*n the Ps[illegible]chostasis* [illegible] at [illegible]. See also Richard F. Johnson, Saint Michael the Archangel in Medieval English Legend (Woodbridge, Eng.: Boydell Press, [illegible]); Katherine Allen Smith, Footprints in Stone: Saint Michael the Archangel as a Medieval Saint, [illegible]–[illegible] (Ph.D. dissertation, Department of History, New York U., New York, NY, [illegible]; UMI Publication No.: AAT [illegible]) (hereinafter Smith, Footprints in Stone); Leif Tengstr[illegible]m, [illegible]*rkkienkeli Mikael taivaallisen [illegible]a maallisen oikeuden henki[illegible]it[illegible]m[illegible]* ([illegible]*rchan[illegible]el Michael as a personification of heaven[illegible] and earth[illegible] [illegible]ustice*) in Oikeuden kuva. Bilden av r[illegible]tten och r[illegible]ttvisan [illegible]–[illegible] (Harju Virpi, ed., Helsinki, Fin.: Riksdagsiblioteket, [illegible]) (translations by Kirsti Langbein); Léon Lecestre, Saint Michael (Paris, Fran.: Henrie Laurens, [illegible]); Anna Jameson, Sacred and Legendary Art, vol. [illegible], [illegible]–[illegible] (London, Eng.: Longmans, Green, [illegible]); Clara Erskine Clement, Angels in Art [illegible]–[illegible] (Boston, MA: L. C. Page, [illegible]).

One inventory of St. Michael's activities described his four [illegible]offices[illegible] the first [illegible]to do battle against Satan and his minions[illegible]; a second to serve as the [illegible]untiring champion of God's chosen people[illegible] (the Jews of the Old Testament and then the [illegible]Christians of the New[illegible]); a third to [illegible]protect the souls of the faithful[illegible] at death in particular; and a [illegible]fourth office . . . to call away men's souls from their earthly life and bring them to judgment[illegible] Richard F. Johnson, [illegible]*rchan[illegible]el in the Mar[illegible]ins*[illegible]*St[illegible]Michael in the [illegible]omilies of Cam[illegible]rid[illegible]e, Corpus Christi Colle[illegible]e*, [illegible] Traditio: Studies in Ancient and Medieval History, Thought, and Religion [illegible], [illegible] ([illegible]) (hereinafter Johnson, [illegible]*rchan[illegible]el in the Mar[illegible]ins*). Jameson, at [illegible]–[illegible], detailed early Christianity's assignment of Michael as the conduit of information between God and Moses. Emile M[illegible]le explained the focus on St. Michael as fueled by the Church, [illegible]a[illegible]nxious to divert to St. Michael the worship which the still pagan inhabitants of Roman Gaul paid to Mercury[illegible] Therefore, the [illegible]Church early endowed the archangel with almost all the attributes of God.[illegible] Emile M[illegible]le, L'Art religieux du [illegible]e si[illegible]cle en France (Religious Art of the [illegible]th Century in France) [illegible] (Paris, Fran.: Armand Colin, [illegible]th ed., [illegible]).

86 Brandon at [illegible]. Brandon further argued that Egyptian imagery demonstrated a [illegible]belief in a judgment after death[illegible] that was then adapted by other religious systems.

87 The Hebrew word *Mi[illegible]Cha[illegible]el* can be translated as [illegible]like unto God[illegible] or [illegible]who is like God[illegible] In the Old Testament, Michael is described as the prince who [illegible]guards your people[illegible] *Daniel* [illegible]:[illegible], Good News Bible. A list of the references to Michael in the Old Testament can be found in Johnson, Appendix B at [illegible]–[illegible].

88 See Glenn Alan Peers, The Iconography of the Archangel Michael on Byzantine Icons (Ph.D. dissertation, Department of Art History, McGill University, Montreal, Can., [illegible]; UMI Publication No.: ATT ML[illegible] [illegible]).

89 Then war broke out in heaven. Michael and his angels
waged war on the dragon:
The dragon and his angels fought, but they had not
the strength to win, and no foothold was left them
in heaven.
So the great dragon was thrown down, that serpent of
old that led the whole world astray, whose name is
Satan, or the Devil-thrown down to the earth, and
his angels with him.

[illegible]*evelation of John* [illegible]:[illegible]–[illegible], New English Bible.

90 See Beaune at [illegible]: [illegible]St. Michael was soon considered the guardian angel par excellence, the most powerful intercessor at the moment of death[illegible] when he would shelter and protect the soul[illegible] and at the Last Judgment[illegible] Attention to Michael stemmed from a belief in Medieval Christianity that angels were present at the moment of death, when the soul separated from the body. David Keck, Angels and Angelology in the Middle Ages [illegible]–[illegible] (Oxford, Eng.: Oxford U. Press, [illegible]) (hereinafter Keck, Angels and Angelology). Angels then bore the [illegible]elect to heavenly bliss[illegible] Id. at [illegible].

91 Keck, Angels and Angelology at [illegible].

92 Jameson at [illegible]–[illegible]. See also Johnson, [illegible]*rchan[illegible]el at the Mar[illegible]ins* at [illegible]–[illegible] (describing various treatments of St. Michael's protection of Mary's soul).

93 Beaune at [illegible]–[illegible]. Beaune credited Charles VII with transforming Michael into a [illegible]royal and national saint by publicly choosing him as his protector[illegible] Id. at [illegible]. Joan of Arc prayed to him, and in [illegible] Louis XI instituted a royal order dedicated to him. Id. at [illegible]–[illegible]. Michael served as the [illegible]guardian of France[illegible] in its conflicts with England, which was sometimes portrayed as aligned with Lucifer. Id. at [illegible]. Beune's account of the relationship between St. Michael and the French king mirrors that provided by Slanski of the relationship of the [illegible]temple and palace[illegible] to Shamash and the kings in Mesopotamia.

France was not alone in its adoration of Michael. Other shrines were in Monte Gargano, Italy, and in Cornwall, England. Adherents are said to have believed that St. Michael appeared in various places to command the building of churches at those spots. Clement at [illegible]–[illegible]. The monuments varied, for the persona of the Archangel filled different roles in response to a particular community's needs. Smith, Footprints in Stone at [illegible]–[illegible]. Beyond any one locality, the yearly Christian calendar recognized St. Michael's importance; on September [illegible], [illegible]clerics all across Christendom delivered sermons and offered prayers to Michael[illegible] as part of the Feast of St. Michael ([illegible]Michaelmas[illegible]). Smith, Footprints in Stone at [illegible]–[illegible], [illegible]–[illegible]. The cult of St. Michael was particulary intense between [illegible] and [illegible], a period in which interest in the Apocalypse was particularly strong. Keck, Angels and Angelology at [illegible].

94 See L'Abbé A. Bouillet, Le Jugement dernier dans l'art aux douze premiers si[illegible]cles (The Last Judgment in Art from the First Dozen Centuries) [illegible] (Paris, Fran.: J. Mersch, [illegible]) (describing a parchment at the Vatican's library that dates from the seventh or

eighth century CE and shows St. Michael wearing armor amidst the battles of Joshua). Medieval cameos also depicted St. Michael, including those identified as either Byzantine or Italian from between [illegible] and [illegible]. St. Michael can be found in later cameos as well, including a French seventeenth-century shell cameo. See James David Draper, *Cameo [illegible]ppearances*, [illegible] Metropolitan Museum of Art Bulletin [illegible] and fig. [illegible], [illegible] and fig. [illegible] ([illegible]).

95 See Roland Mushat Frye, *Milton[illegible] [illegible]Paradise Lost[illegible] and the [illegible]isual [illegible]rts*, [illegible] Proceedings of the American Philosophical Society [illegible], [illegible]–[illegible] ([illegible]). Frye traced the warrior images from sixth century mosaics of Jesus. He is [illegible]clad in military costume . . . standing on a lion and a serpent, symbol of Satan and sin[illegible] Renaissance depictions provided dramatic renditions of heavenly wars in which Michael gained armor. Frye's thesis was that John Milton's descriptions relied [illegible]pervasively upon visual representations[illegible] making knowledge of such images requisite to appreciating Milton's [illegible]epic imagery[illegible] Id. at [illegible].

96 A gilded statue, *St[illegible] Michael Sla[illegible]in[illegible] Dra[illegible]on*, is on top of the Town Hall of Brussels. The [illegible] version replaced one from [illegible], which had endured for [illegible] years, including the destruction of other parts of the building by the French in [illegible]. See [illegible]Brussels: Buildings and Monuments[illegible] Town Hall of the Grand Place, http://www.trabel.com/brussel/brussels-town[illegible]hall.htm. The original statue, by Martin van Rode, was five meters high, made of brass, and sat atop a spire measuring ninety-six meters. See Martine Calomme-Beginne, Illustrated Catalogue of the Town Hall (Patricia Robins, trans., Brussels, Belg.: Archives de la Ville de Bruxelles, [illegible]).

97 Luther Link, The Devil: A Mask without a Face [illegible], figs. [illegible] and [illegible] (London, Eng.: Reaktion Books, [illegible]). Link described a tenth-century Irish cross monument as providing the [illegible]earliest surviving Weighing of Souls[illegible] Id.

98 See Smith, Footprints in Stone at [illegible], n. [illegible]; Johnson, [illegible]*rchan[illegible]el at the Mar[illegible]ins* at [illegible]–[illegible]. The seventh-century Christian practices of Egypt focused on St. Michael as an intercessor [illegible]on behalf of mankind before the Lord[illegible] Id. at [illegible]. Some Greek texts may have provided a means for the information to travel north and west. Id. at [illegible]–[illegible]. Beaune also concluded that veneration began in Byzantium and that the [illegible]cult was at first confined to the Celtic fringe and Italian Lombardy.[illegible] Beaune at [illegible].

99 The text reads: [illegible]We know that the man we once were has been crucified with Christ for the destruction of the sinful self, so that we may no longer be the slaves of sin, since a dead man is no longer answerable for his sin[illegible] The *Letter of Paul to the [illegible]omans* [illegible]:[illegible], New English Bible. In [illegible] CE, a council at Nicaea endorsed what is called the (first) Nicene Creed, committed to the divinity of Jesus as well as that of his Father. Brandon at [illegible]. A second [illegible]Nicene Creed[illegible] of [illegible] CE varied somewhat, speaking of Jesus, who [illegible]for our salvation, came down from heaven[illegible] and reaffirmed belief in the one Church, the [illegible]one baptism for the remission of sins[illegible] the resurrection of the dead, and the [illegible]life of the world to come.[illegible] Philip Schaff, The Creeds of Christendom, with a History and Critical Notes, vol. [illegible], [illegible] (New York, NY: Harper [illegible] Brothers, [illegible]). One interpretation was that, by positing Jesus as the Messianic savior and baptism as salvation, individuals were rendered [illegible]immune to sin.[illegible] Brandon at [illegible]–[illegible].

100 Brandon at [illegible].

101 Link explained: [illegible]You will not find anything in the Scriptures about the Weighing of the Souls.[illegible] Link at [illegible]. See also Brandon at [illegible].

102 Brandon at [illegible].

103 Perry, [illegible] *n the Ps[illegible]chostasis* [illegible] at [illegible] and n. [illegible]. Peers translated the passage from St. Augustine of Hippo, who wrote in the fourth century CE, as [illegible]There will be, without a doubt, a balancing of accounts for good and evil just as each of these that are to be separated will be placed on the plates of the scale, and by the motion it turns the deeds shall take one to hell. If their good deeds are truly greater, they will prevail and out-weigh the bad and they shall decree his deeds in the realm of the living even at the very mouth of hell[illegible] Peers at [illegible], n. [illegible]. The oft-cited example is a Last Judgment scene in a sixth-century mosaic in S. Appolinare Nuovo, Ravenna, in which Christ is shown [illegible]Separating the Sheep from the Goats[illegible] said to indicate the time of judgment. See Frye at [illegible], fig. [illegible]; Link at [illegible]–[illegible].

104 See Perry, [illegible] *n the Ps[illegible]chostasis* [illegible] at [illegible]–[illegible], and fig. F (describing church tympana showing scenes of the weighing of souls, including those from the Autun and Bourges Cathedrals); Smith, Footprints in Stone at [illegible] and n. [illegible] (noting the earliest [illegible]known Continental example[illegible] to be from a late tenth-century cloister in La Dauragde at Toulose). Another, dated around [illegible], is in the Church of Torcello, near Venice. Shown there is the descent of Christ and the rescue of souls. Floating above Jesus is St. Michael, robed and winged, holding an evenly balanced pan scale, which [illegible]two demons try to upset.[illegible] Brandon at [illegible]. See also Caroline Walker Bynum, The Resurrection of the Body in Western Christianity plates [illegible]–[illegible] (New York, NY: Columbia U. Press, [illegible]) (hereinafter Bynum, The Resurrection).

Scenes of judgment that included weighing were also relatively rare in the Psalter texts until the twelfth century. See Janis Johnston Ellicott, Infernal Topography: The Evolution of Hell Imagery in the Middle Ages [illegible] (M.F.A. thesis, U. of Victoria, Victoria, Can., [illegible]). In Link's view, the image of weighing souls became more common in Last Judgment scenes around [illegible]. Link at [illegible]–[illegible]. See also Frances M. Malpezzi, *The Wei[illegible]ht[illegible]lessness of Sin[illegible]Donne[illegible] [illegible]Thou [illegible]ast Made Me[illegible] and the Ps[illegible]chostatic Tradition*, [illegible] South Central Review [illegible] ([illegible]). After the eleventh century, the Devil also gained prominence. Bouillet at [illegible].

105 Christine Maria Boeckl, *The [illegible]Pisan Triumph of Death[illegible] and the Papal Constitution [illegible]Benedictus Deus,*[illegible] [illegible] Artibus et Historiae [illegible], [illegible]–[illegible] ([illegible]). Two trials might have then been contemplated, one at the time of death and a second on Judgment Day, when body and soul would (or would not) be reunited. Id. at [illegible]. The debate about whether the body itself, as contrasted with an immortal soul, would be resurrected is traced over the centuries in Bynum's *The [illegible]esurrection*. Bynum argued that the Medieval idea of a person [illegible]was not a concept of soul escaping body or soul using body; it was a concept of self in which physicality was integrally bound to sensation, emotion, reasoning, identity[illegible] and therefore to whatever one means by salvation[illegible] Id. at [illegible]. The [illegible]extraordinary materialism of early fifth-century eschatology . . . became the basis for the renewal of theological consideration of the body in the twelfth century[illegible] Id. at [illegible]. Bynum detailed the discussion of two judgments, suggested by Pope John XXII. Id. at [illegible]–[illegible].

Interrelated was the development of a conception of purgatory, which gained prominence as an [illegible]in-between[illegible] place between the twelfth and fourteenth centuries. Bynum, The Resurrection at [illegible]–[illegible]; Brandon at [illegible] (citing Dante's *Divine Comed[illegible]* of [illegible]–[illegible]); Boeckl at [illegible], n. [illegible]. As William Miller pointed out to us, the development of a belief in purgatory mitigated to some extent the binary of heaven or hell and also added another opportunity for judgment. According to Jacques Le Goff, [illegible]in the fourth century, the greatest Fathers of the Church conceived of the idea . . . that certain sinners might be saved, most probably by being subjected to a trial of some sort[illegible] and thereafter emerged a [illegible]new belief[illegible] in purgatory, where souls resided after death and before the Last Judgment. Jacques Le Goff, The Birth of Puragatory [illegible] (Arthur Goldhammer, trans., Chicago, IL: U. of Chicago Press, [illegible]). The word purgatorium, however, did not come into parlance until the twelfth century, perhaps in relationship to the [illegible]spatialization[illegible] that developed then, expressed through a focus on maps and territories. Id. at [illegible]–[illegible].

106 Perry, [illegible] *n the Ps[illegible]chostasis* [illegible] at [illegible]. Perry described the first genre, about consequences, as conforming to the [illegible]text of the scripture[illegible] while the second, on weighing, derived from [illegible]ancient tradition[illegible] including that in Egypt.

107 Figure [illegible], by an anonymous artist known as the [illegible]Master of the Zurich Carnation[illegible] and dated about [illegible], is assumed to have been

the right panel, called *Michael as the Weigher of Souls*, of an altar of St. Michael. The panel is currently at the Kunsthaus Museum in Zurich, Switzerland. The title, *Saint Michael Weighing the Souls at the Last Judgment*, is provided by the copyholder, Bridgeman-Giraudon / Art Resource, New York, whereas Christophe Eggenberger called the image *Michael as the Weigher of Souls*. See Christoph Eggenberger, *The Swiss Carnation Masters: Iconomic and Artistic Personality of Painters between the Late Middle Ages and the Renaissance*, in [illegible] Years of Swiss Art [illegible], [illegible] (Heinz Horat, ed., New York, NY: Hudson Hills Press, [illegible]).

108 On the good side are the red and white carnations, and hence the appellation Master of the Carnation. Eggenberger at [illegible]. In [illegible] Zurich enacted a law prohibiting religious images. Id. at [illegible].

109 Perry, *In the Psychostasis* at [illegible].

110 Perry, *In the Psychostasis* at [illegible].

111 One such image, from a sixteenth-century wall painting in South Leigh Church in England, portrays St. Michael with the sword in one hand, and in the other a balance for weighing the souls. Four lively little demons are defeated by the intercession of the Virgin Mary, for two beads of Her rosary are weighing down the scale-pan, in which a poor soul is sitting, thus assuring its salvation. See Ellen Ettlinger, *Folklore in Oxfordshire Churches*, [illegible] Folklore [illegible], [illegible] ([illegible]). Comparable images can be found on pilgrimage badges produced from the thirteenth century to the fifteenth by the abbey of Mont-St.-Michel. See Katherine Allen Smith, *In Innocent's Power in a Bishop's Body: The Making of the Cult of Guivert of Avranches at Mont-Saint-Michel*, [illegible] J. Medieval History [illegible], [illegible] ([illegible]) (hereinafter Smith, *Innocent's Power*).

112 See Peers at [illegible] (describing a Serbian icon of [illegible] in which Michael has a sword in his right hand and scales in his left).

113 According to Perry, *In the Psychostasis* at [illegible], before the fifteenth century St. Michael was generally shown robed, but by late Gothic art the fully-armed St. Michael superseded the robed figure. Beaune detailed the use in France of St. Michael as an anti-English saint who, during the fourteenth century, appropriated the imagery of St. George (identified with England since the late twelfth century) and slowly gained some of St. George's attributes, including armor, sword, shield, and banner. Beaune at [illegible]. One often-reproduced example is Raphael's *Saint Michael and the Demon*, painted around [illegible] and on display at the Louvre in Paris, France. See Josephine Jungi, *Raphael's Saint Michael and the Demon and Savonarola's Vellum Dei*, [illegible] Gazette des Beaux-Arts [illegible], [illegible] fig. [illegible] ([illegible]).

When robed, St. Michael is sometimes shown wearing a *loros*, a flowing dress found in images from about the seventh century and associated with emperors. That cloth later developed into a long scarf that was richly embroidered on both sides. Peers at [illegible]. Alexander was portrayed so garbed, and representations of later emperors followed suit, albeit through modifications that replaced the cumbersome earlier version with a yoke-like design that did not slip off the shoulders. See Lyn Rodley, *The Byzantine Court and Byzantine Art*, in Court Culture in the Early Middle Ages: The Proceedings of the First Alcuin Conference [illegible], [illegible] (Catherine Cubitt, ed., Turnhout, Belg.: Brepols Publishers, [illegible]).

114 Perry, *In the Psychostasis* at [illegible]; Peers at [illegible]. St. Michael, in turn, is on occasion shown with Mercury's insignia, the caduceus, a staff with a serpent entwined. Id. Archeological and mythical connections among Michael, Mercury, and Apollo are explored in G. F. Hill, *Apollo and St. Michael: Some Analogies*, [illegible] J. Hellenic Studies [illegible], [illegible]–[illegible] ([illegible]). M[illegible]le at [illegible].

115 See Keck, Angels and Angelology at [illegible]. Keck quoted *Apocalypse* [illegible]:[illegible]–[illegible], that Michael and his angels 'overcome the dragon 'who is called the Devil and satan.' Rosemond Tuve noted that the serpent in various depictions of St. Michael could also refer to the expulsion from the Garden of Eden. See Rosemond Tuve, Allegorical Imagery: Some Mediaeval Books and Their Posterity [illegible] (Princeton, NJ: Princeton U. Press, [illegible]). The image may also derive from Christ trampling the Devil in the underworld, an idea attributed to an apocryphal Gospel of Nicodemus, Acta Pilati, popular in Europe in the ninth century. Ellicott at [illegible]–[illegible]. Link posited that the Devil had three tasks in the pscychostasy scenes: to help St. Michael separate the damned from the blessed, to lead the damned to hell, and then to punish them. Link at [illegible].

How to portray the Devil was a problem, for Satan was both demonic and tempting. See Frye at [illegible]. One of the earliest identified images, from [illegible] CE, shows black figures 'being cast out as a pair of demoniacs.' See Jeffrey Burton Russell, Satan: The Early Christian Tradition [illegible] (Ithaca, NY: Cornell U. Press, [illegible]). The Devil has made appearances as 'a serpent, lion, dragon, dog, or wolf'; as animals with human bodies and faces of crocodiles or scorpions; and as lions, a human giant, and a distorted person. All these various shapes were sometimes seen as themselves disguises for 'this complete lack of form.' Id. at [illegible]–[illegible]. By the Renaissance, very ugly renditions progressed to more dignified ones. Frye at [illegible]. The instability of Devil/Satan iconography is detailed by Link, who tracked the range of images used to signify evil. He argued that the ideological complexity of the Devil—as a product of God, required by the story of redemption, but also as the anti-Christ and in conflict with God—made for an artistic project that was uniquely challenging. Link at [illegible]–[illegible]. 'No other creature in the arts with such a long history is so empty of intrinsic meaning. No other sign or supposed symbol is so flat.' Id. at [illegible].

116 Peers at [illegible]–[illegible].

117 The weights, dated from before [illegible], were found in Kingston Harbor, Jamaica. See C. Wayne Smith, *Iconography of the Archangel Michael on Pail Weights from Excavation at Port Royal, Jamaica*, [illegible] International J. of Nautical Archaeology [illegible], [illegible] ([illegible]) (hereinafter Smith, *Iconography of the Archangel Michael*).

118 From *Matthew* [illegible]–[illegible], and [illegible]–[illegible] (New English Bible) come the descriptions of three events: the Parousia or the Second Coming of the Lord, the separation of the sheep from the goats, and the resurrection of the dead (either body and soul or just souls):

> Then will appear in heaven the sign that heralds the Son of Man. All the peoples of the world will make lamentation, and they will see the Son of Man coming on the clouds of heaven with great power and glory. With a trumpet blast he will send out his angels, and they will gather his chosen from the four winds, from the farthest bounds of heaven on every side.
>
> When the Son of Man comes in his glory and all the angels with him, he will sit in state on his throne, with all the nations gathered before him. He will separate men into two groups, as a shepherd separates the sheep from the goats, and he will place the sheep on his right hand and the goats on his left. Then the king will say to those on his right hand, 'You have my Father's blessing; come, enter and possess the kingdom that has been ready for you since the world was made.'
>
> Then he will say to those on his left hand, 'The curse is upon you; go from my sight to the eternal fire that is ready for the devil and his angels.'

119 Bouillet at [illegible]–[illegible] (discussing Last Judgment scenes found on frescoes in Roman catacombs); Ellicott traced the imagery and the distinctive format of Byzantine Last Judgment scenes. Id. at [illegible]–[illegible], [illegible]–[illegible].

120 According to Link, in Giotto's *Last Judgment* in the Scrovegni Chapel, 'the grapnel that devils consistently use throughout the centuries is the same instrument used in torture, and flogging criminals

naked through the streets was an event artists would have seen or heard about. Link at .

121 Link at , citing Phillippe Ariès, Images de l'homme devant la mort (Images of Man and Death) (Paris, Fran.: Éditions du Seuil,). See also Kristin Eldyss Sorensen Zapalac, In His Image and Likeness: Political Iconography and Religious Change in Regensburg, – (Ithaca, NY: Cornell U. Press,); Craig Harbison, The Last Judgment in Sixteenth Century Northern Europe: A Study of the Relation between Art and the Reformation (New York, NY: Garland Publishing,).

122 Ziolkowski described Clytemnestra in Aeschylus's *resteia* as holding a bloody axe in a way that the contemporary audience would surely have seen in her the image of Dik personified See Ziolkowski, *ixures of Justice* at .

123 See Zapalac at –. Further, a sword was a proper attribute for a judge according to some Medieval German sources. Selma Pfeiffenberger, The Iconography of Giotto's Virtues and Vices at Padua, ch. at (Ph.D. dissertation, Bryn Mawr College, Philadelphia, PA, ; UMI Publication No.: AAT).

124 Swords can be found in a few manuscripts in Italy and in France but apparently were not commonplace in depictions of Justice before the fourteenth century. See Pfeiffenberger at –. By the fifteenth century, statues of Justice regularly equipped her with both scales and swords. See, for example, Shelley E. Zuraw, *The Pulic Com memorative Monument Mino da iesole Toms in the lorentine Badia*, Art Bulletin , (). Zuraw also detailed how, despite a tradition of depicting Justice within a cycle of cardinal and theological virtues she was repeatedly placed as a single Virtue on tombs providing additional evidence of Justice's centrality to the state. Id. at –.

125 The translation of Homer's *The liad* (bk. , –) is by Michael Gagarin from his article, *Dik in the Works and Das*, at (footnotes and bracketed explanations of a few translations omitted).

126 See Gagarin, *Dik in the Works and Das* at –; Adriaan M. Lanni, *Spectator Sport or Serious Politicsoi periesthkotes and the thenian Lawcourts*, J. Hellenic Stud. (); John Dawson, History of Lay Judges – (Cambridge, MA: Harvard U. Press,). Recent commentary suggests that the role of courts in ancient Greece has been undervalued. By reviewing some one hundred speeches given in the popular courts of Greece between and BCE, Arianna Lanni concluded that Athenian courts played a vital role in enforcing informal social norms and that they succeeded in inducing compliance through decisions rendered by juries often comprised of more than two hundred adult male citizens. Adriaan Lanni, Law and Order in Ancient Athens, – (manuscript,). See also Adriann Lanni, *Social Norms in the Courts of ncient thens*, Journal Legal Analysis ().

Renger, *nstitutional, Communal, and ndividual wner ship or Possession of rale Land in ncient Mesopotamia from the nd of the ourth to the nd of the irst Millennium BC*, Chicago-Kent Law Review , (). Symbolic acts performed in the presence of witnesses gave the act its binding force Id. at .

128 Understanding which aspects of decisionmaking were public is not easy. An overview that tracked the power of magistrates and identified a broad role for laypersons comes from Dawson at –. Ernest Metzger described Roman magistrates' obligations to publish materials related to lawsuits, including a calendar of days on which trials could be held and decisions on postponements. See Ernest Metzger, A New Outline of the Roman Civil Trial – (Oxford, Eng.: Clarendon Press, Oxford U. Press,). Metzger examined the public selection of judges (id. at –) and the one-day rule that might have meant that oral proceedings had to be finished within that time (id. at –). In another book, Metzger detailed the activities that occurred in private before magistrates as litigants obtained postponements or failed to appear; he also reviewed three cases in which witnesses testified at trials. See Ernest Metzger, Litigation in Roman Law (Oxford, Eng.: Oxford U. Press,). According to Benveniste, the Latin term *ariter* denoted both the arbiter and the witness; texts show that the arbiter is always the invisible witness, who has the capacity to become, in certain determined judicial actions, an impartial and sovereign iudex or judge. See Benveniste at .

129 Dawson at –.

130 R. C. van Caenegem, Legal History: A European Perspective – (London, Eng.: Hambledon Press,); Michael R. Weisser, Crime and Punishment in Early Modern Europe (Atlantic Highlands, NJ: Humanities Press,).

131 See, for example, Beth A. Berkowitz, *Neotiatin iolence and the Word in ainic Law*, Yale J. L. Humanities (); Mitchell B. Merback, The Thief, the Cross, and the Wheel: Pain and the Spectacle of Punishment in Medieval and Renaissance Europe (London, Eng.: Reaktion Books,); Pieter Spierenburg, The Spectacle of Suffering: Executions and the Evolution of Repression (Cambridge, Eng.: Cambridge U. Press,); Samuel Y. Edgerton Jr., Pictures and Punishment: Art and Criminal Prosecution during the Florentine Renaissance (Ithaca, NY: Cornell U. Press,); Richard Joseph Ingersoll, The Ritual Use of Public Space in Renaissance Rome (Ph.D. dissertation, U. of California, Berkeley, CA,); Katharine Fremantle, *The pen ierschaar of msterdam SeventeenthCentur Town all as a Settin for the Cits Justice*, Oud Holland – () (hereinafter Fremantle, *pen ierschaar*). A different window into such spectacles is provided by detailed descriptions of what legal actors wore. See W. N. Hargreaves-Mawdsley, A History of Legal Dress in Europe until the End of the Eighteenth Century (Oxford, Eng.: Clarendon Press,).

132 See The Origins of the State in Italy, – (Julius Kirschner, ed., Chicago, IL: U. of Chicago Press,); David Nicholas, The Growth of the Medieval City: From Late Antiquity to the Early Fourteenth Century (New York, NY: Addison Wesley Longman,); Daniel Waley, The Italian City-Republics (London, Eng.: Longman, rd ed.,); Gerald Strauss, Law, Resistance, and the State: The Opposition to Roman Law in Reformation Germany (Princeton, NJ: Princeton U. Press,) (hereinafter Strauss, Law, Resistance, and the State).

133 Many others have done so, sometimes via case studies and sometimes through overviews. Van Caenegem, Legal History at –.

134 These traditions, dating from antiquity, ran through Germanic Europe as well as the low countries. See Edgerton at –. Specifically, in some areas, the sentence of death could be imposed only under the open sky See Fremantle, *pen ierschaar* at (discussing the Town Hall of Hamburg, which had a roof shutter that could be opened to comply with this custom).

135 The development of nation-states during the Medieval period derived from the need and the ability to control the application of law and to collect taxes, thereby linking the individual to the centre in ways that at times added layers of authority and in other instances replaced local obligations with national ones. See Janet Coleman, *Pref ace*, in The Individual in Political Theory and Practice ix, xvii (Janet Coleman, ed., Oxford, Eng.: Oxford U. Press,).

136 To obtain a favourable reputation through the hinterland, a town had to provide appropriate facilities for marketing, attentive administration, and enforcement of local rules and by-laws that were seen as both practical and just. Robert Tittler, Architecture and Power: The Town Hall and the English Urban Community, c.– at – (Oxford, Eng.: Oxford U. Press,). In addi-

tion, the town hall served as the ⊠tangible formulation⊠ of the notion of civic authority, marking ⊠the center as center⊠ and thereby legitimizing its builders, who succeeded in making some of their authority. Id.

137 See Colin Cunningham, ⊠*or the ⊠onour and Beaut⊠ of the Cit⊠⊠The Des⊠n of Town ⊠alls*, in Siena, Florence and Padua: Art, Society and Religion ⊠⊠⊠⊠–⊠⊠⊠⊠, vol. ⊠: Case Studies ⊠⊠–⊠⊠ (Diana Norman, ed., New Haven, CT: Yale U. Press, ⊠⊠⊠⊠) (hereinafter Art, Society and Religion II); Juergen Schulz, *The Communal Buildin⊠s of Parma*, ⊠⊠ Mitteilungen des Kunsthistorischen Institutes in Florenz ⊠⊠⊠, ⊠⊠⊠–⊠⊠⊠ (⊠⊠⊠⊠); Keyvan Claude Rafii, Public Buildings and Civic Pride: Town Halls in Northern Germany, ⊠⊠⊠⊠–⊠⊠⊠⊠ at ⊠–⊠ (Ph.D. dissertation, U. of Illinois, Urbana-Champagne, IL, ⊠⊠⊠⊠; UMI Publication No.: AAT ⊠⊠⊠⊠⊠⊠⊠); Horst Adamietz, The Town Hall of Bremen: A Masterpiece of North German Architekture, Histories and Stories ⊠–⊠⊠ (Bremen, Ger.: Verlag Friedrich R⊠ver, ⊠⊠⊠⊠) (discussing the ⊠⊠⊠⊠–⊠⊠⊠⊠ building); Janusz Pazder, Town Halls in Poland ⊠⊠ (Warsaw, Pol.: Rosikon Press, ⊠⊠⊠⊠); Zapalac at ⊠⊠–⊠⊠. Localities built both merchant halls and town halls. In northern Europe public buildings were often on the market square whereas, in Italy, public squares were placed on cleared land ⊠distinct from the market.⊠ Nicholas at ⊠⊠⊠–⊠⊠⊠. Reviewing the late Medieval period in Spain, Weisser reported that ⊠crimes committed in a local settlement were heard in the courtroom of the nearby municipality⊠ while crimes committed in open settings outside of villages were ⊠heard in the courtroom of the royal police⊠ Wherever committed, certain kinds of crimes, such as murder, were heard in ⊠national courts located at the royal chanceries.⊠ Weisser at ⊠.

138 Nicholas at ⊠⊠⊠. ⊠Although by ⊠⊠⊠⊠ most cities had the right to judge cases involving their citizens, and at least some financial independence, few outside Italy had broadened the right to judge into a right to legislate⊠ Id. His survey spanned England and the European continent; he detailed the ⊠folkmoot⊠ of London, the ⊠alderman⊠ in Denmark, the ⊠scabini⊠ of the Low Country, the ⊠jur⊠s and ⊠chevins⊠ in France, the ⊠rat⊠ or council in Germany, and various other configurations of guilds, citizens, councilors, and assemblies. Id. at ⊠⊠⊠–⊠⊠⊠.

139 One measure of development is population. As of the fourteenth century, cities such as Milan, Florence, Genoa, Venice, Cordoba, Granada, Seville, Paris, London, Ghent, and Bruges had more than ⊠⊠,⊠⊠⊠ persons. ⊠P⊠erhaps twenty such cites, including Padua, Verona, Naples, Rome, Palermo, Barcelona, Lisbon, Valencia in Iberia, Rouen, Toulouse, Bordeaux, and Lyon in France and Cologne, Nuremburg, and Prague in the German areas⊠ numbered between ⊠⊠,⊠⊠⊠ and ⊠⊠,⊠⊠⊠; many others, including important university towns and provincial centers, had approximately ⊠⊠,⊠⊠⊠. Weisser at ⊠⊠, ⊠⊠–⊠⊠.

140 ⊠Medieval society had law⊠ there was too much of it, if anything⊠ and greatly cared for it.⊠ Van Caenegem, Legal History at ⊠⊠⊠, ⊠⊠⊠. Scholars debate the degree of variation in legal regimes. Some stress how ⊠remarkably similar⊠ were the systems for policing crime and meting out punishments across ⊠various European countries.⊠ Weisser at ⊠⊠⊠. Others focus on differences that created a ⊠mosaic⊠ of local customs that, in southern and northern Europe, had more salience than did distinctions between Roman and Germanic traditions. See Constantin Fasolt, ⊠*ermann Conrin⊠ and the ⊠uropean ⊠istor⊠ of Law*, in Politics and Reformations: Histories and Reformations ⊠⊠⊠, ⊠⊠⊠–⊠⊠⊠ (Chrisopher Ocker, Michael Printy, Peter Starenko, ⊠ Peter Wallace, eds., Leiden, Neth.: Brill, ⊠⊠⊠⊠). Universities were sources of trans-European homogenization. By the early fifteenth century, one could study law in Germany, but ⊠preferred⊠ degrees came from ⊠Padua, Perugia, Bourges, Toulouse, or Orl⊠ans.⊠ Strauss, Law, Resistance, and the State at ⊠⊠. Fasolt argued that initially university-taught law had little to do with law in practice but that, over time, the jurisprudence of universities prevailed. Fasolt at ⊠⊠⊠–⊠⊠⊠.

141 Weisser at ⊠⊠–⊠⊠. Private parties initiated prosecutions, because crimes were then seen as injuring individuals entitled to obtain redress. ⊠Once the victim felt that his injury had been avenged he could withdraw his complaint and the proceeding would end at this point⊠ Id. at ⊠⊠. Punishments ranged from fines and banishment to imprisonment and capital punishment. ⊠Medieval court rolls from English counties in the period ⊠⊠⊠⊠–⊠⊠⊠⊠ suggest that less than half of all felony convictions resulted in a sentence other than banishment, and perhaps one in ten sentences included a decree of execution⊠ but not all persons so sentenced were executed. Id. at ⊠⊠.

142 Strauss, Law, Resistance, and the State at ⊠⊠⊠. Strauss recounts that in ⊠⊠⊠⊠, ⊠Duke Christoph of Württenberg convoked in every town and market village ⊠all our bailiffs, overseers, stewards, foresters, town secretaries, revenue collectors, councilors, also our communes and other subjects,' for a public reading of the ⊠⊠⊠⊠ Tübingen Contract, to be followed by declarations of loyalty to this constitution and to the duke⊠ Id.

143 See Schulz at ⊠⊠⊠ (describing one such possible ⊠portico of judgment⊠ in Parma).

144 Fabrizio J. Nevola, *Per ⊠rnato Della Citt⊠ Siena⊠ Strada ⊠omana and ⊠ifteenth⊠Centur⊠ ⊠r⊠an ⊠enewal*, ⊠⊠ Art Bulletin ⊠⊠, ⊠⊠ (⊠⊠⊠⊠).

145 Art, Society and Religion II at ⊠⊠.

146 See Lucien Febvre and Hénri-Jean Martin, The Coming of the Book: The Impact of Printing, ⊠⊠⊠⊠–⊠⊠⊠⊠ at ⊠⊠–⊠⊠ (David Gerard, trans., London, Eng.: Verso Classics, ⊠⊠⊠⊠, reprinted ⊠⊠⊠⊠). As the authors explained, the utility of presses was dependent on the availability of paper; at some point between ⊠⊠⊠⊠ and ⊠⊠⊠⊠, printmaking came into being in Europe, with workshops located in Mainz and Strasbourg. Febvre and Martin identified about ⊠⊠,⊠⊠⊠ surviving printed editions from ⊠⊠⊠⊠ to ⊠⊠⊠⊠. More than ⊠⊠ percent of books printed before ⊠⊠⊠⊠ were in Latin. Further, about ⊠⊠ percent were religious. Id. at ⊠⊠⊠–⊠⊠⊠. Febvre and Martin estimated that in ⊠⊠⊠⊠ about ⊠⊠ million volumes were available; by ⊠⊠⊠⊠, ⊠⊠⊠ million books were in circulation. Id. at ⊠⊠⊠.

147 Art historians are insistent that these images served mnemonic functions that a post-print audience cannot readily appreciate. See Lina Bolzoni, The Gallery of Memory: Literary and Iconographic Models in the Age of the Printing Press (Jeremy Parzen, trans., Toronto, Can.: U. of Toronto Press, ⊠⊠⊠⊠); Mary Carruthers, The Book of Memory: A Study in Medieval Culture (Cambridge, Eng.: Cambridge U. Press, ⊠⊠⊠⊠); Michael J. Bzdak, Wisdom and Education in the Middle Ages: Images and Traditions (Ph.D. dissertation, Department of Art History, Rutgers State U., New Brunswick, NJ, ⊠⊠⊠⊠; UMI Publication No.: AAT ⊠⊠⊠⊠⊠⊠⊠). Pictures in books predate printing presses, as many Medieval manuscripts were ⊠illuminated⊠ that is, illustrated by hand. With presses, printed books could use block-print woodcuts and then copper-plate engravings, which by the late sixteenth century displaced the wood cuts. Febvre and Martin at ⊠⊠–⊠⊠⊠.

148 Art, Society and Religion II at ⊠⊠. See also Christian-Nils Robert, La Justice dans ses décors, XVe–XVIe si⊠cles (Justice in Its Settings during the ⊠⊠th–⊠⊠th Centuries) (Geneva, Switz.: Librairie Droz, ⊠⊠⊠⊠).

149 Robert at ⊠⊠.

150 In some areas, the functions were separated, and new town hall buildings ⊠deliberately avoided the market area⊠ to help establish that their functions were ⊠political and ceremonial⊠ See Jürgen Paul, *Commercial ⊠se of Mediaeval Town ⊠alls in ⊠tal⊠*, ⊠⊠ Journal Society of Architectural Historians ⊠⊠⊠ (⊠⊠⊠⊠). In other instances, town halls in German city-states were used as jails and as venues for local rulers to make various kinds of decisions, pronounce judgments, and impose punishment. Spaces were also provided for shopping stalls, the storage of town weights and standards, and a ⊠municipal supply of local beer and wine⊠ distributed to provide revenue. Rafii at

[illegible]. This mixed use was also seen in churches, many of which served simultaneously as places in which various governance functions, dispute resolution included, took place. For example, in the [illegible]s, judges [illegible]appointed for the Commune . . . heard disputes and pronounced judgment in the church of S. Stefano, the Episcopal Palace, and the Emperor's own palace at Parma[illegible] Schulz at [illegible]–[illegible]. During the sixteenth and seventeenth centuries in England, some ecclesiastical buildings were converted into town halls. See Tittler at [illegible]–[illegible].

151 Randolph Starn and Loren Partridge, Arts of Power: Three Halls of State in Italy, [illegible]–[illegible] at [illegible] (Berkeley, CA: U. of California Press, [illegible]).

152 See, for example, Joseph Polzer, [illegible]*m*[illegible]*ro*[illegible]*io Loren*[illegible]*etti*[illegible] [illegible]*War and Peace*[illegible]*Murals*[illegible]*evisited*[illegible]*Contri*[illegible]*utions to the Meanin*[illegible]*of the* [illegible]*ood* [illegible]*overnment* [illegible]*lle*[illegible]*or*[illegible] [illegible] Artibus et Historiae [illegible] ([illegible]); Jean C. Warburg [illegible] Courtauld Inst. [illegible] ([illegible]) (hereinafter Skinner, *Two New* [illegible]*nswers*); Randolph Starn, Ambrogio Lorenzetti: The Palazzo Pubblico, Siena (New York, NY: George Braziller, [illegible]) (hereinafter Starn, Ambrogio Lorenzetti); Starn and Partridge at [illegible]–[illegible]; Randolph Starn, *The* [illegible]*epu*[illegible]*lican* [illegible]*e*[illegible]*ime of the* [illegible]*oom of Peace*[illegible] *in Siena,* [illegible], [illegible] Representations [illegible] ([illegible]) (hereinafter Starn, [illegible]*epu*[illegible]*lican* [illegible]*e*[illegible]*ime*); Jack M. Greenstein, *The* [illegible]*ision of Peace*[illegible]*Meanin*[illegible] *and* [illegible]*epresentation in* [illegible]*m*[illegible]*ro*[illegible]*io Loren*[illegible]*etti*[illegible] *Sala della Pace Cit*[illegible]*scapes*, [illegible] Art History [illegible] ([illegible]); Quentin Skinner, [illegible]*m*[illegible]*ro*[illegible]*io Loren*[illegible]*etti*[illegible] *The* [illegible]*rtist as Political Philosopher*, LXXII Proceedings of the British Academy [illegible] ([illegible]) (hereinafter Skinner, [illegible]*rtist as Political Philosopher*); Bruce Cole, Sienese Painting in the Age of the Renaissance (Bloomington, IN: Indiana U. Press, [illegible]) (hereinafter Cole, Sienese Painting in the Renaissance); Bruce Cole, Sienese Painting: From Its Origins to the Fifteenth Century (New York, NY: Harper [illegible] Row, [illegible]) (hereinafter Cole, Sienese Painting from Its Origins); Uta Feldges-Henning, *The Pic*[illegible]*torial Pro*[illegible]*ramme of the Sala della Pace*[illegible] *New* [illegible]*nterpretation*, [illegible] J. Warburg [illegible] Courtauld Inst. [illegible] ([illegible]); Nicolai Rubinstein, *Polit*[illegible]*ical* [illegible]*deas in Sienese* [illegible]*rt*[illegible]*The* [illegible]*rescoes* [illegible] *m*[illegible]*ro*[illegible]*io Loren*[illegible]*etti and Tad*[illegible]*deo di Bartolo in the Pala*[illegible]*o Pu*[illegible]*lico*, [illegible] J. Warburg [illegible] Courtauld Inst. [illegible] ([illegible]).

153 Skinner, *Two New* [illegible]*nswers* at [illegible]. See generally William M. Bowsky, A Medieval Italian Commune: Siena under the Nine, [illegible]–[illegible] at [illegible]–[illegible] (Berkeley, CA: U. of California Press, [illegible]) (hereinafter Bowsky, Medieval Commune). These [illegible]Nine Governors and Defenders of the Commune and People of Siena[illegible] were selected in two-month cycles from a group of ruling citizens who worked in [illegible]inter-locking councils[illegible] Starn, [illegible]*epu*[illegible]*lican* [illegible]*e*[illegible]*ime* at [illegible]. A book of the Nine survives in which the group described itself as wise (Sapientes), aiming to do justice by rendering judgments [illegible]to good citizens for their good works and to inspire fear in the malefactors for their offences[illegible] Starn, [illegible]*epu*[illegible]*lican* [illegible]*e*[illegible]*ime* at [illegible], quoting from archived materials. During the two months when a particular group of the Nine held office, the members lived at the Palazzo, apparently in an effort to insulate themselves from the entreaties of other citizens. Starn, Ambrogio Lorenzetti at [illegible]–[illegible]. Over a year, some fifty-four male citizens, coming from the ranks of leading merchant families, would sit on the Nine. Starn and Partridge at [illegible].

154 The images in figures [illegible] and [illegible] are reproduced with permission of Scala / Art Resource, New York, NY. The artist, Lorenzetti, lived from about [illegible] to [illegible]. George Rowley, Ambrogio Lorenzetti, vol. [illegible] at [illegible]–[illegible] (Princeton, NJ: Princeton U. Press, [illegible]) (hereinafter Rowley, Ambrogio Lorenzetti). Payment records indicate that the [illegible]*lle*[illegible]*ories of* [illegible]*ood and Bad* [illegible]*overnment* were completed around [illegible]. Skinner, *Two New* [illegible]*nswers* at [illegible], n. [illegible]; Polzer at [illegible]–[illegible].

155 These titles were not provided by Lorenzetti. See Skinner, [illegible]*rtist as Political Philosopher* at [illegible], n. [illegible]. Some refer to the second fresco (fig. [illegible]) as the *Cit*[illegible]*State under T*[illegible]*rann*[illegible], and a fifteenth-century reference called it *War*. Starn, Ambrogio Lorenzetti at [illegible]. As discussed in the text, apparently the pair was called [illegible]War[illegible] and [illegible]Peace[illegible] for two centuries thereafter. See Starn and Partridge at [illegible]. A contemporary commentator adopted that nomenclature and views the images as a [illegible]dialectical argument on Peace and War[illegible] Greenstein at [illegible], [illegible]. See also Polzer at [illegible]–[illegible]. The Palazzo Pubblico had many other frescoes, including the Lorenzetti *Mappamondo* (*Map of the World*) that deteriorated and was removed during the nineteenth century. Polzer at [illegible]–[illegible].

156 Starn and Partridge at [illegible]. The authors focus on the import of the written word, for [illegible]Medieval cosmology called the world into being in words and read it as a book[illegible] Id. For the rulers of Siena, [illegible]writing was a means of producing real and symbolic capital[illegible] that rested on privilege and control. Id. at [illegible]–[illegible].

157 Starn and Partridge at [illegible]. Rowley, at [illegible], described the frescoes as [illegible]without precedent in the Middle Ages[illegible] for providing a sustained and rich narration through a spatial configuration that integrated so many figures.

158 Polzer at [illegible]. Panofsky has said that Lorenzetti created a [illegible]portrait of Siena[illegible] with the [illegible]panorama of the fertile, rolling country nearby[illegible] and thus provided the [illegible]first postclassical vistas essentially derived from visual experience rather than from tradition, memory and imagination[illegible] See Erwin Panofsky, Renaissance and Renascences in Western Art [illegible] (New York, NY: Harper [illegible] Row, [illegible], reproducing a [illegible] volume).

159 Starn, [illegible]*epu*[illegible]*lican* [illegible]*e*[illegible]*ime* at [illegible]. Starn thought the import of the texts within the frescoes had been underappreciated. Id. at [illegible]–[illegible].

160 Skinner, [illegible]*rtist as Political Philosopher* at [illegible].

161 The Nine functioned as a kind of [illegible]coordinating committee and executive board for a large council of three hundred members and three smaller commissions of tax officials, merchants, and knights[illegible] all of whom [illegible]embodied the sovereign authority of the republic.[illegible] Starn, Ambrogio Lorenzetti at [illegible].

162 Bowsky, Medieval Commune at [illegible]–[illegible]. Siena had many courts, including several with specialized jurisdiction; others came and went as the Council tried different approaches. The city's judges were to decide [illegible]on the basis of analogy with the closest fitting law[illegible] rather than [illegible]upon their own whim[illegible] and were not to apply ex post facto legislation. Id. at [illegible]–[illegible]. As a reminder to the [illegible]modern[illegible] reader, Bowsky also noted that judges often served as prosecutors and investigators and then presided at trial and sentencing. Id. at [illegible].

163 Nevola at [illegible].

164 Starn and Partridge at [illegible].

165 Polzer at [illegible]–[illegible]. The assumption is that Lorenzetti died during the plague.

166 Starn and Partridge at [illegible], [illegible]–[illegible]; Starn, [illegible]*epu*[illegible]*lican* [illegible]*e*[illegible]*ime* at [illegible]–[illegible]. Because of the Sienese form of government, its art commissions were [illegible]civil and communal in origin[illegible] as contrasted with the patronage system that generated the artwork of Padua and some other cities. See Siena, Florence, and Padua: Art, Society and Religion [illegible]–[illegible], vol. [illegible], Interpretative Essays [illegible] (Diana Norman, ed., New Haven CT: Yale U. Press, [illegible]) (hereinafter Art, Society and Religion I).

167 Robert Gibbs, [illegible]*n Search of* [illegible]*m*[illegible]*ro*[illegible]*io Loren*[illegible]*etti*[illegible] [illegible]*lle*[illegible]*or*[illegible] *of Justice*[illegible]*Chan*[illegible]*es in the* [illegible]*rescoes of the Pala*[illegible]*o Pu*[illegible]*lico*, [illegible] Apollo: International Magazine of the Arts [illegible], [illegible]–[illegible] (May–Aug. [illegible]).

168 Starn, Ambrogio Lorenzetti at [illegible]–[illegible]; Starn and Partridge at [illegible]; Starn, [illegible]*epu*[illegible]*lican* [illegible]*e*[illegible]*ime* at [illegible].

169 Rubinstein, at [illegible], described the many possible interpretations of the figure as including [illegible]an aged king, the Good Ruler, Good Government, or Justice, . . . [illegible]or[illegible] the Commune of Siena[illegible] itself. The central male figure [illegible]bears the double aspect of king and judge: his mace, his shield, his headdress with its rays, at once call to mind the sceptre, the orb and the crown of a king[illegible] affiliating the image with [illegible]absolute monarchy[illegible] more than the Republican ideology presumed to

be Siennese. See Chiara Frugoni, *The Book of Wisdom and Lorenzetti's Fresco in the Palazzo Pubblico at Siena*, [illegible] J. Warburg & Courtauld Inst. [illegible], [illegible] ([illegible]).

170 Rubinstein at [illegible]; Rosemond Tuve, *Notes on the Virtues and Vices, Part* [illegible], [illegible] J. Warburg & Courtauld Inst. [illegible], [illegible] ([illegible]). See also Marianna Jenkins, *The Iconography of the Hall of the Consistory in the Palazzo Pubblico, Siena*, [illegible] Art Bulletin [illegible], [illegible] ([illegible]).

171 Both colors were on the emblem, or "balzana" of Siena; further, its councilors used a "white or black bean" when voting. Bowsky, Medieval Commune at [illegible].

172 The initials C.S.C.V. were shorthand for "Commune Senarum, Civitas Virginis." Skinner used Bowsky's translation of the phrase to read "For Siena as the city of the Virgin" and noted that it was a reference to Siena's adoption in [illegible] of the Virgin Mary as its special patron. Skinner, *Two New Answers* at [illegible], n. [illegible]. Starn translated the phrase as "The Commune of Siena, City of the Virgin." Starn, *Republican Revisime* at [illegible].

173 This position is taken by Skinner, who relied in part on the many implicit references to "the Nine" that appear in the scenes, such as the nine dancing figures, the nine Virtues, the nine Vices in the *Allegory of Bad Government*. He also read the room's narrative and its counterpoints as running from Bad to Good Government. Further, at the male figure's feet is a depiction of a Romulus and Remus, which Skinner took as a reference to the Roman origins of Siena. See Skinner, *Two New Answers* at [illegible]–[illegible]. In an earlier essay on the frescoes, Skinner was skeptical about how much the works of Aristotle and Aquinas had been imported into the iconography of the period when Lorenzetti worked. Skinner argued that other approaches, specifically that of Cicero transmitted through Martin of Braga and Prudentius, would have influenced the "pre-humanist rhetorical culture." Skinner, *Artist as Political Philosopher* at [illegible]–[illegible]. Those accounts place peace as the prime aspiration of civic life. Id. at [illegible]–[illegible]. Further, Skinner commented that Aquinas did not posit the common good as the embodiment of the ruler but rather that rulers were obliged to realize the common good through upholding laws. Id. at [illegible].

174 Skinner, *Two New Answers* at [illegible]–[illegible]. Skinner saw the layout to be a "conventional design" of the Last Judgment. Id. at [illegible]–[illegible] and n. [illegible]. He noted that the twenty-four citizens in the picture paralleled the twenty-four Elders in the *Book of Revelation* who "sit with the Lord in the Court of Heaven." Id. at [illegible]. Skinner read the posture of the citizens' leader to be that of a supplicant and pointed to the congruence between the fresco and the [illegible] *Last Judgment* fresco of Giotto in the Scrovegni Chapel.

175 Skinner, *Two New Answers* at [illegible] (his translation) and n. [illegible].

176 Skinner, *Artist as Political Philosopher* at [illegible]–[illegible].

177 Starn and Patridge analyzed the role played by the script and reliance on words. See Starn and Patridge at [illegible]–[illegible]. Latin is used for the labels of the nine Virtues and Vices, for the kinds of knowledge (such as of arithmetic, music, and astronomy), and for the quote from the Wisdom of Solomon. Id. at [illegible]–[illegible]. The many long textual comments are in the Italian vernacular.

178 For discussion of the unusual iconography attendant to those Virtues, see Skinner, *Artist as Political Philosopher* at [illegible]–[illegible]. As noted in the discussion of Temperance in Chapter [illegible], Skinner argued that the picture includes the first clock shown in Western art. Id. at [illegible].

179 That count is from Starn, *Republican Revisime* at [illegible]. Included are references in both Latin and the vernacular. Starn and Partridge at [illegible].

180 The "crown of justice" is biblical; the sword could come from St. Paul's statement that "no ruler bears the sword in vain." Skinner, *Artist as Political Philosopher* at [illegible]. As for the painting, Rowley believed that this Justice, along with Temperance and Magnanimity, were "turned over to an assistant." Rowley, Ambrogio Lorenzetti at [illegible]. Edgerton, at [illegible], suggested that this Justice may have been painted after a fire required the room's restoration in the [illegible]s.

181 Edgerton at [illegible]. When Justices appear with only swords, commentators assume that the artist sought to focus on the punitive aspects of the law. See, for example, Helen Weston, *Prud'hon's Justice and Vengeance*, [illegible] Burlington Magazine [illegible] ([illegible]). In his nineteenth-century renditions, Prud'hon was "consistent throughout his career in showing Justice with the sword rather than the scales." Id. at [illegible]–[illegible].

182 Edgerton at [illegible].

183 Edgerton at [illegible].

184 Polzer at [illegible]–[illegible].

185 Again, Giotto may be a source, for his "*Iustitia* (*Justice*) in the Arena Chapel was also in an enthroned and "focal position." There she was the only Virtue wearing a crown and sitting at the center, with three Cardinal Virtues on her right and the three Theological Virtues to her left; her placement related her to salvation yet also suggested that she was "self-sufficient." See Jonathan B. Riess, *Justice and Common Good in Giotto's Arena Chapel Frescoes*, [illegible] Arte Cristiana [illegible], [illegible] ([illegible]). The garb of Giotto's Virgin Mary in his *Last Judgment* in the chapel is similar to that of the Siena Justice. See Gibbs at [illegible]. The contrast made by Lorenzetti between the benefits that flow from good governance and the harms to the social order from injustice are also echoes of those in Giotto's frescoes portraying the opposition between Virtues and Vices. Giotto's enthroned *Justice* holds scale pans balanced with a figure in each, such that she herself serves as the scale. In the right pan, a "Victory-like" figure crowns a virtuous person; in the left is a "Jupiter-like" figure either brandishing a sword or hurling a thunderbolt at a sinner. Riess at [illegible], n. [illegible]. At the feet of Giotto's *Justice*, people are evenly arrayed and engage in ordinary life" a scene interpreted to convey the peace produced. Riess (building on the work of Pfeiffenberger at [illegible]–[illegible]) linked the display of the benefits of Justice to St. Thomas Aquinas, to the centrality of the study of law in Padua's university, and to the power of judges in the city's life. Id. at [illegible]–[illegible]. A text accompanying the picture reads: "Perfect justice balances everything with equal pans. Crowning good men, she brandishes her sword against vices. Everyone enjoys freedom if she reigns. As long as she wants to, she acts pleasantly; then the worthy knight hunts, people sing and trade, the merchant travels." See Frojmovic at [illegible], [illegible].

In contrast, Giotto showed violence around the male, blindfolded figure, "*Iniustitia* (*Injustice*). This figure has fangs, and his head is turned sideways, facing hell as portrayed in the *Last Judgment* fresco. Below his feet one sees murder, rape, and robbery, all set forth in an irregular pattern to depict the disorder entailed.

186 That size reflected import is an argument put forth by Feldges-Henning at [illegible]–[illegible].

187 See Jenkins at [illegible]. That placement might indicate that Wisdom was a divine rather than human attribute. Skinner, *Artist as Political Philosopher* at [illegible].

188 The text is the opening of the apocryphal *Book of Wisdom* of the Old Testament. The translation of "Diligite iustitiam qui iudicatis terram" is from Skinner, *Artist as Political Philosopher* at [illegible], as is his deciphering of the lettering on the fresco to be "DILIGITE (JUSTITIAM QUI IUDICATIS TERRAM." Id. at [illegible]. Starn, who added the bracketed materials to complete the words translated the phrase as "Serve justice you who judge the earth." Starn, *Republican Revisime* at [illegible].

189 See Frugoni at [illegible]. This vertical reading also shows the relationship between the work of Lorenzetti and the work of Giotto, whose "figures of Justice and Injustice form the base visually of the vertical axes of the South and North walls" of the frescoes in the Arena Chapel. See Howard M. Davis, "*Travit*" *in the Paintings of Giotto*, in Giotto in Perspective [illegible], [illegible]–[illegible] (Laurie Schneider, ed., Englewood Cliffs, NJ: Prentice-Hall, Inc., [illegible]).

190 Polzer at [illegible].

191 O'Reilly interpreted this scene to show "the benefits of rule directed by the Cardinal and Theological Virtues. The fruits of these

virtues are Pax and Justitia, guided by Wisdom and resulting in Concord.⊠ Jennifer O'Reilly, Studies in the Iconography of the Virtues and Vices in the Middle Ages ⊠⊠⊠ (New York, NY: Garland Publishing, ⊠⊠⊠⊠).

192 Rubinstein, at ⊠⊠⊠, identified the box as money. In contrast, Polzer believed it to be a sieve. Polzer at ⊠⊠–⊠⊠.

193 Starn, ⊠*epu⊠lican ⊠e⊠ime* at ⊠(e). Our translations came from Starn, who relied on Rowley (Rowley, Ambrogio Lorenzetti at ⊠⊠⊠–⊠⊠⊠). Translations are also found in Starn and Patridge at ⊠⊠⊠–⊠⊠⊠. Several of the texts are also translated, occasionally with variations, in Feldges-Henning as well as in Skinner, ⊠*rtist as Political Philosopher*. For example, in his essay *The ⊠rtist as Political Philoso⊠pher*, Skinner argued that what ⊠the verse states is that, wherever the holy virtue of justice rules, many souls are able to act together in such a way that ⊠un ben comun per lor sigror si fanno.' ⊠Id. at ⊠⊠. The venacular he quoted could mean ⊠that they are able to act in such a way as to ⊠onstitute the ⊠*en comun* as their *si⊠nor*' or to ⊠make up the common weal⊠ *Ben Comun*⊠ for their lord.' ⊠ Id. at ⊠⊠–⊠⊠ (footnotes omitted). For Skinner, the second reading confirmed that the central male figure was intended to personify the ideal yet also the actual ruler, rather than an abstraction of the common good. Id.

194 See John White, The Birth and Rebirth of Pictorial Space ⊠⊠–⊠⊠ (London, Eng.: Faber ⊠ Faber, ⊠⊠⊠⊠). White detailed the contrasts, such as the well-fitting lines of cornices and moldings under ⊠*ood ⊠overnment* and their disarray in *Bad ⊠overnment*, as well as the diffuse light of ⊠*ood ⊠overnment* in comparison to the darkness of the *Bad ⊠overnment* fresco.

195 Marina Warner described Lorenzetti's achievement as creating ⊠a dream of well-being that is as captivating today as it was then.⊠ Marina Warner, Monuments and Maidens: The Allegory of the Female Form ⊠⊠⊠ (New York, NY: Atheneum, ⊠⊠⊠⊠).

196 The landscape (⊠of surpassing beauty⊠) was ⊠one of the very first topographical portraits in European painting.⊠ Cole, Sienese Painting from Its Origins at ⊠⊠⊠–⊠⊠⊠.

197 Translation by Starn, ⊠*epu⊠lican ⊠e⊠ime* at ⊠(f). See also Edgerton at ⊠⊠⊠.

198 Starn, ⊠*epu⊠lican ⊠e⊠ime* at ⊠(h). Rubinstein, at ⊠⊠⊠, offered a variation of an excerpt through his translation: ⊠Behold the good things that she ⊠that is, justice⊠ provides us with and how sweet and tranquil is life in the city in which she is maintained.⊠

199 The horns may be boars' tusks. See Feldges-Henning at ⊠⊠⊠.

200 Rubinstein at ⊠⊠⊠; Skinner, *Two New ⊠nswers* at ⊠–⊠. Skinner also noted that the Vices depicted depart from some of the regular ones to include social and political failings⊠ fraud, treason, cruelty, war, avarice, pride, and vainglory. Id. Rowley, at ⊠⊠⊠, makes a parallel point, arguing that the configuration was ⊠chosen with the greatest of care as antitheses of ⊠the Virtues of Good Government.

201 Starn, ⊠*epu⊠lican ⊠e⊠ime* at ⊠(i).

202 Starn, ⊠*epu⊠lican ⊠e⊠ime* at ⊠(j), quoting Rowley. That text, punctuated by a semicolon, continues:

> which, in order to carry out her wickedness, is unwilling either to wish or do anything against the dirty nature of the vices, which with her are here joined. She chases those who on the good are intent, and calls to herself everyone who is planning evil. She always defends him who uses force, or robs, or who might hate peace; wherefore every land of hers lies uncultivated.

Because the Latin uses the feminine gender for the nouns that are both Vices and Virtues, the text would in Latin properly refer to the Vice Tyranny as ⊠she⊠ even as the picture posits a large male ruler. The use of the masculine form would further substantiate the Skinner reading that the male figure in ⊠*ood ⊠overnment* was meant to signify the actual persons who ruled, the Nine.

203 Starn, ⊠*epu⊠lican ⊠e⊠ime* at ⊠(k).

204 Rubinstein at ⊠⊠⊠–⊠⊠⊠. Starn and Partridge at ⊠⊠; the authors report that a translation of Aristotle's ⊠*thics* was done circa ⊠⊠⊠⊠.

205 Skinner, ⊠*rtist as Political Philosopher* at ⊠⊠. The argument is that rules of justice are, in some sense, intuitive.

206 Edgerton at ⊠⊠–⊠⊠ (agreeing with and quoting Rubinstein at ⊠⊠⊠–⊠⊠⊠).

207 Starn and Partridge at ⊠⊠; quoting from a then-current source, attributed to ⊠*l tesoretto* of Ser Brunetto Latini, and translated as

> But all in common
> Should pull a rope
> Of Peace and good deeds
> Because there can be no saving
> A land or city broken by faction . . . .

See also Rubinstein at ⊠⊠⊠–⊠⊠⊠.

208 This is Rubinstein's reading at ⊠⊠⊠.

209 Skinner, ⊠*rtist as Political Philosopher* at ⊠⊠–⊠⊠; Starn, ⊠*epu⊠lican ⊠e⊠ime* at ⊠⊠, n. ⊠⊠. As Starn and Partridge, at ⊠⊠, put it: ⊠Punishment is part of commutative but not of distributive justice (where the frescoes include it); transactions of money or goods belong as much to the latter as to the former.⊠

210 Starn, ⊠*epu⊠lican ⊠e⊠ime*, n. ⊠ at ⊠⊠ and n. ⊠⊠ at ⊠⊠. Skinner found this claim strained. See Skinner, ⊠*rtist as Political Philosopher* at ⊠⊠–⊠⊠.

211 Starn and Partridge at ⊠⊠–⊠⊠.

212 Skinner, ⊠*rtist as Political Philosopher* at ⊠, ⊠⊠. Brunetto Latini wrote during the ⊠⊠⊠⊠s, and his work was accessible to those in Siena.

213 Skinner, ⊠*rtist as Political Philosopher* at ⊠⊠. Skinner quoted the ⊠⊠⊠⊠ Constitution and described similar powers given to the Nove in the vernacular ⊠⊠⊠⊠–⊠⊠⊠⊠ Constitution.

214 Skinner, ⊠*rtist as Political Philosopher* at ⊠⊠. There, Skinner translated parts of the Sienese Constitution of ⊠⊠⊠⊠–⊠⊠⊠⊠.

215 Skinner, ⊠*rtist as Political Philosopher* at ⊠⊠–⊠⊠, ⊠⊠. Skinner argued that Concordia and Aequitas were Ciceronian views of the ⊠twin foundations of civil life⊠ Skinner, *Two New ⊠nswers* at ⊠. The rope could thus refer to Justice and to Concord, for the ⊠bonds of concord⊠ (also the ⊠best and lightest rope of safety in society⊠) are at risk of breaking when people are not united. Skinner, ⊠*rtist as Political Philosopher* at ⊠⊠ (quoting Cicero). Further, as Pfeiffenberger explained in reference to Giotto's *Justice* in the Arena Chapel, the idea of Distributive Justice ⊠derives from Cicero, is restated by Justinian, and is expounded again⊠ later by others; the placement of Justice at the center as the ⊠queen⊠ evokes ⊠an ancient imperial form of government⊠ in which the Justice figure parallels the goddess Roma, who ⊠dispensed reward and punishment in ancient art and religion⊠ Pfeiffenberger, ch. ⊠ and ⊠⊠.

216 Frugoni at ⊠⊠⊠–⊠⊠⊠. Skinner's discussion of the resemblance of the fresco to Giotto's *Last Jud⊠ment* supports this approach. Skinner, *Two New ⊠nswers* at ⊠⊠–⊠⊠.

217 This view is put forth by Feldges-Henning, at ⊠⊠⊠–⊠⊠⊠, who relied on the narration of the occupations, the dancing, and Albertus Magnus's description of the seven attributes of the Heavenly City of Jerusalem. The *Bad ⊠overnment* fresco therefore could represent Babylon. Id.

218 Polzer, at ⊠⊠, suggests an analysis along these lines. The scholarly work reads the depiction not to refer to a particular tyrant but to represent despots in general. Starn and Partridge at ⊠⊠–⊠⊠.

219 Polzer at ⊠⊠.

220 The translation is by Skinner, ⊠*rtist as Political Philosopher* at ⊠⊠.

221 Greenstein at ⊠⊠⊠–⊠⊠⊠. Edgerton also saw Peace as the ⊠true center of the whole enframed composition⊠ and as the ⊠focal point not

only of the artistic composition but of the politics of Siena.⊠ Edgerton at ⊠⊠, ⊠⊠.

222 Greenstein at ⊠⊠⊠–⊠⊠⊠. Skinner viewed Peace as the counterpart of the figure War, shown at ⊠alert⊠ with a sword raised in the ⊠*lle*⊠ ⊠*or*⊠ *of Bad* ⊠ *overnment*. Skinner, *Two New* ⊠ *nswers* at ⊠–⊠.

223 Campbell, at ⊠⊠⊠, focused on the underappreciated role played by dancers in the landscape.

224 A capital investment theory can be found in Nevolo at ⊠⊠, as a city's appearance was significant to its political and economic success. See also Starn and Partridge at ⊠⊠–⊠⊠.

225 Bowsky, Medieval Commune at ⊠⊠⊠. Starn and Partridge at ⊠⊠ (detailing the destruction by ⊠a vindictive crowd⊠ of the records of the Nine).

226 Bowsky, Medieval Commune at ⊠⊠⊠. The population of Siena, estimated to have been about ⊠⊠,⊠⊠⊠, was reduced by about half. Art, Society and Religion I at ⊠⊠, n. ⊠⊠.

227 Successive governments made alliances. Siena attempted to maintain its commitment to its own independence and⊠ Jenkins argued⊠ to a form of virtue that was republican in the sense that it was not focused on single personalities. In ⊠⊠⊠⊠, however, Siena was incorporated into the Grand Duchy of Tuscany under the rule of Cosmo De Medici. Jenkins at ⊠⊠⊠.

228 Both of these commissions were completed under a United States government program called Art-in-Architecture, in which set-aside⊠ about one-quarter to one-half of a percent of a construction budget⊠ are provided for public art. We discuss that program and other of its artifacts in Chapters ⊠, ⊠, and ⊠. In addition to deployments in art, contemporary writers argue the relevance of the frescoes to contemporary governance. See, for example, Wolfgang Drechsler, Good and Bad Government: Ambrogio Lorenzetti's Frescoes in the Siena Town Hall as Mission Statement for Public Administration Today (Open Society Institute, Discussion Paper No. ⊠⊠, Local Government and Public Service Reform Initiative, ⊠⊠⊠⊠).

229 Each painting in figure ⊠⊠ (linen over masonite board) measures nine by five feet. The paintings, placed in storage during courthouse renovations in ⊠⊠⊠⊠, were commissioned in the ⊠⊠⊠⊠s and unveiled at a ceremony in ⊠⊠⊠⊠. Bach, GSA Archives/AA-⊠⊠, Project Report (Apr. ⊠⊠, ⊠⊠⊠⊠) (hereinafter Bach, GSA/AA-⊠⊠). The courthouse was named after William Kenzo Nakamura, who had been ⊠posthumously awarded the Congressional Medal of Honor⊠ in June of ⊠⊠⊠⊠ for his ⊠acts of heroism in Italy, on July ⊠, ⊠⊠⊠⊠, that saved the lives of his platoon members, but cost him his life⊠ Bach, GSA/AA-⊠⊠, file notes. Our thanks to Mr. Bach for providing us with permission to reproduce his murals and to Susan Harrison of the Art-in-Architecture Program of the General Services Administration for directing us to them and providing us with photographs to use.

230 Bach trained in ceramics and furniture design at the University of California, Berkeley. A teacher of art history, his interests range from Italian painters such as Lorenzetti and Giotto to the Mexican muralists (including Jose Clemente Orozco, whose twentieth-century work for the Supreme Court of Mexico is discussed in Chapter ⊠⊠). Bach contributes to ⊠*m*⊠*ricas*, a bimonthly magazine about Latin American cultural affairs published by the Organization of American States. Mr. Bach explained to us that, during his service for the Central Intelligence Agency, he had become acutely aware of the importance of government and felt deeply the importance of even-handed and transparent democratic processes. Telephone interview (August ⊠, ⊠⊠⊠⊠).

Some of his imagery raised concerns because it had religious connotations. As one judge explained, ⊠our only reservation was that some people might take exception to the angels and the demons at the top and to the crosses which seemed to be among the figures below. . . . This being a public building, we must be sensitive to any church/state implications and believe that GSA should be aware of this concern⊠ Letter from Chief Judge Walter McGovern to Marilyn Farley of the ⊠Art-in-Architecture⊠ Program (Apr. ⊠⊠, ⊠⊠⊠⊠); Bach, GSA/AA-⊠⊠. The artist reassured the judges that angels were a common decorative adornment in paintings of this genre and that no crosses would be part of the painting. Further, he explained that the ⊠paintings are solidly rooted in the secular branch of Western Art; indeed, their prototypes (the Lorenzetti murals) come from a city hall (not a church) in Siena⊠ Letter from Caleb Bach to Judge Donald Voorhees (Apr. ⊠⊠, ⊠⊠⊠⊠); Bach, GSA/AA-⊠⊠. The judges, in turn, encouraged the display of explanatory materials to help viewers understand the symbolism.

After Bach's ⊠*lle*⊠*ories* were hung, one commentator described the ⊠stubby stylized figures⊠ as suggestive of ⊠carvings on European Romanesque churches⊠ while the ⊠gnarled citizens⊠ in *Bad* ⊠ *overn*⊠ *ment* ⊠owe something to the gothic fantasies of Hieronymus Bosch, while battling soldiers were inspired by the ⊠⊠th-century Florentine paintings of Paolo Uccello⊠ Irene Clurman, ⊠*pic* ⊠ *iew of the* ⊠ *rt of* ⊠ *overnment*, ⊠ Federal Bar Association of the Western District of Washington Newsletter ⊠, ⊠ (Summer ⊠⊠⊠⊠).

231 The ⊠⊠⊠⊠ building, the first federal courthouse in Maine, was one of several constructed under Supervising Architect James Knox Taylor, who served in that role at the United States Treasury from ⊠⊠⊠⊠ to ⊠⊠⊠⊠, and who designed the building in a Second Renaissance Revival style. See Edward T. Gignoux, U.S. Courthouse, U.S. General Services Administration, Historic Federal Buildings, http://www.gsa.gov; Antoinette J. Lee, Architects to the Nation: The Rise and Decline of the Supervising Architect's Office ⊠⊠⊠–⊠⊠⊠ (New York, NY: Oxford U. Press, ⊠⊠⊠⊠). Renovations were undertaken to add space to and to modernize the building in the ⊠⊠⊠⊠s, ⊠⊠⊠⊠s (when postal services were relocated to another building), and, under the supervision of Leers, Weinzapfel Associates of Boston, in the ⊠⊠⊠⊠s. The various expansions were responsive to changes, such as congressional authorization for a second district judge to sit in Portland. Hence, trial courtrooms and offices for the Marshal Service and the GSA were added. The courthouse received its current name in ⊠⊠⊠⊠, when it was dedicated to Judge Edward T. Gignoux of that district court. See Andrea P. Leers, ⊠*r*⊠*an Desi*⊠*n and the Courthouse*⊠⊠ *ow Sites Shape Solutions*, in Celebrating the Courthouse: A Guide for Architects, Their Clients, and the Public (Steven Flanders, ed., New York, NY: W. W. Norton, ⊠⊠⊠⊠). Additional discussion of courthouse building and renovation in the United States can be found in Chapters ⊠–⊠.

232 Dorothea Rockburne, a contemporary artist based in New York City, has work in the collections of many major museums. See Lilly Wei, *Dorothea* ⊠*ock*⊠*urne, Star*⊠*a*⊠*er*, ⊠⊠ Art in America ⊠⊠⊠ (Oct. ⊠⊠⊠⊠). She is a student of Renaissance techniques and paintings, and she has a longstanding interest in math, physics, history, and art. See Robert Storr, ⊠*ock*⊠*urne*⊠ *Wa*⊠*er*, in New Paintings: Pascal and Other Concerns (New York, NY: Andre Emmerich Gallery, March ⊠⊠⊠⊠) (exhibit catalogue); Dorothea Rockburne, telephone interview (Feb. ⊠, ⊠⊠⊠⊠). Our thanks to Rockburne, as well as to Don Johnson, the photographer, both of whom authorized our use of the photograph of the mural, and to the Honorable D. Brock Hornby of the District Court in Maine and to Susan Harrison of the GSA for facilitating and enabling reproduction of the GSA-commissioned catalogue cover shown in figure ⊠⊠.

233 Rockburne, GSA Archives/AA-⊠⊠⊠, Project Summary, Submission to the GSA. Rockburne also explained her classical training, her visits to Siena, and her interest in Lorenzetti's frescoes.

234 These comments are quoted in Robert K. Sloane, The Courthouses of Maine ⊠⊠⊠ (Woolwich, ME: Maine Lawyers Review, ⊠⊠⊠⊠), and in the description of the fresco in the booklet commemorating the ceremony of June ⊠⊠, ⊠⊠⊠⊠, in which the courthouse was formally reopened. See also GSA, http://www.gsa.gov.

235 Ms. Rockburne recounted and GSA files indicated that the concern resulted in the omission of labels. Rockburne, GSA/AA-⊠⊠⊠, Email from Susan Harrison to Michelle Young (Sept. ⊠⊠, ⊠⊠⊠⊠).

236 Some members of the selection panel were also concerned that the abstraction would be met with skepticism, and commended public explanation of the choice. Rockburne, GSA/AA-□□□, Summary of the Art-in-Architecture Program Third Meeting (Sept. □□, □□□□).

237 See Rubinstein at □□□, n. □□, and at □□□, n. □□. We also detail theories of the relationships among Virtues in Chapters □ and □□.

238 Rubinstein at □□□, n. □□, □□□, □□□. Rubinstein also discussed the work of Taddeo di Bartolo, who in □□□□ painted the Siena antechapel that Rubinstein thought continued the political program of the Room of the Nine as it was also replete with images of Justice, other Virtues, and Roman Republican □heroes□ Id at □□□.

239 For example, Melchior Brocksberger did two frescoes for the exterior of the chamber of the Town Hall in Regensburg. One was *Jud□ment of Solomon* and the other □*lle□or□ of □ood □overnment*, based on a woodcut printed in Nuremberg in □□□□. At the center is a figure labeled the □res pub□ (Republic); a Pax (Peace) rests on the floor with her head in the Republic's lap. They are surrounded by an Iusticia (Justice) with sword upright and balanced scale and a Liberalitas (Liberality). A swarm of nearby bees is labeled Concordia (Harmony), and God hovers in the clouds above all. See Zapalac at □□–□□, fig. □□. A □□□□ panel by Isaac Schwendtner replaced the earlier version. Justice and Prudence were in the foreground and linked to Peace and Prosperity. Like the Lorenzetti, one could see that the government functioned under God in the clouds above. Id. at □□–□□, fig. □□. The cities of Padua and Florence also set forth iconographic scenes of good government personified by a male figure and accompanied by seven Virtues. Art, Society and Religion I at □□□.

240 Riess at □□.

241 David Herlihy used the term □civic Christianity□ in reference to the late Medieval buildings. See David Herlihy, Medieval and Renaissance Pistoia: The Social History of an Italian Town, □□□□–□□□□ at □□□ (New Haven, CT: Yale U. Press, □□□□). Herlihy tracked the shift in the allocation of funding of institutions in Pistoria and found substantial funds provided to hospitals for the poor and orphaned as well as a □new taste for liturgical splendor□ Id. at □□□. He attributed these efforts to a new consciousness of social surroundings as well as a focus on □ideal worlds□ rather than on the harsh realities of the time. Id. at □□□. The use of churches as dispute resolution centers in Parma is detailed by Schulz at □□□–□□□. He also charted how the rise in trade and professional groups created □new demands for space□ prompting more communal building. Id. at □□□–□□□. Schulz argued that some structures were decidedly not to be used for religious purposes as a way to build secular civic identity. See also Cole, Sienese Painting from Its Origins at ix (referring to buildings in Siena and elsewhere in Tuscany). Italian town halls typically housed the four intertwined functions of trade, local democracy, adjudication, and public ceremonies. For discussion of these functions in German town halls, see Zapalac at □□–□□, □□.

251 Frojmovi□ at □□.

252 The words, ascribed to St. John of Damascus of the eighth century, are: □Images speak; they are neither mute, nor lifeless blocks like the idols of the Pagans. Every painting that meets our gaze in a church, relates, as if in words, the humiliation of Christ for his people, the miracles of the Mother of God, the deeds and conflicts of the Saints. Images open the heart and awake the intellect, and, in a marvelous and indescribable manner, engage us to imitate the persons they represent□ See Adolphe Napoleon Didron, Christian Iconography: The History of Christian Art in the Middle Ages, vol. □ at □ (E. J. Millington, trans., New York, NY: Frederick Ungar Publishing, □□□□).

253 Ernst Gombrich argued that onlookers would perceive the concept directly rather than by a pattern of interpretation dependent on sequential thought. The visual symbol not only represented but somehow became interchangeable with what it represented. Ernst Gombrich, Symbolic Images: Studies in the Art of the Renaissance □ at □□□–□□□ (Oxford, Eng.: Phaidon, □rd ed., □□□□). Describing the adulation of icons in the sixteenth century, Merback offered the explanation that □the belief in the □living presence' of holy persons in the cult image was, for all but a few skeptical minds, a fixture of mental life□ inspiring pilgrims to trek across Europe so as to see them. Merback at □□□. But within that century, Protestant hostility resulted in the destruction of many such displays. This iconoclasm □transformed the visual environment of northern European sanctuaries□ Id.

255 Zapalac at □□□, n. □. Several authors, often building on each other's work, have catalogued the many displays of the Last Judgment in German and Dutch Town Halls, sometimes with the deployment of this particular scene as the focal point (such as in Zapalac) and other times as part of narratives about art relevant to law or the role of law more generally. See, for example, Ursula Grieger Lederle, Gerechtigkeitsdarstellungen in deutschen und niederl□ndischen Rath□usern (Representations of Justice in German and Dutch Town Halls) (Ph.D. dissertation, Heidelberg, Ger.: U. Heidelberg Press, □□□□); Georg Troescher, Weltgerichtsbilder in Rath□usern und Gerichtsst□tten (Last Judgment Pictures in Town Halls and Court Chambers), vol. □□ of West German Yearbook for Art History at □□□–□□□ (Frankfurt, Ger.: Prestel-Vertel GMBH, □□□□); Harbison; Schild; Levy, Last Judgment; Kissel, Die Justitia; Wolfgang Pleister □ Wolfgang Schild, Recht und Gerechtigkeit im Speigel der europ□ischen Kunst (Law and Justice Reflected in European Art) (Cologne, Ger.: DuMont Buchverlag, □□□□); Susan Tipton, Res publica bene ordinata: Regentenspiegel und Bilder von guten Regiment, Rathausdekorationen in der Fr□hen Neuzeit (The Well-Ordered Public Sphere: Images of Sovereignty and Pictures of Good Government, Town Hall Decoration in the Early Modern Period) (Hildesheim, Ger.: George Olms Verlag, □□□□).

Christian-Nils Robert noted the prevalence in France during the fifteenth century of images of the crucifixion in courtrooms as he

traced the linkage of religious themes to civil power. Robert at ⍰–⍰. He also discussed the regular placement of crucifixes above the chairs in which French judges sat. The deployment of both crucifixes and Last Judgment scenes was a focus of Robert Jacob, who argued that the insistent religious theme helped judges to understand themselves as having some authority independent of the local governing ruler. See Robert Jacob, *Le ⍰⍰ement de Dieu et la formation de la fonction de ⍰⍰er dans ⍰⍰istoire europ⍰enne* (⍰ od⍰ *Jud⍰ement and the Development of the ⍰unction of Jud⍰in⍰ in ⍰uropean ⍰istor⍰*), ⍰⍰ Archives de Philosophie du Droit ⍰⍰–⍰⍰ (⍰⍰⍰⍰).

256 Contemporary discussions of German law either refer to this provision as stemming from the Magdeburg Laws or rely on Ulrich Tengler, writing a legal treatise in the early ⍰⍰⍰⍰s, for the proposition that the requirement existed. See, for example, Zapalac at ⍰⍰–⍰⍰, ⍰⍰–⍰⍰; Strauss, Law, Resistance, and the State at ⍰⍰⍰; Troescher at ⍰⍰⍰. See also Guido Kisch, Recht und Gerechtigkeit in der Medaillenkunst (Law and Justice in Medallion Art) (Heidelberg, Ger.: C. Winter, ⍰⍰⍰⍰). Troescher also cited the fourteenth-century source for the Magdeburg Law as stating that ⍰an honorable judge in the town hall should be reminded of the most serious court of our Lord: and therefore he should think of this court⍰ Id. at ⍰⍰⍰. Later editions of the Magdeburg Laws reiterate that requirement. Through the able assistance of Yale Rare Book Librarian Mike Widener and of Stella Burch Elias, we were able to identify two of those later iterations, the *Sechsich Weich⍰ild und Lehenrecht* (roughly translated as *Sa⍰on Munic⍰ipalit⍰ and La⍰ Law*)⍰ one from ⍰⍰⍰⍰ and the other from ⍰⍰⍰⍰ as well as a ⍰⍰⍰⍰ volume by Tengler in the Yale Law School's Rare Books Collection. The pagination is slightly different than that of the materials cited by Kisch, but two references to Last Judgment images in courtrooms are provided, as we discuss in the text and in subsequent footnotes. The special place accorded the Last Judgment overlapped with a shift to other narrative scenes. For example, as of the end of the thirteenth century, the Nuremberg Rathaus had historical images from Plutarch and Gellius and a *Last Jud⍰ment*⍰Zapalac at ⍰⍰⍰, n. ⍰⍰.

257 Troescher at ⍰⍰⍰. These multi-volume codes in various versions were the laws adopted in different city-states. See, e.g., Paul Laband, Das Magdeburg-Breslauer Systematische Sch⍰ fenrecht aus der mitte des XIV (The Magdeburg-Breslau systematic magistrates' law from the mid-fourteenth century) (Berlin, Ger.: Ferd. Dümmlers Verlagsbuchhandlung, ⍰⍰⍰⍰, reprinted ⍰⍰⍰⍰).

258 *Sechsich We⍰ch⍰ild und Lehenrecht* (*Sa⍰on Municipalit⍰ and La⍰ Law*), Article XVI, folio XXVa (Leipzig, Ger.: Michael Blum, ⍰⍰⍰⍰).

259 *Sechsich We⍰ch⍰ild und Lehenrecht*, Article XVI, folio XXVIIb.

260 Strauss, Law, Resistance, and the State provided that translation at ⍰⍰. *Laienrichter* is the term for ⍰lay judge⍰ The title of Tengler's work is variously spelled Leyenspiegel or Laienspiegel.

261 See Ulrich Tengler, Der neu Leyenspiegel v⍰ rechtmassigen ordnunge in burgerlichen und peinlicher Regimeten (The New Layman's Mirror Containing Just Rules of Civil and Penal Law) (Strasbourg, Ger.: ⍰⍰⍰⍰).

262 Tengler at folio OELXIII (b), as well as the sections titled ⍰On God's Court⍰ (according to the register, folio cvliv (a), and according to the book's pagination OEXLIX (a)) and ⍰On God's punishment⍰ (according to the register, folio cvliv (b), and according to the book's pagination OEXLIX (b)). Given the challenges in locating original sources and the rarity of full discussions in English about Tengler, more details are in order. In one section titled ⍰On the Last Judgment⍰ Tengler explained that earthly judges made the laws in their courts, but it was God who reigned above all judges in his heavenly court and would address the sins of men and punish them accordingly. The section in the ⍰⍰⍰⍰ Tengler ⍰On the Last Judgment⍰ is twenty-eight pages or fourteen double-sided folios. Its introduction reads:

> the image of the Last Judgment provides a model that every judge, person judging, person giving counsel, or other court personnel who administer justice should heed and have before their eyes and pay attention to. For on the last day there will be complete reckoning and they must answer for each and every secret and public action and omission with the threat of the torture of eternal damnation. And so according to regulations, until now in the criminal legal rules, the genuine truth of the Last Judgment was to be shown ⍰or displayed⍰ so that bad laymen would be drawn to justice.

Provided thereafter are detailed descriptions of the content of the *Book of ⍰evelation* and its relevance for judges, including outlines of the Old and New Testament references to God's judgment, the Antichrist, ⍰damnation⍰ the ⍰knowledge of the Jews⍰ and ⍰the Devil⍰ The conclusion, titled ⍰So that the model of the Last Judgment will be useful⍰ admonished judges to ⍰think about the cruelest court of God⍰⍰ as displayed before their eyes⍰ so that they might judge fairly.

263 Zapalac at ⍰⍰, translating Ulrich Tengler, whom, she noted, authored ⍰the most important German handbook⍰ on legal procedure of that era. See also Strauss, Law, Resistance, and the State at ⍰⍰–⍰⍰.

264 Zapalac at ⍰⍰, quoting Tengler.

265 Antje Schmitt, *Paintin⍰ versus sculpture⍰the pro⍰ramme of the L⍰ne⍰ur⍰ town hall*, in The Sculpted Object ⍰⍰⍰⍰–⍰⍰⍰⍰ ⍰⍰⍰, ⍰⍰⍰, ⍰⍰⍰ (Stuart Currie and Peta Motture, eds., Brookfield, VT: Scholar Press, Ashgate Publishing, ⍰⍰⍰⍰) (quoting, as translated, Sigmund Meisterlin's *Narem⍰er⍰ Chronicle*, written in ⍰⍰⍰⍰).

266 Edgerton at ⍰⍰. Such scenes were then less common in Italy. Id. at ⍰⍰.

267 In addition to those cataloguing scenes of the Last Judgment, many scholars have documented their development and distinctions. See, for example, Bouillet; Zapalac; Troescher; Harbison. See also Lisa Wade, Representations of the Last Judgement and Their Interpretation (Ph.D. dissertation, Department of Art History and Theory, U. of Essex, Essex, Eng., ⍰⍰⍰⍰; UMI Publication No.: AAT C⍰⍰⍰⍰⍰⍰⍰). Various versions of Last Judgment scenes were shown in courtrooms, churches, and hospitals. See Janey L. Levy, *The ⍰e⍰s of the ⍰in⍰dom of ⍰ eaven⍰⍰cclesiastical ⍰uthorit⍰ and ⍰ierarch⍰ in the Beaune ⍰ltarpiece*, ⍰⍰ Art History ⍰⍰ (⍰⍰⍰⍰) (hereinafter Levy, ⍰*in⍰⍰ dom of ⍰ eaven*).

268 *Matthew* ⍰⍰:⍰⍰–⍰⍰. See also Edgerton at ⍰⍰–⍰⍰.

269 *Matthew* ⍰⍰:⍰⍰–⍰⍰, New English Bible.

270 *Psalm* ⍰:⍰. See also *Psalm* ⍰:⍰–⍰ (⍰The Lord thunders, he sits enthroned for ever: he has set up his throne, his judgment-seat. He it is who will judge the world with justice)⍰; *Prover⍰s* ⍰⍰:⍰ (⍰A king seated on the judgment-throne has an eye to sift all that is evil⍰); *Luke* ⍰⍰:⍰⍰ (in which Jesus tells the disciples, ⍰you shall eat and drink at my table in my kingdom and sit on thrones as judges of the twelve tribes of Israel⍰). One can also find in The *Second Letter of Paul to the Corinthians* ⍰:⍰⍰ a reference to ⍰the tribunal of Christ⍰ Another text, less often cited, is The ⍰*irst Letter of Paul to the Thessalonians* ⍰:⍰⍰–⍰⍰ (⍰because at the word of command, at the sound of the archangel's voice and God's trumpet-call, the Lord himself will descend from heaven; first the Christian dead will rise, then we who are left alive shall join them, caught up in clouds to meet the Lord in the air⍰). All citations are from the New English Bible.

Marcia Hall also pointed to Paul's writing that on the final day ⍰the Lord himself will descend from heaven with a cry of command, with the archangel's call, and with the sound of the trumpet of God. And the dead in Christ will rise first; then we who are alive, who are left, shall be caught up together with them in the clouds to meet the Lord in the air⍰ See Marcia B. Hall, *Michelan⍰elo⍰ Last Jud⍰ment⍰⍰esurrection of the Bod⍰ and Predestination*, ⍰⍰ Art Bulletin ⍰⍰, ⍰⍰–⍰⍰ (⍰⍰⍰⍰). Other possible sources for Last Judgment scenes include catechetical texts, materials from St. Augustine's *The Cit⍰ of ⍰od* of ⍰⍰⍰–⍰⍰⍰ CE, and literary

texts such as Dante's *Divine Comedy*. See Erwin Panofsky, Early Netherlandish Painting [illegible] (Cambridge, MA: Harvard U. Press, [illegible]); Levy, *Kingdom of Heaven* at [illegible].

271 The frequently cited example, noted earlier, of a great early image is the sixth-century Church of St. Apollinare Nuovo in Ravenna, Italy, where mosaics depict Christ separating sheep from goats. See, for example, Bouillet at [illegible]. Another well-known mosaic *Last Judgment* is in the Torcello Cathedral from the twelfth century. Id. at [illegible].

272 Bouillet at [illegible]; Edgerton at [illegible]. See Dirk Bax, Hieronymus Bosch and Lucas Cranach, Two Last Judgment Triptychs: Description and Exposition (Amsterdam, Neth.: North Holland Publishing, [illegible]). Giotto's Scrovegni Chapel *Last Judgment* in Padua has apocalyptic elements as well.

273 Wade at [illegible].

274 Hall at [illegible]. Hall linked Michelangelo's work to the debate about whether souls alone, rather than bodies, made their way to heaven. She argued that, by the [illegible]s, Catholics were moving "toward the doctrine of bodily resurrection," thereby diminishing the divide between Catholics and Protestants on this issue. Id. at [illegible]. Rather than seeing Michelangelo's work as Neoplatonic, she posited his Sistine Chapel *Last Judgment* as depicting religious commitments to bodily resurrection. Id.

275 See Strauss, Law, Resistance, and the State at [illegible]; Zapalac at [illegible]; Edgerton at [illegible]. Displays of the Last Judgment in Northern Europe were found in the Town Halls of Regensburg, Lüneburg, Basel, Kampen, Louvain, Bruges, Nuremberg, Graz, Danzig, Emden, Bautzen, and Haarlem. See Harbison at [illegible], [illegible]; Schild at [illegible].

276 See Zapalac at [illegible] (detailing some of the images of Mary) and Harbison at [illegible] (describing some of the analogies made in the scenes) and at [illegible] (discussing Mary as intercessor in what he termed Catholic Last Judgments); see also Edgerton at [illegible].

277 Edgerton at [illegible]. Maureen Flynn, *Mimesis of the Last Judgment: The Spanish "auto de fe,"* [illegible] Sixteenth Century Journal [illegible], [illegible] ([illegible]).

278 Flynn at [illegible]. The *auto de fe* was a ceremony "at which the Inquisition judged and punished prisoners for violations of the Catholic faith." Id. at [illegible]. An interest in inscribing obligations of obedience prompted "dramatic production of the Last Day." Id. at [illegible].

279 The artist is unknown. Our thanks to Otto Hochreiter, Katharina Gabalier, and Franz Leitgeb, who directed us to the correct source for the image, and to Stadtmuseum Graz for providing us with the image in figure [illegible] and with permission to use it. The Graz painting has been reproduced and discussed by others, some describing the painting as a seventeenth-century copy. See Zapalac at [illegible] and fig. [illegible]; Troescher at [illegible] and fig. [illegible].

280 See, for example, Zapalac at [illegible]; Troescher at [illegible]; Lederle at [illegible]; Harbison at [illegible]; Schild at [illegible]. Another example, *Himmlisches und irdisches Gericht* (*Heaven and Earthly Court*), from circa [illegible], is reproduced in Pleister and Schild at [illegible], fig. [illegible]. These authors, too, noted that such depictions plainly connected secular and divine judgments.

281 See Troescher at [illegible], para. [illegible]. Troescher reported that Strobel served as town judge in [illegible], [illegible], and [illegible] and as mayor in [illegible].

282 Erwin Panofsky, Early Netherlandish Painting, Its Origins and Character (Cambridge, MA: Harvard U. Press, [illegible]) at [illegible]. Schild and Harbison noted the parallels. As Schild put it, Jesus Christ's "heavenly court is painted in complete parallel to the earthly court." Schild at [illegible]. See also Harbison at [illegible].

283 As Zapalac explained, the spectators' placement "confused the viewer's perspectival understanding of the scene," making "impossible a comfortably distinct reading of two scenes as discrete events." Zapalac at [illegible]. See also Lederle at [illegible]; Harbison at [illegible].

284 Zapalac at [illegible].

285 Zapalac at [illegible] (translating the German) and at [illegible]. Those who executed wills also told executors that they had pledged honest accountings as "he will give an account of himself to God on Judgment Day." Id. at [illegible]. At the time, Regensburg had a population of about [illegible],[illegible] and was, like Nuremberg, a "free imperial city," which meant it owed allegiance to the emperor rather than to any particular prince. Id. at [illegible].

286 Zapalac and others detailed the various depictions. For example, in Regensburg's Rathaus as of [illegible], a *Last Judgment* showed Christ with a sword in his left hand and his feet resting on a globe; angels blew trumpets as the dead "rose from their graves." Mary and John the Baptist were also depicted. Zapalac at [illegible].

287 Strauss, Law, Resistance, and the State at [illegible] (quoting Adolf Weissler).

288 *James* [illegible]:[illegible], as translated by Harbison at [illegible]. See also Lederle at [illegible]. Other quotations proximate to the Last Judgment include: "He who passes judgment too quickly, hastens his own ruin" and "Before the court be attentive to justice and learn to bear witness appropriately." Schild at [illegible] and fig. [illegible]. A detailed analysis of the imagery and structure of the Lüneburg Town Hall is provided by Schmitt at [illegible]–[illegible].

289 Zapalac at [illegible] and fig. [illegible], at [illegible] (citing verses from a panel, now missing, that can be seen in a miniature of a courtroom scene). The verses come from [illegible] *Chronicles* [illegible]:[illegible] and *Matthew* [illegible]:[illegible] but are somewhat paraphrased from the Latin. See Zapalac at [illegible], nn. [illegible] and [illegible].

290 These images are thought to have been made around [illegible]. The frame in Bruges was inscribed with the words "Take heed what you do: for ye judge not for man, but for the Lord." In Nuremberg, the image bore the inscription "Men should be judged on earth as they will be judged later (by Christ)." See Levy, Last Judgment at [illegible], nn. [illegible] and [illegible] (translation by author).

291 Zapalac at [illegible] (translation by author).

292 Troescher at [illegible]. Lederle commented that the depiction was added to the City Hall "after the Law of Magdeburg required it" and that "judges sat with their backs to it." Lederle at [illegible].

293 For example, the section of a [illegible] Tengler (discussed earlier) titled "On the Last Judgment" opens with a woodblock image of Christ floating in midair with his arms outstretched. Versions of that image can also be found in other German codes, including the *Bamberger Codex*, discussed in Chapter [illegible]. Behind the head of Christ stretches a long horizontal bar that ends, on the right side of the picture with a sword and on the left side with a flower (possibly a lily). One of Christ's feet rests on a spherical image, perhaps a globe, and the other foot floats free. Beneath the free-floating foot are two very small figures dressed as peasants, one of whom appears to be tilling the soil while the other may be drawing a bow and arrow. On Christ's right kneels a crowned figure (perhaps a king) behind whom other crowned figures (one of whom is flying a pennant featuring the double-headed Hapsburg eagle) are also arrayed, kneeling. On Christ's left another crowned and cloaked figure is kneeling (perhaps representing the pope), and behind him are a bishop in a miter carrying a crook, as well as what appears to be a monk wearing a habit with a cowl and a straw hat. Over time, the imagery shifted. As discussed later, Zapalac's explanation is that the Protestant Reformation required a different iconographic expression, for predestination did not make as salient as had Catholic theology the connection between the daily rulings of magistrates and whether one went to heaven or hell. Zapalac at [illegible].

294 Zapalac at [illegible]. Zapalac argued that for Regensburg, "the Last Judgment itself was present in the courtroom, evidence for that last trial was there being collected and weighed."

295 Harbison's analysis posited that "the most noteworthy feature of the Last Judgments located in Town Halls is their position in a totally profane environment." See Harbison at [illegible]. Further, he described many of those works as "secular Last Judgments" in that

they had distinctive characteristics. Id. at ⍰. Similarly, Edgerton argued that the increasingly secular societies of the city-states sought ⍰spiritual affirmation that their urban way of life was just as God-anointed as the old feudal vision of society.⍰ Edgerton at ⍰. Levy offered a different claim, that some Last Judgment scenes were deployed in relationship to specific political conflicts between local and central authorities. Her example is the *Last Jud⍰ment* commissioned between ⍰ and ⍰ for the town hall in Diest, in which apostles, symbolic of the local aldermen, are arranged to be seen as holding special authority. Levy, Last Judgment at ⍰–⍰.

296 Zapalac at ⍰–⍰. Zapalac detailed how court-based processes affected Church liturgy, with popular dramas positing trials involving Christ and the Devil and with legal texts portraying Mary as a lawyer defending humanity before Jesus. Further, she compared late fifteenth-century oath-taking scenes of a courtroom and those of the Devil and an angel to show that the boundaries between the secular and the religious were deliberately crossed and obscured. Id. at ⍰–⍰ and figs. ⍰ and ⍰. More generally, a good deal of scholarship looks at the commingling of religious and secular authority, with efforts made by jurists to show that their edicts conformed to divine revelation as well as senses of fairness and equity. See Strauss, Law, Resistance, and the State at ⍰–⍰. From the vantage point of the history of Germany recounted by Strauss, secular institutions reflected a God-ordained hierarchy that ⍰had an immediacy in sixteenth century Europe⍰; political rights were similarly ⍰urgent⍰ and ⍰valued⍰ by persons of high and low ranks in society. Id. at ⍰–⍰.

297 Zapalac at ⍰–⍰, ⍰–⍰. See also Heidi Eberhardt Bate, The Measures of Men: Virtue and the Arts in the Civic Imagery of Sixteenth-Century Nuremberg ⍰–⍰ (Ph.D. dissertation, Department of History, U. of California, Berkeley, CA, ⍰; UMI Publication No.: AAT ⍰). Bate detailed the array of historical models deployed in works by Albrecht Dürer for the Nuremberg Town Hall, for which the Last Judgment was but one part of a ⍰much broader range of iconographical possibility⍰ Id. at ⍰.

Further, as Zapalac recounted, in some instances representations of the Last Judgment were taken down in favor of other images. For example, in the Rathaus in Regensburg, the *Last Jud⍰ment* in which Christ had been central was replaced by a painting of ⍰ by Isaac Schwendtner that was an allegory of *The ⍰irtues of ⍰ood ⍰overnment*. Nearby were Caritas (Charity), Justitia (Justice), and Prudentia (Prudence), with Pax (Peace), and Ceres (Prosperity). Zapalac at ⍰, ⍰, and fig. ⍰. Last Judgments did not, however, disappear. For example, the major renovation of the Nuremberg Town Hall in ⍰ included the placement of an image of the Last Judgment on one of the walls. See Bate at ⍰. Moreover, as Bate pointed out, Lutheran reformers might not have been pleased by the replacement of Last Judgments with the ⍰pagan material⍰ provided through the imagery of Roman gods and goddesses. Id. at ⍰.

298 Harbison argued that in Northern Europe the Reformation and secularization provided impetus for propaganda to reassure members of society that earthly decisions paralleled heavenly ones. Harbison at ⍰–⍰; see also Harbison, Introduction to Symbols in Transformation: Iconographic Themes at the Time of the Reformation ⍰–⍰ (Princeton, NJ: Princeton U. Art Museum, ⍰) (exhibition catalogue).

299 Zapalac traced the shift from ⍰late-Medieval cosmology in which sacred history and eschatology were emphatically present in the temporal world⍰ to ⍰a Lutheran cosmology in which the two realms were held apart by the concept of predestination.⍰ Zapalac at xiii. Last Judgment panels in northern courtrooms of the late Medieval period were replaced in Lutheran cities during the sixteenth century by allegories of Justice. That change occurred in Regensburg that, in ⍰, became Lutheran. See id. at ⍰–⍰, n. ⍰. Zapalac argued that ⍰Christ the judge disappeared from the council chamber, to be replaced by an image that brought together an older vision of justice revived by the humanists and a vision of God the Father rather than the Son⍰ Id. at ⍰. Thus, ⍰the Last Judgment was no longer eminent or present in the temporal judgment⍰ of courts, and those pictures were replaced with images of Justice. Id. at ⍰. Moreover, texts were altered. For example, in Regensburg in ⍰, the charge in the council chamber added (in a ⍰more accessible German⍰) a ⍰final admonition to the councillors: ⍰as you have been impartial or inequitable, so shall you be judges by God⍰ *a ⍰ud⍰ment he has completed in eternit⍰*' ⍰ Id. at ⍰ (Zapalac's translation and emphasis). Further, the pictures that illustrated constitutions and legal rules also shifted to feature abstract Virtues in lieu of images of the Last Judgment. Zapalac's explanation was that the theme of predestination meant that the decisionmaking by judges ⍰no longer determined⍰ their own final judgments. Id. at ⍰. Rather, ⍰God the father⍰ was positioned above the city, in various woodcuts and frescoes, to show that the regime was under his guidance. Id. at ⍰–⍰.

300 Zapalac at ⍰–⍰. There she also noted that the Last Judgment came to serve as ⍰a reminder of the difference between eternal and temporal judgment⍰ Id. at ⍰. Another effect of Lutheran ⍰theology and social policy⍰ was on public executions, which came to engage ⍰para-religious practices⍰ as ⍰popular energies⍰ moved ⍰from altar to scaffold.⍰ Merback at ⍰.

Chapter ⍰

1 See Jeremy Bentham, The Constitutional Code (⍰), in ⍰ The Works of Jeremy Bentham, bk. II, ch. XII at ⍰–⍰ (John Bowring, ed., Edinburgh, Scot.: William Tait, ⍰) (emphasis in the original):

> Art. ⍰.
>
> For the designation of a *Judicator⍰*, why employ this term, to the exclusion of the more commonly employed word *Court⍰*
>
> Answer. Reasons.
>
> ⍰. In this same signification the word *Judicator⍰* is already in use.
>
> ⍰. The word *Judicator⍰* is clear from all ambiguity: the word *Court*, not.
>
> ⍰. The word *Court*, besides ambiguity, is liable to produce delusion and mischievous error.
>
> ⍰. Not that the word *Judicator⍰* is altogether free from ambiguity . . . . Originally it meant . . . a place in which the person or persons *acted* . . . that is to say, the *usual* place of residence of the functionary acting as such; . . .
>
> ⍰. In Monarchies in general, and in the English Monarchy in particular, in addition to the sense in which it is synonymous to the word ⍰*udicator⍰* in its *person⍰ re⍰ardin⍰* sense, as above, the word *Court* is employed in the designation of the persons following:
>
> i. The Monarch.
>
> ii. The persons most immediately attached to the service of the monarch, in his *private* or say *non⍰functionar⍰* capacity.
>
> iii. Any such other persons as are most frequently in his presence.
>
> ⍰. ⍰*ntecedent* to the *Juridical* sense of the word *Court*, was, as above, its *Monarchical* sense. In the times of

> original inexperience and simplicity, all the authorities in the state were, in the supreme grade, exercised by one hand. By degrees, the judicial authority the Monarch not having time for the exercise of it was transferred to *subordinate* hands. Name of this functionary in England, the *Grand Justiciar*. But, his residence was the same as that of the Monarch: to wit, the *Court* in its *kindred-regardin sense*; and whenever and wherever the Monarch *travelled*, (as for a great part of his time he commonly did,) with him travelled the *Judge*, and what was called *Justice*.
>
> . A *Court* is the region of favour: of favour, in contradistinction to Justice. A Monarch is above Justice. From his will it is, as from its source, that what in a Monarchy is called *Justice*, emanates: on that same will depends the nature of it: the purport and tenor of the words by which, on each occasion, it stands expressed. Witness the maxim, *Quod Principi placuit legis habet vigorem*: a maxim, in every pure Monarchy, not only acted upon, but avowed: in the English Monarchy, sometimes avowed, sometimes disavowed: but, by all, more or less acted upon, even when disavowed. . . .

2 See Elizabeth McGrath, Rubens: Subjects from History, vol. : Text Illustrations (London, Eng.: Harvey Miller Publishers, ; National Centrum voor de Plastische Kunsten van de de en de de Eeuw), as part of Corpus Rubenianum Ludwig Burchard at , –. As McGrath explained, history was principally valued for the lessons it taught (id. at). The tradition of didacticism that lined the walls of Renaissance palaces and town halls relied on citation of some deed or saying of the past (id. at). Hugo van der Velden traced the Medieval tradition of such exempla to Cicero's discussion of an example (that) supports or weakens a case by appeal to precedent or experience, citing some person or historical event as well as to another classical text, *Ad Herennium*, whose author is not known. See Hugo van der Velden, *Cambyses for Example The Origins and Function of an Exemplum Justitiae in Netherlandish Art of the Fifteenth, Sixteenth and Seventeenth Centuries*, , Simiolus: Netherlands Quarterly for the History of Art , , () (hereinafter Van der Velden, *Cambyses for Example*). As we detail, the deployment of Cambyses has drawn the eyes of many theorists. See, for example, Christian-Nils Robert, La Justice dans ses décors (XVe–XVIe siècles) (Justice in its Settings during the th and th Centuries) , – (Geneva, Switz.: Librairie Droz S.A.,). Translations of the French by Allison Tait and Julia Schiesel.

3 The images in figures and are provided and reproduced with permission of the copyright holder, Musea Brugge, Groeningemuseum.

4 Cambyses was the son of Cyrus the Great, who conquered Babylon in BCE. Cambyses ruled from around to BCE. See Herodotus, The Histories, bk. , lines – and bk. , lines – at , , , (Aubrey de Selincourt, trans., as revised by John Marincola, New York, NY: Penguin Classics,) (hereinafter Herodotus, Histories). See also Geraldine Pinch, Egyptian Mythology: A Guide to the Gods, Goddesses, and Traditions of Ancient Egypt (New York, NY: Oxford U. Press,). Pinch reported evidence of a king, apparently Cambyses, who conquered Egypt in BCE, but she thought the story of his contempt for Egyptian gods shown by stabbing the sacred Apis bull was a legend.

5 Herodotus, Histories, bk. , lines – at . One translation, provided by Hans Joris Van Miegroet, is:

> Darius left as general of all the troops upon the seacoast Otanes, son of Sisamnes, whose father King Cambyses slew and flayed, because that he, being of the number of royal judges, had taken money to give an unrighteous sentence. Therefore Cambyses slew and flayed Sisamnes, and cutting his skin into strips, stretched them across the seat of the throne whereon he had been wont to sit when he heard cases. Having so done Cambyses appointed the son of Sisamnes to be judge in his father's room, and bade him never to forget in what way his seat was cushioned.

See Hans Joris Van Miegroet, Gerard David (Antwerp, Belg.: Mercatorfonds,) (hereinafter Miegroet, Gerard David); Hans J. van Miegroet, *Gerard David Justice of Cambyses Exemplum Justitiae or Political Allegory*, , Simiolus: Netherlands Quarterly for the History of Art , , (). See also Hans Joris Van Miegroet, Gerard David (ca. –): Patronage and Artistic Preeminence at Bruges (Ph.D. dissertation, University of California, Santa Barbara, CA, ; UMI Publication No.: AAT). As discussed later, Van der Velden disputed some of Miegroet's conclusions.

6 Van der Velden, *Cambyses for Example* at –; Edward Gans Guido Kisch, *The Cambyses Justice Medal*, , Art Bulletin , , () (hereinafter Gans Kisch). One survey of town hall art chronicled this image in various media (painting, glass windows, carvings) in Münster, Emden, Gdańsk, Königsberg, Thorn, and Breslau. Ursula Grieger Lederle, Gerechtigkeitsdarstellungen in deutschen und niederländischen Rathäusern (Representations of Justice in German and Dutch Town Halls) – (Ph.D. dissertation, Heidelberg, Ger.: U. of Heidelberg Press,).

7 Gerard David lived from about to . James Weale, a British scholar working in the s, brought attention to David's work: up to the year , nothing whatsoever was known of Gerard David whose name was found neither in any dictionary of artists nor in any modern work on Netherlandish art Further, his works were attributed to others. See W. H. James Weale, Gerard David: Painter and Illuminator – (London, Eng.: Seeley,) (hereinafter Weale, Gerard David). In , David's work joined that of others in a major exhibition in Bruges of Flemish Primitives. Miegroet, Gerard David at . Weale explained that effort as aimed at inducing the civil and ecclesiastical authorities (in Bruges) to devote a little more attention to the many fine works in their care . . . (some of which were) housed in a disgracefully miserable building and to inspire the creation of a museum appropriate for the quality of the paintings. See W. H. James Weale, *The Early Painters of the Netherlands as Illustrated the Bruges Exhibition of* , Burlington Mag. , – ().

8 Weale documented that the aldermen of Bruges commissioned the painting, which was completed in . Weale, Gerard David at –, . David received payments in and and, after arbitration in an additional sum (perhaps related to other paintings and totally fourteen pounds, ten shillings) was paid. Weale, Gerard David at . According to another scholar, David may have painted a second image for which he was paid in . See Eberhard Freiherr von Bodenhausen, Gerard David and His School – (New York, NY: Collectors Ed. , reproducing the Munich edition). Miegroet speculated that after the conflict with Maximilian in Bruges, directions about how to execute the painting, then in progress, might have been revised. Miegroet, Gerard David at –. Hugo van der Velden disagreed with the thesis that the commission related to a particular political moment and that the subject matter was dramatically changed along the way. Hugo van der Velden, *Cambyses Reconsidered Gerard David Exemplum Justitiae for Bruges Town Hall*, , Simiolus: Netherlands Quarterly for the History of Art , , – () (hereinafter Van der Velden, *Cambyses Reconsidered*).

9 The original frames formed a single whole; each panel is five feet, eleven inches, by four feet, eight inches. Weale, Gerard David at ;

see also Translations of the Captions of the Works of Art Exhibited in the Groeningemuseum in Bruges catalogue no. . (Musea Bruges, Groeningemuseum) (exhibition catalog). By , the diptych was hanging in the Town Hall. In it was taken by the French and then returned in to the Bruges Town Hall before being relocated in to the Museum of the Academy, where it was later restored. Robert argued that the diptych was sent to a museum at that time to damp down concerns about judicial integrity. Robert at . For a time during the nineteenth century, however, a copy titled *la in of Sisamnes* hung in the Law Courts of Bruges. Weale, Gerard David, at and n. .

10 Miegroet, Gerard David at .

11 How viewers then responded is an open question, for other scenes of punishment, seen today as gruesome, were regularly displayed to show the consequences visited on wrongdoers by authority, earthly or divine. See Pieter Spierenburg, The Spectacle of Suffering: Executions and the Evolution of Repression – (Cambridge, Eng.: Cambridge U. Press,).

12 Herodotus, Histories, bk. , lines – at –.

13 That version posited that Cambyses wanted to marry a daughter of the Egyptian King Amasis but was sent a daughter of Apries, who then induced Cambyses to begin a war. He killed the Egyptian Apis bull and was punished by madness. See Herodotus, The Histories, bk. at –. In view of all this, I have no doubt whatever that Cambyses was completely out of his mind. Id., bk. at .

14 Seneca, *De ira* (*n n er*), in Moral Essays, vol. , bk. III–, lines – at – (John W. Basore, trans., Cambridge, MA: Harvard U. Press,). Chaucer repeated the episode recounted by Seneca in which a friend warned Cambyses against drinking. Cambyses responded by drinking more and then killed the son of the friend. Geoffrey Chaucer, The Friar's, Summoner's and Pardoner's Tales from The Canterbury Tales, ll. – at – (N. R. Havely, ed., London, Eng.: U. of London Press,).

15 As one commentator noted, the Roman and Greek sources for this story provided an acute sense of the barbaric such that one would feel the harsh justice of antiquity. See Juliaan H. A. Ridder, Gerechtigheidstaferelen voor Schepenhuizen in de Zuidelijke Nederlanden in de de, de, en de Eeuw (Images of Justice in Courthouses in the Southern Netherlands in the th, th, and th Centuries) – (Brussels, Belg.: Paleis der Academi n,). See also Wolfgang Pleister Wolfgang Schild, Recht und Gerechtigkeit im Spiegel der euro ischen Kunst (Law and Justice Reflected in European Art) – (Cologne, Ger.: DuMont Buchverlag,). Translations of the Dutch are by Chavi Keeney Nana, German translations by Chavi Keeney Nana and Stella Burch Elias, and translations of the Old German by Stella Burch Elias.

16 The reversal of the original moral came from various Medieval authors, who portrayed Cambyses as a sage who acted justly in making a public example of a corrupt officeholder. Valentin Groebner, Liquid Assets, Dangerous Gifts: Presents and Politics at the End of the Middle Ages – (Pamela E. Selwyn, trans., Philadelphia, PA: U. of Pennsylvania Press,).

17 The tapestry called the *Throne Baldachin* was commissioned by King Frederick II in . Woven around by the Danish workshop at Helsing r, the tapestry consisted of a backcloth (more than nine by eleven feet) and a canopy (thirteen by nine feet) that was intended to hang above the royal table at which Frederick II and his wife, Queen Sophie, would sit. See Elizabeth Cleland, *Throne Bal dachin*, in Tapestry in the Baroque: Threads of Splendor (Thomas P. Campbell, ed., New York, NY: Metropolitan Museum of Art; New Haven, CT: Yale U. Press,). Justice plays a prominent role, depicted as a blond-haired centerpiece between the images celebrating the justice and greatness of the king and queen's lineages. Id. at . Justice, in turn, is flanked by Temperance to the left and Fortitude to the right.

In the canopy are four classical justice stories encircled as if on medallions. The first shows Alexander hearing the case of a supplicant while covering one ear; Alexander heard both sides of an argument without bias, literally offering one ear to each plaintiff, before reaching judgment. Id. The next scene is of a man restraining the son of Zaleucus (discussed later in this chapter) while another gouges out his eye. The scene is translated as Resolution. A third scene depicts the Roman Emperor Trajan (also discussed later) raising his sword to execute a soldier being punished for the accidental killing of a child. The medallion reads traiani billigkeit (Trajan Fairness). A fourth medallion shows a crowned Cambyses gesturing to the flayed body of Sisamnes, hanging above a judicial throne. The inscription below reads cambysis vorsichtigkeit (Cambyses' Prudence). Id. at –. From to the tapestry remained in the Danish Helsing r Castle, but in the troops of Swedish King Karl Gustav X removed it to Sweden. See Throne Baldachin at the website of the Metropolitan Museum of Art, http://metmuseum.org/special/tapestry/view .asp tem .

18 Miegroet, Gerard David at . According to Miegroet, the book was translated into Netherlandish and published in Gouda, Delft, and Zwolle in the s. See also Weale, Gerard David at .

19 Miegroet, Gerard David at . In addition, an abbreviated version of this legend was mentioned in Valerius Maximus's *acta et dicta memora ilia*, which described the judge as strangled and also noted that his skin was stretched over the judicial chair upon which he made his son sit. Id. at . Maximus noted that Cambyses, king of Persia and Medea, had provided a good example of severity and that as a consequence of the novel and marvelous punishment other judges would not turn to corruption. Id. at . See also Valerius Maximus, Memorable Doings and Sayings, vol. , bk. :, ext. at – (D. R. Shackleton Bailey, trans., Cambridge, MA: Harvard U. Press,) (hereinafter Memorable Doings and Sayings). Whether *esta omanorum* was available in Bruges is questioned by some commentators pointing to other Medieval texts including versions of the Cambyses story. See Van der Velden, *Cam ses for am ple* at –, . Those discussed were several, including *Speculum historiale*, by Vincent of Beauvais, who died in ; *Spie hel histori ael*, by Jacob van Maerlant; a translation of that work, the *Ludus scac corum* (The Game of Chess), from about ; and a Dutch adaption of about , called *Dat scaecspel*.

20 Gans Kisch at .

21 See Cesare Ripa, Baroque and Rococo Pictorial Imagery: The – Hertel Edition of Ripa's 'Iconologia' With Engraved Illustrations (Edward A. Maser, ed., New York, NY: Dover Publications,) (hereinafter Ripa, Maser Edition). This English edition cited a Ripa text for the description of the figure Injustice, shown as a tall woman of commanding appearance with a white cloak . . . splattered with blood and a blood-stained scimitar in one hand. At her feet lie torn scrolls, parts of a broken pair of scales, broken tablets of the Decalogue, and a fragment of an obelisk. On her shoulder sits a toad. . . . Her turban and robe suggest the barbarous lands where injustice is common. The toad is a symbol for greed, upon which much injustice is founded. Accompanying the drawing is an excerpt from Herodotus, *The istories*, bk. at line , translated as Cambyses, seated on his throne, watches while the naked Sisamnes is flayed alive. In the background the hapless man's skin is being nailed to the judge's seat in the court where he had performed his office dishonestly. Ripa, Maser Edition at .

In other editions of Ripa, Injustice was also portrayed with a toad and broken tablets representing the Ten Commandments at her feet, although her garb was not obviously from other barbarous lands. The edition depicted Injustice holding a sword in the right hand and a toad in the left; on the ground law tablets are in pieces. Cesare Ripa, Iconologia (Padua, Ital.: Pietro Paolo Tozzi, ; New York, NY London, Eng.: Garland Publishing,) (hereinafter

Ripa, Padua–[illegible]. Translations of the Italian by Allison Tait and Tess Dearing. In the French edition, Injustice wore a spotted and soiled robe and held both a sword and a toad that represents [illegible]the venom with which she infects good morals.[illegible] Cesare Ripa, Iconologie, vol. [illegible] at [illegible] (J. Baudoin, ed., Paris, Fran.: Chez Mathieu Guillemot, [illegible]) (hereinafter, French Ripa–[illegible]). A Dutch version contemporary with the French had Injustice with a toad and broken tablets. Cesare Ripa van Perugien, Iconologia, of uytbeeldingen des Verstands [illegible] (Amstelredam, Neth.: Dirck Pietersz Pers, [illegible]) (hereinafter Dutch Ripa–[illegible]). Even in the later [illegible] English edition, Injustice was portrayed with [illegible]a sword in one hand, and in the other, a toad, she tramples under her feet, a pair of broken scales and the books of law, both human and divine.[illegible] Cesare Ripa, Iconology London [illegible] at [illegible] (George Richardson, ed., New York, NY [illegible] London, Eng.: Garland Publishing, [illegible]). The toad [illegible]in the Netherlands and Flanders stood for unchastity, greed and miserliness, uncleanness, and pride. The animal could be a symbol of the devil and the latter sometimes changed himself into it. In purgatory and hell, toads not only torment sinners, they are also given to the doomed to eat[illegible] See D. Bax, Hieronymus Bosch and Lucas Cranach, Two Last Judgment Triptychs, Description and Exposition [illegible]–[illegible] (M. A. Bax-Botha, trans., Amsterdam, Neth.: North-Holland Publishing, [illegible]).

22 [illegible]The great majority of extant Cambyses scenes depict the moment at which Otanes has taken his place in the judgment-seat, on or beside the skin of his flayed father[illegible] See Van der Velden, *Cam*[illegible]*ses for* [illegible]*ample* at [illegible]. [illegible]With the single exception of the painting by Gerard David, all the monumental representations of the Judgment of Cambyses produced in the Low Countries were therefore dominated by the portrayal of Otanes in the judgment-seat[illegible] Id. at [illegible]; see also id. at [illegible]–[illegible] (describing the many renditions of the throned judge, the occasional scene of flaying, and the unusual aspects of the Bruges version).

Whether the particular sanction[illegible] flaying[illegible] had a real-world counterpart is a subject of debate. Miegroet suggested it did. See Miegroet, Gerard David at [illegible], n. [illegible] (noting that classical writers described flaying as a [illegible]Persian punishment[illegible]). But see Van der Velden, *Cam*[illegible]*ses* [illegible]*econsidered* at [illegible]–[illegible] (disagreeing with Miegroet's interpretation; while [illegible]one might be decapitated, buried alive, burned, quartered or even boiled[illegible] one would not be flayed).

23 Robert at [illegible], [illegible].

24 See Miegroet, Gerard David at [illegible]–[illegible], [illegible]–[illegible]; Gans [illegible] Kisch at [illegible].

25 As Miegroet detailed the history, the authority of Archduke Maximilian of Austria over the Burgundian Netherlands lasted only during the life of his wife, Mary of Burgundy, who died in [illegible], when their son (who would become Duke Philip the Fair) was four. Miegroet, Gerard David at [illegible], [illegible]. Flanders, Ghent, Bruges, and Ypres did not recognize Maximilian as the rightful regent. Facing a French invasion in [illegible], Maximilian sought to enlist support from Ghent and Bruges, but was met with resistence. In December of [illegible], Maximilian entered Bruges with about two hundred armed German soldiers. By January of [illegible], as armed conflict between France and Maximilian became unavoidable (with Ghent seeming to move toward revolt), the city leaders of Bruges refused to let Maximilian leave, keeping him hostage in a house near the marketplace. Sometime that spring, they released him as they faced a threat from the German cavalry and excommunication by Pope Innocent VIII for imprisoning the Roman king.

Bruges and Maximilian then negotiated that the provinces of the Netherlands, united under Duke Philip the Fair, would enter into a peace with France. Maximilian was given funds for his army, but later reneged on the agreement. In [illegible] Maximilian entered a treaty with France, and Bruges recognized it. Thereafter, the city again sided against Maximilian during a conflict with Holland and moved into an open revolt in [illegible]. Under siege, Bruges capitulated in November of [illegible]. Miegroet, Gerard David at [illegible]–[illegible]. Maximilian became Emperor in [illegible], after the death of Frederick III. Weale's account focused on the seizure of Maximilian in January of [illegible], whereafter a [illegible]deposed burgomaster, the judge Peter Lanchals, and other members of the magistracy were accused of corruption and malversation, were put to the torture, condemned to death, and executed[illegible] Gerard David was in the city at the time and soon thereafter was commissioned to [illegible]paint for the justice-room in the town-hall two panels that should recall to the sitting magistrates that they must be honest and impartial.[illegible] Weale, Gerard David at [illegible]–[illegible]. Weale put the date of payments in [illegible]. Miegroet thought that pro-Maximilian magistrates paid David some of what was owed in [illegible], the year after Bruges was finally defeated by Maximilian. Miegroet, Gerard David at [illegible], [illegible], [illegible]. Final payment, however, was made when the diptych was completed in [illegible], and the conflict may have been less salient then.

According to Miegroet, however, the authorities and not the painter decided on the subject matter and the [illegible]highly wrought iconography[illegible] that reaffirmed loyalty to the governing rule. Thus, the Bruges burghers were reminded that, if they [illegible]ever failed to heed the rule of the Habsburgs, they would pay for their crime in a most cruel manner.[illegible] Miegroet, Gerard David at [illegible]. See also Ridder at [illegible]–[illegible]. In addition to the central story, the canvas is full of other referential details, such as the painted wall medallions, identified as reproductions of [illegible]cameos in the Medici collection[illegible] and of mythic scenes. Id. at [illegible].

26 Van der Velden, *Cam*[illegible]*ses for* [illegible]*ample* at [illegible], quoting a [illegible]–[illegible] Dutch text. Another volume, from [illegible], explained the many historical narratives, predicated on the writings of Valerius Maximus, Plutarch, and Aulus Gellius and depicted on the walls of the Nuremberg Town Hall, were [illegible]intended to inspire counsellors and judges to embrace justice[illegible] Id. at [illegible].

27 According to Miegroet, it was not until the sixteenth century that [illegible]the legend of Cambyses became more popular in the visual arts[illegible] to be found in many paintings, stained glass, tapestries, and medals. Miegroet, Gerard David at [illegible]. Thus, fifteenth-century versions, such as Gerard David's *Jud*[illegible]*ment of Cam*[illegible]*ses*, were rare; [illegible]only one other contemporary rendition of the theme is recorded, executed on canvas by Martin de Hauchin for the aldermen of Mons between [illegible] and [illegible] Id. But Van der Velden, in *Cam*[illegible]*ses* [illegible]*econ*[illegible]*sidered* at [illegible]–[illegible], argued that images of the Cambyses story were depicted in [illegible]miniatures dating from [illegible]–[illegible], half a century before the Bruges justice scenes were painted[illegible] However, he commented that most portrayed Otanes sitting on his father's skin and thus that David's choice of scenes was [illegible]remarkable[illegible] Id. at [illegible]–[illegible] (noting a comparably gruesome specificity in a stained glass pane by Dirk Vellert). See Van der Velden, *Cam*[illegible]*ses for* [illegible]*ample* at [illegible].

One of the best-known seventeenth-century examples of the Cambyses narrative was painted around [illegible] by Peter Paul Rubens for the Brussels Town Hall. Titled *Cam*[illegible]*ses* [illegible]*dmonishin*[illegible] [illegible] *tanes upon Sisamnes*[illegible]*Throne*, the painting was lost to fire in [illegible]. See Van der Velden, *Cam*[illegible]*ses for* [illegible]*ample* at [illegible]–[illegible] (describing the image as the [illegible]most famous *Jud*[illegible]*ment of Cam*[illegible]*ses*[illegible]); Gans [illegible] Kisch at [illegible], n. [illegible]. As McGrath explained, in the Brussels Town Hall Cambyses joined a *Jud*[illegible]*ment of Solomon*, and [illegible]between them, above the judgment seat, there may have hung a painting of the Last Judgment.[illegible] McGrath, vol. [illegible] at [illegible]. Several copies of Rubens's painting exist. See, for example, McGrath, vol. [illegible] at figures [illegible]–[illegible], catalogue no. [illegible]a. As McGrath explained (vol. [illegible] at [illegible]–[illegible]), Rubens's rendition focused on Otanes, the new judge sitting on his father's skin, which was [illegible]suspended behind[illegible] with a ghostly skull-like face at its center. Further, Rubens's picture is unusual, if not unique, in its emphasis on the [illegible]salutary function[illegible] of justice. The judge is surrounded by petitioners, including a mother, children, and an old man, all appealing to Otanes. On his chair are [illegible]symbols of wisdom and discretion[illegible] including shells and [illegible]sphinxes for arm-rests[illegible] which alluded to the [illegible]throne of Solomon[illegible] Id. at [illegible].

Discussion of the Cambyses in a building known as ⊠Arthur's Court⊠ in Gda⊠sk can be found in Jerzy Miziolek, ⊠⊠*empla ⊠ustitiae at ⊠rthur⊠ Court in the Conte⊠t of Dutch and ⊠lemish, ⊠erman, and ⊠talian ⊠rt*, in Netherlandish Artists in Gda⊠sk in the Time of Hans Vredeman de Vries ⊠⊠, ⊠⊠–⊠⊠, fig. ⊠ at ⊠⊠⊠ (Gda⊠sk, Pol.: Museum of the History of the City of Gda⊠sk, ⊠⊠⊠⊠). The building, constructed in ⊠⊠⊠⊠ as a ⊠social meeting place for the wealthy⊠ was rebuilt in ⊠⊠⊠⊠ at the direction of the City Council and used between ⊠⊠⊠⊠ and the eighteenth century as a court of justice as well as a meeting place for guilds. Id. at ⊠⊠. The Cambyses fresco was completed before ⊠⊠⊠⊠ and may well show the influence of David's portrayal. As in the image by Gerard David, the arrest is also featured, with an enthroned judge accosted by two men taking him off the chair while a third (perhaps meant to be the king) points a sword at him. The flaying, however, is shown in a smaller and less graphic scene than in Bruges.

28 Alexander S. Gourlay, ⊠*o⊠arth, ⊠u⊠ens, and the ⊠Justice⊠ Picture⊠ Tradition*, ⊠⊠ The Eighteenth Century: Theory and Interpretation ⊠⊠–⊠⊠ (⊠⊠⊠⊠). Remoldus Eynhoudts did etchings after the version of Cambyses that Rubens painted for the Brussels Town Hall, and those prints were available in London in the seventeenth century. Id. at ⊠⊠–⊠⊠ and fig. ⊠.

29 Van der Velden, *Cam⊠⊠ses ⊠econsidered* at ⊠⊠. Van der Velden argued that, because Philip the Handsome (also called Philip the Fair) paid his first visit to Bruges in ⊠⊠⊠⊠ and the City celebrated him in an expensive fashion, ⊠it would have been improper to set out to give the city's administrators a humiliating reminder of the errors of their predecessors, who had been removed from office years before⊠ Id. at ⊠⊠. Van der Velden disputed Miegroet's identification of a portrait as of Philip and argued that putting in images of local magistrates was a way of recognizing those who may have contributed financially to the painting. Id. at ⊠⊠–⊠⊠. Further, Philip would have identified with Cambyses, ⊠who used unflinching discipline, where necessary, to preserve order and justice⊠ Id. at ⊠⊠. In short, it was ⊠incorrect . . . to suppose that the significance and function of this painting differed from that of the countless other representations of Cambyses, or of other contemporary exempla of justice⊠ Id. at ⊠⊠.

30 Natalie Zemon Davis, The Gift in Sixteenth-Century France ⊠⊠ (Madison, WI: U. of Wisconsin Press, ⊠⊠⊠⊠).

31 Davis at ⊠⊠.

32 Davis at ⊠⊠.

33 Davis at ⊠⊠ (emphasis in original). Even then, one could give ⊠game taken from the forests of the seigneurs who were presenting it⊠ In ⊠⊠⊠⊠, the Ordinance of Blois forbade all gifts from parties to a current case, yet the provisioning of judges continued. Id. at ⊠⊠–⊠⊠.

34 The term *don de l⊠⊠ ce* entailed, in fact, two ⊠gifts⊠⊠ that of the king bestowing the position and that of the judge, paying for it. According to Davis, ⊠By the ⊠⊠⊠⊠s, every new judgeship involved a payment to the king, described as a loan to help the monarch in his urgent necessities.⊠ Davis at ⊠⊠.

35 John T. Noonan Jr., Bribes ⊠ (New York, NY: Macmillan Publishing, ⊠⊠⊠⊠) (emphasis in the original).

36 *Tume⊠ v⊠⊠ hio*, ⊠⊠⊠ U.S. ⊠⊠⊠, ⊠⊠⊠ (⊠⊠⊠⊠).

37 *Tume⊠*, ⊠⊠⊠ U.S. at ⊠⊠⊠.

38 *Tume⊠*, ⊠⊠⊠ U.S. at ⊠⊠⊠.

39 *Tume⊠*, ⊠⊠⊠ U.S. at ⊠⊠⊠. The unanimous opinion, by Chief Justice Taft, analyzed the amount of income received (about ⊠⊠⊠⊠ in a seven-month period), the mayor's salary, the range of discretion over the amount of a fine (from ⊠⊠⊠⊠ to ⊠⊠,⊠⊠⊠), and the percentage to be retained by local law enforcement as contrasted to that allocated to the state. The court also concluded that ⊠matters of kinship ⊠and⊠personal bias⊠ were issues for local legislation and did not have constitutional import. Id. at ⊠⊠⊠.

Under current federal law, judges must disqualify themselves from sitting on proceedings in which their ⊠impartiality might reasonably be questioned⊠ ⊠⊠ U.S.C. ⊠ ⊠⊠⊠(a). Included in a list of reasons for recusal is that a judge or a close family member has a ⊠financial interest in the subject matter in controversy or in a party to the proceeding, or any other interest that could be substantially affected by the outcome⊠ and ⊠financial interest⊠ is defined to include ownership interests, ⊠however small⊠ except not if part of a ⊠mutual or common investment fund that holds securities⊠⊠ ⊠⊠ U.S.C. ⊠⊠ ⊠⊠⊠(b)(⊠), (d)(⊠). Another statute also calls for judges to step aside if their impartiality could be questioned. See ⊠⊠ U.S.C. ⊠ ⊠⊠⊠. However, if all judges hold such stakes⊠ for instance, because a provision is challenged as unconstitutionally diminishing the salary of federal judges⊠ in the federal system, the Supreme Court has concluded that none are barred. See ⊠*nited States v⊠ Will*, ⊠⊠⊠ U.S. ⊠⊠⊠, ⊠⊠⊠ (⊠⊠⊠⊠). Under such circumstances, a few states have convened specially constituted courts. See generally Judith Resnik, ⊠*n the Bias⊠⊠eminist ⊠econsiderations of the ⊠spirations for ⊠ur Jud⊠es*, ⊠⊠ S. Cal. L.R. ⊠⊠⊠⊠ (⊠⊠⊠⊠).

40 *Consultation Paper of the Ministr⊠ of Justice* ⊠ (Apr. ⊠, ⊠⊠⊠⊠), Her Majesty's Court Service, http://www.dca.gov.uk/consult/civilcourtfees/cp⊠⊠⊠⊠.pdf. Included are exemptions ⊠to ensure that access to justice for the less well-off is protected.⊠

41 A pressing contemporary issue in the United States is the effect of campaign contributions on judges who run for office. See generally Madhavi M. McCall ⊠ Michael A. McCall, *Campai⊠n Contri⊠u⊠ tions, Judicial Decisions, and the Te⊠as Supreme Court⊠⊠ssessin⊠ the ⊠ppearance of ⊠mpropriet⊠*, ⊠⊠ Judicature ⊠⊠⊠ (Mar.–Apr. ⊠⊠⊠⊠). In ⊠⊠⊠⊠, the United States Supreme Court debated the constitutionality of the receipt of electorial contributions. See *Caperton v⊠Masse⊠*, ⊠⊠⊠ S.Ct. ⊠⊠⊠⊠ (⊠⊠⊠⊠). In a five-to-four decision, the majority concluded that a state justice ought to have recused himself, as a matter of due process, from sitting on an appeal when the president and chief executive officer of the corporation in the case had contributed some ⊠⊠ million to his campaign after they had lost a ⊠⊠⊠ million verdict at the trial level.

42 Textual references can be found in Egyptian edicts, as well as in Jewish and Christian theology. Noonan at ⊠⊠–⊠⊠. Unlike false witnessing, however, for which punishments were specified, none were detailed for bribery, nor were methods put into place to ferret it out. Id. at ⊠⊠–⊠⊠.

43 *Leviticus* ⊠⊠:⊠⊠ reads: ⊠You shall not pervert justice, either by favouring the poor or by subservience to the great.⊠ The New English Bible with the Apocrypha (Charles Harold Dodd, ed., Oxford ⊠ Cambridge, Eng.: Oxford ⊠ Cambridge U. Presses, ⊠⊠⊠⊠). Many similar references were made in both the New and Old Testaments. See Noonan at ⊠⊠–⊠⊠. We have consulted many versions of the Old and New Testaments, such as The New English Bible with the Apocrypha (Charles Harold Dodd, ed., Oxford ⊠ Cambridge, Eng.: Oxford ⊠ Cambridge U. Presses, ⊠⊠⊠⊠) (hereinafter New English Bible); The Twentieth Century New Testament: A Translation into Modern English, Made from the Original Greek (New York, NY: Fleming H. Revell, ⊠⊠⊠⊠, revised ⊠⊠⊠⊠); and The Good News Bible with Deuterocanonicals/Apocrypha, Today's English Version (Robert G. Bratcher, trans., New York, NY: American Bible Society, ⊠⊠⊠⊠).

53 Van der Velden, *Cam⊠⊠ses for ⊠⊠ample* at ⊠⊠. This ⊠moralizing and edifying literature⊠ (⊠regentenspiegel⊠ or ⊠mirrors of sovereignty⊠) ⊠ with injunctions and illustrations⊠ was disseminated during the eras when town hall art preached parallel lessons through their imagery. See Susan Tipton, Res publica bene ordinata: Regentenspiegel und Bilder vom guten Regiment, Rathausdekorationen in der Fr⊠hen Neuzeit (The Well-Ordered Public Sphere: Images of Sovereignty and Pictures of Good Government, Town Hall Decoration in the Early Modern Period) ⊠⊠–⊠⊠ (Hildesheim, Ger.: Georg Olms Verlag, ⊠⊠⊠⊠).

54 Donald Veall, The Popular Movement for Law Reform, ⊠⊠⊠⊠–⊠⊠⊠⊠ at ⊠⊠⊠–⊠⊠⊠ (Oxford, Eng.: Oxford Clarendon Press, ⊠⊠⊠⊠).

55 Veall at ⊠⊠⊠–⊠⊠⊠. In January of ⊠⊠⊠⊠ Charles I was compelled to agree to that rule, which was confirmed in the ⊠⊠⊠⊠ ordinance and then repealed. Veall concluded that judges had more protection during the Interregnum, which laid the groundwork for the development in the eighteenth century of judicial independence from the Crown.

56 Plutarch, Morals, vol. ⊠, ⊠⊠ (William Baxter, trans., William W. Goodwin, ed., New York, NY: Athenaeum Society, ⊠⊠⊠⊠). This quote comes from ⊠*is and* ⊠ *siris, or of the* ⊠*ncient* ⊠*eli⊠ion and Phi⊠losoph⊠ of ⊠⊠⊠pt*, collected along with more than seventy other essays in the *Morals*.

57 Waldemar Deonna, *Les ⊠res⊠ues de la Maison de ⊠ille de ⊠en⊠ve*, ⊠⊠ Revue Suisse d'Art et D'Archéologie ⊠⊠⊠, ⊠⊠⊠ (⊠⊠⊠⊠) (hereinafter Deonna, *Les ⊠res⊠ues*).

58 The Historical Library of Diodorus the Sicilian, in Fifteen Books ⊠⊠ (George Booth, trans., London, Eng.: W. McDowell, ⊠⊠⊠⊠). The Renaissance turn to Diodorus and other classical writers is chronicled in Malcolm Bull, The Mirror of the Gods (Oxford, Eng.: Oxford U. Press, ⊠⊠⊠⊠).

59 As noted in Chapter ⊠, Andreas Alciatus (or Andrea Alciato, or Alciun, or Alciati) was born in Italy in ⊠⊠⊠⊠; he lived until ⊠⊠⊠⊠ and was a leading figure in systematizing the study of law and in shaping a humanistic jurisprudence. Alciatus's emblem treatise was an anthology of a diverse collection of moralizing short poems or epigrams and illustrations. It was first published in Augsburg in ⊠⊠⊠⊠ and had ⊠⊠⊠ emblems. See Andreas Alciatus, The Latin Emblems: Index Emblematicus, vols. ⊠ ⊠ ⊠ (Peter M. Daly, ed., Toronto, Can.: U. Toronto Press, ⊠⊠⊠⊠) (hereinafter Alciatus, Daly Edition). No page numbers are provided in this compilation, but the emblems are numbered. A ⊠⊠⊠⊠ Latin version had ⊠⊠⊠ emblems, while other versions had fewer. A ⊠⊠⊠⊠ version appeared in Latin, French, Italian, and Spanish, and in that year, the Lyon edition innovated by organizing the emblems by topic. By the seventeenth century, more than ⊠⊠⊠ editions existed. See Denis L. Drysdall, ⊠*m⊠lema* ⊠ *uid⊠ What ⊠s an ⊠m⊠lem*, in Under the Aegis, The Virtues ⊠⊠⊠, ⊠⊠⊠ (Peter Shand, ed., Auckland, New Zeal.: Fortuna Press, ⊠⊠⊠⊠). See the memorial web edition in Latin and English of Alciatus's *Book of ⊠m⊠lems*, created by the English Department of the Memorial University of Newfoundland, Memorial University of Newfoundland, http://www.mun.ca/alciato/c⊠⊠⊠.html.

Ripa is known for its illustrations, but as discussed in Chapter ⊠, the first edition of Ripa's ⊠*onolo⊠ia* was published without pictures in Rome in ⊠⊠⊠⊠. Many variations followed the first (⊠⊠⊠⊠) illustrated ⊠Ripa⊠ resulting in a total of more than forty editions in eight languages. One of the last, the ⊠⊠⊠⊠ English edition by George Richardson, is, like the Maser translation, a selective rendition. Both Alciatus and Ripa had great influence over contemporary image makers and the standardization of the emblem lexicon. Even when Ripa's work was not known directly, its use by other artists put it into circulation around Europe. See Keyvan Claude Rafii, Public Buildings and Civic Pride: Town Halls in Northern Germany, ⊠⊠⊠⊠–⊠⊠⊠⊠, ⊠⊠⊠ (Ph.D. dissertation, Department of Art History, University of Illinois, ⊠⊠⊠⊠; UMI Publication No.: AAT ⊠⊠⊠⊠⊠⊠⊠⊠); Andrew Pigler, *The ⊠nportance of ⊠ono⊠raphical ⊠⊠actitude*, ⊠⊠ Art Bulletin ⊠⊠⊠ (⊠⊠⊠⊠). We return to Ripa's several renditions of Justice in Chapters ⊠ and ⊠.

60 Two books, one by Horapollo and the other by Francesco Colonna, were popular at the time. Horapollo is assumed to have been the author of ⊠ *iero⊠⊠phica*, a fifth-century collection of explanations of Egyptian hieroglyphs reprinted in ⊠⊠⊠⊠ in Florence. Francesco Colonna, a Dominican monk, is credited with the authorship of the ⊠⊠⊠⊠ ⊠ ⊠*pnerotomachia Poliphili*, a courtly romantic allegory of Poliphilo's quest for love; the accompanying woodcuts offer emblematic illustrations. Emblem books published thereafter elaborated that symbolism and found an audience in Renaissance humanists, intrigued by these devices, which they perceived as enabling discursive, ideogrammatic, allegorical communications. Alison Saunders, The Sixteenth-Century French Emblem Book: A Decorative and Useful Genre ⊠–⊠, ⊠⊠–⊠⊠ (Geneva, Switz.: Librairie Droz, ⊠⊠⊠⊠).
